I have interested many in Christian Science, and have seen them cured of intemperance, rheumatism, lumbago, curvature of the spine which had been treated for sixteen years under a specialist, heart trouble, nervous prostration, indigestion, and many other troubles. I am indeed thankful to God for leading me to this blessed truth, which Mrs. Eddy teaches in her book, Science and Health, and which reveals the true idea of God.

JOS. H. MENDINHALL, Wilmington, Del.

Every science which does not utter investigated fact, every history which does not tell of experience, every poetry which is not based upon the truth of things, has no real life. It does not perish; it is never born.

PHILLIPS BROOKS.

From Our Exchanges.

A serious indictment of the religion of the average church member is that it is too largely a church religion. This is not said with any purpose of disparaging loyalty to the church, for there is all too little of that, but the church is a means, not an end. The church exists to aid the religious life and not as a substitute for religion. Too many assume that if they are members of a church, contribute to its support, attend its services, they are therefore religious. While these are natural expressions of the religious life they may and do exist apart from it. They are not religion, neither are they religious save as they spring from a distinct purpose centering in God. It is easy to content ourselves with functions and observances while we refuse to give God any real place in our hearts and know little or nothing of him by experience.—*The Standard*.

Rev. W. R. Huntington, D.D., of Grace Church, New York, preaching recently on "The Widow's Mite," and the force of the parable to-day, said, "The doctrine that I am laying down is this, that, if we would be acceptable givers, we must pass the whole of this living of ours into the treasury of God. Make your living, with all that it contains and includes, accomplish the very utmost that it is capable of for the betterment of this world in which you find your temporary residence. That is your duty. You complain that this teaching is too severe? Heroes are not made by lowering standards. Jesus Christ demands of men nothing less than the consecration of the entire life, with all its powers, faculties, and abilities, to the service of the Almighty God."

Most people believe that the period of investigating and challenging the historic Christian creeds is passing away, and that the time is ripe for reconstructing a system of theology. Some beliefs long held precious, some of them regarded by many as essential, have not stood the test of scrutiny in the light of newly discovered truths of history and experience. It has been found necessary to modify the forms of expression of other beliefs, and there are still others emerging into view which have not yet been positively stated. The process of reconstruction must begin with simple, fundamental statements, drawn from the study of the New Testament in accordance with the results of recent scholarship.—*The Congregationalist*.

A rightly developed individualism is the aim of Christianity. Make individual character what it should be, and the whole church will be right, and will be mighty in its righteousness. All the means and appliances of Christianity are directed to the end of making the individual man right. The kingdom of God is a kingdom in the heart, and over the individual life. Every true disciple has welcomed the King, and is under the dominion and culture of the King. The kingdom of God is not so much a something to be entered into, as a something to enter into men. The kingdom of heaven is the heavenly end, the future of the kingdom of God, and is something to be entered into.

The Examiner.

If there is one thing that the world hates, especially in these twentieth century days with their enlightenment and progress, it is narrowness. And there is no narrowness that the world despises more than theological narrowness,—the narrowness that makes destiny more a matter of belief,—that is to say, a sort of an assent to some man-made dogma,—than a matter of life and character.

REV. H. F. MOULTON.
The Universalist Leader.

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, \$5. Twelve or more to one address, \$4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, \$1 per copy; \$5 per half dozen; \$9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, Treasurer.
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, \$2.40 per annum; \$1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, \$1.00 in advance; all other countries, \$1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH of Rochester, N. Y.

CHRISTIAN SCIENCE. Its Promises and their Fulfillment. By EDWARD A. KIMBALL of Chicago, Ill.

CHRISTIAN SCIENCE. Is it Christian? By Mrs. SUE HARPER MIMS of Atlanta, Ga.

CHRISTIAN SCIENCE. Its Work and Scope. By CAROL NORTON of New York City.

CHRISTIAN SCIENCE. The True Idealism. By ANNIE M. KNOTT.

Price. Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, 75 cents; five hundred copies, \$3.25; one thousand copies, \$6.00. Orders for supplements may be assorted as desired.

German Supplements

CHRISTIAN SCIENCE. Its Promises and their Fulfillment. By EDWARD A. KIMBALL of Chicago, Ill.

CHRISTIAN SCIENCE. The Christianity of Christ. By Rev. IRVING C. TOMLINSON.

Twelve or more to one address, each, prepaid 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid \$3 00
Twelve or more books to one address, each, prepaid . . . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science, 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; \$3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL, 80 pages, cloth covers. Prices, prepaid, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, \$1.00; \$5.00 half dozen; \$9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, \$1.00; \$5.00 half dozen; \$9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, \$2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, \$2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckle edges; 50 pages. Prices, prepaid, 50 cents; per dozen, \$4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckle edges. Prices, prepaid, 50 cents per copy; \$4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, \$1.00; six copies to one address, \$5.00; twelve copies to one address, \$9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; \$5.00 per dozen.

Direct all orders for above works, and make remittances payable to

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, \$1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, \$1.40; one hundred copies, \$2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

It is estimated that the exports of manufactures in the calendar year 1904 will exceed \$500,000,000 in value. The total for eleven months amounted to \$459,575,023. In the calendar year 1903 the exports of manufactures were but 421 millions; in 1900, in which year the highest export record in manufactures occurred, the total for the calendar year was 441 millions; in 1898, 308 millions; in 1896, 253 millions; and in 1894, 178 millions.

Routes for more than twenty-seven miles of new subways in Manhattan borough, extensions to the elevated railroad system in the Bronx and subway extensions in Brooklyn, the cost of which is estimated at \$49,000,000, have been recommended to the rapid transit commission by its chief engineers.

The new tunnel connecting East Boston with Boston was opened to the public December 30. The tunnel was begun in May, 1900, has cost approximately, \$3,300,000, is 1.4 miles long, and at its lowest point, in the middle of the harbor, is 82.3 feet below mean low water.

The National bank notes issued during the six days preceding Christmas Day exceeded in value the mutilated ones destroyed by \$1,413,107. The National bank notes then outstanding, including the gold bank notes, amounted to \$463,481,209.

Foreign.

Czar Nicholas' long-expected reform ukase, issued last week, deals with practically all the subjects brought to the Emperor's attention by the memorial of the Congress of Zemstvos presidents held in St. Petersburg last month, and promises that each shall be referred to the Council of Ministers with orders to report promptly and fully.

The subjects that will be referred are, a just and equitable enforcement of existing laws, with a view to securing the harmonious administration of all the courts; Zemstvo organization, with a view to giving the widest latitude and autonomy to the various district Zemstvos; equality of all citizens

before the law; a scheme of workmen's assurance, for the benefit and protection of factory workers throughout the empire; security of citizens against arbitrary arrest; the religious freedom of all subjects of the empire without respect of creed or manner of worship; rescinding all unnecessary repressive laws; to accord the fullest possible measure of liberty to the press and the removal as far as possible of the various restrictive laws.

Naturally it has not given satisfaction, being too radical for the reactionaries and too conservative for the liberals.

Panama is now a gold standard country, as the result of an agreement between the United States and the new Republic, signed last June. The gold and silver coins of Panama have thereby become legal tender with the canal zone on the isthmus, so far as it was practicable. Panama agrees to keep on deposit gold equal to fifteen per cent of the amount of its new coinage issued for the purpose of guaranteeing the parity. The first batch of the new coins, which are being minted in the United States, has reached the isthmus. The monetary unit is called a balboa, a gold coin equal in value to a United States gold dollar. When authorized they will be issued in pieces of one, two and one-half, five, ten, and twenty balboas. The silver coins are peso, or half balboa, and a half, fifth, tenth, and twentieth peso. On the obverse is stamped the bust of Vasco Nunes de Balboa, the discoverer of the Panama coast.

Admiral Baron von Spaun of the Austro-Hungarian Navy, who, at the opening session in Paris, December 22, of the International Commission to inquire into the North Sea Incident, was unanimously elected the fifth member of that body, has agreed to serve on the Commission. Admiral Knaznakoff, who was Russia's representative on the Commission, has been recalled and will be succeeded by Vice-Admiral Doubassoff.

The Russian garrison at Port Arthur, commanded by General Stoessel, capitulated January 1. The Japanese siege lasted 238 days; the cost to the Russians is placed at 25,000 men, 20 ships, and \$300,000,000; to the Japanese, 60,000 men, six ships, and \$150,000,000.

Industrial and Commercial.

The American Car and Foundry Company recently obtained a large contract to supply cars for the Baker Street and Waterloo Underground Railway in London. In order to reduce the cost of production the company, immediately after closing the contract, acquired a site in Trafford Park, Manchester, on which to erect large car works from which it is expected the first delivery of finished cars will be made early in March. The iron and steel work will be exported in finished form from the United States. The remainder of the work will be done in England, and will necessitate the employment of local labor on the current contract to the value of between \$75,000 and \$100,000. This move may lead to the establishment there of permanent works.

During the season of navigation just ended the total net tonnage of freight passing the Soo was 31,545,106. Grain, other than wheat, showed an increase of three per cent over last year; the tonnage of pig and manufactured iron increased nineteen per cent; building stone twenty-seven per cent, and general merchandise eleven per cent. All other items show decreases ranging all the way from three to thirty-four per cent. The total east-bound traffic was 24,213,902 net tons, and the total net tonnage of the west-bound traffic was 7,332,204.

Less than ten miles of new steam railroad track were constructed in the New England States during the past year. The entire railroad mileage of the country, however, increased some 4,100 miles, which is a little less than the average for the last seven years. Most of the railroad building last year was in the Southwestern States, which

have nearly a third of the total. The United States now have a total railroad mileage of 212,000 miles.

During the brief season, extending over only about two and one-half months, about 65,000 barrels of salted herring from Newfoundland, almost entirely from the Bay of Islands, have been received at Gloucester. This is the largest receipt of salted herring on record. This year herring bloaters are sold to the trade smoked at \$1.50 a box of one hundred count. They reach the consumer at about five cents for a pound and a half.

The cold storage of fruit has grown to large proportions, nearly three million barrels of apples having been stored in the United States during the last winter. It is found that the condition in which the fruit is grown and the manner of handling it determine to a large extent its keeping quality and ultimate value.

General.

On the morning following the close of the St. Louis Exposition, says the *Scientific American*, great interest attached to the shutdown and inspection of the 600-horse-power steam turbine generating unit in the Palace of Machinery after a continuous run of over 3,962 hours—a performance which has had no parallel in steam turbine history. This machine, which is of the Westinghouse-Parsons type, was started on its long run on the morning of Monday, June 20, shortly after its installation at the Fair, and was stopped on the morning of Friday, December 2. During the five and a half months that the unit was in operation it supplied current for light and power in various buildings of the Exposition. Several engineers connected with the builders of the turbine and with the Machinery Department of the World's Fair were present when the engine was stopped and examined. It was found to be in perfect condition, as shown by the fact that there were no signs of wear, and that the bearings still retained the tool marks which they carried when they came from the shops. The remarkable feature of this performance, of course, was the maintenance under load of a speed of 3,600 revolutions per minute for such a long period. The total number of revolutions was but a little below one billion.

T. V. Powderly, former head of the Knights of Labor, is reported to have said, "I firmly believe that the day of the strike is over. I don't mean by that there is never to be another strike, but I do mean that each year will see fewer causes for the strikes, and that as a natural result the strike will be a thing of the past as a means of bringing employers and workmen to amicable relations. Already labor unions are laying the strike aside as a weapon. On both sides there is a strong tendency to combination, just as the workmen began to combine years ago, and the combinations are getting closer and closer to each other. The two combinations cannot afford to fight all the time, and they are beginning to see it."

At the first meeting of the committee in charge of the competition for the C. J. Glidden auto-touring trophy the dates and route were selected and basic rules decided upon for the contest in 1905. The tour will start in New York July 11, and will continue for two weeks over a 1000-mile course. The routes will be via Stamford, Bridgeport, New Haven, Hartford, Springfield, and Worcester to Boston, and thence to the White Mountains and return via Lowell, Worcester, Lenox, Albany, and Poughkeepsie to New York. One day will be spent in a run of one hundred miles around Boston, two days in the White Mountains and a day in the Berkshires. The day's run will average less than one hundred miles, and violations of speed laws will disqualify a competitor. The contest will be decided on stops for repairs and gasoline consumption. The competition will take the place of the annual tour of the American Automobile Association.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

Heredity.

REV. WILLIAM P. MCKENZIE.

HAVE you ever seen a crowd pressing wildly down a narrow street? You hear hoarse, meaningless cries and the rush of feet, and some, unapprised of the reason for the excitement, are borne before the tumult like foam on the incoming wave. One protests. You see him gesture and appeal to the people, but he is urged onward by the brute force of the movement of the unintelligent mob, and must go whither he would not. Such is the picture of the force of heredity as some would conceive it. Each man is the apex of an ever-widening, wedge-shaped mob; behind him parents twain, and grandparents twice twain; their grandparents in turn four times four, and so on, till the numbered ancestry would make small and ridiculous the largest army ever assembled. And that one poor man at the apex of the wedge is pushed through life (so they say) protesting against the force, demanding to be guided by intelligence, but helpless, because what he is supposedly exists in and through and from that mob of related human beings. From them he is supposed to inherit "diseases, and accomplishments, and sins." Yea, from that compact wedge of fleshliness is supposed to originate his life; and its continuance is to be in like manner in the characteristics and predilections of future lives which will find him one of their ancestors.

Is it any wonder, then, that at some time every man is likely to find himself searching after a way to be "born again," even though like Nicodemus he come to Jesus by night? What is the cry of the heart? Is it not a prayer for direct connection with Mind, for immediate government by intelligence; in a word, to KNOW THE FATHER? Of Life temporal,—to be born of a woman,—it is said, how few the days, how full of trouble! But life eternal is what? Recognition of God as the source and continuity of real being, and self-recognition in the likeness of God rather than "in the likeness of sinful flesh;" for thus spake one who proved his Sonship with the Father: "This is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent." Why did he include himself? Is it not that we must gain some sense of Sonship first if we are to understand the Fatherhood of God? "No man knoweth the Son, but the Father; neither knoweth any man the Father, save the Son, and he to whomsoever the Son will reveal him."

It is true that men have used the phrase, "Man's heredity is from God;" but actions have revealed that they understood not what they said, since first they believed in the ills that flesh is heir to, and then for relief from these sought not for a re-birth into spiritual relationships, but made use of remedies from mineral and herb,—of the earth earthy. Can any remedy give of life more than it has? Surely then if one would have life imparted to him, he should seek for life where Life is. If life ever was in the ancestry of the flesh, now the splendors of the tomb conceal

the loathsomeness of "dead men's bones;" and in the now of need no help is there for any of the living offspring from those long dead. What abides then of the life that was? Some will say, "characteristics," or "tendencies;" others are frank to say "diseases." Think of the irony of the theory! The only immortality of some reckless sinner is the fact that his descendants suffer from inherited scrofula! More than that, conceive of the cruelty of the riveted fetter upon a life, and the pessimism of a belief which says, "My grandfather, whose life I never knew nor could control, sinned, and now upon me is inalterably fastened the counterpart of his sin, the burning as of fire in my flesh."

Truly it is good news which not only proclaims as a theory that "Man's heredity is from God," but proves it as a fact in human experience. Cases of healing in Christian Science are numerous whose *modus* has been the awakening of some captive stupefied in the prison-house of despair, to the truth that the supposedly hereditary disease can disappear and be no longer known, just as soon as life from God is sought and found. Why then seek among the dead for that which is living? Why bear about burdens of sorrow from the tombs of the past? Why be fatefully driven by the errors of past generations, when as individuals we may find ourselves free in the ever-present Life and intelligence,—in God whose resources of good are infinite?

It is inspiring to think of the discovery of Christian Science, whereby tens of thousands have been emancipated from a control reaching out from the past, been enabled to live fearless and at rest in the sense of God which Jesus knew,—the presence of life and peace. More inspiring yet is it to foresee the redemption coming nigh for millions of our fellow-men; and, in view of the endless vista of happiness, we quietly rejoice that Mrs. Eddy, as benefactor of the race, now sees the results of her lone travail, and shall be satisfied in knowing that the good she toiled to establish abides with men.

Salvation.

JOHN L. RENDALL.

PAUL's injunction, "Work out your own salvation with fear and trembling," is accompanied by the promise, "For it is God which worketh in you both to will and to do of his good pleasure." From the Christian Science viewpoint, salvation is very practical and includes much more than is embraced within the ordinary acceptation of the word. It becomes more than an abstract term embodying a future hope. Rather is it a very present event, "Now is the day of salvation."

With the Christian Scientist, salvation is an individual experience, contingent upon individual understanding and assimilation of truth. In proportion as the individual gains a clearer concept of God and his relation to Him, he finds a present and available salvation, embracing every avenue of life,—that recognition of Truth which enters his consciousness and results in the elimination of all fear, doubt, discord,—whatever "maketh and worketh a lie."

Does mankind need salvation? emphatically yes. That

is, man needs to know the truth. He needs to be awakened from the lethargic conditions of the "carnal mind" which constitute the only selfhood of mortality. He needs to be awakened to the recognition of a diviner sense wherein man knows as "he is known," and in this knowledge God's "image and likeness" is brought into a present realization. The text-book of Christian Science, "Science and Health with Key to the Scriptures" by Mrs. Eddy, studied in connection with the Bible, supplies this need.

Salvation is necessarily individual because each case presents its own specific claims, and no two cases are exactly alike. The reason for this is to be found in the differing mental conditions directly traceable to the "carnal mind," each with a distinct assertion of causation. Salvation, then, consists in the elimination of the supposed cause. Dealing with effects is like trying to stop the leak in a roof by catching the water in buckets. The better way, the scientific way, is to fix the leak.

All sin, all disease, all discord, has its supposed cause in mortal mind, and it has no cause anywhere else. That which is called circumstance, environment, the bias of education, etc., all enter to a greater or less extent into mortal thought as productive of conditions, the nature of which depends upon the thought of the individual. In the proportion that man recognizes his spiritual immunity as an "heir of God and joint-heir with Christ," he also recognizes that neither circumstance, environment, nor former educational beliefs can longer bind him, and he takes a step towards salvation.

"Now is the day of salvation." It is always "now" with God, neither the past nor the future determine the question of salvation. The right thought, the right desire, the right impulse, taking form in right action "now," eliminates the past and determines the future. There is no other time than "now." Jesus said, "Let the dead bury their dead, but come thou and follow me." Future salvation is neither the demand, nor the need of this hour, but a present, practical, and available salvation, which meets the needs of the hungering heart, which heals the sick, comforts the sorrowing, and redeems the sinner "now," which imparts the certainty of God's protecting power, and of the Love that lifts humanity above "earth's discords" to the consciousness of "God with us." It is not the evil which you thought you knew, and have forsaken, but the good you now know and practise that makes for salvation. Salvation, then, consists in knowing good, being good, and doing good, it is the "activity of good," wide-awake, alert, progressive Christianity.

"Be not Afraid."

REV. IRVING C. TOMLINSON.

JESUS has one message for us that should always ring in our ears, and that message is, "Be not afraid." When we, like the disciples, seem to find ourselves in the troubled waters of mortal mind, and foolish fears take possession of us, Christ walks over the wave and in a voice full of love exclaims, "Be of good cheer, it is I, be not afraid." This has ever been the voice of God to His children. The Psalmist said, "The Lord is my light and my salvation; whom shall I fear? the Lord is the strength of my life; of whom shall I be afraid?" "Wait on the Lord: be of good courage, and he shall strengthen thine heart: wait, I say, on the Lord." Here should we take our stand. Is not God infinite Love and is He not all-powerful? We have only to be still, only to "wait on the Lord," and His power will strengthen and restore.

Fear belongs not to the children of God; it is the offspring of mortal mind; it is of dreamland, and without substance or reality. It was Adam who, in the presence of God, exclaimed, "I heard thy voice . . . and I was afraid." A true child of God, in the presence of his heavenly Father,

hears the blessed message, "Fear thou not; for I am with thee: be not dismayed; for I am thy God: I will strengthen thee; yea, I will help thee; yea, I will uphold thee with the right hand of my righteousness."

Daniel is the type of the true Christian Scientist. In the presence of lions he turned his back upon them, and his face toward the light. So may we calmly turn our backs upon error of every form and turn our faces toward the heavenly light of Love divine. Then we shall hear from on high that sweet message which came to Daniel, "O man greatly beloved, fear not: peace be unto thee, be strong, yea, be strong."

Would we escape from fear? Would we utterly destroy it, so that we can live above it, as the mountain rises above the mists? Then let us reflect immortal Love, for where Love is, there fear is not. As the beloved apostle has said, "There is no fear in love, but perfect love casteth out fear, because fear hath torment." Love is the eternal sunshine in whose presence there is living light, for God is light and in Him is "no darkness at all."

This verse from the Christian Science Hymnal is always helpful,—

In heavenly love abiding,
No change my heart shall fear;
And safe is such confiding.
For nothing changes here.
The storm may roar without me,
My heart may low be laid;
But God is round about me,
And can I be dismayed?

The Recognition of Law.

F. J. RYAN.

ONE of the objections made by materialists to Christian Science is that a God who could relieve mankind of the ills from which they suffer, and would not, unless His conditions were complied with, would not be a God of love, but a whimsical tyrant. This is a misapprehension of what Christian Science teaches as to the prerequisites of healing. To a mechanic who made this objection an easy answer was given; namely, The conditions required are not whims to be complied with but laws to which conformance is necessary. In the erection of a building architectural laws must be observed or the structure is liable to fall.

To a printer who made the same objection, the correction, put in the form of an illustration from his craft, was substantially this: When a form has to be made ready for the press, every type, every space, every rule, and the side and foot-sticks have to be in place and the form perfectly "justified" and locked. The law governing "making up" has to be complied with in every way or the form will not "lift" safely. If any part of the form has been carelessly made up, the defect is liable to be developed by the vibration of the press, and both press and form be greatly damaged in consequence.

The healing in Christian Science is accomplished in conformity with law as inflexible and inexorable as the law of gravity. If any of the requirements of that law are ignored the result will not be what is desired. When Jesus healed the impotent man at the pool he bade him go and sin no more lest a worse thing should come upon him.

The error of the materialist is based on the erroneous supposition that Christian Science teaches that God heals the sick in compliance with the supplication of the practitioner, as a governor might pardon a convict in compliance with the "pull" of a political worker, or to be relieved of the importunities of a weeping mother; but this is far from being the case. God being the author of all law, His laws are inflexible, inexorable, and if we are not in harmony with them we should not expect to be either healthy or happy. It is only by compliance with God's law that we are placed in harmony with the Divine author of all real law, and are thus healed of all ills, moral and physical.

Scientific Methods.

MRS. AL-FREDDIE DE LONG.

IN reading the 11th chapter of John's gospel, I have been impressed with the simplicity and lack of detail in Jesus' speech, as there recorded, regarding Lazarus' sickness, death, and burial. When impressed with the necessity of returning to Bethany, because of the need that the power of the Christ be demonstrated, he did not proclaim in an elaborate manner, even to the receptive thought of the disciples, the conditions that he knew had to be overcome in order to prove the power of Life over death. At first he did not tell them in the ordinary way that Lazarus was dead. He did this only after he was convinced by their questioning that they did not understand what had occurred; "then said Jesus unto them plainly, Lazarus is dead." Again, when met by Martha, the sister of Lazarus, we do not find him questioning her as to how he sickened and died. The only inquiry as to what had passed was, "Where have ye laid him?" His greeting to Martha savored of Life, not death,—“Thy brother shall rise again.” Jesus' attitude toward the testimony of the senses in that hour of need, which is explained by our Leader in Science and Health, (p. 75), is of unmeasured importance to us as students and followers of his example.

One of the grand lessons which we learn from this incident is the necessity of refraining from a curious desire to know all the details of any discord that may present itself to be overcome by the understanding of Truth. At this hour, many seem the subtleties which would tempt the workers in the vineyard to pause by the way, either to listen to the history of some disaster or to explain to another the same, when our attitude should be that of watchfulness lest we believe a lie to be truth, and how can we fail to believe it if we continue to rehearse it? If we do not believe it we should refrain from talking about it.

When there was some specific error to be overcome I have felt the handicap of the question, "Tell me all about it," for after mortal mind's curiosity has been thoroughly satisfied, and it is oftentimes nothing else, it is laborious work to destroy that lie to its consciousness. The demand to-day upon Christian Scientists for a higher and grander emulation of Jesus' example is met only through a more earnest, daily striving for that Mind which was in Christ Jesus, and such an attitude toward all sense testimony as will enable us to enter into the realization of his prayer at the entrance to the sepulchre where Lazarus lay, "Father, I thank Thee that Thou hast heard me."

The Lesson-Sermon.

E. J. H.

WE can hardly estimate the good we derive from the study of the Lesson-Sermons in the *Christian Science Quarterly*. Each lesson brings us what we need for every day of the week. How often, when the error to be overcome seemed so great, and when we were at a loss to know how to meet it, the lesson has brought us the statement of truth whereby we could realize error's unreality and so destroy it. The lessons are both a preventive and a cure of disease and discord. "His truth shall be thy shield and buckler." These lessons contain the Word as given in the Bible references and spiritually interpreted by the references from Science and Health. As we gain the spiritual sense of the Word, it becomes to us the healing truth. "Ye shall know the truth [understand it spiritually], and the truth shall make you free." Then we are able to prove the Psalmist's statement, "Because thou hast made the Lord, which is my refuge, even the most High, thy habitation; there shall no evil befall thee, neither shall any plague come nigh thy dwelling."

One morning a Christian Scientist, in studying the lesson,

had a clearer realization of the truth it contained than usual. A few hours later, her little boy was skating on the river. This was during ice harvest, and a narrow channel had been cut across the river to float the ice through to shore. The little boy was making a long run and did not see the channel until too near it to stop. He fell into the river where the water was very deep and very swift. He swam across the channel, but was unable to get upon the ice as the water was so swift that it drew his limbs under the ice. The men were unable to reach him in time to give any assistance, and there seemed to be no way of escape, when, with presence of mind, he changed his position, made a great effort and raised himself clear up on the ice and was saved without any human help. Who will doubt that the morning study of the lesson enabled this mother and her boy to realize the promise, "I will be with him in trouble; I will deliver him."

I know a Christian Scientist, living where there are no others, who meets and destroys the attacks of error of every sort by the study of the lessons. Her little grandson had a severe cough, and not being able to overcome it by silent treatments, she and his mother went over the Lesson every day until the cough was entirely healed, which was not many days.

This little incident reminded me of the siege of Jericho, when Joshua was commanded to go round the city every day until the seventh day. They were not to shout until the seventh day. The "still, small voice" of Truth was to be heeded. Joshua was obedient to the call of Truth. We are told that "he rose early in the morning" and began the compass of the city of Jericho. This is surely a lesson to us. We need to begin early each day to encompass every wall of error with the Lesson-Sermon, and when we assimilate the truth it contains, the walls will fall down flat.

Sin and Sickness—Twins.

FRANK BELL.

THE close association of sin and suffering is a phenomenon of every-day observation. Mankind readily recognizes and acknowledges that a career of wickedness is usually attended by bodily ills in approximate proportion to the degree of the excesses indulged, and that frequently the most malignant maladies accompany the vilest vice. As to why this is so, most persons seem to be satisfied with the vague assertion that "outraged nature" imposes penalties for "violated laws." The vital point of evil's awful lesson is lost to those who fail to see that the distressing and debilitating accompaniments of sin are the direct results, not only of the sinful acts, but of the mental conditions of which those acts are themselves merely expressions or manifestations. In the frequent concurrence of wicked deeds and physical suffering, Christian Science sees but twin children of one evil,—wrong thinking. Obviously, the antidote for wrong thinking is right thinking, and the Christian Scientist understands, therefore, that the real cure is to be found, not in a "soothing syrup" for the pain, nor in a "Thou shalt not" for the sinful act, nor in any attempt to reach either one through the other; but that each must be met and mastered in the mentality of which it is the expression.

Mortal mind, in its theorizing as to cause and effect, is as far wrong when it attributes the sickness of debility to the sin of drunkenness, for instance, as when it ascribes the sin of ill temper to the sickness of dyspepsia. Coincidence, not consequence, is the proper word in each case.

The true and permanent corrective is found by those who seek neither cause nor cure in matter, but who find the unfailing remedy, for sin and sickness alike, in the understanding of the real man's rightful dominion over all the earth, including that portion of it commonly denominated the human body.

Selected Articles.

The following article is copied from the editorial pages of *The Church Visitor*, the official paper of the Epworth League in the Cincinnati district:—

LIVING EPISTLES.

While at the World's Fair we were the pleased guest of Mr. and Mrs. Frank Obear. They were strangers when they consented to entertain us, but after two weeks of happy sojourn we parted with them, feeling that we had enriched life by our brief acquaintance. They are ardent disciples of Christian Science, and the best arguments for the new cult we have ever seen. They have studied it thoroughly, and give many plausible reasons for accepting its teachings. We employed our leisure reading the books and tracts they furnished. We attended two of the public services of the church. We saw two thousand people at their Wednesday evening testimony meeting, and heard several persons witness to the healing efficiency of the system.

After reading and hearing a deal of Christian Science teaching we are at a loss to see why its disciples think it necessary to withdraw from the established churches. It must be admitted that Mrs. Eddy is a woman of superior intelligence, and that she has expressed her views in a very fascinating style.

We are of the opinion that Christian Science lived up to would greatly benefit mankind. More harm is done by dosing with noxious drugs than good is done by the whole *materia medica*. Morbid fancy and wasting worry are causes of much suffering and fatality. Christian Scientists possess their souls in patience, borrow no trouble, are strangers to hypochondria, and they are kind and fraternal to each other. Health is catching, and these self-possessed people spread the contagion. They use no intoxicants, opiates, or tobacco, and in these respects, at least, are worthy of all imitation. Their devotion to their church shames the orthodox sects. Think of a prayer meeting of two thousand people in the middle of the week!

These people "search the Scriptures;" they are Christ-consecrated; they believe that sin and sickness are diseases to be expelled by holiness, and they live what they profess. Restless, discontented minds and foul hearts have more to do with creating vice and crime than any personal devil. Whatever can exorcise these demons that possess so many, should be welcomed. It was David's transforming harp that emancipated Saul and made him sane. It was the harp of Orpheus that silenced the seductive strains of the Sirens. The lyre of love has a charm in its strings to chase away sin and its sorrows. We are no Christian Scientist, but we have no stones to throw at any who love the Lord.

We appreciate this editor's words because they express his deliberate judgment after intimate association with Christian Scientists and the reading of the official literature of the denomination. The most ready answer we can give to his query, why do Christian Scientists think it necessary to withdraw from the established churches, is the words of Rev. T. A. Goodwin, a Methodist minister of Indianapolis, "The churches ought to welcome Christian Scientists, instead of making it so uncomfortable for them that they are compelled to start churches of their own."—[ED.]

A Christian Scientist could have no fear of evil thought, for he understands how to overcome evil with good, neither could he resort to evil mental practice, for in so doing he would be obliged to depart from Christian Science, substituting a wicked mental practice. Every effort of the true Christian Scientist is consistent with the understanding that God is Love and that He is the only real power. Such practice can never do harm, but must always do good.

It is recorded in the Bible that Jesus after doing "many mighty works" was accused of casting "out devils through

Beelzebub the chief of devils." His reply was, "If I by Beelzebub cast out devils, by whom do your sons cast them out?" This silenced his accusers.

From the tone of much criticism one might be led into thinking that Christian Science was being subjected to the same accusation. The condition which Christian Scientists find existent in the world to-day more than justifies the efforts which they are making to afford relief to humanity. With sickness and sin on every side, the call is for something more than blind faith, and if "every good gift and every perfect gift is from above, and cometh down from the Father of lights, with whom is no variableness, neither shadow of turning," then is it not a comparatively easy matter to discover the source of anything which brings forth the multitude of good works which we find accompanying the teaching and practice of Christian Science?

ALBERT E. MILLER.

Pennsylvania Scrantonian.

Christian Scientists do not claim to possess supernatural gifts, but they do claim that the teachings of Christ, in their application to the healing of disease, are as practical to-day as they were when our Saviour and his disciples dispelled sickness with the Word. The following letter has just been received from a member of the Institution of Civil Engineers in London. He writes, in part:—

"One of Lord Maitland's men at the war was kicked in the knee by a horse. After being twice operated on and pronounced incurable, Lady Maitland suggested Christian Science. He went to a practitioner and was healed within three quarters of an hour. He had stammered badly for years, and this also was put right. The leading surgeon at Westminster Hospital could not believe it, and remarked that it was simply a miracle."

Herbert A. Parkyn, M. D., in explaining the cures of Christian Science, says, "A few years ago physicians in general laughed at the idea of Christian Science curing genuine physical complaints; to-day the physician who denies the fact proclaims his ignorance of what is actually going on in the very fields of thought and research in which he should be most interested." RICHARD P. VERRALL.

New York Globe.

The fundamental teaching of Christian Science that God is All in all, is Scriptural; hence all that really exists is God and His infinite manifestation. This Scriptural view exalts one's idea of God far above his former sense of Him, and enables one to contemplate infinity. From this elevated point of view he clearly perceives that the claim of evil as entity involves the limitation of God as infinite good. The manifest phenomenon of evil, known as sin, sickness, disease, and death, must therefore be seen for just what it is; namely, the belief in something apart from the infinite, the belief that there is something opposite and contrary to God, notwithstanding the Scriptures declare that God is All in all. The abstract statement that matter is unreal needs the following explanation: Christian Science teaches that all things are, that the universe is, is real, and at hand; but it also teaches that Spirit alone is substance, and, hence, that the universe is spiritual and not material.

To the uninformed it appears that Christian Science teaches that there is no such thing as sin, disease, and death. Christian Science refers such an one to the works of Jesus, who demolished all these evils, overcoming them with the Word of God. He thus proved them to be nothing more than a false appearance, by destroying them. He taught his followers to do the same, and so it is at the present time. Christian Scientists are enabled to prove them falsities through the understanding that God is the only creator, and that He made all, and that all He made was pronounced "very good."

JAMES D. SHERWOOD.

El Paso (Tex.) Herald.

The Lectures.

Leavenworth, Kan.

More than five hundred people attended the lecture given in the Opera House, Thursday evening [November 3], by Bicknell Young of Chicago. Mr. Young was introduced by Rev. Samuel Pearson, pastor of the First Congregational Church, who spoke in part as follows:—

Christian Science has passed through the initial stages peculiar to all religious movements, and its influence cannot be measured by figures. Thoughtful, devout minds are seeking for whatever permanent contribution Christian Science has to make to the established beliefs of Christendom. The Christian Science church has emphasized the study of the Bible, prayer, and experience or testimony. These three features of the new church are not new, but have been peculiar to the history of the Christian church in its several divisions, but there is a peculiar revival of interest in these particulars, under this church's insistence. As a humble follower of Jesus, with many others present, I come with an open mind to hear from one who is competent and authorized, an exposition of the faith and Principle of Christian Science. It is with sincere pleasure I introduce to you the lecturer of the evening.

Leavenworth Times.

Winchester, Mass.

A large audience last Friday evening [November 11] took advantage of the opportunity to attend a lecture on Christian Science by Edward A. Kimball, given under the auspices of First Church of Christ, Scientist. Mr. Kimball was introduced by Samuel J. Elder, Esq., who said in part,—

"You have come together to-night, friends, in response to an invitation to listen to a presentation of some of the facts concerning Christian Science. I do not need to say to you that this subject is not one which can be dealt with in the compass of an ordinary discussion, and I apprehend that you have not assembled with the anticipation of hearing the subject exhausted, or more than dealt with in some of its stages."

We print on first page, in full, the lecture given by Edward A. Kimball, which is worth reading, whether you believe in Christian Science or not. There is a great deal to be learned from reading this lecture, as it brings to light much that has not heretofore been perfectly clear to many persons. It certainly is a very forceful and clear exposition of what Christian Science really stands for.

The Winchester Star.

Peoria, Ill.

How the world moves! Yesterday afternoon [November 13] the Grand Opera House was packed to its full capacity with people who wanted to learn of Christian Science. It was a most representative audience in that it included men from all the advanced walks of life, lawyers, judges, business men, and all who had made of life a success.

Strange to say, the orator of the occasion was introduced by an orthodox theologian, to wit, the Rev. Dr. Simmons, and a splendid introductory speech he made. At the outset he declared that this life was not the only thing worth living for, but that greater things lay beyond. He stated that in privileges and in practice all the members of the associated churches had been working along the same line. There were times when there were untold truths that had to be developed, and it was possible that the Christian Scientist had reached those untold truths. There are truths that have been neglected; there are truths that have been ignored, but they still come up, and in these later days they are found to be omnipotent.

There is in the Scripture the pronouncement that the truth shall make you free, and we in these latter days,

searching after the truth, find it expressed in Christian Science. We give to you of the Christian Science faith a greeting, and moreover we state that you have discovered the truth that shall make you free. We believe that in the fullness of God's own good time this freedom will be extended to all, and that the power which cleanses shall cleanse us to the full freedom that lies in Christ Jesus. This was a beautiful expression of the freedom of faith of which Dr. Simmons is a prime example.

Following the introductory, ex-Attorney-General Clarence A. Buskirk of Indiana came forward. He is a distinguished citizen of the middle west, and his words were attentively listened to by the large audience, to many of whom the first light on Christian Science was being given.

Peoria Herald-Transcript.

Englewood, N. J.

On Monday evening [November 21] the auditorium at the Lyceum was respectably filled with a very attentive audience, gathered to hear an exposition of Christian Science by Judge Septimus J. Hanna of Colorado Springs.

The speaker was introduced by Councilman William A. Childs, who said in part,—

The wisest man that ever trod the globe, he who accomplished vastly more than any other, said that his wisdom was not of this world; in other words, that it could not be had through a study of matter; nevertheless, he said that all men could and should acquire it, and when acquired and applied, they could not only do the wonderful works that he did, and greater; but more, it would bring to them every conceivable good thing, and bring it now and bring it here!

My friends, by reason of the consecrated work of one woman in our own time, Mrs. Eddy, Christian Scientists assert that they have acquired this Christ knowledge, and thus far, in some small degree, they have succeeded in applying it with results which prove conclusively the truth of their assertion. Naturally enough, then, we are exceedingly desirous that everybody share with us this truth and these benefits.—*Englewood Press.*

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Corner-stone Laid in London.

THE following correspondence between our Leader and First Church of Christ, Scientist, London, upon the occasion of the laying of the corner-stone of the new edifice in that city, will be read with interest.

London, S. W., December 8, 1904.

Beloved Leader:—It is my privilege to send you, on behalf of the Board of Directors of this church, the enclosed memorandum of the proceedings at the laying of the corner-stone of our new church building—notice of which you will have received by cable last month.

We are very grateful for this onward step and rejoice to feel that stone from your native state, built into the walls of this, the first Christian Science Church in London, will always remain a tribute of our deep gratitude to you as the Discoverer and Founder of Christian Science, and a happy emblem of unity, not only of the two countries but of the one Cause.

Sincerely yours,

GODFREY R. PEARSE,

President, Board of Directors First Church of Christ, Scientist, London.

[The following is a copy of the memorandum referred to in Mr. Pearse's letter.]

The corner-stone of First Church of Christ, Scientist, London, was laid on Tuesday, November 29, 1904, at noon. The following order of service was conducted by the First and Second Readers, Mrs. Thomson and Captain Baynes: Reading from the Bible (1 Corinthians, 3 : 9-14; Ephesians, 2 : 19-22; 2 Corinthians, 3 : 5, 6); reading from "Miscellaneous Writings" by Mary Baker G. Eddy; extracts from the letter to First Church of Christ, Scientist, Denver. Silent prayer followed by the audible repetition of the Lord's Prayer, and the laying of the corner-stone of granite from Concord, N. H., the repetition of the daily prayer from the Manual, and the scientific statement of being.

The stone was laid by Mrs. Graves Colles, C.S.D., and the following officials were present: the board, the building committee, the trustees, the architect, the finance committee, the publication committee, the Readers, the clerk, the librarian, the organist, the caretaker, the First and Second Readers of First Church of Christ, Scientist, Dublin; the First and Second Readers of First Church of Christ, Scientist, Edinburgh; the First and Second Readers of First Church of Christ, Scientist, Brighton; the First Reader of First Church of Christ, Scientist, Manchester; the First and Second Readers of Second Church of Christ, Scientist, London. A lead box was enclosed beneath the corner-stone containing the Bible and all Mrs. Eddy's works, the current numbers of the Christian Science periodicals; viz., the *Journal*, *Sentinel*, *Herold*, and *Quarterly*, and a copy of the constitution and rules of First Church of Christ, Scientist, London.

MRS. EDDY'S REPLY.

First Church of Christ, Scientist,

Sloane Terrace, London, England.

Beloved Students:—You have laid the corner-stone of your church edifice impressively, and buried immortal truths in the bosom of earth safe from all chance to be challenged.

You whose labors are doing so much to benefit mankind will not be impatient, if you have not accomplished all you desire, nor will you be long in doing more. My faith in God, and in His followers rests in the fact that He is infinite good, and He gives them opportunity to use their hidden virtues—to put into practice the power which lies concealed in the calm, and which storms awaken to vigor and to victory.

It is only by looking heavenward that mutual friendships such as ours can begin and never end. Over sea and over land Christian Science unites its true followers on one Principle, the divine Love, that sacred *arc* and essence of Soul which makes them one in Christ.

MARY BAKER G. EDDY.

Pleasant View, Concord, N. H., December 23, 1904.

In Answer to Many Queries.

WE are often asked to "say something in the *Sentinel*" calculated to correct some practice or custom which the person who makes the request believes to be a growing evil destined to work great injury to our Cause, but in a majority of instances we have found that the evil complained of is one which can be readily corrected by obedience to the letter and the spirit of the Church Manual, and it therefore seems inexpedient to devote any of our limited space to articles which we are requested to write upon these various subjects. Another reason why a discussion of some of the evils reported to us cannot be undertaken is, that they are purely local matters, upon which persons may differ without bad motives and without intending to abridge the rights of any other person. Recourse to Article XXI., Section I, of the By-laws of The Mother Church is the first step necessary to the settlement of all such difficulties and differences of opinion, and to the extent that the spirit of this by-law is understood and its letter practised, all seeming necessity for the expression of an opinion by a third party, even if that third party be the *Sentinel*, will be removed.

There is yet another class of questions that we are called upon to answer, which deal with the deep things of Mind, and which are fully answered in our text-book. Questions of this latter class we cannot undertake to answer, and it is quite unnecessary that we should. The Scriptures unfold a perfect plan of salvation, and through the study of Science and Health we are enabled to understand and follow this plan, but this work each individual must do for himself. While a person of consecrated life and keen spiritual perception may point out the way of salvation, he cannot achieve salvation for any individual other than himself.

The pith of what we have to say about the many questions propounded to us is this: a full statement of Christian Science is contained in Science and Health and the other published works of Rev. Mary Baker G. Eddy, and those who faithfully study these writings and live in conformity with the spirit and the letter of their teachings will find less and less need for reliance upon human opinion.

The Church Manual presents a thorough and adequate code of moral and spiritual procedure for the guidance of Christian Scientists, and a more general knowledge of this book will be found useful. The demand of Truth is that each individual shall work out his own salvation, and

while every one of us can be of assistance to our fellows through prayer and example, we cannot carry them into the kingdom of heaven.

We shall continue to discuss from time to time such subjects as seem necessary for the good of the Cause, but we cannot undertake to consider all the subjects presented to us with the request that we handle them in the *Sentinel*. We suggest to our readers that they consult Science and Health and the Church Manual when in doubt upon any question, and we feel sure that if they do this patiently and prayerfully, they will find little need of asking for more light.

ARCHIBALD McLELLAN.

Our Resources.

THE inquiry, "What is he worth?" is made from many widely differing motives. The business man may wish to know something of the character and resources of a possible employee or partner, and those who are wise may desire to have this question answered before admitting any one into the sacred circle of friendship. In no case can the mental and moral elements be ignored, for it will be found that everything really depends upon them. Even the great Teacher did not disdain the current coinage of thought in illustrating spiritual truths. He told of the prodigal son who asked for his inheritance before entering the world's great arena; and again, he used the terms of traffic in telling of those to whom the "Talents" were given. We learn in Christian Science that Truth begins its mighty work in us where it finds us, and never ceases until a complete transformation is effected in all our habits of thinking, speaking, and acting, for Truth is not only the "author" but is also the "finisher" of our salvation.

In one of Job's mournful soliloquies he declares that he came naked into the world, but a modern poet says in contrast,—

Not in utter nakedness
But trailing clouds of glory do we come
From God who is our home.

These words surely point to the mental and spiritual endowment with which our heavenly Father provides His every child. Man's patrimony consists in his ability to understand and reflect God, and he proves his sonship in the demonstration of those qualities which have their origin in supreme intelligence. God never limits His gifts, His word is ever, "Son, all that I have is thine." If we are conscious of any lack of ability we should see clearly that although the divine bestowals are free for all, the capacity and disposition of the human sense must needs limit our receptivity, until, through the Christly overcoming, these give place to a perfect realization of the Truth of being. It is of less importance to know whether a man has received one "Talent" or five than to know how he is using what he has received. There are certain foundational qualities which are indispensable to every right character, qualities which all claim at least to possess; viz., purity and honesty. We learn, however, through the understanding gained in Christian Science, that it is necessary to express the rounded whole of the true ideal, and not "a broken arc."

If we are ever conscious of a sense of discord, either in respect to our health, home, or business, we have boundless resources in Truth from which the need may be supplied, and neither indolence, indifference, nor obstinacy should be allowed to hinder our appropriation of them. A story is told of a worthy woman who was harassed by her household cares, especially by the indolence and unfaithfulness of her servants. She consulted a hermit, famed for his wisdom, and he gave her a small sealed casket, telling her to carry it three times a day into the stable, the cellar, and the kitchen, respectively, and to continue this for a year. It will be readily seen that while this led at first to the uncovering of many errors, it finally led to their elimination. We are

thus reminded that greater persistency is needed in carrying the truth, which we have so often proved effective, into the midst of seemingly insurmountable difficulties, ever remembering the angel's assurance to Mary, "With God nothing shall be impossible."

In estimating our resources we should never forget the Master's words which are made so clear in the light of Christian Science, "Unto every one that hath shall be given, and he shall have abundance." Great indeed is the gift of divine Love bestowed upon us through the one who was faithful in carrying the "Talents" given into her keeping to the thought conditions of sin and sickness where the need was most urgent. As the truth was made known to humanity, those who were willing to receive it exchanged their beliefs of sin and sickness and want for the spiritual ideas of health and holiness, "the unsearchable riches of Christ," and it is ours to know that neither temperament nor environment can rob those who are faithful to Truth of their divinely bestowed resources.

ANNIE M. KNOTT.

The Heavens are Telling.

From Thy will stream the world, life, and nature.

THOUGH our sense of space and time, with all the other limitations of human thought, can but sadly mar our concept of God, nevertheless we may be inspired, find escape from a baser self, as mind and heart are opened to the grandeur and sublimity of the universe about us. To turn away from the realm of sickness and sin, and let thought speed into the star-illuminated corridors of the sky, is to find a richer communion, a nobler aspiration, calmness and strength, and there is much to indicate that the Master's frequent retirement, in the night season, to the mountains and desert places apart, was for that refreshment and strengthening which the spiritual interpretation of nature ever brings, and which served to relieve any sense of exhaustion attending the constant self-expenditure of his life.

In a recent article on the celestial distances, Professor Newcomb has spoken of the solar system as "merely a point! a sphere with a radius 400,000 times the distance of the sun. An idea of this distance may be gained by reflecting that light, making the circuit of the earth seven times in a second, and reaching us from the sun in eight minutes and twenty seconds, would require seven years to reach the surface of the sphere we have supposed. Now, the first result of measures of parallax is that within this enormous sphere there is, besides our sun in the center, only a single star; named *Alpha Centauri*."

A sphere having double this radius, that is, 800,000 times the distance of the sun, and containing eight times the volume, would enclose only about eight additional fixed stars. Estimating upon this basis, he concludes that the stars which are known to exist, and which have been tabulated in large part, occupy a region "whose boundary is *two hundred million times the distance of the sun*,—a distance through which light would travel in about thirty-three hundred years!" The impinge of this thought of immeasurable vastness begets a sense of awe, and of human insignificance, such as may have moved the Psalmist to say "What is man, that thou art mindful of him? and the son of man, that thou visitest him?" Indeed one is stunned rather than uplifted by it, unless this overwhelming thought of the immensity of being is lighted up with the realization that the all-supporting, all-embracing infinite is divine Love, our Father-Mother God. The abiding faith that He who hath bound "the sweet influence of the Pleiades," and loosed "the bands of Orion," who bringeth forth "Mazza-roth in his season," and guideth "Arcturus with his sons," is *our* strength and *our* defender,—this gives an entirely new significance and value to the data of astronomy, as it does also to the data of every other domain of nature.

When we can discover within the flower, beyond the sunset, and above the stars that which makes us more adequate for the sick-room, more authoritative over sin, more calm and Christ-like in every human exigency and demand,—then, indeed, have we found nature's secret, and though perhaps unphrased and unframed, our philosophy will stand every assault of doubt and distress.

The students of Christian Science gratefully witness that its teaching has given them a more helpful hold upon God; that as never before they now find quiet and strength of heart, amid the trials, temptations, and annoyances of human life, by thinking upon the greatness, the repose, the imperturbed stability of the Principle of Being. To them, and to all who are no longer in contented enslavement to material sense, the heavens do "declare the glory of God," and in a way which leads to the demonstrable assurance that it is He who forgiveth all our iniquities, and who healeth all our diseases.

JOHN B. WILLIS.

Letters to our Leader.

Boston, Christmas, 1904.

Rev. Mary Baker G. Eddy,

Pleasant View, Concord, N. H.

Beloved Teacher and Leader:—The day which Christendom celebrates as the one on which Jesus of Nazareth was born has again returned, but you have taught us that the true Christmas,—the birth of the Christ, the Saviour of mankind,—is not a day in the mortal calendar; it is a revelation to each human consciousness that divine Love is ever-present and omnipotent, and for the understanding of this Science we are indebted to you. The multitude of sick who have been healed and the sinful who have been saved stand forth as veritable witnesses that the inspiration which impelled you to write the Christian Science textbook was divine.

With a deep sense of the blessings which have come to us through your teaching, counsel, and unceasing love for us, we send this expression of our profound gratitude.

Lovingly, your students,

IRA O. KNAPP, JOSEPH ARMSTRONG,
WILLIAM B. JOHNSON, STEPHEN A. CHASE,
ARCHIBALD McLELLAN.

Brookline, Mass., December 27, 1904.

Beloved Leader:—I feel it is our privilege to share with you, this Christmas time, the joy that has been brought, through your teachings, to the little band of workers in Wellesley, Mass. Three years ago services were held every Sunday in a little studio, where a few college students gathered. We soon felt the need of a larger room, and one in a better location. We procured a room at "The Wellesley Inn," where many of the students board. Last winter we were offered a still larger room in the same building, which is the new dining-room, beautifully finished in the Dutch style. Our attendance has increased and a number of new students from the college and "Dana Hall" come to the service, also several residents of Wellesley, and some from two of the neighboring suburbs. Our Second Reader is a junior, and our treasurer and organist are both sophomores in the college. There has been good, quick healing of sickness; fear of contagion has been destroyed, a sense of over-study has been removed, anger and hate have melted away before the presence of Love, and the thought of limitation has been met by the understanding of the one infinite source of supply. At the time of yearly examination Truth has met every need, and instead of being sent home overworked, as many of the students are, those who have turned to God as the one Physician have been able to keep at their post, well and strong and able to do good work in all their studies.

Respect for all those who are known as Christian Scientists in this college settlement is growing rapidly, and the truth which these young women are learning to love and live will be carried into many different cities at the close of their college course. It has been our privilege to send as our Christmas offering a contribution to The Mother Church Building Fund. Our treasurer forwarded to Mr. Chase fifty-two dollars. This meant self-denial on the part of the students, as most of them have only "pin-money," but they realize the great joy of giving toward the building of this church which stands for the redemption of mankind.

My own gratitude to you is deeper than words. All that I am, or have, I owe to your faithful teachings, and my prayer is to be worthy to voice God's word to His little ones.

Your loving follower,

ROSALIND WHEELER.

Rock Island, Ill., December 20, 1904.

Mrs. Eddy.

Beloved Leader:—Our little church hailed with joy and satisfaction the opportunity afforded us to make an offering through you, at this happy season, to The Mother Church Building Fund. Soon after the publication of your message in the *Sentinel*, our joint boards, in a notice to the church members, called their attention to this happy opportunity and stated that it was their belief that the church would be delighted therewith and would make a hearty response thereto. The result proved that their faith was well founded, for a hearty and generous response was made, amounting to five hundred and eleven dollars and twenty-five cents; and accordingly we have this day forwarded to Mr. Chase a draft for the same. The above sum is in addition to our regular subscription of two thousand dollars, which has been paid up in full, and it is our further expectation to make considerable additional payments.

We are indeed grateful to you for this special opportunity of attesting our love and reverence for you in the way of your leading, and in the real work of the church,—healing the sick and sinful, and lifting the world to a higher and nobler plane,—it is our constant prayer that we may do our full share.

Yours in truth,

F. C. DENKMANN, *Chairman Joint Boards.*

First Church of Christ, Scientist.

Paris, November 24, 1904.

Reverend Mary Baker G. Eddy.

Dear Leader:—Having studied my Thanksgiving lesson, and with a grateful heart reviewed all the good which has come to me during the past year, I feel a sincere desire to thank you for the great blessing which you, with unselfish love and labor, have given to mankind. Though German, I am able to read all your books and to gain through them each day a little more of the spiritual understanding, which does not depend on language. I feel glad, thinking that, after my return to Germany, I can help the faithful workers who came from America to our country to sow the good seed. I know that the only way to prove our gratitude, is to help others "on the way there."

Christian Science will become a strong tie between the nations, for wherever it is accepted, it demonstrates "on earth peace, good will toward men." I feel that I have still many battles to fight with self and the senses, yet I rejoice in going the way which you, dearest Leader, have pointed out, and on which you are going before us, holding up for us the high standard of the perfect man.

In gratitude and obedience,

Yours lovingly,

EVA MARIA SCHNEIDER.

Testimonies of Healing.

I wish to express my gratitude for the understanding of God that I have gained through the study of Christian Science. Three years ago Christian Science found me a most miserable woman. I was a great sufferer physically and mentally. I had several years before graduated from a regular school for trained nurses and followed my profession for a number of years, the greater part of the time being superintendent of a hospital and associated with some of the ablest physicians in the country. I saw their most noble efforts often fail to alleviate pain or prolong life, and having myself found it necessary at two different times to submit to surgical operations which afforded only temporary relief, I found myself losing faith in *materia medica*. I gave up my profession as nurse to be married, and, as I then thought, to live a life of happiness and peace, but sickness, first in one form and then another, manifested itself, till life became a burden to me, and my great fear was that I would become a burden to my family. I could find no relief in *materia medica*, and finally, in desperation, I turned to Christian Science. I knew nothing about it or its teachings and had always entertained a sense of ridicule towards it; I had no faith in it, but just grasped at it as a drowning man would at a straw.

I went to see a practitioner and in less than a week was lifted clear out of the gloom. My healing was rapid. I had suffered intensely from indigestion, chronic bladder trouble, aggravated nervousness, and insomnia in its worst form. Of all of these I was healed. I had worn glasses for twelve years for far-sightedness and astigmatism. I laid them aside when I commenced studying Christian Science and have never had them on since, and have never felt the need of them. I was also healed of intense fear. My healing certainly was marvelous and so impressed myself and family that we made a thorough investigation of Christian Science, feeling sure that it had a divine origin, with the result that no member of the family has taken one drop of medicine in the last three years and we never before enjoyed such perfect health. Any form of inharmony that has manifested itself in this time has been very quickly destroyed by our understanding of Christian Science.

I am most grateful for this beautiful truth taught us in "Science and Health with Key to the Scriptures" by Mrs. Eddy. I am grateful for all her writings, also for the helpful thoughts we receive from the *Sentinel* and *Journal*, and I am also grateful for the help which class instruction has brought me in the application of this grand truth. I do know that with reformation and the application of the truth taught in Science and Health, sickness, sin, sorrow, and discord of any name and nature can be healed.

MARY E. HINTON, Salt Lake City, Utah.

In March, 1890, the healing power of God through Christian Science was first brought into our home. The benefits received have been many. The first help given was for my husband, who had been for years a great sufferer with stomach trouble. Careful dieting and abstinence from certain articles of food seemed to prevent the acute attacks, but he took medicine after each meal and tonics of different kinds at stated intervals. He had been under the care of different physicians, "and was nothing bettered, but rather grew worse." At a time when he was discouraged and almost desperate, a friend, who had been healed of a serious stomach trouble, persuaded him to try Christian Science treatment, which proved a great blessing to us. He has used no medicines or drugs of any kind since that time.

The winter following, a sister who was visiting us was healed of constipation, peritonitis, and diphtheria, after

learning of the work done for him. My mother was then advised by my husband to come to our house from the mountains, and to be treated. She had been an invalid for over twenty years, suffering from chronic constipation, intestinal obstruction, and numerous attendant ailments. She was entirely healed after several weeks' treatment.

After all this wonderful benefit to those dear to me, I acknowledged their healing, but remained stubborn and wilful, and would not take help for myself, though sadly in need of treatment, and kindly importuned by my husband to do so. The following March, 1891, when the grip was prevalent in our city, my husband came under it and seemed exceedingly ill, but he relied upon Christian Science treatment, and in less than a week returned to his business, perfectly healed, while others taken sick at about the same time, and under medical care, were housed much longer, and some passed away.

After some argument, I was persuaded to have help for a severe headache at the time my husband was ill with the grip. For years I had been subject to spinal headaches, the result of an attack of spinal meningitis. When taken ill I would be prostrated for several days. The one treatment is all that I ever had for this complaint, and I was up and around that afternoon and do not remember having a severe headache of that nature since. It was some time even after this help before I was willing to rely wholly upon God for all benefits. A desire to know and understand this wonderful truth has been gradually growing, until now it has become our main dependence.

Three years ago in February I was laid upon my bed with pneumonia. I was confined to my room for two weeks, and while, to mortal sense, I seemed a very sick woman, I was again raised up by Divine power. Through the faithful work of the practitioner whom we call when in especial need, I was lifted above the seeming cloud. The Bible and its promises have become more precious, and my love for God, and my faith in Him has been increased as I come to understand more of its spiritual teaching through the study of our text-book, Science and Health.

I feel under a personal obligation to the one who received this revelation of Truth, and through whose faithful and steadfast work I have been able to find help. God has surely showered blessings upon us, for which we are thankful. I am unwilling longer to withhold my testimony of help received and desire to send this simple acknowledgment as a small token of my thankfulness to God for His many blessings to me, of which I have mentioned but a few. I trust that this may be of help to some one else.—MRS. GERTRUDE GILLETTE, Denver, Col.

I have attended Christian Science meetings, held in large churches, crowded with people; and I have been where there were only two or three met together to give thanks to God. Whether there are few or many, God's presence and care are always felt. I have sometimes gone to the meeting with some ailment,—it might be a headache or weariness, or only a load of care, but whatever the trouble, I have always been helped, and usually entirely cured, simply by being at the meeting. We are learning, in Christian Science, that all the promises in the Bible are true, and that they are intended for us here and now. We know of the God who forgiveth all our iniquities; who healeth all our diseases. We have realized the truth of the saying in Isaiah, "They that wait upon the Lord shall renew their strength."

I am a teacher in the public schools, and Christian Science has taught me many lessons that a teacher needs to know. It has taught me to see the beauty of the child's character, and to be constantly on guard lest prejudice against one of the little ones should come in some subtle form. Above all, it has taught me to appreciate the privilege I have of being continually among the children.

I pray constantly that I may pattern my life after that of him who said, "Of such is the kingdom of heaven."

DOROTHEA LOWE, Leadville, Col.

How eager we should be to tell of the blessings that have come to us through the truth as revealed in Christian Science. I have been so greatly benefited that I could not enumerate the blessings, and scarcely know where to begin. The first benefit which I received came from reading Science and Health to a colored woman who was living with me as a cook. She had passed through a surgical operation which had left her bankrupt in more ways than one, and had been directed to Christian Science by me without my having any knowledge of it. I had only heard of it and suggested it to her. She left my house, lived with Christian Scientists, and upon her return asked me to read Science and Health to her. At that time I was in the very depths of despair, bordering on melancholia, and the gloom was dispelled while reading to her. I was filled with sunshine,—happiness,—and this overflow went out to my friends; every one would remark upon the change and all were glad to see it. All the world is seeking for peace and happiness, and if all would humbly and earnestly study the Bible and Science and Health, it would certainly bring that peace which Jesus promised.

There have been many ailments overcome in my family by the declaration of the truth,—the grip, eczema of long standing, severe catarrhal trouble of the kidneys, chilblains, and other ills. Through the aid of a practitioner I have been relieved of heart trouble, caused by indigestion, extreme nervousness, severe inflammation of the eyes, and I am indeed a different woman since learning that Life is God. I am deeply grateful to God, and to Mrs. Eddy for the revelation of this beautiful truth, and for what it has done for me.—MRS. A. WINSTON, St. Louis, Mo.

I did not come to Christian Science for any physical need but for a number of other things. During the healing of my mother I became interested, and the more I read in Science and Health the more I wanted to read, until I became aware that I had lost or got rid of a terrible disposition. For this blessing I am very thankful. I owe all I have to God,—my home and the peace and harmony that have come into it. Our little boy is nearly four years old and has never taken a drop of medicine, for he knows where to go and get help, that is, in the Bible. He will ask me to read to him when he does not feel right, and always says it makes him feel better. It is beautiful to see what God's little ones can do in a home.

Such ailments as measles, colds, appendicitis, severe headache, and a number of other troubles have been rendered null and void as we have proved our true relation to God. Our little boy got his finger pinched in a clothes wringer so badly that the nail dropped off and it seemed to be bleeding terribly, but that was all stopped in a very short time and he was at play again as though nothing had happened. We have much to be thankful for.

It seems a hard battle to fight to rear children in this thought when some one in the household is opposed to it, but it can be done, for I had this to meet for nearly two years. Now all is peace and kindness, however, and my husband is coming into an understanding of the birth-right of man. I can truly say to any weary wife, that though the way seems hard to go without your husband, if you are faithful and work on, knowing that God worketh with you, your husband will follow. Our home is not like what it used to be, but is now a home of harmony. I could tell of a thousand blessings but time and space will not allow me to do so. My daily prayer is to live a better, higher, holier life, to be an example for others, be worthy to be called a child of the kingdom.

Words cannot express the love and gratitude we owe to Mrs. Eddy for the blessings she has given to the world, if all would come and drink at this fountain. It has been a blessing to me and mine to find God in the way our Leader has shown us.

MRS. HARRY BURTCH, Bay City, Mich.

Over a year ago our little four-year-old daughter had a stroke of paralysis. The entire right side was affected, her arm being limp from the shoulder, and she could not walk. The father's faith was at that time in *materia medica*, and the help that he called for left him absolutely hopeless. In his extremity he turned to Christian Science and asked for treatment for the child. In three days she began to walk, and in two weeks was sliding down the banisters. Within two months she could use her arm, and for more than a year she has been perfectly well and strong. For the physical healing we are most grateful, but this is small in comparison with the healing of her nature. Neighbors will tell that they used to see a little frowning face at the window, where now there is always a smiling face. The child's nature has been transformed, and she has become loving.

My heart goes out in deep gratitude and love to our Leader, who is teaching us so wisely and patiently how to win our freedom from sin, sickness, and death. In my thought of gratitude and love there is a large share for the dear practitioner, through whose understanding this healing was made possible. All that we have, all that we *are*, we owe to Christian Science.

MRS. FRANCES C. GROVES, Chicago, Ill.

I was miserable for several years, and was healed by the persistent study of Science and Health. My healing was very slow. At first I did not understand the teaching, but I liked the religious part, and knew that it had healed others and I believed it would heal me when I thoroughly understood it. I would take my Science and Health, which was a present from the lady who brought the glad tidings to me, and I would ask to understand it from a spiritual standpoint. Finally, after about three or four years of study, the healing came.

Not long ago, as I was getting my little girl ready for Sunday School, she complained of earache. I denied it as best I could, and told her to keep the scientific statement of being well in mind, and to go to Sunday School if she wished. I helped her as much as possible while attending to household duties; however, on her return she came to me crying with pain in her ear, and could eat no dinner except an orange. In a short time she was very feverish, and complained of headache, also a sense of pain in her stomach. I immediately took my Bible and Science and Health, sat down beside her, and read aloud to her for some time, perhaps an hour or more, when she fell asleep. I read the 91st Psalm and peacefully realized the presence of divine Love. By bed time my little one was much better, and her earache was gone. She went to bed, slept soundly all night, and in the morning, while I was preparing breakfast, she came downstairs and peeped into the kitchen with a very bright and smiling face. She kept singing all the time she was dressing, and said, "Mamma, it seems like I can't think anything but Love." She ate a hearty breakfast and went to school, although she still complained of soreness around the ear when it was touched. I could not give her as much time as I should but I kept the scientific statement of being constantly in thought and I never heard any more of her trouble.

May God bless our dear Leader for the blessings she has brought to suffering and sinning mortals through Science and Health.—MRS. D. C. OLMSTED, Bertrand, Neb.

I wish to add my thanks for the many blessings received from Christian Science. I was restored to perfect health after seven weeks' treatment, cured of constipation, nervousness, sleeplessness, and was able to discard glasses after having worn them for over eight years. I had been troubled with headaches for over a year, but, thanks to God, this trouble has also disappeared. I would add, for the sake of any who hold back from Christian Science on account of having no faith in it, that I had little or no faith but felt so miserable that I thought I would try it. I was filled with fears and doubts, especially as I had been brought up in the Jewish faith, and thought I was doing a great wrong even to think of Christian Science; but after investigation these doubts and fears have been dispelled, as they will be for all earnest investigators.

I am deeply grateful for having been led by divine Love into this truth, and my aim is to know more of it and to live the pure life and follow faithfully the glorious example of our beloved Leader, Mrs. Eddy.

ROSA GREEN, Cleveland, O.

I am a woman seventy-three years of age. About three years ago I fell and broke my nose. It bled profusely and was so sore that it seemed to hurt even to be looked at without being touched. One of the most gentle of doctors was telephoned for, and he was going to set it, but I could not bear to have it touched. He then told me to keep a cloth wet with a solution of witch hazel on it to take the soreness out so that he could put it in place, but it did no good. A piece of skin was rubbed off under the left eye. There was a large lump over the same eye and the nose was pushed to one side, and the doctor said that an abscess would form which would eat the bone away. I did all I could with material remedies to bring everything back to its natural state, but instead of getting better it got worse. I then thought, Why not try Christian Science? I went on Tuesday to a practitioner, and the next day the lump disappeared, and at the same time the swelling and the discoloration also left. Before the end of the week I was looking natural. The practitioner gave me Christian Science literature to read. I read the scientific statement of being (Science and Health, p. 468) twice, and when I got half way through again I felt as if a gentle hand was putting my nose in place and instantly the soreness was all gone. But that was not all; I felt such a glorious spiritual uplifting of thought that it seemed as if I were in heaven. That spiritual sense has stayed with me ever since, and my prospects are growing brighter. I wish to add that my nose also regained its proper shape at this time.

I can never say enough in favor of dear Mrs. Eddy through whom the blessed Saviour has shown us the way. "It is God that girdeth me with strength, and maketh my way perfect."—MRS. M. E. HARTON, Cincinnati, O.

It is now six years and a half since I commenced the study of Science and Health. Christian Science has healed me of stomach trouble from which I had suffered for many years, failing to get relief from *materia medica* any longer. It has also healed me of the grip, inflammation, abscess of the ear, and chilblains in the severest form. Two years ago a baby girl was born under the Christian Science thought. Word was sent to the practitioner, and in a short time the baby was born. Fear was destroyed and everything was harmonious. She is a strong and sturdy child, a picture of perfect health. I feel thankful every day for the proof of God's love, and of what Science is doing for us in our every walk of life, and for His protecting care. We feel thankful for Mrs. Eddy and her teaching, and for the grand work she has done and is doing.

MRS. GERTRUDE GUNSON, Brantford, Can.

In gratitude to our dear Leader, I desire to say, that only for "Science and Health with Key to the Scriptures," no true knowledge of a loving Father-Mother, God had been mine. Only darkness, as to my origin and destiny, was mine, until the word of our text-book, with its healing power, breathed upon me. Can I be blamed for gratitude that the Holy (whole) Scriptures were opened to me, and I thereby received the bread of Life?

I would here gratefully testify to the healing of hemorrhoids of long standing, and severe headaches which resulted from this diseased condition. I had only our text-book for my healing, and did not read to gain my health, as I did not then believe it would heal me. I read it to satisfy the hunger and thirst, the longing for home and heaven, when one day the hemorrhoids passed from me without pain. I had been advised to submit to surgery, but so dreaded an operation that I did not yield. I know by my own experience and that of many others, that spiritual power never wanes,—that God is the same yesterday, to-day, and forever. This true knowledge of God has fitted me for usefulness to humanity in ways that I had only longed for, but knew not how to find.

My prayer is for wisdom, for humility, that I also may say with the apostle,—“I can do all things through Christ which strengtheneth me.”—SARAH D. HILL, Burns, Ore.

My present existence is due to Christian Science. I have been interested in this Science for nearly nine years, and during that time many have been the ways in which it has brought peace and harmony to my consciousness. It seems to me that one of the most inharmonious mental conditions which has been overcome for me, through Christian Science, is jealousy. Through this truth I have been healed of sciatic rheumatism, colds, boils, nervous prostration, stomach trouble, and many other physical ailments have been corrected. I have also had the benefit of class instruction and thank God for the faithfulness and patience of my teacher in helping me along the way. I am grateful to our beloved Leader, Mrs. Eddy, for the "little book," Science and Health. I am also thankful to each and every one of God's children who have been instrumental in helping me to reach a place where I could help myself. My desire is to be a more faithful and obedient student, and to live and love the truth so that others may see my good works and glorify "our Father in heaven."

JOHN H. PRICE, Hill City, Tenn.

Five years ago I was taken with heart trouble. I employed one of the best doctors in the country and he said that I never would be well any more, but he could patch me up if I would quit work. To mortal sense I grew steadily worse, until this winter I could not do anything. I tried two more doctors who could only give relief. My rest was broken at night, after meals I had to walk in the open air, my feet and ankles were swollen, and I was not able to lace up my shoes. A friend hearing of my case, recommended Christian Science treatment. I promised her I would go to the nearest practitioner, the next week, but not thinking that it could do me any good. I had, however, faith enough to go, and after I had been up there the second time, the practitioner told me if I had any work to do, to go home and go at it. The doctors had told me before I must not work. I went to chopping wood, work I had not been able to do for two years. That was six or seven weeks ago when I began treatment. I have been working every day since at all kinds of heavy ranch work, and feel better than I have for six years. I am cured, sound, and well, thanks to God, to Christian Science, and to my practitioner.—T. H. CARD, Lemoore, Cal.

From our Exchanges.

An unthankful man is never long or really happy. While some peculiarly pleasing experience absorbs his consciousness he is not miserable, but the unthankful spirit soon asserts itself and he becomes dissatisfied, cynical, or morose. In the heart the emotion must glow and, whatever betide, the recognition of the beneficence of God is accompanied by a warmth of feeling which itself makes life in any condition worth living. Without this, happiness is never perfect, the dark corners of the soul harbor creeping things and the man grows morose, fearful, and suspicious; old age is a barren desert, and death would be welcome if conscience did not make a coward of the unloving, unlovely, unloved being who has failed to recognize God in all good things—and also in evil things which are so only in the seeming, except when “sin lieth at the door.”

The Christian Advocate.

What is your motive in life? Every life finds its chief inspiration somewhere. Perhaps it is to succeed? But what do you mean by success? Is it to gather together dollar after dollar; to stand in a conspicuous place in the social circle; to achieve some great result in invention, in commercial life, in art, in letters, in politics, in the professions; to develop the mind so that all the learning of the ancients will be your possession; to indulge in the pleasures of the world-life; or, is it so to live, that by the unhindered utterance of the highest instincts and impulses of your heart, you shall make some permanent contribution toward the uplifting of men? The interpretation of life depends altogether upon the motive that inspires it.

Epworth Herald.

To find discontent is to find the covering of an evil. The covering begins to be torn off when once there is a sense of discontent. The most hopeful things are often the most uncomfortable things. Let not despair or complaining seize the church because it hears the mutterings of discontent. Rather let these mutterings be to it like the petitions of the needy and troubled who came to Christ,—heart-cries for mercy. Let every one of them say, “If thou canst do anything, have compassion on us and help us.”

The Examiner.

After all is said and done, remarks an unknown writer, the conquest over self is the greatest victory a soul can achieve. The man who never loses his temper, whatever the provocation; who never becomes bitter, whatever his adversities; who never loses his optimism and sweetness whatever his disappointments,—such a man is greater than he who gets his name into the mouth of the world.

The Universalist Leader.

A thankful spirit is of vastly greater importance than the manner in which we express our gratitude, for if we are sincerely appreciative and thankful in heart for what God gives us we shall be sure to find some way to express it. In fact it is a good way in which to measure the degree of gratitude we profess to have, by seeing in what way we show it.—*The Standard.*

The real expression of our gratitude to God involves the sum total of our daily living. When into that we import a certain quality we may venture even to think of our lives as songs of gratitude. This quality grows out of an appreciation of the depth of the Father's love and the richness of the life hid with Christ in him.—*The Congregationalist.*

To do justice and to love mercy, and to make the happiness of our fellow-creatures the end of our existence, is to be a Christian after the pattern and teachings of Jesus.

The Christian Register.

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of **SCIENCE AND HEALTH**, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in **SCIENCE AND HEALTH**. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, \$5. Twelve or more to one address, \$4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, \$1 per copy; \$5 per half dozen; \$9 per dozen.

Address all orders for books named above to **JOSEPH ARMSTRONG**, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to **WILLIAM B. JOHNSON**, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to **STEPHEN A. CHASE**, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, Treasurer.
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, \$2.40 per annum; \$1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, \$1.00 in advance; all other countries, \$1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH of Rochester, N. Y.

CHRIST AND CHRISTMAS. An illustrated poem. Single book, prepaid \$3 00
Twelve or more books to one address, each, prepaid 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science, 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; \$3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science: its growth and fundamental idea: 120 pages, cloth covers, gilt edges. Prices, prepaid, \$1.00; \$5.00 half dozen; \$9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion: 132 pages. Prices, prepaid, \$1.00; \$5.00 half dozen; \$9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, \$2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, \$2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, \$4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; \$4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, \$1.00; six copies to one address, \$5.00; twelve copies to one address, \$9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; \$5.00 per dozen.

Direct all orders for above works, and make remittances payable to

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, \$1.40; one hundred copies, \$2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

The Treasury receipts for the calendar year 1904 were \$540,000,000, and the expenditures (including the Panama payments) \$562,000,000—a deficit for the year of \$22,000,000. As compared with the previous calendar year, the receipts show a falling off of \$8,000,000 and the expenditures an increase of \$50,000,000. The decrease in custom receipts was \$9,000,000. Civil and miscellaneous expenditures increased \$13,000,000; War Department \$9,000,000; Navy Department, \$23,000,000; pensions, \$2,000,000, and interest \$1,000,000.

Imports for the first eleven months of 1904 were \$939,000,000, an increase over the corresponding period of 1903 of \$22,000,000. Imports free of duty, for the same period, increased \$42,000,000, while the dutiable imports decreased \$20,000,000. In 1903, 43½ per cent of the imports were free of duty; in 1904, 47 per cent.

Practically the entire increase in free imports was in coffee, India rubber, and raw silk. Dutiable imports decreased \$20,000,000, although raw sugar and wool increased \$28,000,000. All other dutiable imports decreased nearly \$50,000,000. Of this decrease \$20,000,000 was in iron and steel.

During the year 1904 there was paid \$50,000,000 for the right of way of the Panama Canal; the outstanding five per cent bonds, due February 1, 1904, amounting to approximately \$6,000,000, were redeemed.

Theodore Thomas, the noted orchestra leader, who for nearly fifty years has been identified with musical progress in the United States, passed away at his residence in Chicago on the 4th, almost at the hour of the happy achievement of his ambition of years, the establishment of the Chicago Orchestra in a magnificent permanent home, costing \$800,000. His last appearance was at the concert on the day before Christmas.

Wilhelm Gericke, conductor of the Boston Symphony Orchestra, pays him this tribute: "It is impossible to exaggerate the great loss this will mean to the musical world. Mr. Thomas was ever at the head of his profession. His position was unchallenged. He was the greatest orchestra conductor, not only in America, but in the world. He had no equal. There is none to take his place."

Secretary Hay, forecasting important changes in Morocco, has asked Congress to appropriate \$7,500 annually to provide for an envoy extraordinary and minister plenipotentiary to Morocco in order to safeguard the potential commercial interests of the United States. The American representative in Morocco is a consular officer, while nine European Powers have ministers, and in consequence those who enjoy American protection are not treated with that degree of courtesy and justice that is accorded to those having diplomatic representatives.

The Harvard class of 1880, of which President Roosevelt is a member, and which will celebrate its twenty-fifth anniversary next June, has started to raise a fund of \$100,000 to be donated to the university at the next commencement. No restrictions are to be made, the only suggestion being that it be applied toward the payment of the salaries of professors and instructors.

Mr. Ojeda, the Spanish Minister, has signed with Secretary Hay an arbitration treaty between Spain and the United States, similar to those already signed with other nations.

Foreign.

The Porte, replying to the notes of the American Legation and British Embassy regarding the sales of Bibles, declares there is no doubt that agents of the Bible societies indulge in a propaganda in explaining the utility and use of the Scriptures, and, as all propagandas are forbidden by the laws of the empire, the action of the colporteurs brings them under prohibition. Consequently the Government can no longer consent to the system of peddling Bibles, but must insist that the sales be confined exclusively to shops or the depots of the societies.

The results of the operation of Cuban reciprocity show an increase in importations of merchandise from the United States amounting to twenty-five per cent over 1903, and an increase in exports to the United States of forty-seven per cent and only small percentages of increase compared with imports from the principal European countries.

France and Morocco have settled their recent misunderstanding, and the French minister at Tangier has had an audience at the Court of the Sultan.

The Russian Committee of Ministers has begun meetings to discuss the Zemstvo reform manifesto referred to it by the Czar.

Industrial and Commercial.

The assessed valuation of the property in the Southern States was \$4,510,925,237 in 1890, \$5,266,594,044 in 1900, and \$6,196,697,813 in 1904. Contributing to this excellent showing have been the better cotton prices, more diversified industrial activities, and increased agricultural production of all kinds. The total increase in the assessed value of property in the twenty-year period from 1880 to 1900 was \$2,310,000,000. In the last four years the gain in the taxable value in the South has been forty per cent as great as the total gain of the preceding twenty years.

The *Journal of Commerce and Commercial Bulletin* says: "It has been reserved for the industrial world to furnish one of the most remarkable business changes of the year 1904. This is found in the great falling off in industrial mergers, the total capitalization of completed consolidations for the year reaching only \$185,000,000. The insignificance of this total becomes apparent when it is stated that the mergers amounted to \$430,000,000 in 1903, \$1,122,000,000 in 1902, and \$2,800,000,000 in 1901.

During the year 1904 there arrived at the port of New York a total of 11,279 vessels, exclusive of tugs, barges, and other small craft, of which 4,035 came from foreign ports, the greater number being of British registry and the second largest number of American registry, followed by German and Norwegian vessels. There were 3,781 ar-

rivals from Southern ports, and 3,403 from Eastern ports. Of the foreign arrivals, 3,158 were steamers and 877 sailing vessels. Compared with the arrivals of the year 1903 there is a decrease of 975 vessels. The foreign arrivals increased 22 vessels, the Southern arrivals decreased 83 vessels and the Eastern arrivals decreased 914 vessels.

It is predicted that Egypt will before many decades raise five million bales of cotton a year. The Assuan dam has resulted in bringing an area under cultivation which now yields one million bales of cotton similar to the American sea island variety. The Government is considering a further extension of the area of production by building a canal between the different branches of the Nile, an undertaking which would be distributed through thirty years.

So large is the yield of cotton this year, due to increased acreage because of the high price of last year, that it has been suggested, and in some cases acted upon, that planters burn a pro rata portion of their product in order to keep prices high for the balance.

The total capitalization of 1,491 companies which incorporated in the District of Columbia during the calendar year 1904 aggregated \$2,236,752,750, exceeding the previous year by almost \$1,000,000,000.

Texas is credited with the production in 1904 of 19,500,000 barrels of oil.

General.

The *Scientific American* gives an interesting account of the empire of Peru previous to the advent of the Spaniards. The Government is said to have been the most enlightened despotism that ever existed and the nearest approach to a Utopia which has yet been reached by any people. Each man was allotted free of charge a dwelling-site, an extended area of land for him to cultivate to maintain his family. The surplus was given to the Government for charitable and other purposes. The character of the people was of a high order—corruption and theft were not known—a resident with a large amount of gold and silver in his house left it wide open, only placing a small stick across the doors as a sign that the owner was out. Nobody went in.

Professor Perrine of Lick Observatory has just discovered a sixth satellite of Jupiter by means of observations with the Crossley reflector. Early in December he found on photographs of the region immediately west of Jupiter the image of an unknown body, which changed position from night to night. Last week he secured observations which enabled him to determine whether this was a new satellite or one of the asteroids. The satellite is five or six times farther away from the planet than the outermost of the five others; its period may be from six to eight months. The four very bright satellites were discovered by Galileo in 1610. The faint fifth one was discovered by Barnard in 1892 with the Lick telescope.

The year 1904 records these things: The first application of the turbine engine to the propulsion of transatlantic steamships of great tonnage; the lapse of twelve months for the first time since 1812—and probably for the first time in our history—without the launching in the United States of even one square rigged vessel; the construction of the transatlantic liner *Baltic* of 23,876 gross tons register in the United Kingdom, and of the transpacific liner *Minnesota* of 20,718 gross tons in the United States; the definite beginning of work on the Panama Canal by the United States.

Mr. Carnegie has given, or pledged himself to give, 1,290 library buildings to English-speaking peoples. Of these 779 are in the United States. The aggregate cost of these buildings is \$39,325,240, of which \$29,094,080 has been expended in this country, about \$6,000,000 in England, about \$2,000,000 in Scotland, and \$1,475,500 in Canada.

Connecticut has no State debt.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

Religion and Joyousness.

CLARENCE A. BUSKIRK.

WHENEVER the Gospel ceases to be good news and glad tidings to all men, it ceases to be the true Gospel. Whenever any messengers of the Gospel so deliver it that it carries gloom and terror into the consciousness of men, they pervert its meaning and weaken its force and value. Any form of religion which is not essentially joyous cannot be the true religion.

It is easy to find in human history a sufficient explanation of the gloom and fear which have become too much associated with religion. Primitive man accepted everything as being what it seemed to be to his physical senses. If the sun seemed to rise in the east and set in the west, he did not stop to question the appearance. His superstitious fancies filled the earth, the water, and the sky with malignant and mischievous deities, in order to account for the floods, earthquakes, hurricanes, and their like, which seemed constantly to menace him. He could not have done otherwise than mould his deific concepts into frightful mythologies, when he accepted the universe as really being what it appeared to be to physical sense. Devils innumerable were inevitable. And it was inevitable that he should seek to propitiate, by gifts suitable to their supposed traits, the evil powers which seemed to hold his destiny in their capricious and frightening grasp. Thus his religion became of necessity a religion of fear and anxiety.

So far as modern theology accepts the phenomena of the physical universe as real, it implies the reality of evil as dual with the reality of God, and its religious teachings are inevitably depressing and darkening. There is not a single notion of evil in the human consciousness which does not have its origin and growth from our sense-perceptions. Our sense-perceptions and sense-consciousness are the sole source of all our fears, anxieties, worries, doubts, perplexities, discouragements, despair. Theology can never cease to be a most direful shadow on the thoughts of men until it ceases to accept the universe as being what it seems to be to sense. Theology can never cease to be the unwitting handmaid and ally of materialism, so long as it fails to grasp the profound truth that the sole reality is to be found in God and His spiritual manifestation. So long as theologians shall continue to teach that physical appearances are a part of the reality of being, so long will the theological teacher, however ardent and sincere may be his desire to serve God and his fellow-men, stand as a portrait of gloom and sadness in the thoughts of men. And so long as this sort of portrait is associated with religion, so long will large classes of thinking men and women, as well as the frivolous and sensual, continue to be repelled. Not only the earthquake and storm, but also our passions and appetites, are related to the physical universe. They are the inheritance of the Adam man described in Genesis, but not of the real man who is in the image and likeness of Spirit.

So far as a theological teaching must have its fruitage in fear and gloom, so far it appeals, not to man's spiritual

nature, not to man's higher reason, but to that which is essentially abject and base. True religion is like the pure flame in an alabaster vase, giving forth light and joy. It is not the breeding-place of shadows. It is not the lurking-place of spectres. It took mankind a very long time to learn that the sun does not really rise in the east and set in the west. Century after century had to drag its wearisome course before man's reason taught him that this sense-perception was teaching him a miserable falsehood. In like manner the sense-consciousness derived from the material universe, that evil is a creation of God and possessed of a real existence, has held human thought in bondage and dwarfed theology for a long, long time. Centuries have waxed and waned, men have invented, discovered, and gloriously triumphed in many realms, but the radiant concept that God is Love has not yet penetrated into the innermost consciousness of men, because theology has persistently taught otherwise. Men read the joy-inspiring truth in their Bibles and believe that they accept it as true; but the appalling spectres which have been described to them have so warped the mirrors of their religious thought that the image of the true God is still distorted before their deceived vision. However painstaking our introspection, we are unable to contemplate a single image of truth in the mirror of sense-consciousness which is not somewhat dimmed in its radiance and marred in its form.

The only theology, therefore, which can teach men the absolute truths of their being must classify the physical universe, and its incidents of sin, sickness, suffering, decay, death, as non-realities. The images of religious truth must come to us absolutely undimmed and unmarred by the falsehoods derived from our sense-consciousness, in order that their presentation may be faultless. Therefore, the processes of deduction must be used in metaphysics. Induction can only present to us physical facts, or rather, supposititious physical facts, and these necessarily involve the errors of the perceptions and consciousness received from our so-called five physical senses.

"God is Love." Divine, infinite, absolute Love. There could be no other kind of God as the creative and energizing power of the universe. Any conception of God which is short of this full standard is a half-open door to atheism. Materialism has no concept of God as Love. Pantheism identifies God with the errors of the physical phenomena about us, and theology can rise no higher than pantheism, in this respect at least, until it learns no longer to accept the phenomena of matter as real, including the incidents of sin, sickness, suffering, and death.

The deductive metaphysics of Christian Science emphasizes the full measure of the concept of God as Love, as it is taught in no other modern or ancient system of thinking, if the Bible be omitted. False inductions from man's sense-perceptions and sense-consciousness have made religious thinking a hopeless and confusing labyrinth of self-contradictions. There can be no escape from this labyrinth until sense-perception and sense-consciousness have been wholly eliminated from religious thinking. Glorious and saving glimpses of the truths of our being are to be found, it is true, throughout religious literature; but these have all had their origin in man's spiritual per-

ception and consciousness. They have served, like the pillar of cloud by day and pillar of fire by night, to lead our race through the wilderness towards the promised land. Although they have only been occasional, and have not furnished a cloudless radiance, they prove man's spiritual capabilities, and are the prophecies of spiritual achievements to come.

Pure religion, as taught by Christian Science, uncontaminated by materialistic concepts and traditions, and recognizing the existence of no supreme power controlling men's destinies except the power of divine Love, perpetual and immutable, is the religion of joyousness. When we fully realize that the arms of divine and absolute Love are around us and beneath us always, that God's protecting care is always immanent and available, that our Father-Mother God is ever ready to help and rescue us in all our distresses, then our religious thinking becomes, instead of a source of sadness and gloom, a perennial garden of joy, peace, and content. Then the world will have no thorns to wound us when we gather its roses, death will be deprived of its sting, the grave of its victory. Then wars and the rumors of war shall no longer be known. Then men shall regard and treat each other as brothers, not as the strong and the weak, the rich and the poor, the oppressors and the oppressed. Then the flaming swords of the cherubim will be turned to welcome us back to our lost Eden. Then shall we eat of the tree of the knowledge of good, and the serpent can beguile us no more to eat of the tree of the knowledge of good and evil, because we shall understand that good and evil cannot grow together on the same stem, and no serpent can hypnotize us into the false belief that divine Love ever planted such a tree in His garden.

Meanwhile, let us assiduously strive to banish the fear of evil from our consciousness. Let us religiously remember that fear has ever been the arch enemy of our race. The fear of evil is the ubiquitous demon that climbs the roof-tree of palace and cottage alike. Every truth enunciated in Christian Science is a joyous truth. Every piece in the armor of the Christian Scientist is burnished by a loving thought and reflects a joy-inspiring faith. All its ideals, aspirations, and achievements are in a realm where sadness, fear, and doubt have no home. The more thoroughly the teachings of Christian Science become a part of a person's consciousness the more surely joyousness will show itself in that person's thoughts, emotions, sentiments,—the more joyful will become the face, the bearing, the whole life. Whenever an adherent of Christian Science discovers that he is in the shadow rather than in the undimmed light, he needs at once to be on his guard against error, and to free himself from its influence by a prayerful and steadfast realization of the absolute allness of Truth and Love. He needs to reach out for this truth of being as the drowning man reaches for the plank that can save him from the threatening waters about him. Our salvation is a process which brings joy into our lives. Our regeneration is a joyous regeneration. Therefore, we are remiss whenever we permit our religion to become a breeding-place of shadows or a lurking-place for spectres. It is our duty to say to every spectre that seeks to keep our company, "Get thee behind me, Satan." And a duty is something to be acted upon, and acted upon constantly and always.

The Gospel of Giving.

ELIZABETH EARL JONES.

At each Christmas season the whole Christian world with one accord lays aside the weight of dogma and religious contention, to unite anew in friendly endeavor to fathom the secret of Jesus' joy, and to discover in each

expectant heart some sign of the never-ceasing activities of divine Love.

It is a quaint and pleasant custom, this giving of gifts at Christmastide, and it illustrates to the more thoughtful a valuable lesson; namely, that infinite Love is ever beautiful and unlimited in manifestation. Little deeds of tenderness, thoughtfulness, kindness, and self-sacrifice, ever follow and multiply *ad infinitum* in the wake of Love. There are myriad and untold opportunities ever presenting themselves for those who love to serve in helpful ways both great and small, which seem not to be visible to those who do not love. We therefore learn to measure the quality and quantity of our love according to its radiation. In the New Testament, from beginning to end, we may trace one unbroken gospel of *giving*. First of all we read that God gave through His Son a revelation of Himself, that all might look to him and learn the way of salvation.

In the life of the loving Jesus we read in living letters the divine definition of giving. Through spiritual understanding and divine compassion Jesus gave sight to the blind, feet to the lame, health to the sick, joy to the sorrowing, life to the dying, and guided sinners in the way of purity and goodness, teaching them the loving kindness of God by demonstrating for himself that loving kindness to the repentant sinner. As Paul says of Jesus, "He led captivity captive, and gave gifts unto men." Dearest of all earthly gifts, he gave himself in holy consecration.

Prophetic and most appropriate were the gifts Jesus received from the wise men from the East. As "King of the Jews," they gave him gold, typical of royalty; as priest and prophet of God, they gave him frankincense (priestly incense); as the great Physician and healer of mankind, they gave him myrrh (a fragrant balm). It was beautifully significant and also prophetic that the two extremes of society, the learned and princely Magi of the East, and the lowly shepherds of Israel, should have met and knelt together in reverent fellowship at the cradle of the infant Jesus, whose mission is now made comprehensible and practical for all, through the revelation of Christian Science. Before his departure Jesus spoke of another gift which God, out of the richness of His love, was to bestow upon the world. He said, "And I will pray the Father, and He shall give you another Comforter, that he may abide with you forever;" "Even the Spirit of truth, . . . he shall testify of me," . . . "He shall guide you into all truth."

Through the Christian Science text-book, Science and Health, many thousands are realizing Jesus' promise, and experiencing the blessed presence of the ever-abiding Comforter, the "Spirit of Truth," which daily testifies of the Son of God by healing the sick and reforming the sinner, and by bestowing the same Christly gifts upon mankind that Jesus bestowed of old. In the life of our beloved Leader we see exemplified the deep significance of the Christly gospel of giving; and we learn that the gift each should make to the world is the endeavor to live a loving life which is consecrated to the service of God and man,—a gift which blesses all, and most of all the giver.

This Christmas season has served as a reminder to the writer, of both the joys and the obligations of the ministry of Christ. It is a reminder that Love must not only be thought and voiced, but must also be expressed in deeds, must be allowed to flow freely into every available channel, no matter how small that channel may seem; must continue to flow therein, not only at Christmas but all the time that there is need. It is the small brooks that fill and swell the ocean; therefore it may not be amiss to repeat that the pages of the *Sentinel* and *Journal* afford valuable and ever-open channels for the streams of love. As we give out to others, God gives to us, for there can be no vacuum in infinite Mind. Therefore we find ourselves face to face with this seeming contradiction in terms: He possesses most who gives most freely.

A Decade of Growth.

The Wednesday evening meeting held in The Mother Church January 4 was of more than ordinary interest, because of the retrospective character of much that was said by those who took part in the services. Professor Hering, First Reader of The Mother Church, said in part,—

"It is just ten years since this edifice was completed and dedicated, the first service having been held Sunday, December 30, 1894, and the dedication service, January 6, 1895. It seems appropriate that we should refer to this fact and notice the growth that has taken place since the building of this church, which event was such a vital turning-point in the history of our movement. The literature which refers to this subject is most interesting and can always be re-read with profit and encouragement. Let us take a brief backward glance, lest we lose sight of the import of that epoch of which this temple will forever be a visible evidence, and lest our love and reverence for it wane.

"This church society had its beginning in April, 1879; the following June it had only twenty-six members; from that time until the dedication, over fifteen years, the number increased to 3,388, while during the last ten years the membership has reached 31,423. When this church was dedicated there were one hundred and ten branch churches, now there are 636; there were then 124 societies holding meetings, now there are 260. At that time there were only 234 places where Christian Science services were held, whereas now there are 896; then there were but two Christian Science church edifices, this one and the little one in Oconto, Wis., now there are about one hundred and thirty.

"At the last service held in Copley Hall before the congregation moved into this church, there were less than five hundred present, while at the first service held in the new building there was a congregation of one thousand, and at the dedication there was an attendance of about six thousand, showing the awakening which this event caused. The growth in the regular attendance at this church has been very marked. Afternoon services, to accommodate the increasing numbers, were begun on April 26, 1896. The church again became overcrowded and on January 22, 1899, three branch churches were organized in the vicinity, which took away about five hundred members. In the fall of 1903 it became necessary to hold overflow meetings on Wednesday evenings, in The Mother Church, while hundreds have been obliged to stand at the Sunday services.

"This numerical growth, however, is but an outward sign of the spiritual growth which has taken place. And what has made all this possible? The spiritual understanding, self-sacrifice, devotion, courage, and wonderful leadership of one woman, who was so near to God that she was able to hear the declarations of Truth and to give to humanity the Science through which we have felt the benign influence of the ever-present healing Christ. I am sure that no one, intimately concerned with the building of this church, would say that its erection could have been accomplished had it not been for the faith, conviction, and understanding of our beloved Leader, Mrs. Eddy. And what has made this church grow? No human, worldly, or personal attraction, nothing but the attraction of Spirit, of Truth and Love. The Christ-healing was the foundation of the primitive Christian church, and it is the foundation of the Church of Christ, Scientist, and because it was built on this foundation our church has grown. It is only by healing, by overcoming the works of the devil, that any progress toward heaven can be made.

"It would be very interesting and helpful, if some of those who were associated with the building of this church in the momentous days of ten years ago, or who were present then, would tell us of their experiences, and of what the erection of this house meant to them. We would like

to hear of some of the glorious fruition of that hour, for it must needs be that the building of 'Our Prayer in Stone' brought a wonderful awakening to those who went through the experience, or even witnessed it, and secured for every one blessings which are still being realized and appropriated."

This invitation was accepted by several of the older Christian Scientists present, who spoke of the struggles and triumphs of former days in a manner which interested and encouraged those who had participated in the erection of the church, as well as the larger number who have since become Christian Scientists.

Not the least interesting feature of the evening was the reference made to the new church edifice in course of construction, which will have five times the seating capacity of the present building.

Annual Meeting of the Church in Concord.

We are indebted to the *Concord Evening Monitor* for the following report of the annual meeting of the church in our Leader's home city:—

First Church of Christ, Scientist, of this city held its first annual meeting last night [January 5] in its new church edifice, the gift of the Reverend Mary Baker Eddy, the Discoverer and Founder of Christian Science. The reports of the church officers for the past year showed a gratifying increase in all departments of Christian activity. The treasurer reported all bills paid and a balance in the treasury.

The semi-annual communion service of this church will be held on Sunday next, when a goodly number of new members will be welcomed into active membership.

In addition to its regular services, this church conducts a service at the county jail each Sunday afternoon, and the religious exercises have had a marked influence for good with the prisoners.

The following letter of greeting to the honored Leader of Christian Science was unanimously adopted:—

Concord, N. H., January 5, 1905.

Reverend Mary Baker Eddy.

Beloved Teacher and Leader:—At this our first annual meeting in our beautiful new church edifice, so generously given by you, we, the members of First Church of Christ, Scientist, of Concord, N. H., send you greetings of love and gratitude.

As citizens of your home city, we wish to assure you of our sincere appreciation of your munificent generosity, so often shown to the capital of your native state. We recall that your gifts have been bounded by no lines of class or creed, and we rejoice in the cordial recognition by our foremost citizens of your helpful service to all that makes for the highest welfare of this enlightened community.

More and more there is growing within us the sense of thankfulness to God for our beautiful church home. We are beginning to realize that your gift of \$200,000 for our stately granite edifice is but the sign and symbol of your boundless love and fervent prayers for the dear people of your native state and for their growth in the Christian life.

We again thank you for your inspiring and immortal words given us in your dedicatory message, consecrating to God and to His Son our noble house of worship. As a slight recompense for your toil and self-sacrifice in its preparation, it must indeed gladden your heart to know that those words of truth are still reverberating in hearts far and near, calling them to active service for Christ and his church.

We are grateful to God for your faithful labors, which, in the past, gave us the Key to the Scriptures in the Christian Science text-book, *Science and Health*, and for the other rich and fruitful literature which you have sent forth to teach us more love for God and for our fellow-men. We

thank our heavenly Father that you have been preserved by His love to found this universal church upon a rock against which the gates of hell cannot prevail, and that you continue strong in mind and heart to carry forward this world-wide movement for the redemption of mankind, which is healing it here and now of sickness as well as of sin.

It is our privilege and our joy to pledge anew to you our loyalty and our love. We rejoice in the prosperity which has characterized every institution and every organization which you have so successfully founded. We praise God that your position as the Discoverer and Founder, Teacher, and Leader of Christian Science is indisputable and beyond the reach of envious or carping criticism, while a large united church of loyal followers give to you their free and unqualified allegiance. We pray God that our deeds may attest our gratitude and that our lives may show proofs of the Christ-spirit toward which you have ever tenderly and patiently called and led us.

IRVING C. TOMLINSON, C.S.B.,
JOSIAH E. DWIGHT,
J. WESLEY PLUMMER,
Committee.

[Mrs. Eddy's reply to the above letter appears on page 312 of the *Sentinel*.]

Opening of New Chapel in Hartford, Conn.

THE members of First Church of Christ, Scientist, of this city, have moved into their new church home on Farmington Avenue opposite Kenyon Street, and the first service was held in the new chapel Sunday, November 27. The church proper has not been started yet, but it will be built directly in front of the present chapel. The society is growing rapidly.

The new chapel seats about five hundred, and was well filled at the opening service.—*Hartford (Conn.) Courant*.

Earnest Givers.

At a recent meeting of the Board of Directors of First Church of Christ, Scientist, Ottawa, Ont., it was decided to follow the good example set by the church at Colorado Springs, Col., and donate the local building fund of our church to the Building Fund of The Mother Church. Accordingly the proposal was submitted to a meeting of the church members, and it was unanimously decided by a standing vote to remit the full amount of the fund to the Treasurer of The Mother Church. It was also decided that on our Canadian Thanksgiving Day, November 17, a special collection should be taken for the same purpose, and a very gratifying addition was thus made to our contribution.

One year ago last May our church pledged itself to subscribe not less than one thousand dollars. This pledge was fulfilled, and we are now well advanced towards a second thousand. The church members also decided that our local church building fund should be suspended pending the building of The Mother Church extension, and that monthly remittances should be continued until word is received from the Treasurer that no more funds are needed.

WILLIAM KING, *Clerk*.

The question of the efficacy of the faith that is in Christian Science is not discussed so animatedly as formerly. With the thought that every man has a right to worship God as he pleases, and that the new movement is meeting the approbation of thousands of intelligent moral people, the spirit of intolerance is gradually disappearing.

Albany (N. Y.) Express-Times.

The Lectures.

Kingston, N. Y.

Judge Septimus J. Hanna lectured at the Kingston Opera House Monday evening [November 14], upon Christian Science. He was introduced by Judge Clearwater, who said in part,—

It may seem strange to this audience that a hardened unbeliever in the teachings of Christian Science should preside at this meeting, but I know, as you all do, that Christian Science has elevated, softened, made brighter and happier the lives of thousands of men and women, and a faith which has added so much to the fund of human happiness must teach much that is good.—*Kingston Leader*.

Los Angeles, Cal.

Under the auspices of First Church of Christ, Scientist, of Los Angeles, F. J. Fluno of Oakland lectured on Christian Science, to a large and representative audience November 28, in Hazard's Pavilion. Dr. Fluno was introduced by Mrs. Lizzie L. Filbert, who spoke in part as follows:—

Friends:—For centuries the healing work and the love that Jesus manifested was lost sight of, but to-day his prophecy is being fulfilled and thousands are saying, "Blessed is he that cometh in the name of the Lord." Many are still asking the same question as did John, "Art thou he that should come? or look we for another?" The same Christ spirit is answering this question to-day, and blessed is he, whosoever shall not be offended in him.

Correspondence.

Fairfield, Ia.

Last Thursday evening [November 17] the Opera House was comfortably filled by people who were anxious to learn something about Christian Science from Hon. Clarence A. Buskirk of Indiana. Hon. R. J. Wilson introduced the lecturer, and said in part,—

What more wonderful chapter is there in the Bible than the fourteenth chapter of John. Listen to these words.—

"Verily, verily, I say unto you, He that believeth on me, the works that I do shall he do also; and greater works than these shall he do."

While one like myself, of too little study, perhaps, may find much in Christian Science of doubtful acceptance, yet he cannot fail to see that its literal acceptance of these words, and their practical application to the here and now, should command the considerate approval of the Christian world.—*The Fairfield Tribune*.

Selected Articles.

Christian Science.

The following appreciative words from a brother editor speak volumes for the value of the educational work which is being done by the Board of Lectureship, and for the far-seeing wisdom of our Leader in making this provision for the advancement of our Cause.—[Ed.]

The *Express* has not been in sympathy with Christian Science, so-called, and yet we have never been ready to take the position, assumed without investigation by many people, that the system was all folly and folderol. That it has some basic truth of value we are driven to admit in advance by the fact that so many people of intelligence subscribe to its tenets. So much as this, however, can probably be said of every belief which has won the approval of any considerable number of persons of average intelligence. Even some systems of rites or worship which might appear entirely absurd to thoughtful people are no doubt, relatively to the former belief of their converts, a step in advance.

These reflections are induced by the fact that in Rochester, the other day, one Edward A. Kimball delivered what seemed, all in all, the most sensible talk on Christian Science to which our attention has been called. He says that Christian Scientists are trying to do, as followers of Christ, what Christ said that his followers and disciples could and ought to do; that the works of the Saviour were not miraculous in the sense that they were in contravention of natural law, but that in fact his system of healing was natural, practical, scientific, and that it was within the power of human beings to attain similar results. Considering the causes of disease, Mr. Kimball says, very truly, that physiology takes no cognizance of the mental, moral, and spiritual natures of man. Herein, he adds, Christian Science differs from all material theories and beliefs, declaring, as it does, that much disease is caused primarily by ignorance, superstition, sin, and fear; many causes of sickness being thus to be sought in the mental realm instead of the material. This dictum suggests, at least, a recent utterance of Doctor Hill, late president of Rochester University and Assistant Secretary of State, who seems to regard good morals as merely an extension of good health into the realm of mind.

Christian Science, continues Mr. Kimball, is demonstrating the verity of its own disclosure, which is that hatred, grief, remorse, envy, fear, and kindred evils cause inevitably, if persisted in, bodily disorder and suffering. With these enunciations of the eloquent defender of the cult, even if we do not accept them all, there is nothing to criticize as absurd and self-evident error. Other claims, however, are attributed to Mrs. Eddy and many of her followers which are far from commanding our assent. As to Christ's method of healing disease, the position of Mr. Kimball appears to be that the Master cured by virtue of powers which God has bestowed on all men. Without endorsing or, at this time, discussing this doctrinal notion, the suggestion occurs to us that Christ enjoined men to be perfect as he was perfect, an injunction which seems inconsistent with any theory other than that he spoke as a man to hearers who had it within their power to imitate him and attain to his perfection.

Editorial, *Watkins* (N. Y.) *Express*.

Christian Scientists are not "skeptical as to the existence of evil," neither do they believe "that they can cure their ills by not thinking about them," or "by thinking them away."

Christian Scientists do not claim immunity from those

things which ordinarily leave their impress upon the physical senses. As do other Christians, they proclaim that the God whom they worship is Spirit, and that man, made in His image and likeness, must of necessity be spiritual. To demonstrate this self-evident truth, it is necessary for man eventually to prove his absolute dominion over things material, and the Christian Scientist sees no other way to reach this ultimate than to exercise this dominion, in so far as he is able, right here and now, and thereby to proclaim, as in the words of our Saviour, "The kingdom of heaven is at hand." No sect, religious or otherwise, deals more effectually with evil than do Christian Scientists, and their efforts to abolish it for themselves and others meets with a degree of success which is very gratifying, not only to Christian Scientists but to all who appeal to them for physical and moral help.

ALBERT E. MILLER.

Philadelphia (Pa.) *Ledger*.

Christian Scientists, instead of regarding man as an object of psychological evolution, are striving to know him as God created him in the beginning. This, Mrs. Eddy teaches, can only be done by gaining a victory over the world, the flesh, and the devil, in the manner outlined by Jesus in his Sermon on the Mount.

The five physical senses are shown to be the avenues of temptation by which mortals are drawn aside from the paths of virtue, and thereby imprisoned in the dungeon of sickness and sin. Our hope of salvation is further shown to be in the restoration of our spiritual birthright, by means of which we can prove our power to become the sons of God. It will thus be seen that, instead of attempting to spiritualize the physical universe, Christian Scientists are aiming to bring about the kingdom of God and the brotherhood of man. In spite of the conflicting evidence of sense-testimony, which reports every form of sickness and sin, they declare on Scriptural authority, "Now is the accepted time; behold, now is the day of salvation."

RICHARD P. VERRILL.

New York Sun.

Christian Science does not deal with the imagination (the fancy) except as it deals with all other disease. It does not say to man that suffering, pain, disease are only notions of the imagination, and that the exercise of sufficient will-power will overcome them. It deals with them by a scientific curative process—a mental treatment that corrects the trouble at its foundation in the mind. It comes to man bringing to him the gospel of sonship with (likeness to) God; in other words, the very truth which Christ Jesus said would "make free." It interprets this assured freedom to mean that man's rightful condition is one of health and happiness,—that as a son, a creation, of God, he is entitled to health,—and it teaches that man's mortal sense of disease may be overcome through harmony with God, that is to say, by the realization of the spiritual sense of immortal existence.

W. S. MORRIS, JR.

Newport News (Va.) *Press*.

Our critic finds fault with the definition of God as given in the Christian Science text-book, "Science and Health with Key to the Scriptures." He declares that "Christian Science dethrones the God of the Bible and defines God as divine Principle, supreme incorporeal Being, Mind, Spirit, Soul, Truth." I ask, Would the reverend gentleman be willing to assume the risk of declaring that God is not what any one of these statements of Deity declares, but its opposite? And, if God is infinite Mind, can it be held that He is oblivious to any real fact? Can God forget or be unconscious of His own existence?

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Our Leader's Letter to the Concord Church.

First Church of Christ, Scientist, Concord, N. H.

Beloved Brethren:—You will accept my gratitude for your dear letter, and allow me to reply in words of the Scripture: "I know whom I have believed, and am persuaded that he is able"—"able to do exceeding abundantly above all that we ask or think," "able to make all grace abound toward you; that ye, always having all sufficiency in all things, may abound to every good work," "able to keep that which I have committed unto him against that day."

When Jesus directed his disciples to prepare for the material passover that, spiritually speaking, is the passover from sense to Soul—he bade them say to the good man of the house: "The Master saith unto thee, Where is the guest chamber, where I shall eat the passover with my disciples? and he shall show you a large upper room furnished: there make ready."

In obedience thereto may these communicants come with the upper chambers of thought prepared for the reception of Truth; with hope, faith, and love ready to partake of the bread that cometh down from Heaven; and to "drink of his blood"—to receive into their affections and lives the inspiration which giveth victory over sin, disease, and death.

MARY BAKER EDDY.

Pleasant View, January 6, 1904.

A Cry in the Wilderness.

THERE are few men who have come into the inheritance of a larger and nobler opportunity than that of the distinguished preacher and journalist upon whose shoulders, eighteen years ago, the mantle of Henry Ward Beecher was laid. Whether as pastor and editor, or as lecturer and philanthropist, Dr. Lyman Abbott has ever displayed a breadth of sympathy, a purity of purpose, a vigor of thought, and a venturesomeness of faith which have enabled him to wield an influence that has been both signal and far-reaching.

Caring more for truth than for its human expressions, he has often evinced an indifference to conventional thought and stereotyped religious convictions, and one of his late utterances has begotten a tide of comment and criticism which well illustrates the fact that the declaration of a non-conformist is always no less interesting for the thought it begets, than for that which it contains. The nature of the echo which a given statement, at a given time, awakens, supplies one of the essential bases for the study and interpretation of history.

Speaking recently to the students of Harvard College, he entered a vigorous protest against the anthropomorphic sense of God, and declared that the "notion of an absentee God, an imperial Cæsar, sitting in the center of the universe ruling things, whose edicts are law, and who is approached only from afar by men," is unworthy of the Christian faith and is happily "gone, or going." No longer are we

to conceive of God as "a Great First Cause, setting in motion secondary causes which frame the world; no longer a divine mechanic, who has built the world, stored it with forces, launched it upon its course, and now and again interferes with its operation if it goes not right," but we are to think of Him as "one great, eternal, underlying Cause, as truly operative to-day as He was in that first day when the morning stars sang together—every day a creation day." And for this,—for daring to recognize the unworthiness of past concepts of the infinite Father, and the naturalness of that spiritual awakening and advance of the race which is expressed in the evolution of Christian thought, he is stoned by not a few of his brother Christians and placarded with every condemnatory epithet from "Pantheist" to "An angel of darkness"!

Men are usually most sensitive respecting such of their ideas as are most in need of mending. It is the opinion which has been petted into deformity for which mortals are most ready to fight, and this may account for the swift and severe theological resentment which is visited upon those who stand for a nobler thought of God. In discarding the idea of an august and autocratic ruler, who effects his will over a material world by means of secondary causes, Doctor Abbott is in accord with the teaching of Christian Science which declares that the eternal and infinite Cause is without beginning or ending,—is neither first nor last, and that the word *beginning*, as used in Genesis, 1 : 1, must therefore signify, as Mrs. Eddy has declared, "*the only*—that is, the eternal verity and unity of God and man, including the universe. . . . creation consists of the unfolding of spiritual ideas and their identities, which are embraced in the infinite Mind, and forever reflected" (Science and Health, p. 502, 503).

To a part of this exalted thought, viz., that God is omnipresent Spirit, our brother rises with eagerness and enthusiasm; but the sequential truth, that the universe, including man, is wholly spiritual, the immediate and continuous manifestation of omnipresent Mind, he does not seem to have accepted. Though so assertively repudiating the notion of an "absentee God," he fails to grasp the fact that this concept is an inevitable outcome of the belief in the reality of matter; for to assert with Jesus that God is Spirit, and at the same time to accept the testimony of material sense that matter is substance, is to be driven, by the universal, though largely unconscious, sense of the unlikeness of Spirit and matter, to the practical conclusion that they are mutually exclusive, and, therefore, since matter is present, Spirit, God, must be absent. Surely Doctor Abbott and all others who accept the idealistic concept of God must come to see that it involves the denial of the substance and reality of matter.

The rebuke of physical science is splendidly voiced when he says that it has attacked the medieval idea of a God as one "who can be defined, described, analyzed, interpreted in creeds. Science, which, first, showed *how vast the universe* was; which, secondly, showed *how the universe was all one*; which, third, showed that the *same forces were at work in this world and in the remotest sun* and in this epoch and in the remotest epoch, so that *all days are equally creative*, undermined the notion of a celestial Cæsar sitting on a celestial throne afar off, creating matter and force out of nothing, and laws to govern them, and leaving them to their own operation with occasional interventions on his part." And yet, when he declares that physical scientists are "thinking the thoughts of God after Him, whether they know it or not," we can but infer that he looks upon the study of the seeming action of poisons, of the bacilli of consumption, and of the asserted laws of heredity, as an inquiry into the order of the divine manifestation! However near physical scientists may approach to the phenomena of the spiritual universe, it scarcely need be said that in so far as they think of matter as substance, and rely upon the testi-

mony of the physical senses for their philosophical data, thus far are they removed from the possibility of that spiritual view of God and interpretation of nature which is the only basis of a true Christian ministry.

Our brother speaks of Christ as "the supreme expression of the divine idea." Christian Science teaches that Christ is the Divine idea—the spiritual truth whose appearing in consciousness effects the new birth, and that Christ Jesus is the highest human manifestation of this idea. This discrimination between Christ the Son of God, and Jesus the son of Mary, together with the kindred distinction made between man in the image of God and the human sense of personality, "the old man" which is to be put off, is a distinctive teaching of Christian Science, and is fast dispelling that confusion of creedal statement and common thought which has proved an abiding disability to religious progress.

While contending for the continued effectiveness of the Christ-life, Doctor Abbott betrays what seems to be an astonishing indifference to his healing work.—the amelioration of human suffering through the sovereignty of spiritual understanding. He says, Christ Jesus "succored doubting Thomas from the skepticism in which he was entangled, of the unstable Peter he made a rock, and of the ambitious John the beloved disciple and the prophet of a spiritual life. This," he (Jesus) said, "is what I mean by the healing of diseases." But, I ask, is this *all* that Jesus meant? if so, his commission to his disciples was wholly misunderstood by them, for that they corrected the mal-conditions of human sense, healing the sick and resuscitating the dying, is as fully substantiated as that Jesus did these beneficent works himself. Furthermore, the healing which is being effected to-day through Christian Science should remove every vestige of doubt as to the practical efficiency of the Christ-idea to restore health to the afflicted, in entire keeping with the logic of our brother's insistence that the divine law is uniform and ever-operative.

Dr. Abbott has made an interesting contribution to the ever-increasing evidence that the peerless and irrefutable statements of Christian Science respecting God, and man in His image, are shaping religious thought to earth's remotest bound. "The kingdom of heaven is like unto leaven, which a woman took and hid in three measures of meal, 'till the whole was leavened."

JOHN B. WILLIS.

Letters to our Leader.

Brooklyn, N. Y., December 25, 1904.

Reverend Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader and Guide:—While all Christendom is celebrating the birth of the great demonstrator of Truth, our hearts turn to you in loving and grateful recognition, for having brought to this age a scientific Christianity which reforms the sinner, heals the sick, and lifts humanity above the clouds of mortal belief into that light of spiritual understanding which was so clearly made manifest by Christ Jesus.

We consider it a privilege to aid in the building of The Mother Church, and particularly rejoice at this season to be enabled to send to its Treasurer a Christmas offering from this church, which includes the Sunday School and Mrs. Hulin's Students' Association. We realize that by so doing we not only help to establish the temple of God on earth, but also give to you that which you most desire,—an evidence of loving obedience, and of our hearts' gratitude for your life of sacrifice, and for the rich blessings you have bestowed upon us and on all mankind.

We consecrate ourselves anew to God and renew our assurance of loyalty and love.

Second Church of Christ, Scientist, of Brooklyn, N. Y.
H. M. FERRIS, Clerk.

[Telegram.]

Denver, Col., December 27, 1904.

Rev. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—We, the members of the Students' Association of Mrs. Ella Peck Sweet, C.S.D., in adjourned annual meeting assembled, desire to express our deep love and thankfulness to you, for the rich blessings showered upon us through the revelation of Christian Science; for your untiring watch and patient admonitions received by us through the inspiration our teacher has gained during her sojourn at Pleasant View. We have caught somewhat of the reflection of the great power and purity of Christian Science as lived by you, and we wish to prove our appreciation and gratitude by more humility, consecration, and by a broader activity for our beloved Cause. May the time not be distant when the whole world shall know that Christian Science is the truth.

HARRY E. SIMS, Secretary.

Bloomington, Ill., December 26, 1904.

Rev. M. B. G. Eddy.

Beloved Leader:—Permit me to lay my humble thank-offering at your feet this blessed Christmas season, for your ceaseless efforts in behalf of Christian Science, and especially for your untiring labor in the revisions of Science and Health. Since the last revision, I have had four painless obstetric cases, one patient having a claim of malformation which the physicians said would make it impossible for her to give birth to another child. As a last resort she applied to Christian Science, with the above result, and is now a consecrated student of your writings, and is doing excellent work. I have never been through an obstetrical class, and have found that obstetrics, as taught in Science and Health, is all sufficient. I have long wanted to express my heartfelt thanks for your life and writings, which have made the Father's house so attractive and desirable that the humblest place therein is worth striving for.

My one ambition now, is to be a practical exponent of the divine Principle of Christian Science, through daily living and demonstration.

Gratefully yours,

BARBARA M. PRINCE.

St. Joseph, Mo., November 27, 1904.

Rev. Mary Baker G. Eddy, Concord, N. H.

Dear Leader:—I would like to tell you what Christian Science is doing for one whom God led to this truth, about two years ago through some Jewish friends of mine. I am a Jew myself, and a traveling man. At that time I had given up hopes of ever getting well. I knew nothing of God, and was in such a condition physically and mentally that I could not even hold a position, but from the very day that I became interested in Christian Science my experience has been one of growth. First of all it has relieved me of sin, has healed me of my old complaints, and led me into a position with one of the foremost houses in my line. My prayer now is to live this truth, and to be worthy of the good that has come to me through your teaching. It is a great pleasure for me to spread the knowledge of Christian Science in my travels.

Yours most faithfully,

CLARENCE ARNOLD.

Testimonies of Healing.

As my thoughts go back to the time when I believed I had nothing to live for, and when each morning's awaking from sleep brought a sense of disappointment to find myself still among the living (for I had hoped each night as I closed my eyes in sleep that it would be the last time), my heart overflows with love and gratitude to God for our dear Leader who discovered this blessed truth and to the dear ones who have helped me so lovingly and patiently over many rough places.

Twelve years ago, I consulted a physician because I had noticed some odd looking spots on one of my arms. He said they were liver spots, but that it was not worth while prescribing for those few, that I should wait until I was covered with them. About three months later, with the exception of my face and hands, I was covered with them. Then I became alarmed and called on another physician who prescribed for me, but he finally said he could do no more for me. Other physicians were consulted with no better results. Six years ago, friends advised me to see their family physician, and when I called on him he said he was positive he could cure me, so I asked him to prescribe for me. At the end of two years, after prescribing steadily, he said I was so full of medicine that he was afraid to have me take any more, and advised a rest. After having paid out a small fortune, I was no better, and very much discouraged.

Two years ago, having failed in business, I applied to one of my patrons for a furnished room where I could meet the few I still had left. This lady, who is a Christian Scientist, loaned me Science and Health, and because she asked me so often how I was getting on with the book, I began reading it. I also attended the Wednesday evening meetings which I found very interesting. After hearing the testimonies at the meetings, I decided to speak to some practitioner about those spots, but not until I had at least a hundred dollars on hand, because I thought I would require that amount for treatments, as I had been accustomed to paying high prices. I had not inquired about prices, and in fact did not speak to any one about my intentions, because I felt sensitive on this subject. When I had read about half of Science and Health, I missed the spots, and upon searching could find no trace of them. They had entirely disappeared without treatment. In a few weeks the reading of that book had accomplished what *materia medica* had failed to accomplish in ten years. It is impossible to express the feeling of relief and happiness which came over me then. In December, 1902, I became a member of First Church of Christ, Scientist, of New York City, and last June I became a member of The Mother Church in Boston.

I have many reasons to feel grateful for what Christian Science has done for me, and my daily prayer is for more wisdom and understanding and more love for all mankind.

CARRIE KRUSES, Astoria, N. Y.

If I could express even a small part of my gratitude and love for Christian Science, and to our Leader, who has made it possible for me to live and not die, I should, indeed, be very happy. One of the most beautiful things about my Christian Science experience has been its ever-ready answer to my questions; and I should like to give a little example in illustration of what I mean by this.

We go in the summer to a beautiful mountainous region where people sojourn for the climbing. At the time of which I am about to speak, my mother and I were the only Christian Scientists among the guests at the hotel. The question came to me one day, as to how it would be if, in my climbing, I should meet with an injury on the

mountains, which might prove severe. I had the remembrance of a very badly sprained ankle from an accident which had befallen me a few years previous to this time, when it was a month before I could again walk out. I had no understanding of Science at that time.

One day, a party of us had been on the mountain; and returning, we were making speed, for it was then quite late, and we had still a mile and a half to go before reaching our hotel. I was running down the path, when suddenly I made a misstep, wrenching my instep in precisely the same way which had caused me such suffering before. After recovering myself from the fall, I tried to go on; but I immediately recognized the pain and the faintness which had been features of the former accident as they again came sweeping over me.

I said to the gentleman accompanying me, "I think I will sit down and wait for the others." My mother was the next to come up, and I told her that I had sprained my ankle, and asked her to help me. She sat down at once, telling the rest of the party not to wait for us, as we would soon overtake them. Then she bowed her head in Christian Science prayer which, with much joy, we are learning is the prayer that receives answer. Immediately, almost, the severe pain and faintness left me, and we started out on our mile and a half walk down the mountain.

As I went on, the ankle steadily grew better and stronger, and soon we caught up with the rest of the party. No mountain path is smooth walking, but God was there and we felt His presence. When I reached my room at the hotel and removed my walking boots, my ankle at once swelled to such an extent that I could not get another boot on, so I put on slippers instead, and went down to supper rejoicing, and the evening was spent in playing games. The next day I was all right, and able to take up, without interruption, my mountain walks and climbs. A few remaining symptoms of sensitiveness and swelling, which in the previous case had lasted a year, in this instance wholly disappeared in two weeks' time. The healing was so complete, moreover, that I was not again troubled with any tendency in the ankle to turn, a difficulty which had continually manifested itself after the previous accident.

My question as to how one can overcome mishaps, when far from home, was thus most satisfactorily and practically answered in this simple and convincing demonstration of the power of Truth in Christian Science. To me, however, the deepest cause of gratitude for Christian Science lies in the certainty of its answers to the world's burning questions on the great issues of life, and its balm for the world's great woe.—THEODORA BECKWITH, Boston, Mass.

It is more than ten years now since I first learned of Christian Science, and when I am asked how it came about, I generally answer, that I walked right into it, for so it seemed to me. My husband and I were both church members, but we were not bigoted in any way, and so by mutual consent we frequently attended service in churches of other denominations. They all seemed alike to me, except that "our church" seemed a little the best. It came to me, however, that there was something more to do than merely going to church on Sundays, and I said so to my husband. We had seen the Christian Science church notice among others, but had never made any effort to attend.

About this time a very dear friend told me she was reading a most wonderful book, the reading of which had healed her and made her a Christian Scientist. She also said she had attended a Christian Science service, and we decided to go also. We went one Sunday morning, and although I had never seen Science and Health, nor had the slightest idea of what Christian Science was, yet at

that Sunday morning service I was completely converted, and said as we came away, "I always knew there was a clearer and better way to worship God, and this is my ideal of Christian worship." From that Sunday morning I never had any desire to attend service anywhere else, and both of us have been in Christian Science from that time. I have never seen anything in Christian Science that I could not and did not accept at once. We entered a class a few months after attending our first service and studied with one of Mrs. Eddy's students, to whom we give endless thanks and love for her faithful teaching. I was in great need of help physically when I first learned of Christian Science, and I began at once to improve. For the past eight or nine years (I say it with deep gratitude) I have not had to ask help from any one, for Truth has enabled me to overcome all that has come to me, both in myself and many others. I know that Christian Science is the absolute truth, and I feel that I have but slightly expressed what it is to me. As we live up to its teachings we find that there is a God whose promises never fail. I wish to express my love and reverence for the dear one who has been found worthy to bring again to human consciousness the right understanding of God.

MRS. FANNIE L. SELLEW, Brooklyn, N. Y.

From childhood, there was nothing I desired or loved more than honesty, and this desire followed me through a long struggle with poverty. The test of my desire for honesty came. A nice country home and seemingly all we possessed was swept away through the destruction of crops, hog cholera, bail money, and the dishonesty of a fellow-man. This loss was nothing compared to the debts that were added to the burden. I was charged with dishonesty by the creditors, who would come to my home and declare I had money hid when I had none.

Science and Health was then handed to me. I was a church member, and my sense of honesty to my fellow-man caused me to carry Science literature to the pastor of said church. For two years I did so, hoping to have him either acknowledge the good or else condemn the evil in it. He did neither, but instead denounced it from the pulpit. This so wounded me that I could no longer attend church. Ambitious as my husband was, every undertaking was a defeat. My great aim was to give my children as good an education as our city afforded. In order to accomplish this, I kept boarders, sewed, and did any kind of work I could, but one thing followed another, until we were reduced to extreme poverty.

For a year we managed to pay the rent, but we only had two sacks of flour and a few potatoes besides corn meal for food. One evening, when there was nothing in the house for fuel or food, we all went to bed very much discouraged. There was a little son of five years, who stilled the tempest by singing, "Shepherd, show me how to go" (*Miscellaneous Writings*, p. 397). I was not even aware that he knew it. Defeats and triumphs had followed one another until the crisis came. Breakfast was prepared of corn-meal as usual, but all refused to eat. Dinner and supper were prepared with the same result. Human energy and strength had failed. I asked all to go to bed and leave me alone with God. I worked until ten o'clock, when these words of truth came to me: "To-day shalt thou be with me in paradise." I saw that poverty was putting my sense of life, substance, and intelligence into matter, and from this time forth we were never in want. I learned that in the measure that our sense of life, substance, and intelligence is lifted out of matter into Mind is progress manifested in every direction.

Words cannot express the gratitude I owe to our dear Leader for "*Miscellaneous Writings*," which held me so firmly to God and showed me the need of patience.

MRS. MAGDALENA HOWSER, Marion, O.

Some time ago, I had an experience which may be helpful to others. I became interested in Christian Science, and attended the services, but doubt and fear came in, and I became stubborn and wilful. I was unable to distinguish between Christian Science and some of the popular modes of thinking. I therefore dropped Christian Science, and went back to my former church home, where my father preached many years. At this time a carbuncle was forming on my neck, a condition which I afterward learned was dangerous. It had been coming several months, and continued to increase in size. I thought I would consult a doctor, and when I did I found that I would require treatment which would keep me from my work. Leaving the doctor's office, I made up my mind that instead of going through all this ordeal it would be better to have Christian Science treatment, for I knew it healed the sick. I went to the office of a Christian Scientist and asked for help. She was glad I had changed my thought, and gave me a treatment. How much better I felt! I was told to read the chapter on "Physiology" in *Science and Health*, and to come the next day. In the evening I read the chapter and felt better. Then I decided to return to Christian Science, and said, "God will lead me. I know not how, but I will hold on, and I shall be delivered in some way." I fell into a peaceful sleep and in the morning I was much better. After four treatments the practitioner told me I was able to work out my own case. I was much better, although the manifestation had not altogether disappeared. As I improved in thought, my neck kept getting better. It gave me no trouble and I was healed completely.

During the time I was out of Christian Science, I kept getting less and less efficient in my work, until I nearly lost my situation. When I was healed by Truth I was not only healed physically, but by the uplifting I received I was enabled to retain my position, and I rejoice to say that I did not lose a day's work. Later, I had the privilege of class instruction, for which I am very thankful. Often, in looking back, I see that though I was seemingly far away from Truth during these weeks of struggle, yet God was very near, sustaining and leading me. He did not let me get lost, and when I turned to Him for bread I was not given a stone, and I was led to the fount of healing waters,—the eternal Christ.—LOUIS H. JENNINGS, Toledo, O.

I have often had a desire to make public what Christian Science has done for me, but I never could tell of all my blessings, they are so many. From childhood I was always sick, never knew one hour of rest, and was under the doctor's care most of the time. I was living in the East at that time, and was advised to try change of climate, which I did. I came West with my family in the spring of the year, but instead of growing better I grew steadily worse, until at last I was obliged to keep my bed for nearly three years,—a great sufferer. My ailments were, it seemed, all that flesh is heir to, and were called incurable by the doctors; viz., lung trouble, heart trouble, nervous prostration, stomach trouble, Bright's disease, and others,—in the last stages. My case was known among physicians, many of whom were prominent specialists, as a most extreme one. Many, upon looking at me, would turn away with a wise shake of the head and say, "What keeps her alive?" I was so low at times that one person's presence in my room would prostrate me and I would be unconscious for hours. I could not endure a ray of sunlight. My physicians, who were exceedingly kind and did all that lay within their power for me, gave me up and the death sentence was pronounced on me by all who attended me.

It was then I realized that "man's extremity is God's opportunity." The "little book" was handed me at this hour of great need. I read it, not thinking it would heal me, but, like a drowning man, I grasped at it. I read it, read it again, and soon found myself growing stronger;

then I kept on reading and was perfectly healed of all the supposedly incurable diseases. What a boon to poor, suffering humanity is this truth! Since that time I have had class instruction, and it has been my privilege to see many diseases return to their native nothingness in the presence of omnipotent Mind. Two of my own household, son and daughter, have been healed of consumption.

It has been my blessed privilege to attend Communion service in Boston twice. I was among the many grateful ones who visited our beloved Leader's home in June, 1903, and heard her strengthening words of truth. Words are inadequate to express what all this meant to me. I can show my gratitude only by loving obedience to her teachings.

LUCINDA BUCK, Austin, Minn.

I am very glad to tell of the wonderful help Christian Science has been to our family. Ten years ago Christian Science first came into our home and it was certainly a welcome visitor. My mother had been sick for a very long time with what the doctors called muscular rheumatism, when my grandmother returned from a visit and brought Christian Science to our home. She had been sick and had treatment in Christian Science, and was well and strong although then seventy years old. She told my mother all about what had healed her, and my mother had treatment and was healed. My grandmother went away, and when she returned my mother was well and strong and was doing her work.

I have been much benefited by Christian Science, more than words can express. I was always sickly from a child. We were always having doctors, first for one, then another in our family, but thanks to God and to our beloved Leader, Mrs. Eddy, for the health and happiness that has come to our home, which we never knew before.

REBA I. BALCH, Utica, N. Y.

Before I became interested in Christian Science, about two years ago, I was greatly annoyed by frequent attacks of rheumatism, but after beginning its study, these attacks became less and less frequent, and finally disappeared altogether, until now I have almost forgotten that I ever had rheumatism. Christian Science has meant so much to me, that, as I look back to the condition in which it found me, physically and mentally, it is difficult to imagine what life would now be without it. It helps me every hour and every minute of my daily life. I can turn to it for comfort and strength in every trial. It is in every way the most practical knowledge which has ever come into my experience. As an illustration of this, I should like to tell of a financial demonstration that I had shortly after uniting with the church last January. In filling out the subscription blank to the expense fund, I had in mind a certain amount that I desired to subscribe, but it seemed difficult to realize that I could spare so much. I finally decided to name a much smaller sum, and filled out the subscription blank accordingly. I knew, however, that I had not done the right thing in disobeying my first impulse, and I delayed some time before sending in the subscription. Finally the realization came, through the study of Science and Health, p. 79, what the true sense of giving means, and I knew that I could subscribe the amount I wished to give, and that I need have no fear about being able to pay it, because the divine substance is ever-present and abundant, and God supplies all our needs. I crossed out the amount for which the blank had been filled, and substituted the larger sum. Before I even had a chance to send it in,—and this time there was no delay in so doing,—the money came to me from a source most unexpected. This served me as a beautiful lesson, and showed how unnecessary it is to listen to suggestions of fear, and how absolutely the supply does come when our lives are governed by Truth. I am indeed grateful to God for all

that Christian Science has done and is doing for me. I am also grateful to Mrs. Eddy who has so tirelessly and faithfully labored to show us anew the way of life.

RHAE SALINGER, Chicago, Ill.

About six years ago I was led to Christian Science by one of my neighbors. I was a great sufferer, to mortal sense, and I was very much afraid of lightning. I was alone one day and went to my neighbor's door to ask if I could stay with her till a storm was over. She said she would like to have me come in, as I had only lived there a few weeks and had not become acquainted with her. She gave me some Christian Science literature to read, and I was very eager to learn of something which would heal me. I never had to leave my home after that day because of my fear of storms. I learned of my relation to God through Christian Science, and found that perfect love casteth out fear. I had tried many doctors and patent medicines, but all proved of no avail to me. I threw away all material means for this great truth that makes free, and by reading Science and Health, and having three treatments, I was healed of several ailments. I am very grateful for the physical healing, but yet more rejoiced over the moral and spiritual uplifting. I have seen many proofs of the power of Truth over error in my own home and elsewhere. I feel that I have found the pearl of great price which is for all who will accept it.

My gratitude is more than I can express to God who has revealed the truth to our dear Leader and to this age. I thank my brothers and sisters all over the world for the beautiful thoughts I receive through our periodicals.

MRS. J. TILGHMAN, Bay City, Mich.

I first heard of Christian Science ten or twelve years ago, while living in Paris, France. Soon after arriving in Paris I made the acquaintance of a fellow art student who was a Christian Scientist. We were brought together very often because of mutual interests in our work. In those days there was no regularly established work of Christian Science in Paris, and only occasionally would a traveler or a student be seen with the "little book," Science and Health. The subject, however, sometimes came up in conversation with my friend, but I did not seem to grasp its meaning very fully. One thought did, however, appeal to me with great force,—it was the thought that Mind governs the body.

I had been for years a great sufferer from terrible headaches, and when these attacks came they lasted two or three days, at which times I was not able to find any relief from my suffering. It would be difficult to describe my thoughts when I first heard that there were people who actually believed that Mind governs the body. It seemed to fill me with a hope that here was a way by which I could be healthy and strong like others, and not have to live in dread of those awful headaches. I could see that these attacks were growing more frequent, and certainly were more severe. Then came the fear that it might not be true, indeed it seemed almost too good to be true. Then I feared to mention this thought to any one, or even to hear it discussed, for fear something would be said that would take away this little hope that I had. If these lines ever reach the eyes of any who may be passing through such a condition of thought I say to them, "Fear not, it is true, and it is for you as well as for me." When my Scientist friend spoke of Mind, I little dreamed, at that time, that she meant God, the divine Mind. As I look back over those days I realize that I understood very little of the truth. All that seemed to remain with me from those conversations was the thought, to resist evil and it would flee from you. I proved to myself the power of the truth on my return voyage to America, when I was able to overcome severe sea-sickness by putting this thought into practice.

Upon returning to my home, then in southern Indiana, although very unhappy, I seemed to forget all about the impression Christian Science had made upon me, and was contented to drift along in the old way, until a year or two later when, by force of circumstances, I was brought to Boston where, I remembered, my Scientist friend was living. After finding her, and going with her to The Mother Church, which was then just completed, and meeting a great many Christian Scientists, I procured a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy. I began to read, and study, and to work out my own salvation. I was in greater need of the truth than ever by this time, as I was in almost hopeless darkness. As I gained a glimpse of the real meaning of Christian Science I began to unwind my snarls. I think I may say that I am one of the Scientists who have come every step of the way with bleeding footprints, but the reward has always been found, and as each new standpoint has been gained, there has come a deeper sense of what Jesus meant when he said, "Peace I leave with you, my peace I give unto you: . . . Let not your heart be troubled, neither let it be afraid."—HARRY VANCE SWOPE, New York, N. Y.

Paul said, "Be ye transformed by the renewing of your mind." In my own case deafness has been overcome by an enlarged understanding of God's word, as explained by Mrs. Eddy in her work, "Science and Health with Key to the Scriptures." Many times I have been enabled to turn to God, to know it was His will to help in trouble, and practically to obtain the needed benefit. Catarrh has disappeared, tonsillitis, which very frequently laid me aside from duties in the schoolroom and home, is no longer manifest. When temptation comes (for Christian Science is both preventative and curative), I turn to that wonderful book, Science and Health, and my precious Bible, grown dearer since read in the new light of spiritual understanding, until I know that my mind is renewed, because the action is changed and the inflammation abated.

Thus in my experience in Christian Science, I have seen the transformation begun, and Truth is able to perfect that which is begun in me so gloriously.

MRS. CARRIE A. MCLEOD, Brooklyn, Nova Scotia.

With a heart overflowing with gratitude for Christian Science, my thought turns to our Leader, and I would tell of the fruits gleaned from the study of her books. I have had such a wonderful proof of the ever-presence of divine Love, that, like Mary Magdalene, I express my gratitude with tears and also with the oil of gladness. I had been going through the wilderness of doubts and fears for the past two years, yet striving to hold to the ray of light that had come to me, though at times the way was dark and God seemed afar off. I felt that others found Him a present help in times of trouble, but I had lost my way. Fears which had been planted in my consciousness by physicians, and hospital work, made a mental picture that has seemed hard to erase. But thanks to God and Christian Science I am leaning upon His sustaining arm with a victory won for good.

The Lord's Prayer has a new meaning to me since I have studied it in the light of Christian Science. I now know that we really can have nothing but what God sends, and that He sends nothing but good. I am very grateful for the Christian Science literature, and thankful indeed to know the meaning of "Lo, I am with you alway."

MRS. EVA H. SWENSON, New London, N. H.

When Christian Science came into my life, it found me a hopeless, forlorn invalid. I had tried many physicians and many kinds of treatment, and had become completely discouraged, and when I tried Science it was with the

idea that it could not hurt me, even if it did not help. The fourth treatment brought a great change, in relief from pain, and in a few weeks I was a well woman. It seemed very wonderful to be well and around like other people, but since then, the wonder has increased with the revelation of the truth, and the beautiful light brought to the world. I realize more deeply all the time the gratitude we owe to God for the Leader who has so bravely shown us this Light,—gratitude which can be expressed only in our lives and by our obedience to Principle, day by day.—MARY McLAIN, New York, N. Y.

In July, 1902, I was healed of a severe attack of articular rheumatism, in one treatment, and have been perfectly free from it since that time. An article in *The Christian Science Journal* has awakened me to the fact that I should have given this testimony long ago. I feel most grateful to God, the ever-present Father, Mother, and to the dear one who realized the truth for me so clearly in that one treatment, and who is now my very loving teacher. For that most loving of women, Mary Baker Eddy, I feel, each day, more of gratitude, reverence, and love, and I marvel more and more at the work she has done, and is still doing for God's waiting children.

M. W. MESEROLE, Lawrence, N. Y.

About six years ago I was healed of a severe case of measles in a few days through Christian Science, without any bad after effects. I was at that time a pupil in an orthodox Sunday School. After my healing I joined the Christian Science Sunday School, and the lessons learned there were a great help in starting me in the right way. There I was taught that God is Love and that He does not send sickness. Shortly after I was taken into the church and recently had the privilege of class instruction. Through the understanding of truth as taught in Christian Science, I have been able to overcome many ailments, and it has been a great help in enabling me to gain a higher position and properly fill the same. I wish to express my gratitude to God, to Mrs. Eddy, and to my teacher who has been so kind and faithful.—J. E. HERONEMUS, Baltimore, Md.

[Written for the *Sentinel*.]

Our Trust.

MRS. H. RUTHVEN MCDONALD.

WHY should we fear, when God is All,
Can He be more than Love?
Will He forget, or let us fall,
His own, His treasure trove?
All nature lives in Love divine,
And every flower, that grows
In sweet and fragrant loveliness,
God's thought, on us bestows.

"As mountains round Jerusalem"
His people, guardeth He;
'Tis Truth and Love, that keepeth them,
In health and purity.
"In pastures green" His sheep are fed,
Nor aught of terror know,
Peacefully by the Shepherd led
Where quiet waters flow.

When Truth appears, all error flies,
As darkness 'fore the light,
And joy succeeds to grief and pain,
As day succeeds to night.
My heart, with rapture rests in God;
Amid earth's toil and strife;
To know no fear, content with Him,
This, is eternal life.

From Our Exchanges.

Certainly more than one half of all the so-called religious discussion going on in books, magazines, newspapers, synods, conferences, parliaments, and even in churches themselves, do not even suggest the essentials of religion. They tend to barrenness, because religion is a movement of the spirit and manifests itself in sentiments and emotions which lead to thought and action. It will be a great gain to all churches and to all-religious people when we see, and agree to say, that creeds and philosophies, scientific studies and rituals, modes of church government, and comparisons of them, are not in themselves religion, and that, if we depend upon them, we shall forget the vital realities which they tend to obscure.

The Christian Register.

What was the secret of the grip Phillips Brooks and Henry Drummond had on men? Why, it is found in their very *abandon* of unselfishness, self-forgetfulness, and self-expenditure. . . . The distinctive power of the pulpit is in its personality; not primarily what it says, important as that is, but who says it; not the clothing which a man wears, but what is the spirit of the man who is inside the clothes; not whether a man receives three hundred and forty dollars for every sermon he preaches, but whether the man and his message so correspond that the voice of God is heard sounding in the soul.—*Methodist Review.*

Through Christ, God reaches down to our deepest need, and through the Holy Spirit we may be carried up into His life—so that a man may even say, "Christ lives in me!" "I am crucified with Christ;" "I am buried with him;" "I have gone down into death with him;" "I count all things 'loss' in my determination to have a fellowship in his sufferings, to be conformed unto his death and to rise with him from the dead." In such bold language the great apostle announces the fact that there is a possible identity of self with Christ, a substitution of his nature for ours—an actual re-creation.—*The American Friend.*

"It is quite true," says *Leslie's Weekly*, "that the church is not designed primarily as a social club; neither, on the other hand, is it designed to be a social refrigerator. A religion that has not enough heart in it, enough warmth of feeling, enough kindness and sympathy to thaw out the social ice among the fellow-members of the same church and bring them together in some degree of mutual interest, is not the kind of religion that will redeem the world."

Every soul must have its election-days, when it must definitely express its will in regard to great moral and spiritual issues. The old alternative of God or Baal is forevermore presenting itself under every variety of modern form. Life and good are being constantly set over against death and evil, and come before us perpetually for our adjudication.—*Western Christian Advocate.*

The absolute simplicities are as essential to a pure character as to an intellectual grasp, and the love of them is the fountain of sincerity and the source of permanent confidence.—*The Christian Advocate.*

Each heart, like each home, should have its guest chamber, so that the beautiful thoughts which journey through the world may turn aside to tarry for a while.

The Standard.

The chief mark of a growing Christian is his growth in love. A selfish Christian lacks the essential element of the Christly life.—*The Examiner.*

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, \$5. Twelve or more to one address, \$4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, \$1 per copy; \$5 per half dozen; \$9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, Treasurer.
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, \$2.40 per annum; \$1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, \$1.00 in advance; all other countries, \$1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH of Rochester, N. Y.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid \$3 00
Twelve or more books to one address, each, prepaid 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; \$3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea: 120 pages, cloth covers, gilt edges. Prices, prepaid, \$1.00; \$5.00 half dozen; \$9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, \$1.00; \$5.00 half dozen; \$9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, \$2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, \$2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, \$4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; \$4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, \$1.00; six copies to one address, \$5.00; twelve copies to one address, \$9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; \$5.00 per dozen.

The inquiry conducted by the Bureau of Corporations under authority of a resolution of Congress, into the operations of the so-called Beef Trust, has been completed, and the report of Commissioner Garfield will soon be filed with President Roosevelt for transmission to Congress. The resolution directing this inquiry stated that since July, 1903, there has been a wide margin between the prices of live cattle and the price of dressed beef, the former declining to such a figure that many cattlemen had been driven into bankruptcy, and it asked whether this disparity was caused in whole or in part by a combination in restraint of trade; whether the margin could be accounted for by natural causes, or whether it resulted from artificial influences controlled by a combination in restraint of trade.

Secretary of War Taft will visit the Philippines in July to make an inspection of the islands and consult with the heads of the insular government about various matters which will then be pending. One of the questions will be whether the conditions on the islands warrant the convening of a Philippine Assembly. This has been asked for in communications from there. The law says that an Assembly cannot be organized until two years after the census of the islands has been taken. The census report is expected to be issued about February 1. If Secretary Taft is satisfied that the Filipino is ready to have an Assembly of his own the existing law can be changed. Another question to be considered is that relating to railroad matters.

A bill that shall satisfactorily regulate railroad rates, prevent discriminations and rebates, and not run counter to constitutional provisions or Supreme Court decisions, is taxing the ingenuity at present of some members of Congress. The Cooper-Charles bill already reported is not considered satisfactory. Much opposition, direct or indirect, has already appeared to this proposed control by the Government through the Interstate Commerce Committee. There is also a difference of opinion as to the advisability

of immediate action on the President's recommendation for such rate regulation.

Treaties of arbitration have been entered into between the United States and France, Great Britain, Germany, Italy, Portugal, Switzerland, Spain, and Austria-Hungary. These conventions have been transmitted by the President to the Senate. That body seemed to think amendments necessary in some particulars, fearing that its prerogatives were threatened. But this opposition has been withdrawn on the assurance that "none of the contracting parties are committed to any action in opposition to their national interests, their policy, or their aspirations."

The gross postal receipts for the fifty largest postoffices in the country for December, 1904, as compared with December, 1903, show a net increase of about nine per cent. The highest increase was 22 per cent at Peoria, Ill. The only decreases were four per cent at Portland, Me., and thirteen hundredths of one per cent at St. Joseph, Mo. The receipts at New York increased almost six per cent, and at Chicago almost fourteen per cent.

The Senate has ratified and made public an arbitration treaty for pecuniary claims, to be in force five years, signed at the conference of American States at Mexico, January 30, 1902. The countries signing are Bolivia, Costa Rica, Colombia, Chili, Dominican Republic, Ecuador, San Salvador, United States, Guatemala, Hayti, Honduras, Mexico, Nicaragua, Paraguay, Peru, and Uruguay.

More than half a million steerage passengers arrived at the port of New York during the year 1904. William C. Moore, the Government landing agent at Ellis Island, places the number at 572,798. Of first-cabin passengers there were 68,704, while 93,685 came in the second cabin.

The disclosures that have been made through the Department of Commerce relative to the discriminations practised against commission merchants by the owners of "private cars" are leading to the preparation of a number of bills in Congress to regulate this abuse.

The President has appointed Vespasian Warner to be Commissioner of Pensions. Mr. Warner is now a member of Congress from the 19th district of Illinois, serving his fifth consecutive term.

Foreign.

Automobile matters in Italy have been given a new interest by the efforts of Signor Florio, who has recently offered a very handsome cup, to be competed for in the annual races at Brescia. Next year, no doubt, the Brescia circuit will rival the Gordon-Bennett Cup in interest. The leading event on the programme will now be the Florio Cup. The circuit already has two prizes, the Italian Cup and the one offered by Princess Letitia. The principal cup race will be run over a distance of about six hundred miles, or about five times around the circuit. The other cups will be raced for over the intermediate distances. After the Florio Cup has been won the seventh time it will become the property of the constructor whose car has won it the greatest number of times. The different cities along the course, Brescia, Cremona, and Mantua, are also to award prizes for the race.

Admiral Fournier has been elected as permanent President of the North Sea Commission of Inquiry. This is considered a well-deserved tribute to the good service of France in the critical days following the Dogger Bank incident. Much of the credit for a peaceful settlement of the Anglo-Russian dispute seems due to M. Delcassé, the French Minister for Foreign Affairs. The text of the procedure of the Commission has been given out as follows: The Commissioners will deliberate in secret and will hear the witnesses in public; the British claims will be first presented and the Russian reply will

follow; counsel for both sides will present final arguments; the Commissioners will deliberate in secret upon their final report; the closing session, when the Commission will publish the result of the investigation, will be public.

The year-book of the German universities, just published, makes it clear that Berlin University is the most numerously populated seat of learning in the world. It contains 7,774 matriculated and 1,330 non-matriculated students. The philosophical faculty, embracing philology and natural sciences, numbers 3,572 students—medicine, 1,111; law, 2,756, and theology only 335. America sends 123 students, Africa 8, Australia 3, and Asia 37.

The anniversary of the revolution of 1848, which prepared the way for the union of Sicily and Italy, was celebrated on the 17th at Palermo by the unveiling of a monument to Francesco Crispi, the soul of that movement, who later became Premier of united Italy. The Count of Turin represented King Victor Emmanuel II., and Emperor William and King Edward were also represented.

The French Foreign Minister has informed the Council of Ministers that the Moroccan crisis has been entirely relieved. The Sultan restores his French military advisers and expresses satisfaction with the French policy. The French Minister has been ordered to proceed to Fez and arrange details for carrying out the policy of France.

The International Art Association of Rome has voted an order of the day protesting against the plan of Professor Waldstein of Cambridge University, England, for excavations at Herculaneum, and urging the Government not to allow foreigners or persons in foreign interests to undertake excavations in Italy.

The discovery at Lund, Sweden, is reported of a book containing the text of Shakespeare's "Titus Andronicus," printed in London in 1594. The oldest edition hitherto known is the 1600 quarto.

Industrial and Commercial.

The thirty-sixth annual report of the Board of Railroad Commissioners of Massachusetts says that the State has been over-burdened with electric roads, that many roads are in a bad financial condition, and that in many cases the alternatives of increased fares or abandonment of the service are the only ones that present themselves. "Of seventy-four operating companies, thirty failed to earn expenses and fixed charges; twenty-five paid dividends; of the twenty-five which paid dividends fourteen earned them during the year. Five companies have been in the hands of receivers. Very few companies, besides keeping their railways in good repair, reserved for depreciation what prudent management would require. Generally present necessities only have been met, the future, with its inevitable expense of replacement and reconstruction, being allowed to look out for itself."

The aggregate capital stock of the forty-four Massachusetts corporations June 30, 1904, was \$237,423,885.72—a net increase of \$1,589,420 over the previous year. The total amount of dividends declared the last year was \$14,985,815.50—an increase of \$1,490,627.

The Uraad, a life-boat designed and commanded by Captain Ole Brude, after a trip of six months has crossed the Atlantic and come to anchor in Gloucester. She has safely weathered storms that have disabled and wrecked powerful ships. She is egg shaped, eighteen feet long, eight feet wide, and eight feet deep, and draws but four feet of water. She carries a single mast of hollow steel, which is stepped close to the pointed nose of the craft and to which a small lateen or sprit sail is hoisted. She is built of steel one-eighth of an inch thick, and is 4.75 tons gross, and her hull is perfectly oval. She is steered by an ordinary tiller from below decks.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

Truth brings Light.

LEWIS C. STRANG.

THE endeavor of error to obtain the justification which belongs to truth, is notably prevalent in the various phases of the world's opposition to Christian Science. It assuredly is not effrontery for Christian Scientists to be just to themselves and to recognize that the experimental stage has passed, so far as their system of theology and medicine is concerned. An honest man, acquainted with the facts, can no more dispute the claim that Christian Science heals the sick and reforms the sinner than he can dispute the fact of his own existence. The proofs are too positive and too numerous to be refuted.

The opposition to Christian Science and the denials of its efficacy can be traced to two conditions of mortal consciousness. One is ignorance, sometimes wilful, sometimes materially excusable. The other, and far more common one, is dishonesty,—nothing less, whether its disguise be intellectuality, self-righteousness, or indifference. In some cases this dishonesty is conscious, the product of a perverted and obstinate mentality. In most cases it is blandly unconscious, self-complacent, and egotistical.

However much they may regret this widespread unconscious dishonesty, Christian Scientists know the folly of blaming individuals for their seeming mental lethargy. In fact, many Christian Scientists can sympathetically recall in their own experiences the time when they, too, dismissed self-evident proof without the courtesy of a second thought. Neither comprehension of the situation, nor compassion, however, should blind the Scientist to the truth that dishonesty is dishonesty, regardless of the conditions or the circumstances which accompany its manifestation.

Mortal mind is reasonably secure so long as it can hide its nonentity behind its own egotism. It is when the suffering, consequent upon established wrong thinking, finally penetrates the shell of mortal egotism with doubts as to the infallibility of material methods and theories, that the voice of Truth reaches human consciousness. Its command is always to shake off the mesmeric influence of material sense and thoughtless mental routine, and investigate. Thus spoke Jesus, "Seek, and ye shall find; knock, and it shall be opened unto you."

When impelled by this call of Truth, honest investigation of Christian Science, if courageously pursued to the point where understanding of the fundamentals of the Science can be demonstrated, invariably leads to the acknowledgment of logical soundness and practical power.

After all the researches of men for a correct solution of the great mysteries—what is truth, what is man, what is the universe?—and the utter failure of these researches to discover even approximately adequate answers to the perplexities of existence, it is not strange that one must become as a little child in order to find the way in Christian Science. As would be the case were one bent upon

acquiring knowledge of any new thing, the seeker after spiritual understanding must cultivate mental receptivity by putting aside for the moment all prejudices, all preconceived ideas, all materialistic and idealistic theories born of worldly philosophy, worldly theology, worldly science, and worldly pride of intellect. He must humbly seek to know God in the way of His appointing, not questioning for the time being the reason why.

Were it not that Christian Scientists absolutely know and frankly acknowledge that all they have of light is literally a revelation from the source of all light, their boldness in claiming that they are right would be ludicrous. It is not, however, because of its words, but on account of its works, that Christian Science challenges the world to judge whether it be of God or no.

Jesus sounded the keynote of Christian Science and indicated the direction for human thought and progress when he said, "God is Spirit" (Revised Version); and he gave mankind a complete guide to eternal life when he endorsed and emphasized the divine command, "Love thy neighbor as thyself." The whole of Christian Science is comprehended in these sayings, but the fact that the world has had them for nineteen hundred years and has failed to profit by them to the extent of destroying or even greatly ameliorating sin, sickness, and death, shows how much the sayings needed an interpreter and how much nearer to Jesus' standard of spirituality than the average of mankind was Mrs. Eddy, to have been able to act as that interpreter. Christian Scientists, therefore, do well to love and honor a Leader whose works so manifestly testify to her worthiness and consecration.

Patience.

EVELYN SYLVESTER KNOWLES.

It would be difficult to find a better definition of patience than that conveyed by the last three words of Milton's matchless line,—

They also serve who only stand and wait.

While the words in themselves do not literally define patience, they suggest most happily the mental attitude indicative of that quality. The act of "standing" dissipates any idea of listlessness in connection with the "waiting;" while it shows a readiness for action in the most manly of postures.

Patience is not inactivity; it is not an indifferent yielding to unpropitious circumstances, nor does it smother desire for progress, though for a time advance may seem impossible. It is a yielding of the human will to the Divine; a submission of every human desire and propensity to the unerring law of wisdom, and that without chafing. While necessarily quiet and unostentatious it always denotes power, for the ability to control self betokens a kindred ability to govern circumstances.

It is obvious that this desirable quality of character cannot exist as an abstraction. It must be expressed; and this expression cannot begin at too early a period. The child in the nursery needs to be taught the sweet lessons of

self-control; through schoolroom and college-hall, indeed through all the relations of life, patience must be learned and lived, and nowhere is it more essential than in the home. Scarcely a day passes that makes no demand upon our self-control. A wise person once remarked, "Christian Scientists have no excuse for an impatient word." This is true; yet some of us are still struggling on the hither side of this goal, and nowhere are our efforts more severely tested, our victories more complete, than in the home.

It was this trait in the boy who, when his day's work was finished, studied by the light of a blazing log, that placed Abraham Lincoln at the head of a nation; it was this quality dominating the intellectual life of him who entirely rewrote his "History of the French Revolution" when the first manuscript was destroyed, that made Carlyle one of the great reformers and literati of the nineteenth century.

A more recent and marvelous example of patience is manifested in the life of the Discoverer of Christian Science. Years ago, while walking in comparative darkness with the rest of mankind, she saw a great light, and, from its nature, she knew that it had always been shining. Lighting her candle at the eternal flame, she turned joyously toward those who having eyes saw not, and declared her discovery. They were slow of apprehension, but finally one candle was held timidly up to hers, then another and another caught the blaze, until through the darkness a tiny path appeared, like approaching dawn, and again the "Light" was among men. She might have become impatient of dull ears, she might have listened to the tempter when he said, "What can *one* accomplish!" but she gave no place to the thought as she toiled faithfully onward, and to-day she reaps her reward. Not in that she has thousands of followers, this is glorious for the Cause; nor yet in that she has shown them the light, this is glorious for mankind; but in herself, "patience" has had its "perfect work."

By what means has the Discoverer of Christian Science attained this rich possession? Has it not been through the close study of the teachings of the Master, and the closer walk with him whose example of patience is above all? Recall, for instance, his words when confronted by the traitor. Would not many of us have felt justified in heaping upon Judas the strongest invective? To rebuke such open hypocrisy would have seemed the righteous thing to do; but what said Jesus? "Friend, wherefore art thou come?" "Friend." O the world of meaning in that word! He who thought thirty pieces of silver ample recompense for the life of that perfect man who had striven all this time to uplift the traitor out of the very self that made such treachery possible,—he it was whom Jesus addressed as "Friend!"

When arrayed before his accusers, every indignity of which mortals were capable was showered upon him. Brutal contempt, distrust, envy, malice, hatred, and hypocrisy, all were there, yet, "He held his peace." Sublime silence, back of which lay infinite humility and love.

When finally rejected by a torpid, self-satisfied humanity, brimming with sensuality and sin; when his consecrated efforts in behalf of this same humanity seemed to have resulted in nothing but his own agony, note his words, almost the last to fall from those patient lips, "Father, forgive them; for they know not what they do." Is not the love here expressed the fruit of that divine patience whose roots pierce the depths of being?

Though this grandeur seems so far beyond and above our present realization, let us not yield to discouragement. Our Wayshower began with the smaller demonstrations of Truth, working faithfully upward until he had surmounted every obstacle that lay in the path of mortals, and we must do the same. "An honest and good heart, having heard the word," will "bring forth fruit with patience."

No matter how bungling our work may appear at times,

nor how often we stumble, so long as our motives are pure, our efforts for the advancement of Truth rather than of self; so long as we keep our eyes steadfastly on the goal and not, as our Leader has said, upon the bleeding footsteps behind us, the everlasting arms will bear us protectingly on, into the realm of pure Mind where we can say, as did our patient Master, "It is finished."

Keeping our Lights Aglow.

IDA L. BAKER.

SEVERAL years ago I read of an incident which illustrated most vividly the need that each individual hold forth steadily this word of Life,—Christian Science. A traveler who visited the lighthouse at Calais, questioned the keeper, "What if, on one of these stormy nights, this light should go out?" To this the keeper replied, "If to-night this light should go out, I would receive a message from India, America, or perhaps from some other part of the world from which I had never before heard, saying that on a certain night the light was out and a ship was in danger." He added, "I look across the sea and feel that the eyes of the whole world are looking at this light. Go out! burn dim! No, never!"

As I finished the reading of this story I thought of what our lives should be as Christian Scientists, and I saw that we should be no less faithful and earnest in our work of reflecting the light of Truth, for if it means so much that these lesser lights be kept constantly burning, how much more needful is it that from each individual consciousness there should shine out, clear and radiant, its knowledge of Truth undimmed by error's shadows.

We learn through Christian Science that each time we admit as reality another power than God, good, we are to that extent withholding the light,—it may be from some one who is in distress,—one who is reaching out for just the help which we could so well give, were our lives only more true to our light. Every faithful Christian Scientist should ponder these words of the Master, "Ye are the light of the world," and should demonstrate the obedience thereto which will result in the lifting of many afflicted ones out of sin and sickness into the joy and gladness which follow the knowing of divine Love. Christian Science teaches us that only as we understand and live Christ's Christianity can we radiate its saving power and help our fellow-sufferers. We may never know how many are being guided into the way of health and harmony through the direct influence of our steadfastness to Truth, but we do know that if our thoughts are aglow with divine Love every one within the radius of our thought will be helped and encouraged.

We are thankful for the many witnesses to this truth,—those who discerned the light before us, and who, having passed safely through dark hours of fear and dismay, were able to say to us with the calmness and confidence of the great Teacher, "Be not afraid, only believe." Besides this, we have also the joyful assurance that our beloved Leader goes before us, reflecting upon us the Christ-love, which is indeed the light of the world, and which is being radiated to-day unto the uttermost parts of the earth, turning men "from darkness to light, and from the power of Satan unto God."

An Experience.

MINNIE E. ERWIN.

OUR Christian Science periodicals come to us so richly laden with offerings from the deep experiences of those who love and live the truth, that we read them with grateful hearts,—grateful that we are permitted to know of their victories,—of the demonstrations of the power of Truth and Love, and we are strengthened and helped by them, often gaining courage for some encounter with the enemy which would overthrow our sense of Truth.

For this reason I venture to give an experience which came to me in the early years of my life in Christian Science, with the hope that some timid ones who long to do right, and yet who do not clearly see the path of duty, and so wait in uncertainty and suffering, may be helped and encouraged to trust, while they stand with staff in hand ready to take the step as soon as it is shown them.

This experience occurred about fifteen years ago. For two years I had been studying with great interest our textbook, "Science and Health with Key to the Scriptures" by Mrs. Eddy. I had also had class teaching, and at this time was able to help myself and others. In the city where I then resided a little band of Christian Scientists were about to organize a church, and as my heart was with them in the work, I longed to be one of the number. I was still connected with my old church which, until I knew of Christian Science, had seemed to me a manifestation of my highest sense of good; but with the understanding of God that I had gained through the study of Christian Science, I was no longer satisfied with its teaching, and longed to be free to follow my new conviction of right. I was a teacher in the Sunday School, but unable longer to teach the children as I had formerly done, and knowing that I would not be allowed to teach them the truths of Christian Science, I saw that I must very soon break this tie. At this time I lived in my father's home. He was pastor of one of the orthodox churches in the city, a man of sterling qualities and wide influence. During years of sorrow that had seemed to cloud my life, he had shown me the utmost tenderness and love, which I deeply appreciated. For sixty years he had served the church and loved it ardently, and I felt that it could not but be to him a crushing grief to see his children step out from its communion. His thought toward Christian Science was very kind, so I did not wish to antagonize him; and while I was fully decided as to my duty, and that I should do what seemed to me right, how to do it wisely and well was the question that puzzled me.

For days the conflict was so severe between my earnest desire and determination to be released from the old church and my indecision as to how to take the step now that the time had come, that it caused me intense mental and physical suffering. In this time of temptation and fear, my cry went out to God in the words of the Psalmist, "Shew me thy ways, O Lord; teach me thy paths." I did not then know just how to meet the mental suggestions that thronged upon me, and a belief that some of the dear Scientists misunderstood my motive and my attitude in delaying to take the step, added to the bitterness of the trial.

One day, while trying to overcome with the thoughts of truth the depression that was almost more than I could bear, suddenly something seemed to say to me with startling force, "What are you doing? You are anxious and worried, and worry is sin." In penitent thought I answered, "Yes, I am indulging in worry and it is sin." The error was uncovered to me, and I acknowledged it as error, when immediately the remedy came. Like a bright light this clear text illumined my thought: "Commit thy way unto the Lord; trust also in him; and he shall bring it to pass." I appropriated it at once, and said, "This is God's message to me, I will obey." With my guide-books, the Bible and Science and Health, before me, I spent the remaining hours of the day and far into the night, waiting upon God. The conflict was not yet over, and, like Jacob, I wrestled until the day dawned. Mental suggestions forced themselves upon me, as if they would take possession of my consciousness in spite of my efforts to bar them out; but I met them firmly with declarations of the truth, and I realized that error had no power to thwart omnipotent Love. Again and again the enemy was driven away by this earnest denial of its claims, and in clinging to the Promise of Love, until the night was past, the foe was

vanquished, and the early morning hours brought peace. I knew then that I did trust, and there was no more fear. It was Sunday morning. At an early hour my father came to my rooms and said, "M—, I understand that the Scientists are about to organize a church, and I know you wish to go with them. I suspect that it is the thought of me which delays your taking this step." I replied, "You know Jesus said, 'He that loveth father or mother more than me is not worthy of me,' and yet, father, I would be sorry to grieve you." He said with emotion, "Yes, I know, but do not hesitate on my account, follow your convictions of duty, ask your pastor at once for your church letters, and do as seems to you right." I told him then of my experience, of the promise given, and of how precious it had been to commit this troubled thought to the care of divine Love.

During the week, I severed, one by one, the ties that bound me to the old church. I asked for, and received without an objection, my own and my daughter's church letters. I learned afterward that my father went to our pastor and asked him to give us our letters. I gave my class into the care of the superintendent of the Sunday School, and bade each of my girls a loving good-bye. Sunday morning I went to the hall where our dear little band of Scientists held their services. As I turned that way, the bell of my old church behind me called with every peal, Come! Come! Come! but oh! how sure I was that I was indeed coming to the true Christ-life in Christian Science, as, with love to the dear old church, yet without one regret, I turned my steps away from it. That day began a new life for me,—a life of broader and richer experiences. After the morning service our Christian Science church was organized. My daughter and myself were among the twelve charter members, and I have never ceased to rejoice that I did commit my way unto the Lord. I did trust in Him; and He brought it to pass.

In June, 1903, when our beloved Leader spoke to us from her balcony at Pleasant View, sweet, strong words of welcome and of trust, then gave us a gift of rare beauty,—a chain of precious texts,—her "sacred motto," one of the links in the golden chain being the dear verse I have quoted here, my heart went out in thanksgiving to God, and to His messenger, that through Christian Science we are learning how to trust, and learning, too, that the struggle is not necessary, for if we trust first, last, and always, we shall know only assurance, harmony, and peace.

Obedience.

E. L. L.

I DESIRE to express my gratitude for the new order recently issued through the *Sentinel* and *Journal* relative to the requirements for public practitioners of Christian Science. Instead of finding it restrictive, it has brought to me a greater sense of freedom by compelling me to systematize the work in thought. By mentally obeying the requirements involved by this order, and taking such steps as are demanded to fall into line, I have not only been able to do better work, but more people have come to me than ever before, seeking help from this wonderful truth which has been again revealed to the world through the inspired thought of our Leader, Mrs. Eddy, and known to the world as Christian Science. I see more clearly than ever before how necessary it is that we who are in the ranks stand ready to respond with prompt obedience to the bugle call of those at headquarters, that we may not in any way impede or retard the carrying out of Truth's command.

The lesson which came to me as I listened to the reading of our Leader's message of 1902, to The Mother Church, was that of intelligent and loving obedience, and experience has proved its value.

Selected Articles.

David and the Angel.

An old truth in a new dress is sure to attract more than ordinary attention. One of the central truths in the popular mind about Christian Science is not a new truth. It is as old as religion. But hundreds and thousands in New England to-day are standing up for it, and proclaiming it to the world with all the enthusiasm of a new revelation. A new church has just been dedicated in New Hampshire. It is all of stone, costly, beautiful; with its large seating capacity, its massive pillars, and high vaulted roof, it is more like a miniature cathedral than an ordinary parish church. Its founder is for the most part its bountiful giver; a notable woman, the apostle of Christian Science.

Now what is one of the central truths that Christian Science stands for in the popular mind? Is it not that in all the diseases and ills that flesh is heir to, there is a higher power to help besides the surgeon's knife and the medicine bottle? Is it not that if any son of man finds himself in a maze, a winding path of perplexity out of which there seems no exit, an unseen presence, in answer to his prayer, may put a string in his hand, and, if he follow that mysterious leading, he will get out into the open? Is it not that when night comes down, the night of any kind of trouble, and broods over a man's soul, the stars come out to the eye of faith, the stars of hope? Does Christian Science teach that, when a man's hour is darkest, and a man's fortunes are lowest, a supernatural, benevolent presence, visible to the eye of faith, invisible to the eye of sense, encamps round about him? There was David, a good Old Testament Christian Scientist. This truth I say is not new. It is as old as religion, and David was one of the first preachers.

I have a picture of that Old Testament Christian Scientist in my study. It is the form and features of a young man, cut, in the finest Carrara marble, by a great sculptor. The youth is handsome, lithe, athletic. Who in all Old Testament history better played the man than David? What hunter ever met the lion and the bear with greater courage? What soldier ever hid among the rocks, when pursued by his enemies, with greater security? But the secret of his security was not his sword. The secret of his ability to sing in the midst of perils was his trust in the great invisible, benevolent present, which he called the angel of the Lord.

Picture, if you will, the first Christian Scientist cathedral. There it is, up among the rocks of old Judea. The founder of the faith was this Minstrel Monarch of Israel. What time he heard the bugle call to duty, he was afraid of the dangers and fled. He was so struck with the terrors that he feigned madness, rather than face them; he "scrabbled on the doors . . . and let his spittle fall down upon his beard."

But note the contrast. Note the effect of his belief in this one great central truth of Christian Science. Up there in his cathedral among the rocks, up under the blue, he sang his song of trust and praise. He heard the lions roar, but they had no terror for him. He uplifted his companions who had gathered round him, and taught them to believe in an invisible, benevolent presence—what a subject for an artist! Not a new cult. Not a grand new church in New Hampshire. Not the apostle and her followers of an old truth in a new dress. But a soldier, an outlaw, surrounded by his wild band of followers, wild by the exigencies of their trade, but tamed into steadiness, order, and courage, up there among the rocks, worshiping God, and this is the text that has come down to us of that first sermon, of the first Christian Scientist, at the dedication of his cathedral among the rocks, and this is the truth which the church teaches, and which we all believe in, "The angel of the Lord encampeth round about them that fear him, and delivereth them."

And this is by no means the only picture that rises before us, as we open our Bible, and ponder one of the central truths of Christian Science. Time would fail us to speak of the invisible, benevolent presence that called up to Abraham, and stayed his hand, when he took the knife to slay his son; of the angel which redeemed Jacob from all evil; of the power that led him all his life long; of the warrior leader, sword in hand, who proclaimed himself the captain of the Lord's host, as benevolent a presence to the Hebrew Joshua, as he was to the English Cromwell. If we are believers in the benevolent, unseen messengers of God, are we not able Christian Scientists? At Advent do we not believe in the great presence who is the brightness of his Father's glory and the express image of His person?

Do we not believe at Easter in that presence breaking on his disciples, and saying, Receive ye the Holy Ghost? Do we not pray for that presence in every great crisis in our lives? "Lo, I am with you always, even unto the end of the world." I knew a woman who was taken to a hospital in a serious illness. She was told she must undergo an operation, and on the issue, life and death were at stake. At first she was agitated with natural fear; but she prayed in her peril, like David among the rocks, for strength. The strength came, and she used it to calm her fears, and to walk up to the dangerous ordeal with perfect tranquillity. All who saw her said there was a look on her face like the face of an angel. In answer to her trust deliverance came in the experience of strength. She was able to say with perfect serenity, "I shall be happy if I live, I shall be happy if I die."

If trust in an unseen benevolent presence is one of the principles of Christian Science, then are we not all Christian Scientists? Christian Science may believe more; truth does not contain less. Some talk of Christian Science as if it were an enemy, and nothing but an enemy, of the church. Surely there could not be a greater mistake. It is a time to feel that, if the Christian Scientist is right in one particular, it is all coming our way. We should rejoice in faith, wherever it appears. It is never right to narrow the cause of God to our own parting circle. It was the highest voice which said in reply to, "Master, we saw one casting out devils in thy name; and we forbade him, because he followeth not with us"—"Forbid him not: for he that is not against us is for us."

REV. T. E. CALVERT.

The Christian Work and Evangelist.

It has been well said that whereas the common method of human reasoning is to induce conclusions from physical phenomena, Mrs. Eddy has taught us to deduce conclusions from spiritual noumena.

The materialist protests against this method of logic, for he says there is no tangible evidence that God is All in all, and there is abundant proof that matter has an omnipresent existence. The psychologist, however, informs us that the evidence of the physical senses cannot be relied upon, and that "matter to the scientist is not matter at all."

Far more convincing than argument or ridicule comes the indisputable evidence of actual demonstration, and pure reason, for the Principle of knowledge, is found to be in perfect accord with both the letter and practice of Christian Science.

RICHARD P. VERRALL.

Brooklyn (N. Y.) Eagle.

Be strong!

Say not the days are evil—who's to blame?
And fold the hands and acquiesce—oh, shame!
Stand up, speak out, and bravely, in God's name.

Be strong!

It matters not how deep intrenched the wrong,
How hard the battle goes, the day how long;
Faint not, fight on! To-morrow comes the song.

MALTBIE D. BARCOCK.

The Lectures.

Kenosha, Wis.

Edward A. Kimball of Chicago delivered a noteworthy lecture on Christian Science at the Rhode Opera House on Thursday evening, November 17. Mr. Kimball was introduced by the Rev. J. L. Hewitt, D.D., who said in part,—

Man is by nature religious; religious questions claim, deserve, and receive universal attention. This is an age not of speculation but investigation. He is untrue to his moral sense, untrue to the inspirations of his age, who purposely ignores a religious truth and is unwilling to listen without prejudice while that truth is expounded and vindicated. The more truth is opposed the more earnest should be our consideration of it. A faith or a philosophy that is false on the face will have no opponent. We may ordinarily measure the importance of an idea or a doctrine by the number and strength of its antagonists. Christian Science seems to have made itself worthy of antagonism; authors have written against it; conventions have resolved against it, and logicians have argued against it, yet it has moved amazingly forward.—*Kenosha News*.

Chadron, Neb.

A moderate house greeted Bicknell Young at the Rink last Saturday night [November 5] to listen to his exposition of a few fundamental truths in the Christian Science system of religion. His address was simple as a child's reasoning, and logical because it cannot be overthrown without the prior destruction of the Bible and Christianity. The spirit displayed was fraternal and conciliatory, the language chaste, the delivery easy, natural, and graceful, with a very pleasing and perfect modulation. The audience was as select as could be gathered in the ordinary manner in Chadron, and the address was well received and no doubt had the effect of softening prejudice, as it could not fail to enlighten some who had never had opportunity to gain information concerning Christian Science but had heard the coarse jests of the street and the unlearned criticisms of people credited with knowledge. For their own sakes we regret the absence of those who neglected to attend. Time will be when their loss will be upon them, and though sensible of the discord they will not understand why it is a loss. But it takes time for innovations to clear the way for the people who are satisfied with things as they are.

Chadron Times.

Philadelphia, Pa.

One of the largest audiences ever assembled in this city to hear a religious address thronged the Academy of Music last night [December 2] to listen to a lecture on Christian Science by Judge Septimus J. Hanna of Colorado Springs. Fully three thousand persons obtained admittance to the lecture. One by one the two balconies and amphitheatre were thrown open, to be quickly filled, and finally the overflow found seats in the orchestra pit. The second balcony proscenium boxes, deserted except on the most popular opera nights, were filled. Regular box-holders who came late were turned from the doors. Only one spot escaped the onslaught of the crowds,—the stage box held sacred to the directors of the Academy. Few occasions, indeed, find it with occupants, yet last night a party of directors sought its seclusion from which to hear Judge Hanna's discourse. A more cosmopolitan audience could not have been brought together.

Charles H. Fahnestock, First Reader of First Church of Christ, Scientist, in introducing the speaker of the evening, said,—

The presence of such an audience for such a purpose is

indicative of the fact that never in the history of mankind has the quest for knowledge and truth been so earnestly prosecuted as in the present age. Men and women are becoming more and more dissatisfied with the old conception of an anthropomorphic God who is the author of both life and death, who cognizes both good and evil, and who engenders both love and hate.—*North American*.

New York, N. Y.

A large and cultured audience assembled at the Harlem Opera House on Sunday afternoon [December 11] to hear Mrs. Sue Harper Mims of Atlanta lecture on Christian Science. The house, which has a seating capacity of fifteen hundred people, was filled to overflowing, and many who could not find seats were seen standing during the whole of the lecture. Mrs. Mims presented her subject in a very logical and convincing way, and was warmly cheered again and again at the close of the lecture. She was introduced by Mr. Charles E. Burnham, First Reader of Third Church of Christ, Scientist, of this city, who spoke in part as follows:—

The crying need of humanity to-day is love,—love for God, and love for one another. But we cannot honestly and sincerely love God unless we can, in a measure, understand Him. There is something in each and every one of us that rises in rebellion and protests against the belief in a wise, kind, and loving God, who, for some inscrutable reason, would inflict upon His children want and woe, sin, sickness, and death.

God has revealed Himself to this age through one noble woman, whose beautiful Christian character, and nearness to God, fitted her to receive the divine message; one whom we reverently love and honor as our Leader, and the author of our text-book, Mary Baker Eddy. Christian Science is neither a fad nor a fancy, but is of God, else its history, for the past nearly forty years, would not be what it is.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

As to Quotations.

It has often been observed that children whose parents have done a great deal for them, presume upon the loving kindness of those to whom they are so deeply indebted, and soon come to look upon the property of their parents as something which may be freely used without the formality of first asking permission; and it is to be regretted that, to a certain extent, some Christian Scientists have drifted into this manner of regarding Mrs. Eddy's copyrighted works. Some have used quotations from her books without the courtesy of a quotation mark, the name of the author, or the name of the book quoted from; others have been careful to observe all the proprieties except that of procuring the permission of the author to quote from her works; still other persons—not Christian Scientists—have garbled and distorted her words in order to appropriate her labors to their own use without detection. All these practices should be stopped, and Christian Scientists should need no further admonition than has been given them.

Mrs. Eddy's wisdom and foresight in protecting the integrity of her published works by registering them under the copyright law, has been fully justified in the defeat of certain attempts to appropriate her writings, attempts which might have succeeded had she not availed herself of the protection legally obtainable through this law.

Copyright is defined by the "American and English Encyclopædia of Law" as "the exclusive right of printing or otherwise multiplying copies of a published intellectual production, and publishing and vending the same; the right of preventing all others from doing so."

The first copyright law was enacted in England in 1709, and in 1790 a similar law was passed in the United States, and although various changes have been made from time to time, the rights of authors to the exclusive control of their works have been protected by statute since these dates. The law now in force in the United States provides that the author of a book, upon complying with the provisions of the law, shall have the sole liberty of printing, reprinting, and publishing his works, and certain penalties are decreed against all who violate these rights.

The question of how much of a book may be used in the way of quotations, is hard to decide, but the courts seem generally to hold that the precise quantity is not essential in determining whether the quotations constitute an infringement. Mr. Scrutton, in his work, "The Law of Copyright," says, "Honest and *bona fide* extraction will not necessarily protect the taker," and in this connection he quotes the case of *Scott v. Stanford* (L. R. 3 Eq. 718), in which the court said, "No man is entitled to avail himself of the (copyright) labors of another for the purpose of conveying to the public the same information, although he may append additional information to that already published." Commenting upon this decision, Mr. Scrutton writes, "If the part taken is substantial in merit, its mere physical smallness will not protect the infringer, especially if it is used, not for critical purposes, but so as to compete with the original publication." The mere fact that the person quoting from the work of another gives full credit to the author does not

acquit him of infringement, nor does it absolve him from liability to the author. It is not essential that the exact words of the author shall be used in order to constitute the new work an infringement.

It is but right that our Leader should receive the hearty support of every Christian Scientist in her endeavor to preserve the purity of the authorized literature of Christian Science, and we will do well if we are careful to refrain from any infringement of her proprietary right to her published writings. "Piracy" is the legal term used to designate the intentional infringement of copyright, and it aptly describes the lawless thought which would make use of the property of another without his consent. We are sure that Christian Scientists who have quoted freely from Mrs. Eddy's writings without permission have not intended to do wrong, therefore this ugly term does not apply to them.

ARCHIBALD McLELLAN.

Illogical Criticism.

"It is not sufficient to say that cases of toothache and of diphtheria have been cured by the Christian Science treatment. There are on record many cases in which the treatment has been a failure. That is a serious reflection upon a system based upon Scriptural texts which recognize no chance of failure."

This comment voices a criticism of Christian Science which is frequently made, and so long as the fact of failures to heal is undisputed, there are those who seem to think that the criticism is valid and unanswerable.

The declaration that Christian Science is "based upon Scriptural texts which recognize no chance of failure" is altogether misleading, and makes it apparent that the critic is not fair either to Christian Scientists or to himself. All truth comes into demonstration through some human channel, and to say that the Scriptures recognize no chance of failure through the imperfection of this human factor, is to forget that from beginning to end the sacred writings affirm the weakness and unreliability of human will, wisdom, and endeavor, and that they encourage the hope and expectation of satisfactory results only as human weaknesses give place to the Mind that was in Christ Jesus. If humanity were able to receive and utilize truth without marring results by its own imperfections, then the science of mathematics would realize a no less significant gain than the science of theology. In every domain of thought the limitations of human sense, and the present impossibility of grasping and verifying all the data involved, have rendered results only approximate, so that even in what is known as the most exact of all sciences, an appreciable element of uncertainty appears in connection with well-nigh every problem. It follows that if a given failure to demonstrate a system of thought invalidates that system, regardless of the question as to whether or not the would-be demonstrator has mastered its basic philosophy and rules, and acquired an exact knowledge of all the data involved, then, manifestly, everything is swept away, since every statement and rule of truth has certainly thus suffered at the hands of its students.

The failure upon the part of an astronomer to determine the correct date of an anticipated eclipse, would raise no question respecting the possibility of solving the problem by mathematical processes, provided the necessary data is at hand and the rules and order of procedure are adequately apprehended. It does beget doubt as to the adequacy and reliability of the astronomer in question, and that is all. In like manner the failure of a Christian Science practitioner to effect the cure of a given malady, in no sense or degree invalidates the law and order of spiritual overcoming, the possibilities of which have been so fully demonstrated by Jesus and his disciples, by the church Fathers in the early centuries, by men of exalted faith all through the years.

by the Discoverer of Christian Science in verification of the truth and power of the spiritual understanding which came to her, and by the faithful students of Christian Science in ten thousand instances during the last three decades.

A failure to realize escape from disease in a given instance, may result from an insufficient understanding of Christian Science, or from the lack of spiritual growth in the practitioner. He may thus be unable to uncover and hence to rebuke the error or evil, immediate or far removed, of which the malady is but the physical expression. This all will concede; but he who, from such a failure, leaps to the inference that the rule and order of spiritual healing is thereby proved fallacious, discloses a type of prejudice which can be illogical for the sake of its own satisfaction.

It should be further said that in spiritual healing the conscious or unconscious attitude of the patient, his mental state or reserve, may be such as to thwart the most intelligent and most faithful spiritual endeavor. Even Jesus recognized a limitation to the truth's efficiency, in human experience, when he said to sick ones, "Wilt thou be made whole?"—"Believe ye that I am able to do this?" "If thou canst believe, all things are possible to him that believeth." It may thus be seen, that practitioners who have again and again overcome the most aggravated attacks of a given disease may fail in another case, despite their most devoted effort. Mrs. Eddy has strongly emphasized the imperative demand for that spiritual insight which shall be able to discover to the sufferer every subtle mental antagonism or reserve which is to his disadvantage, and for this higher, holier, and more efficient apprehension, every true Christian Scientist is seeking with prayers and longings which cannot be uttered. JOHN B. WILLIS.

Commemoration.

WE are reminded at this time of that highly-important event in the history of the Christian Science movement,—the dedication of The Mother Church edifice,—which took place ten years ago. Those who were present on that happy occasion will remember how hearts were thrilled as the chimes rang out their greeting in some old and familiar hymns, and in the Communion hymn "Saw ye my Saviour?" by our beloved Leader. They will recall the successive services rendered necessary by the large numbers who sought admission, and that at each service the joy-inspiring Dedicatory Sermon by the Pastor Emeritus, Mrs. Eddy, was read to the members and the many strangers who had come to share the blessings of the day. As we now read this sermon in "Pulpit and Press," we can better appreciate its deep spiritual import, as well as the unparalleled experiences which led up to the dedication of The Mother Church.

In looking backward through the vista of years we behold a figure at once pathetic and heroic,—a woman standing alone in the light and shadow of the nineteenth Christian century, calling the world to listen to her message, telling the sick and the sinful, the weak and the weary sons and daughters of men that all the blessings of divine Love, including the Christ-healing, were as truly available for their need, for all need and for all time, as they were in the days of Jesus of Nazareth. As we thus recount the early days of this movement, we remember the incredulity, the scorn, the mockery which were called forth by the message of Christian Science, but there was no sign of wavering on the part of the messenger. Mrs. Eddy knew that the Science of being, the Science of the Bible, the Science of Christianity had been revealed to her, and that God's right hand was resting upon the hour. When successive and progressive steps were demanded in the establishment of the Cause, especially in the organization of The Mother Church, hers was the vision which penetrated beyond the mists of materiality and saw the

availability of spiritual law in these things, as well as in the healing of the sick, and at length her faithful followers were enabled, in some measure, to see and respond to its requirements.

Meanwhile the healing of the sick and the sinful had been taking its rightful place in the history of Christianity, and kindling into an ever-greatening glow a love for the life-giving Word of Truth. Thousands who were thus healed and spiritually quickened are able to say, as did those of the olden time, "Now we believe, not because of thy saying: for we have heard him ourselves, and know that this is indeed the Christ, the Saviour of the world."

With the dedication of The Mother Church there came to all the branch churches a wonderfully quickened sense of divine possibilities, and much of the real progress in their unfoldment may be traced to this demonstration. Again we feel the spiritual impulse going out in the enlargement of this dear Church which is to so many as "the shadow of a great rock in a weary land," and the Master's strong word of assurance comes down the centuries, "The gates of hell shall not prevail against it." When the building of The Mother Church was going on, the country was struggling with a widely-prevalent sense of financial stringency, so much so that few had the courage to engage in any new undertaking. This, however, did not weigh one jot in our Leader's decision that the Cause of Truth needed a visible home, and that the time for its manifestation was ripe, regardless of material evidences. The result fully justified that undertaking, as it will this which is now going steadily forward, with its promise of blessing for all who love Truth's appearing.

ANNIE M. KNOTT.

Letters to our Leader.

Minneapolis, Minn., December 28, 1904.

Beloved Teacher and Leader:—As we stand on the threshold of the glad new year, full of hope and promise, we pause for a moment to give thanks to God and to you, His faithful messenger, for the countless blessings that have flowed into our lives during the past months. With the light of Christian Science comes "The freer step, the fuller breath, the wide horizon's grander view," and each year brings surer proofs of "divine goodness and love." In the present hour we count as our greatest blessing the opportunity to share in the building of The Mother Church. The love and gratitude of our church found its first expression in a contribution of three thousand dollars; and later, the sending of fifteen hundred dollars as a Thanksgiving offering sweetened the time with a fuller harvest song than we had ever known. A Christmas gift of three thousand dollars made that day holy with gladness. The dear children of our Sunday School, polishing their pennies to make them shine, have sent three hundred and twenty-five dollars with a love that can only find expression in the radiance of their eyes.

When we remember that every Christian Science church in the world is sharing with us this joy of giving, it is like the swelling of a grand chorus, echoing the song of the angels, "Glory to God in the highest, and on earth peace, good will toward men."

Lovingly and gratefully, your students,

EMMA A. THOMPSON,
ABIGAIL D. THOMPSON.

Worcester, Mass., January 2, 1905.

Rev. Mary Baker Eddy,

Beloved Leader:—The money, heretofore constituting our local church building fund, the lovingly hoarded dollars of the little ones of the Sunday School, to pay for its corner-stone, together with the special collections taken at the Thanksgiving and Christmas services, has been sent to Mr. Chase, to be merged with the grand total contributed

to the Building Fund of The Mother Church. Although our little church visible may be delayed in its erection, for a while, we realize that, through your abundant gifts to us, we are encouraged to complete that "building of God, an house not made with hands, eternal in the heavens," which will stand as an imperishable monument to the gospel of Life, Truth, and Love, when all earthly houses have been "dissolved."

Our hearts' deep and loving gratitude ever goes out to you, for all the blessings which come to us through following loyally in thought and deed the suggestions and commands of Love, revealed to us through you.

Very sincerely,

FREDERICK N. COOKE, *Clerk.*

First Church of Christ, Scientist.

Denver, Col., December 30, 1904.

Rev. Mary B. G. Eddy,

Pleasant View, Concord, N. H.

Beloved Teacher and Leader:—I think you will be pleased to hear of a demonstration wherein a little leaven leavened the whole lump. It came about in the following way: A brother of mine, whom I had not seen for twenty-seven years, visited me in Dakota. He belonged to the Shakers, and their home is near Dayton, O. This brother came to me a total wreck, both in mind and body; he could neither eat nor sleep. He had suffered from dyspepsia for over forty years, besides many other ailments of less consequence. When he had finished telling me of his troubles, I began to tell him of Christian Science, and after a brief explanation of it, and what it had done, and was then doing, for me and mine, I said to him, "I think I can help you; let me treat you to-night." He answered, "I wish you would; I think there is something in what you say." The trouble was met that night, and the next morning he said, "John, I believe you have cured me; I never had a better night's rest than I had last night, and I am feeling fine this morning." He was well from that time, and remained with me about a year and then returned to his Shaker home.

Five years later, I was returning from Boston, at the time when the corner-stone of The Mother Church was laid, and made him a visit. The Eldress was then, and had been for a long time, a great sufferer from neuralgia. My brother told her how he had been healed by Christian Science and asked her if she would not try it, as everything else had failed to give her any permanent relief. She said she would be glad to do so and my brother then asked me if I would take the case. He introduced me to the lady, and I talked to her about thirty minutes and gave her treatment. The next morning she sent me word that she had rested well that night and got up in the morning free from pain and was well. The next was one of the Elders, who inquired of my brother if I could do him any good. His disease was rheumatism and partial paralysis. I told him I would do the best I could. He, too, was restored very quickly. He then told my brother to order everything in the line of Christian Science literature that they needed in order to study and learn Christian Science. I gave them a list and soon after left for my home in Dakota. While in Dayton I made the acquaintance of Mr. and Mrs. Hatten, and several other earnest Christian Science workers, and spent a very pleasant Sabbath with them. After that I heard nothing from my Shaker friends until I met Mr. and Mrs. Hatten at the Teachers' Association in Chicago last October. They then informed me that the whole Shaker society had become Christian Scientists, and were studying and using our Sunday Lessons.

For this and many other demonstrations we are very thankful, and to you, our beloved Teacher and Leader, we are most grateful.

Your loving and obedient student,

JOHN C. RYAN.

Testimonies of Healing.

Eighteen months ago, when I was a beginner in the study of Christian Science, a statement from its text-book arrested my attention. With my mind steeped in pantheism, I had taken up Science and Health in the hope of learning from its pages a way to the solution of the perplexing problems of life and mind which then confronted me. While I had found numerous passages, beautiful and grand, that on page 89, line 17, appealed most strongly to that love of understanding which had led me to the open door of Christian Science. Like Maggie Tulliver, I had thirsted for all knowledge. I had known the blind, unconscious yearning for something which would link together the wonderful impressions of this mysterious life and give my soul a sense of home in it; and furthermore, the yearning had become a sharp hunger which demanded speedy satisfaction. From Balzac, from Hugo, from Carlyle, from Emerson, each in turn, I had caught glimpses of the living energies of divine Life, yet these seers had given me no clearly defined sense of a Principle which could enable me to govern my thinking. It was from Science and Health that I learned how thought is to be guarded and controlled.

From this book I learned the only rational, and therefore satisfying, interpretation of the Bible. While I believed life to be in matter, soul in body, the glorious admonitions of Paul would only perplex me. In my earliest readings of our text-book, mortal mind rebelled against the teaching that God was not the author of the material universe. The uncompromising statements which declare that matter is unreal and unknown to God, created a violent storm in a mortal thought which believed the visible universe to be God. But at last came a day when the glorious pages of Apocalypse lifted me up to that plane of seeing where I could more clearly understand Mrs. Eddy's teaching relative to matter and spirit. (Science and Health, p. 573.) The joy of that revelation surpassed anything within the reach of my memory. Then it was that the immaculate conception of Jesus and his resurrection were as clear to my spiritual sense as any problem in geometry had ever been to my human reason. I had been a wanderer through many strange lands of philosophic thought, but at last I found myself truly established in the realm of Mind, where the supremacy of Spirit was no longer a matter of opinion but where the allness of Spirit was spiritually discerned.

Since that day I have had occasion to prove the truth taught in our text-book. The Christian Scientist knows that all problems are mental, that the destruction of an error manifested in a bruised muscle is just as much a problem in thought as the destruction of envy, malice, or deceit. When we know that we reflect infinite understanding, then envy, malice, deceit, together with all petty limitations of mortal thought, will vanish from our consciousness. Should our problem be one requiring concentration, memory, constructive imagination, the same changeless and ever-operative Principle is at hand. As the children of God, we know that we are the reflection of Truth, which is infinite. Whether in writing a poem, in painting a picture, in telling a story, our effort is one and the same,—to reflect Truth. Then we perceive our powers in all their strength and beauty, realize our spiritual perception of what is beautiful, and pure, and true. We should at the same time realize that only spiritual perception can direct us aright. Then we shall escape from any false, mortal sense of the good and the true. We shall make no compromises with the reports of the carnal mind which is enmity against God,—Truth. To be absolutely governed by the one Mind is to be perfect, and this perfection will manifest itself in beautiful thought, in beautiful speech, in beautiful action. A life governed by the divine Principle of harmony is, indeed, a grand, sweet song.

Whatever may be the field of thought which we desire to explore, we have but to commit ourselves to the supreme Mind in order to "travel a royal road to particular knowledges and powers." In these words Emerson has merely given us a re-statement of the teaching of Jesus: "I can of mine own self do nothing," "but the Father that dwelleth in me, he doeth the works."

ELIZABETH CAHILL, Philadelphia, Pa.

About eight years ago my eyes failed to do their work, but through my faith in the physician and in the oculist to whom he sent me, my sight was restored. Nearly a year ago, after coming into Christian Science, the old ailment came back with double force, and I at once told my troubles to my teacher and practitioner. For a time my sight seemingly grew worse, so that by the latter part of January, 1903, I could not see the distance of half a block to tell whether a man or woman was coming toward me, and in February, 1903, when receiving class instruction I could not see the length of the room to tell from the features whether or not it was my teacher in the chair. When I state that this condition originated from hereditary blindness, something may be known of what my fears were.

By the close of the class term I could see my teacher clearly, and through the healing, and the patient instruction of my teacher, I have come to see that in infinite strength there is no weakness; in infinite light there is no darkness; in perfect Love there is no fear; and that to realize these three statements is to know the truth of the statement concerning spiritual sight given in Science and Health (p. 505).

My physical sight is restored so that I now see better than ever before, and my gratitude to God, to Jesus our Way-shower, to our beloved Leader for this wonderful truth, and to my teacher and practitioner, cannot be expressed in words, but I daily pray that my thoughts, words, and deeds may prove my gratitude, faith, obedience, and love. I hope that I may be found worthy to do for others what has been done for me. I listen constantly for the "still, small voice" of divine Love to guide me as it has our Leader, who has so nobly and lovingly discovered and proved the way for us through the one Christ.

ALMA M. HOWARD, New York, N. Y.

Having received the blessing of Christian Science, my consciousness is filled with gratitude for deliverance from former bondage. Though heredity had set its seal upon the physical, and years of devotion to *materia medica* had brought no relief from torture, this was as naught compared to my mental suffering. Human experiences had brought little but disappointment, and a condition of unrest was fast leading to insanity. Religion offered little consolation; looking for God in man, for health in matter, and for happiness in circumstances and environment, what wonder that I found nothing but weariness? Now, through the revelation of Truth in Christian Science, I am learning that the positive reversal of all former beliefs brings health, happiness, and security. I am very thankful for the dawning of that consciousness where the understanding of God leads into all truth.

MRS. EMMA GREY HARBECK, Chicago, Ill.

It is with deep gratitude for what Christian Science has done for me and my family, that I write this testimony. Five years ago I came to Christian Science through a very dear friend. I was healed of constipation of twenty years' standing, kidney trouble, inflammation of the bowels, and several other troubles. All these were healed in four weeks, so I think I cannot be too grateful.

Three years ago my oldest daughter, then fifteen years old, came down with typhoid fever. This was on a Satur-

day morning. I turned to God for help and told her to lie down a while. Instead of getting better, however, she seemed to get worse; then fear took hold upon me, and as I was young in Science, I sent for a practitioner on Monday morning. We both worked faithfully as we could, in Science, but the case seemed to be very stubborn. Four days later my husband said to me, "Do you think Christian Science can cure her?" and he added, "If a wagon wheel is dry it has to be greased in order to run, and this case needs to have medicine." I told him that there is only one Physician, and that is God, and that if God could not heal her a doctor needn't try. The fifth day he said, "I can see that the girl is going to die," but I was assured that God would save her. To satisfy my husband, however, I said, "Get a doctor, then," and he did. When the doctor came he said she was very sick, and that he would call another physician if she was not better the next day. He also said it would be seven or eight weeks before a change would be seen, but I knew there was only one law-maker,—God.

The next morning my husband was willing to have the Christian Science treatments continued. There seemed to be no change until about the tenth day, when I was reading Science and Health, and I said, "O God, why hast thou forsaken me?" when a cry came from my daughter's room, "O mamma, help." I ran to her, and my first thought was, "How shall I get word to the practitioner?" but my second thought was, "God is just as near to me as to her." I repeated "God is Love," and taking up Science and Health, I opened the book at page 419, and read to the bottom of the page, when she said, "Mamma, I feel better now." In about ten minutes she said, "I want to play the piano." As a week before this she had not been able to hold even a spoon or raise her head alone, I knew that God was her strength, and she did walk to the piano, and played six songs out of the Christian Science Hymnal. The first one was "O for a faith that will not shrink" (p. 67). The music sounded so sweet; she had never played like that before, and I cried for joy and thankfulness. She was healed of typhoid fever, inflammation of the bowels, and two carbuncles. She had lost thirty pounds and looked like a skeleton. She had been delirious for one week, but after this day she improved constantly. Four days later she helped me with housecleaning. Words cannot express my gratitude to God, to dear Mrs. Eddy, also to the practitioner, and all the loving Scientists who helped me.—MRS. MARY HAAS, Chicago, Ill.

As I have received so much benefit from the testimonies in the *Sentinel*, I have often thought that the demonstration made in our family might help some mother with afflicted little ones. My little daughter, when about a year and a half old, fell from a chair on which she was standing, and received severe internal injuries. We called one of our best local physicians, a surgeon, and were told that she was then too young for an operation, but that it might be performed when she reached the age of twelve. We were also told that these injuries were liable to bring on consumption long before that time. In a year's time she began to have every symptom of going into a rapid decline. Her health and nerves were then in such a state as to require all my time and attention to care for her. We then took her to a specialist on the diseases of women and children, but were told the same as before, and although this doctor gave medicine to relieve, it did not do any good. After this we went to another eminent specialist who promised great results, but after a year's treatment the child was so reduced in strength and vitality that she could stand scarcely anything. The least exertion would bring on hemorrhage of the nose, so frequent and severe that I expected each time she would die. At such times, when I saw healthy children about me, I would say, "Oh, why did God send this great afflic-

tion upon us," and I was told that it was His will, and I ought not to murmur. This made me more rebellious and miserable than ever.

At this time a friend asked me to try Christian Science. I did not see what there could be in it to do us any good, but I was at the point where I would do anything, or try anything, and as I thought that no harm could come of it, I decided to give it a trial. I went to a Wednesday evening meeting and the testimonies were good, so the next morning I took the little girl and called on the practitioner whose address had been given me by this friend. After some talk with her she explained that God had not sent this affliction upon us, and she took up the case. She gave a treatment then, but as the child had always seemed to need medicinal injections, I said that I would have to give her medicine before coming again to-morrow. The practitioner told me the child would not need it. I thought she was mistaken, and that no one could know a child so well as her own mother; but, to my surprise, the little one seemed no worse without the medicine. We went again the next day for treatment, and I was advised to get Science and Health and read it, that it would help the child as well as myself, so on my way home I bought a copy and read it the rest of the day. The first two weeks we went almost every day for treatment, the next four weeks, twice a week, with absent treatment the days we did not go. In just six weeks the child was entirely healed and has remained so. She is now nine years old, attends public school regularly, and for the last two years has taken music lessons also.

It is now almost four years since any medicine has been given in our family. I can never thank Mrs. Eddy and the kind practitioner in words for what they have done. It is through them and their understanding of God that my daughter's life was spared. I am also thankful for my understanding of the love of God for all His children.

MRS. G. BOND, Chicago, Ill.

I gladly give a testimony of the healing of our only child of diphtheria, through Christian Science. After learning a little of this teaching and work, we came North and settled for a few months at the town of Neillsville, Wis., where at that time an epidemic of diphtheria was prevalent. A little while before we had lost one child, and being among strangers and with no Christian Science practitioner near, my fear was something terrible to experience. Through our efforts to reach a Scientist by telephone, a health officer, also a doctor was notified; he came and pronounced the case diphtheria.

In a short time we had reached a practitioner in Minneapolis and some helpful letters told us she was at work. It did not seem to us a quick case of healing, but rather a good demonstration that no matter what mortal mind claims the condition of the body to be, Life is distinct,—entirely separate and above it. During this time the child ate of anything, and quantities of all kinds of fruit. She got up every day and was dressed. This case seemed to be watched closely and it was reported in an adjoining town that she was dead.—V. ESTES BARKLEY, Greenwood, Wis.

It is only within the last few months that I have come into the truth, as taught through Christian Science, and to-night that beautiful verse of Scripture looms up before me with clearer meaning than ever before, in fact, I had never before realized its meaning: "Purge me with hyssop, and I shall be clean: wash me, and I shall be whiter than snow." Thank God for Christian Science. I had reached the point of the greatest mental darkness; I felt lost and doomed to despair; I had no hope here, and very little for the hereafter. Night was so dark within me that I felt as if each person I met must be able to see it. Then came Christian Science, bringing light, joy, gladness, hope, and

the knowledge of peace. "I know that my Redeemer liveth," and that I am being washed and purified by "the blood of the Lamb." Darkness is giving place to light; night to day; ailments to good health; and I have learned that in Truth there is no room for anything but good, and I rest in the blessed assurance that I have an ever-present God.—MRS. LUCY E. CARTER, Manchester, Va.

Things have greatly changed since I came into Christian Science. I see everything in a different light. Before that time I feared everything. If I heard of something that had happened to a neighbor, I feared it would happen to some of us, and I carried that load until I heard of something else. I also suffered from constipation, which had troubled me for eight years, but I can now say that I am freed from all. It was about two years ago that I first heard of Christian Science, but I could not get a copy of Science and Health, until June, 1903. When I began reading this book, it was like Greek to me; but I had not read very long before I caught a faint glimpse of its meaning, and the more I read the clearer was my understanding. What a comfort it was to me, the error that seemed so real in the old thought had disappeared into its native nothingness.

I wish to tell of a demonstration I had with my grandmother. She was taken ill very suddenly, and when I got to her home I thought she could not live. Then the thought came to me,—God is with you, can't you speak the truth to her? What a calm, peaceful feeling I had as I realized the truth,—knowing that God is Love and God is Life. She did not seem to get better for some time, but I clung to the truth without a doubt, and in the course of an hour and a half the swelling had all gone from her tongue and it had its natural color. She could talk, and then the jerking ceased. She was much better, and to-day she is as well as she was before she was sick. This proved to me the power of divine Love to heal.

I have the *Christian Science Sentinel*, and *Quarterly*, which are a great help to me. I can hardly wait from one week till the next to receive the *Sentinel*, for the testimonies are so much help to one who is striving to live the truth. I am very grateful to our dear Leader for making known to the world this beautiful religion of divine Love. As we imbibe the spirit of the Christly teaching contained in Science and Health, it sets the captive free and brings health, joy, plenty, and peace.

KATIE CRITTENDEN, Beaver, S. Dak.

Before I knew about Christian Science I had a very sensitive skin, and was always careful what kind of soap I used. When I commenced to study Christian Science I stopped using cream, etc., for my skin, and used any kind of soap, and in a few weeks my face was in such a state I could hardly bear to touch it and dreaded having to wash myself, but after two weeks' absent treatment it was quite healed and I haven't had any trouble with it since, and go out in the wind and frost without any fear. I was also considered to have impure blood, and had taken sulphur tablets, etc., besides home remedies, without any permanent benefit. I used to have boils constantly, but have not had one for nearly four years. Whenever this disorder has commenced to manifest itself I have remembered and put into practice the instruction given in Science and Health (p. 153). The result has been that the boil has never developed.

I am indeed thankful for this physical freedom, but am most grateful for the awakening to a true knowledge of Life,—God. I would like to express my gratitude to Mrs. Eddy for her life of self-sacrifice, and for Science and Health, which is lighting the path for so many.

MARGARET M. SHAW, New Castle on Tyne, Eng.

My experience in Christian Science dates back over a period of several years, and it is now my pleasure to make known my feelings of gratitude toward our beloved Leader, Mrs. Eddy. In my case it was line upon line and precept upon precept which finally brought me out of the deep materialistic beliefs that had completely surrounded me from my childhood days. I found these old beliefs most difficult to drop by the wayside, as they clung to me tenaciously, but one by one they are disappearing, as the light of Truth dispels the darkness. My experience during the process of emerging from my former thought into "The wide horizon's grander view," as gained through a study of "Science and Health with Key to the Scriptures," has been most gratifying and satisfying, and therefore I am encouraged to strive for the summit, whence I well know I can see with undimmed eye that all things are fresh and new to spiritual sense.

I was so steeped in the belief in *materia medica* that it seemed to me I would certainly be lost unless I could have my physician within easy reach, and I could not understand how other people could live whose homes were many miles from the nearest physician. A few marked demonstrations that were brought to my personal notice soon revealed to me that I had been leaning on the unreal for my help and health, although at the same time I was claiming to believe that God is all-powerful. The Bible became a different book to me after I had been taught Christian Science by a student of Mrs. Eddy, and many things are now perfectly plain that formerly seemed unintelligible.

It now seems clear that we are living in the dawn of a new and more spiritual day, and that our understanding will rapidly increase as we carefully follow the footsteps of our Leader, and every one who accepts this truth will be blessed as he walks boldly forth from the cover of material darkness and allows himself to bathe in the Divine light.—WILLIAM H. SAVERY, Wilmington, Del.

About sixteen years ago I read an article in the *Century Magazine*, on Christian Science healing and mind cure. I thought little about it, however, until some years after, when an acquaintance was healed of a life-long ailment by Christian Science. Later, a young friend had been trying everywhere to get help, and had failed. I then suggested to her mother to try Christian Science. She said, "She is trying it, but do not tell any one." In six weeks she came home well. I went to see her at once, and soon after began reading all I could get hold of on the subject. I was then taking two kinds of medicine daily, to be able to do my work. I had suffered all my life from constipation, and from sick-headaches for ten years. One day I decided that I had best begin to put into practice what I knew. I could only declare that God is all, but I held to that, and in a short time the trouble disappeared. I wondered if I dared to do without drugs, and decided I could at least try for one day. The result was that I have never taken any remedy of any kind since, save Christian Science. I could not then read a word without glasses, but I now read and sew all I need to without them, and I have had many good demonstrations for my family and others. How grateful I am to our Father-Mother God for the revelation of this Truth in my day, and to our dear Leader who was able, through her pure life, to apprehend this message of love and good will to man. I know I can best show my gratitude by faithful work in the Cause.—MRS. LUCY A. BROAD, Owosso, Mich.

Christian Science has brought so many blessings to my home, that I do not know how to express my gratitude to God for it and my love for the dear one through whom it has been given to the world. It has certainly been "A present help" in time of need; it has many times helped me to overcome fear, and I now feel that my greatest fear

is that of offending God, which I hope I shall never again do. My most earnest prayer is, that I shall have a better understanding of this wonderful truth, which will enable me to live the Christ life and in so doing bring others to God. As a Scientist, I have had many temptations, and at times, to mortal sense, the way has seemed very dark, but by trusting Truth to deliver me, I have been brought safely where the light shines so brightly that I press on until my journey is ended and the victory won for Christ.

MRS. NANNIE WINBORNE, Suffolk, Va.

Seven years ago I was full of care and unhappiness. I felt that for me life had little joy. My diseases were many, and thinking that Christian Science might benefit me, I found a practitioner who gave me many hours of her time and work, and tried to show me that God did not see me in sorrow or sickness, and that He is omnipotent. Slowly my diseases left me, and from the first treatment I knew that I had found the Comforter which Jesus told us that he would send us. Now I am well and happy, and the days are not long enough for all that I wish to do, or for all that I wish I could say to express my gratitude to our Leader for this wonderful truth that she has given to the world. My class teaching was of great benefit to me and each day I am more grateful to all the workers in Christian Science for the help which I have received.

MRS. F. M. DEAN, Kansas City, Mo.

I am eleven years old and have had some good demonstrations. I have often had such terrible dreams at night that I was afraid to go to sleep, and when I did I would wake up frightened and afraid to move. I was in agony, for they kept on, and mamma asked me why I didn't try to overcome them. She said that I reflect the allness of God,—of infinite Mind, all intelligence, all Love, the ever-presence of harmony,—and so I went to work and overcame it. The bad dreams went away and I have never had them since. I am always going to try to lean on God, to help me.—HELEN ENSLEY, Tonkawa, Okla.

For some time I have felt a desire to acknowledge through the columns of our *Sentinel* the many blessings and the help which the study of Christian Science has brought to me, both physically and spiritually. All the blessings which we, as a family, now enjoy have come to us through Christian Science. For the healing of disease in all the phases of mortal belief, the spiritual uplifting, the freedom from cares and worries, the help derived from our periodicals, the help of the dear ones who are in the truth, the teachings and guidance of our dear Leader, I desire to acknowledge my heartfelt gratitude and to return thanks.

MRS. M. HOWARD, Grand Rapids, Mich.

Good Advice.

We have no right to judge a man
Until he's fairly tried;
Should we not like his company,
We know the world is wide.

Some may have faults,—and who has not?—
The old as well as young;
Perhaps we may, for aught we know,
Have fifty to their one.

I'll tell you of a better plan:
I find it works quite well
To try my own defects to cure
Ere I of others tell.

Anon.

From our Exchanges.

More and more it is to be seen that science recognizes the great spiritual necessity of regeneration as the ground of unity between the sinner and the God against whom he has sinned. It will not be accounted unscientific to demand that this unity of the sinner with God shall be ministered to by a Son of God who is also the Son of Man, and who sends into the world as his great blessing and benediction the Paraclete, another Comforter, the Spirit of truth, who shall abide forever. When science reaches its highest altitude it will be Christian in its recognition, in its attitude, and in its confessions. When religion reaches its outermost bound it will be found to be in accord with all truth in all realms of knowledge. Science will not be anti-religious, and religion will not be anti-scientific.

The Examiner.

When the religious aim has been corrected, when theology has been reseasoned and made spherical instead of hemispherical, when the pulpit has gained a message and really preaches Christ's gospel of the kingdom, with its social laws of service, sacrifice, and love, thus quickening and deepening the spiritual life of the church, and when the church perceives that her mission is not to get individual souls into heaven, but to create an ideal world—then religion will gain her rightful place and power to mold and Christianize the new civilization. JOSIAH STRONG, D.D.

Homiletic Review.

Men may differ as to the precise nature of the literary media of the revelation, but they are coming together upon the basis of the fact and content of the revelation itself. Christ himself is the great spiritual fact, and, say what we like, the literary media through which his personality and message flash is sufficiently trustworthy to convey his image, his ideas, his spirit to the soul of the beholder, as the lens and tube of the telescope make possible the image of the star upon the retina of the observer.

The Watchman.

Faith, Hope, and Charity:—without the faith there can neither be the charity, nor the hope; without the charity the faith is not living; without the hope the charity is not crowned. The charity proves the faith and creates the hope—the greatest of these is charity. He who loves is therefore most surely a Christian.

DR. JOHN WATSON (Ian Maclaren).

The Congregationalist.

Given the supremacy of the teachings of the Master in every land as the guiding rules in individual, social, commercial, and national affairs, and peace follows as naturally as darkness disappears before the rising sun. Fatherhood, brotherhood, love, justice, sympathy, helpfulness,—yes, there lies the way to universal peace, prosperity, happiness.

The Universalist Leader.

I believe in Jesus Christ as the supreme revelation of Divine and human love, the perfect and eternal Ideal and Lord for all who, through Him, learn to love.

PROF. C. P. FOGNANI, D.D., Union Theological Seminary.

The Independent.

Earnestness and faith, while at the mercy seat, are not enough; they must be supplemented by an honest effort to realize our supplications, with the help of God.

D. J. BURRELL.

The Christian Intelligence.

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, \$5. Twelve or more to one address, \$4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, \$1 per copy; \$5 per half dozen; \$9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual-contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, Treasurer.
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, \$2.40 per annum; \$1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, \$1.00 in advance; all other countries, \$1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH of Rochester, N. Y.

Works on Christian Science

Written by Rev. MARY BAKER G. EDDY

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid \$3 18

Two to twelve books (cloth only) to one address, each, prepaid 3 00
Twelve or more books to one address, each, prepaid 2 75

Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid 4 00
Twelve or more to one address, each, prepaid 3 75

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid 5 00
Twelve or more to one address, each, prepaid 4 75

Levant, divinity circuit, leather-lined, round corners, gilt edges, silk-sewed, heavy Oxford India Bible Paper, wide margins, each, prepaid 6 00
Twelve or more to one address, each, prepaid 5 75

Orders for Science and Health, in lots of twelve or more to one address, may include any or all the different styles of binding.

A COMPLETE CONCORDANCE to Science and Health with Key to the Scriptures, 595 pp., 10 x 7. Bound in cloth, marbled edges. Price, single copy, prepaid \$5 00
Twelve or more copies to one address, each 4 50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid 2 25
Twelve or more books to one address, each, prepaid 2 00

Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4 00
Twelve or more to one address, each, prepaid 3 75

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5 00
Twelve or more to one address, each, prepaid 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid \$3 00
Twelve or more books to one address, each, prepaid 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; \$3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea: 120 pages, cloth covers, gilt edges. Prices, prepaid, \$1.06; \$5.00 half dozen; \$9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion: 132 pages. Prices, prepaid, \$1.06; \$5.00 half dozen; \$9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, \$2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, \$2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, \$4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; \$4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, \$1.00; six copies to one address, \$5.00; twelve copies to one address, \$9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; \$5.00 per dozen.

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

210 Huntington Ave., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, \$1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, \$1.40; one hundred copies, \$2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

Soon after the fall of Port Arthur, Russia communicated to the different Powers identical notes, alleging breach of neutrality on the part of China and intimating that she might under the circumstances look out for her own interests. Secretary John Hay immediately took official note of the matter, addressing Russia and the other Powers affirming good faith on the part of China and minimizing the complaints. The Secretary has also addressed notes to the Powers, having in view the securing from them of their assent to a continuance of the "open-door" policy in China and disapproval of any attempt, when peace proposals between Russia and Japan are made, to interfere with the integrity of the Empire. This latter letter the French, British, and Italian Governments have already approved.

Secretary of War Taft and the chief of the Insular Bureau of the War Department, are considering a bill drafted by the Philippine Commission to amend the tariff laws of the archipelago affecting imports into the islands from the United States and other countries. It is understood that many important changes in the present duties are recommended by the Commission.

Ambassador Aspiroz of Mexico and Secretary Hay have signed an arbitration treaty along the lines of similar documents recently negotiated with other countries. A similar treaty with Norway and Sweden has also been signed.

A bill to regulate railroad rates was introduced to the House last week. Considerable opposition to governmental action in the matter has developed and the Senate seems to be leaning to a go-slow policy.

Mr. Bristow, who as head of a department, conducted the investigations into postal irregularities, has retired from that position and will conduct an investigation in railroad freights.

Foreign.

History appears to be making very fast in Russia. The great unrest of the lower class,

which has recently become more marked, is finding expression. The petition of the Zemstvos, which was presented to the Czar soon after the appointment of Sviatopolk-Mirsky to the Department of the Interior, has been practically pigeon-holed. This represented the opinion of the intelligent class of Russians on the questions of needed reform in the Government. Recently a strike, involving a hundred thousand workmen and affecting the Government's war preparations, has been in progress. These men last week attempted to proceed to the Palace of the Czar to petition him personally for a redress of their grievances. The military forces were called out; riots resulted, massacres followed; the enraged people barricaded the streets of the city. The situation appears extremely critical and ominous.

The British Foreign Office, convinced that the Austro-Russian reform measures decided upon for Macedonia are not meeting expectations, is communicating with the interested Powers in the Near Eastern question, with a view of securing more radical reforms, and probably will lay before Parliament very early in the session a project which it is hoped will insure success. This will include a renewal of the suggestion offered a year ago, to place Macedonia under the control of a Christian Governor-general, not responsible to the Sultan, but to the Powers. Italy has signified her willingness to co-operate with Great Britain in demanding more effectual methods. France is inclined to side with effectual reforms. Austria and Russia refused to consent to Great Britain's original proposition and their present attitude is not known. Germany, it is said, will maintain a friendly attitude toward Turkey.

The present year shows an increase in Japanese exports of \$6,421,159, and in imports of \$10,080,597. During the same period the increase of exports in specie and bullion amounted to \$41,463,394, and the increase in imports to \$1,842,370. During the period exports to the United States were valued at \$33,898,622 and imports therefrom at \$19,719,486, showing, as compared with the same period of 1903, an increase in exports of \$3,919,277, and an increase in imports of \$2,702,538. Raw silk was the principal item of export, showing a marked increase. There was a reduced export of tea and coal. Kerosene oil, leather, rails, flour, and sugar were imported from the United States in larger quantities than during the same period last year, while raw cotton imports declined.

Information respecting the situation at Caracas received by the State Department is to the effect that President Castro has made a proposition for the settlement of the asphalt claims and other issues between the United States and Venezuela of such a nature that it is impossible of acceptance by the United States. President Castro, who has been so notified, has left the capital for an indefinite period, and the negotiations have for the present been suspended.

The Government of the Netherlands has selected the military parade ground near the Bosch as the site for Andrew Carnegie's Palace of Peace. The selection must be approved by the States General. The Bosch (or wood) is a park nearly two miles long, a short distance out of The Hague. It abounds in forest trees. At the end of the park is the palace known as the Huis Ten Bosch (the house in the wood) built in 1647, containing many valuable paintings.

The Embassies of Austria and Russia have submitted to the Porte a plan for the financial administration of the three Macedonian vilayets, providing for the control of the receipts and expenditures by financial inspectors and civil agents, and the introduction of a regular annual budget in each vilayet.

The American Chamber of Commerce of Berlin favors a movement looking toward a

reciprocity treaty between the United States and Germany.

Industrial and Commercial.

The Pennsylvania Railroad, acting under recommendations of a special committee of its transportation department, anticipating the growing scarcity of timber for cross-ties, is preparing to plant two hundred thousand trees in the spring and six hundred thousand in the fall. Two thousand acres of land along the various divisions of the road have already been selected for this purpose. This information was brought out in an address by the chief engineer of maintenance of way before the American Forestry Association of United States at the forestry conference at Washington last week. The railroad hardly expects to meet its full needs in these supplies, but it hopes to encourage others to engage in the business. The number of cross-ties in use in the United States is estimated at 620,000,000 and the annual consumption used for extensions and repairs is about 100,000,000, representing the product of about one hundred thousand acres of land.

Each year the supply of timber is further from the base of transportation, many of the former sources of supply having been exhausted. The Pennsylvania Railroad is now compelled to get its supply from inland Virginia, West Virginia, Kentucky, and other Southern States, says this official.

The annual consumption of cross-ties on the Pennsylvania Railroad east of Pittsburg and Erie, for repairs only, is estimated by this official to be 3,000,000. About 500,000 additional are required annually for new work. It is evident, therefore, he asserts, that all railroads must prepare for the future, for the supply will be exhausted soon. Especially is this true of white oak and yellow pine. The Pennsylvania Road has experimented with the yellow locust trees, and its plantings have all been of that kind. Ties made of this material are more durable and lasting. The trees planted have been seedlings two or three years old, and cost, including labor, about eight cents each. They were planted ten feet apart, averaging about four hundred to the acre, although 54,871 trees planted recently were placed six feet apart and 88,127 were set eight feet apart. The total number planted by the Railroad Company is 280,530. The land, except a tract of fourteen acres, is owned by the railroad. To supply the increasing needs of the Pennsylvania alone it will be necessary to plant 1,300,000 trees each year for a period of thirty years, the time required for a tree to mature. If planted ten feet apart, or four hundred to the acre, it will entail the continuous use of 97,500 acres, or 152 square miles of land.

The Fall River strike which began July 25, has been declared off. A proposition offered by Governor Douglas has been accepted and signed by both parties. The men are to return at once on the reduced scale of wages against which they struck, and they depend upon the Governor's finding as to the justification of increased wages. Whatever increase the Governor may decide upon shall be binding on the manufacturers only up to April 1, 1905. When the strike was declared about 25,000 operatives were involved, and seventy-one mills controlled by thirty-three corporations remained idle until the middle of November, since which time most of the factories have been running, generally with about one-half the usual force. The strike was directly due to a reduction of 12½ per cent in wages. The mills had reduced wages ten per cent eight months previously. The mills affected by the strike have a combined capital of \$25,000,000, and have 2,300,000 spindles. During the months the seventy-one mills were shut down the operatives lost nearly \$150,000 weekly and the corporations about \$23,000. The aggregate direct losses to all interests is estimated at fully \$5,000,000. A notable feature of the great struggle was the absence of disorder and lawless acts. The operators claim that the trouble lay not at present justly larger wages and that their books show it.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

About Counterfeits.

SAMUEL GREENWOOD.

THE Christian Science teaching that evil in whatever guise presented, whether physical or moral, is itself an error, may seem hard of acceptance by those who mistake appearance for fact. It is contended that evil is true because of its visible and tangible effects in the misery and crime of earth, although the Scriptures tell us that God is Himself too good to see it. It must be true that the divine Principle of being, the infinite creator, imparts no evil to His manifestation nor finds evil in it. Conceding this, human reason must eventually take refuge in the inevitable truth of Christian Science, that the sum total of evil is a huge deception, a self-destroying delusion, a counterfeit of all that is true and good.

The essential fact concerning evil is that it is not good, that it is bad, or in other words, spurious. It is not what it claims to be, hence it is a deceiver and a deceit. No one need go outside of his own experience to prove this, and once proving it he should recognize the truth of Jesus' statement that evil was a lie "from the beginning." Admitting that Jesus taught the truth, he who pleads for the real existence and entity of evil is in much the same position as the man who declares for the genuineness of bad money. Only a thief would venture to practise the latter theory, and a wicked man the former, so that neither position can be honest or good.

The man who has in his possession a genuine and a counterfeit dollar does not deceive himself that he therefore owns two dollars, unless he is ignorant of the nature of the counterfeit. A counterfeit dollar is not a dollar at all, despite its appearance. Its claim to be a dollar is a deception, an illusion. It may pass current among the ignorant, and for a time deceive many, but when its real nature is exposed its suppositional value becomes extinct. This value never existed, for it began as a counterfeit and at no point in its career was it anything else. Its purchasing power existed only in belief. A counterfeit dollar has but a false existence, for it begins as a lie and lies to every one who accepts it. To class it as a true dollar, or as having any claim to our respect, is a mistake. It is universally recognized as a cheat, an imposition, a crime.

If good money is good enough for evil to counterfeit, why is not a good man, or God's man? Why may it not be true that bad men, or the badness in men, are simply counterfeits of genuine men, or the good in man? The qualities which are the opposite of goodness are usually spoken of as worthless, and hence they form no part of God's genuine and real man. Is it not reasonable to conclude that they are not man at all, no matter what they seem to be? It is considered good sense to discard spurious money, and why not as good sense to discard the spurious qualities which a sense of evil would pass off on us as man? Why should we accept ungodlike qualities in man as genuine or legitimate while we deem it wise to apply the opposite rule in other things?

A simple, majestic account of the real origin and nature of man is given in the first chapter of Genesis, wherein

God is represented as making man the expression of His own goodness and perfection. This account is not denied by later inspired writers, but throughout the Scriptures is regarded as the supreme standard of manhood. In sharp contrast to this, and closely following it, is the story of Eden, wherein an evil intelligence is represented as having tampered with God's idea, or likeness, and produced a state of moral collapse. Was this corrupt product the genuine man, or a counterfeit? God's repudiation of this sense of man has stamped it as false and spurious, and should prevent its passing current as effectually as does the word "Counterfeit" when stamped on a bad dollar.

Jesus once, when speaking of the malice and hatred of the Jews, referred the origin of these qualities to evil and not to good, and further spoke of this evil, or devil, as the origin of lies, or counterfeits, having no truth in it, and as attempting to murder the true sense of man from the beginning. What language could better describe a counterfeit than the verse to which we refer (John, 8 : 44)? Jesus could not have meant that these Jews were wholly evil, but that the evil which they were manifesting was a lie and not a part of the true man. Is not Christian Science in accord with his teaching, and with the record of God's perfect creation, when designating evil, including all suffering and discord, as having no real relation to God or to His works, and therefore as having no rightful claim on man? Does not general Christian teaching embody the same truth, if it be followed correctly to its logical conclusion?

A counterfeit is not a debasement of the true but an imitation of it. They must of necessity be opposites from the beginning. The qualities of God wherever expressed must be beyond defilement or debasement, since their source is good and perfect. And likewise the bad qualities of mortals are not degraded good, but are evil from their origin down. Considered as man they are as worthless as a bogus dollar. Is it not strange that so many of those who have given their lives to the winning of men back to goodness and purity should defend as truth and reality the opposites of these conditions, though they would scorn to defend the genuineness of bad currency? But if one is falsity and delusion, why not the other?

The educated belief that the evil in mortals is as truly a part of man as is the good, is as illogical as would be the belief that counterfeit money is as legitimately a part of our financial system as is the genuine. But in what way is it more foolish for a man to believe that he has two real dollars when one of them is spurious, than for him to believe that he has in himself two real natures when one of them is bad?

Why may not Christian Science be right in teaching that sinful, sick, suffering, dying man is not the real but the counterfeit? (Science and Health, pp. 409, 476.) That is, that it is not the original and never was, and is therefore a deception. What possible relationship can good and evil have with each other, any more than good and bad money? One or the other must be false at the outset. The maker of spiritual, perfect man could not have been later deceived by a sinful man of flesh, and His condemnation has followed this evil belief all through its mortal history. Having no connection with the divine Principle of man, its whole

existence has been an error. Is Christian Science at fault for rejecting it as such? Is any one at fault for denying the claims of a bad dollar, for denying that it ever was a dollar, that it was ever anything else than a deception, a lie? Is any one at fault for treating the badness in mortals in the same way; that is, rejecting it as a pretence, a falsity? If this were done, would a man lose, or gain as the result? Would he become more, or less of a man? If we take away the vice and meanness and misery from mortals, is it the worth or the worthlessness, the reality or the sham that remains?

The Scriptural condemnation of the fruits of the flesh does not sustain the belief that they constitute the real man or any part of him; whereas its approval of the fruits of the Spirit supports the Christian Science teaching that the true man is spiritual and good only. Since all the evil in mortal man proceeds from the belief that he exists in and of the flesh, or matter, what is the good of such a belief? What value do we suppose God places upon this kind of man, manifesting qualities and attributes the opposite of His own, and the thought of whose heart is "evil continually"? Can we conceive of Him as accepting such a being as His own "image and likeness," that is, as the genuine man? If not, then why should we?

Are anger, fear, suffering, selfishness, dishonesty, malice, hatred, sorrow, poverty, disease constituent parts of God's man? Are they requisite to make up the whole of man, or are they manly qualities at all? Do they increase, or diminish as mortals grow more Christ-like? Have they any claims that we are bound to recognize, any more relationship to truth than darkness has to light?

As it needs no argument to prove the worthlessness of counterfeit money, bearing witness as it does to its own falsity and fraud, so it should need no argument to prove that the discordant and evil qualities in human nature are deception and not truth, that they are errors from their beginning to their end. Their evil influence upon those who accept them, the havoc they have wrought in the happiness and peace of earth, their degradation of the human ideal of manhood, should stamp them without reserve as counterfeits, and nothing more, of what God manifested and maintains in man.

There is no higher standard than perfection, and nothing further can be gained than the truth and reality of all things. If the terrifying manifestations of evil are true and real, what hope can mortals have of ever being freed from these conditions? If God has anything to do with their presence and perpetuation, if He recognizes their existence or upholds them in any degree, man must be doomed to an eternal round of woe; for mortals can never hope to attain to anything higher than that which is known to God. But if they are not of God, and hence not true, the acceptance and realization of this fact is our only refuge and escape from the miseries and delusions of mortality. Jesus demonstrated this truth when the manifestations of evil gave up their apparent reality before the Word of God; and through this same truth of the absolute infinitude of good, Christian Science will demonstrate in this and future ages that the reality of man from the beginning is perfect in God.

Confidence.

CORA P. HILL.

WHEN a girl, there came an experience into my life which I can never forget, and from which I have since drawn some useful lessons.

I was then living with relatives in Buffalo, N. Y., and on one occasion they took a party of friends, together with their own family, myself included, up the Niagara River in a small tugboat for a day's fishing. There were about fifteen on board, besides an experienced pilot, and two

skiffs were attached to the rear of the tug, for use by those desiring to go nearer shore. We steamed up river until we arrived at a suitable point, when those who desired to fish took to the skiffs, the pilot among them, leaving the tug in mid-river to drift. In an hour or so I noticed anxious faces about me; I saw all on board looking in one direction in great fear, and was told that the mist seen rising in the distance was the spray of Niagara Falls. I remember the thought uppermost in my mind was, that we would not be so far down river were the pilot not sure it was all right. I had all confidence in him, and seemed to know that he could easily get us back into quieter waters when it seemed necessary. Looking into the water, I could see it getting very swift and turbulent, and we were drifting very fast. Over near the shore, in a skiff alone, sat our pilot, and it took some time to attract his attention, although we shouted and waved furiously. When he came on board I remember with what caution he turned the little boat around, and how slowly he began to make his way back against the tide, for I was told when I arrived home that a break in the machinery, or a disabling of the boat, would have meant that we should drift into the rapids, and all be lost.

Since coming into Christian Science, I find that on every page of its text-book, "Science and Health with Key to the Scriptures," is emphasized the necessity of complete reliance on the omniscience of ever-present God, good; the assurance that where He leads us, we may follow in confidence. This is Immanuel, "God with us," indeed; it is a working and walking with Him momentarily which gives comfort and peace, even when mortal thought presents its most fearful pictures—illusions. If, when passing through a dark hour, we listen to the sense testimony, God, our pilot, may seem a great way off, even beyond our call, the surging, foaming thoughts of doubt, anxiety, impatience, and fear are rolling about our very feet, and our craft seems to be approaching nearer and nearer engulfment in the midst of false belief, but there still remains the child-thought, pure and confident, the thought resurrected within us by the far-seeing, faithful sentinel on the battlements of the world to-day,—our beloved Leader, Mrs. Eddy. Through the wonderful revelation of God's eternal purpose, in Christian Science, thought responds to the assurance of His eternal presence, and thus consciousness embraces truth, the things that be of God. Divine Mind is our pilot, and we may ever be sure that His leadings are safe. God can know us only in those qualities of Truth and Love which we are bringing out in our daily lives. If our desire is for His guidance alone, and our prayer is, "Not my will, but thine, be done," we shall find His will destroying error by uncovering it to us.

We need to be awakened from the mesmeric drifting with the currents of mortal thought, and to be lifted above any obstacle lying between us and good. There is never a time when it is possible for us to be otherwise than victorious, through the understanding of man as being, *note*, the perfect, sinless idea of infinite Mind, having dominion over all that is unlike God, and subject only to the perfect, spiritual law of infinite intelligence, which is immutably right.

It is a glimpse of heaven to have had one little demonstration of "God with us" in our common daily life, and this glimpse sheds a holy radiance on all our work, no matter how insignificant or menial, causing us to exclaim with Jacob, "This is none other but the house of God, and this is the gate of heaven." Here we begin our work of reversing the craft of thought, and head up stream to the source of all good. Each one must, individually, stem the current of human belief and make his way back to his rightful inheritance. The process may be slow at times, according to the turbulence of the waters, but the eager heart keeps the goal always in view. In his hand he carries the divine commission of all the heirs of God and

joint-heirs with Christ, and he presses on to the Holy City as did his Master, until the light of the Father's face, growing clearer and clearer as he advances, drives all the mists away. The goal is assured to the traveler who is ever striving to be earnest, honest, faithful, humble, loving, pure, unselfish, and obedient. The joy of unfolding spiritual truths belongs to this heir of God, leaving no room for complaint or discouragement, for with the eye single to the light, and gratitude therefor, there remains no dark thought; joy and gratitude, qualities of Truth annihilate it. This understanding destroys any sense of fear lurking in some hidden place, that there may be something which can harm us, for there is no place where God is not.—He fills all eternity.

"A Word in Season."

MARY E. CRAWFORD.

ISAIAH said, "The Lord God hath given me the tongue of the learned, that I should know how to speak a word in season to him that is weary."

In a world where such wisdom is rare, yet so much needed, surely the gift is one to be desired, and also cultivated. This sweet, gentle grace which teaches us how to do deeds of kindness, and how, moved with compassion, to speak kind and encouraging words when they are most needed, is very often absent. And why is this? Many people show that they have genuine love, joy, peace, and faith, and yet seem to lack the wisdom needed for their application when some poor stricken one is disheartened over a mistake, or a failure to stand when tempted. Perhaps with the very best intentions, they say or do just the wrong thing. When these come near to one who has been tempted, who has perhaps fallen, and is chafing under the terrible thought of wrong doing, and feeling bowed down to the earth with shame,—then, instead of pouring in oil and wine, they, with perhaps the best intentions, but with mistaken views,—begin to probe the wound to its most sensitive depths. There are times, surely, when hurts need probing, but a gentle, loving, as well as an understanding touch, should do the work. The very keenest sting for the poor suffering one, is the conviction that the terrible suffering has all been brought on by his own wrong doing. To such an one, when utterly disheartened and discouraged, with seemingly no hope left, how like dew from heaven it seems, to have some cheering word of encouragement, especially from those who are endeavoring to follow the Master, and who should know how to speak a loving word in season. The wise Christian Scientist does not, in such a case, drag up from the mire all the mortifying reasons for the physical condition, but instead holds out the cheering, uplifting thought, and points to an inspiring outlook of great possibilities for the one who must pass through the fiery furnace for purification. We read, "Blessed are the merciful for they shall obtain mercy."

How Christ-like are loving words, how little they cost us, and how priceless their value to those who are stricken. All around us are those who need such refreshment, and may Love guide us all to understand and put in practice the prophet's teaching.

Little Things.

PRINTHIA T. MILLER.

So many people ask, How can I advance in Christian Science? and the response is that we can advance, and rapidly, too, if we are obedient and watch all the "little things" which go to make up true happiness. Says Dryden, "If a straw can be made the instrument of happiness, he is a wise man who does not despise it." It is the close observation of little things which is the secret of overcom-

ing self. We are told that human knowledge is but an accumulation of small facts made by successive generations, and these little bits of knowledge and experience carefully treasured up grow at length into a mighty pyramid. Christian Scientists work each day, trying ever to do what is right for right's sake. In doing all they can for the happiness of those around them, they are looking after each little thing that needs attention. We must not expect to do great things before we have proven that the little things have been done.

Discouragement is due to a lack of understanding and is not Christian Science. Isaiah says, "Precept upon precept; line upon line, . . . here a little, and there a little." Any one who learns a science must master it fact by fact. To write a book you must do it sentence by sentence. It is the minutes wasted over self-condemnation or in criticism of a brother or sister that hinders our progress. Christian Science is sure, and never fails for those honest, humble children who love good and live it in their every-day life. It is the every-day life, the daily watchfulness and prayer, the unselfish desire to do more for mankind that causes Christian Scientists to grow and be successful. We must love one another more and be loyal and honest, and then we are helping our beloved Leader in her great and noble work for mankind.

According to St. John.

EULALIA BENNETT.

Once in a temple a woman sat,
Guilty, deserted, and bowed with shame;
And she offered a prayer
To the priests who were there,
But they had no pity—naught but blame.

Into that temple a wanderer came,
A wonderful light in his fathomless eye,
And the woman looked up:
Her bitter cup
Long since was drained, 'twas parched and dry;

But something about the tender face
Bending above her, touched her heart:
Her breath came fast,
And tears, at last,
And the chains of sin were rent apart.

Slowly she stretched forth her trembling hands
To his spotless robe, and touched its hem;
And the priests looked down
With a sneering frown,
And questioned, and tempted, and scoffed at them.

And the Man turned away and spoke no word,
But wrote with his staff upon the sand;
Till the priests tried again
To tempt him; and then
Came that voice, so gentle, so mighty, so grand:

Let him who is sinless first cast the stone,
And he wrote again on the sand with his staff;
And the priests fell back
To their beaten track;
And the world grew silent—ashamed to laugh.

And all was still save the song of a bird
Far up where the eaves of the temple meet,
And the whispering breeze
Through the olive trees,
And the woman sobbing at his feet.

Selected Articles.

Medical Legislation.

THE following excerpts are taken from an article, written by Ezra W. Palmer, which appeared in the *Denver (Col.) Post* of December 11. It has more specific reference to a medical bill which has been zealously circulated throughout the state, with a view of predisposing judgment upon the subject.—Ed.

The Christian Scientists of Colorado assuredly have no desire or wish to interfere with wise legislation governing the practice of medicine, which confines itself strictly to such practice, but when, in the language of the author of this bill, the intention is to "make clear that the essential feature of the practice of medicine is not the administration of drugs, but that it is the cure of the sick or injured, irrespective of any particular method of treatment," and at the same time to require all persons, no matter what their wishes or convictions may be, to conform to a particular standard determined by nine *materia medica* practitioners, they must certainly protest most strongly and emphatically against this unjust invasion of their rights as citizens.

The methods adopted to secure the passage of this bill are unfair and unpatriotic. Quietly, without the knowledge of the public, the candidates for the general assembly have been subjected to the pressure of powerful organizations all over the state, and for what purpose? this namely, to place in absolute control of nine men the care of the sick and suffering and of the health conditions of every man, woman, and child in Colorado, these men to be of a *materia medica* standard and all others to be excluded as enemies of society. It is a significant fact that the righteousness of this bill has not been championed by a single newspaper in the state, so far as the writer is aware. Its authors have worked in the dark, because the bill will not stand the searching analysis of strict justice to all men. It is monopolistic and antagonistic to the liberties of the people.

Article I. of the amendments to the constitution of the United States states that Congress shall make no law respecting an establishment of religion, or prohibit the free exercise thereof.

Article XIV., Section 1, also declares, "Nor shall any state deprive any person of liberty or property without due process of law, or deny to any person within its jurisdiction the equal protection of the laws."

The constitution of the state of Colorado is equally clear and emphatic.

Article XI., Section 3, asserts as follows: "That all persons have certain natural, essential, and inalienable rights, among which may be recorded the right of enjoying and defending their lives and liberties; that of acquiring, possessing, and protecting property, and of seeking and obtaining happiness and liberty."

Section 3 of the same article declares, "That the free exercise and enjoyment of religious profession and worship without discrimination shall forever hereafter be guaranteed; and no person shall be denied any civil or political right, privilege or capacity on account of his opinion concerning religion." The section further states that the liberty of conscience hereby secured does not "justify practices inconsistent with the good order, peace, or safety of the state."

Our medical friends must therefore show, when attempting to exclude the practice of Christian Science from the state, and to make the practitioners thereof criminals under the proposed measure, that the practice of Christian Science is "inconsistent with the good order, peace or safety of the state." This they will be unable to do. Thousands of people in Colorado are living witnesses of its efficacy to heal disease after all material remedies fail and man's skill

becomes valueless. They testify that it regenerates physically, mentally, morally, and spiritually, that it has healed, and is healing, all kinds of so-called incurable diseases, after they have been declared hopeless by *materia medica*, and that its adherents are conscientious, law-abiding citizens, and have no practices inconsistent with public safety. The state constitution guarantees to all citizens the right "of seeking and obtaining their safety and happiness" and this privilege is all they ask.

Our medical brethren must further show that they have grasped the whole of the healing art, if they are to be given exclusive control of healing sickness and suffering. Great powers entail great obligations. The list of diseases declared incurable by *materia medica* is a long one and is constantly growing. What would our medical friends have us do with so-called incurable cases? Let them die without hope of succor when aid may be received from Christian Science? And yet this proposed bill would make a criminal of a Christian Scientist who prayed for an invalid abandoned as hopeless by *materia medica*. *Materia medica* has no consistent basis of practice; its methods are continually changing,—the remedy of yesterday being thrown aside to-day and that of to-day being found valueless to-morrow. Oftentimes, in the same case, diametrically opposite courses of treatment are employed by the same physician, showing that medicine is based on no truly defined law.

A few months ago there came to Denver a gentleman for his health. He was given all *materia medica* could offer, but to no avail. He grew worse, until finally a God-fearing woman, a Christian Scientist, who knew the power of rightly directed prayer to a loving God, was called. The man was dying, his eyes glazed, his limbs cold. Within twenty-four hours he was healed, and shortly afterward appeared on the street, to the utter astonishment of all who knew him. Would any fair-minded citizen, any man with a spark of justice in his makeup, dare suggest that this lady should be treated as a criminal? And yet this measure purposes such odious results. In another Colorado city a business man came to Christian Science a victim of morphine of fourteen years' standing. Shattered in body and mind, disgrace and death seemed inevitable. A lady, a Christian Scientist, took his case. The habit was entirely broken in four weeks and the gentleman completely restored to health, both bodily and mentally. Should fine and imprisonment await the practitioner for this notable victory? Such cases can be duplicated in almost every city and town in the state.

The attempt is made in this bill to make the receiving of compensation for services rendered the sick or suffering a crime. Would our medical friends who are pushing this bill so zealously, wish to have this feature of the bill become of universal application? The constitution of the United States guarantees to all citizens the equal protection of the laws. Would it be just to exclude one class of the community from receiving compensation for services rendered, while the others, including all mankind, applied the law of compensation to all the affairs of life? The act of receiving compensation for services rendered, of itself constitutes no offence. Jesus said, "The laborer is worthy of his hire," and this dictum has received the sanction of all mankind ever since civilization began. This feature of the bill is a mere subterfuge.

THERE is no real rest until we reach God; there is no noble and inspiring courage until we trust in Him. When we build on such a faith, floods may break on the foundations, but cannot move them; clouds may obscure the sun, but cannot destroy it. "You may kill us but you cannot hurt us," said one of the noblest of the early martyrs to his persecutors. "If God be for us, who can be against us?"—*Hamilton W. Mabie*.

Among the Churches.

Church Dedication in Kansas City, Mo.

The new church edifice of Second Church of Christ, Scientist, was formally opened Christmas day with four services.

The building is on one of the highest points in Kansas City. Its well-proportioned dome stands out clearly on the sky line and is visible for miles in every direction.

Second Church of Christ, Scientist, was organized February 18, 1898, with a membership of sixty-two. The present membership is three hundred and seventy, with a regular attendance of between six and seven hundred. The attendance at the Wednesday evening experience meeting, where cases of healing are related, is nearly as large as at the Sunday services.

The dedicatory services were simple and impressive. They consisted of the reading of selected texts from the Bible, with correlative passages from the denominational text-book, "Science and Health with Key to the Scriptures," by the Rev. Mary Baker Eddy. The congregational singing was far above the average.—*Kansas City Star*.

Through private correspondence we have learned that, "The services on Sunday last were the happiest of our lives. Four services were originally planned, but the immense throng in the evening made it necessary to hold a fifth service beginning at 9.30 P.M., while nearly a thousand went away without gaining admission to the main auditorium. It was a great triumph for our dear Cause. One of the collections, it was announced, would be for The Mother Church Building Fund, and our treasurer will, in consequence, forward Mr. Chase seven hundred dollars. We shall now be able to more fully discharge our obligation to The Mother Church Building Fund, knowing that our own prosperity depends on the discharge of this duty."

A Letter from Berlin, Germany.

Last week First Church of Christ, Scientist, Berlin, Germany, was privileged to celebrate her third Thanksgiving services with two overflowing congregations,—German and English speaking. A glad feature of each service was the spontaneity of the gratitude expressed. One indication of progress was the preponderance of testimonies showing the preventive as well as the curative efficacy of Christian Science in regard to physical health. Another sign of growth was the increased stress laid by most speakers on the spiritual benefits brought them by the Christ-Truth. Many rejoiced over their "clearer thought of God;" over their growth in Love, and over their increased understanding of what they had to be grateful for; and that this gratitude must be expressed practically. In three cases special thankfulness was voiced for the spread of Christian Science in this and other foreign lands, a phase of thanksgiving which appealed peculiarly to congregations like ours, in which, though they are mainly composed of Germans, Americans, and English, there come and go representatives of all European peoples as well as visitors from South Africa and Australia. Very significant were the expressions of love and gratitude toward Mrs. Eddy, our honored Leader, many of the speakers being unlearned Germans, to whom, from one to three years ago, the Discoverer of Christian Science and the author of its text-book was not even a name. Much heartfelt gratitude was expressed for our Christian Science literature in both languages; and the repeated allusions to the Publishing Society and the Lesson-Sermon committee, testified to an awakened appreciation of their loving labors.

ELLEN BENTINCK-BEACH, *Clerk*.

The Lectures.

Plymouth, Mich.

Rev. William P. McKenzie delivered a lecture in First Church of Christ, Scientist, Plymouth, last Sunday afternoon [October 23]. The church was filled with an appreciative audience. Mr. McKenzie was introduced by Prof. W. N. Isbell, who said,—

Kind Friends:—All of us who are Christians believe that Christ was the greatest teacher the world has ever known. I, as a teacher, recognize him as a Master. I believe in education. Christian Science, as I understand it, is educational. In just what way and how much it is educational we will learn more in the pleasant hour I anticipate for you this afternoon. I have the pleasure of introducing to you Rev. William P. McKenzie of Cambridge, Mass., who will speak to us on the subject of Christian Science.

Plymouth Mail.

Braintree, Mass.

A good audience assembled in the Town Hall, Braintree, Mass., Tuesday evening [December 13] to hear a lecture on Christian Science by Bliss Knapp of Boston. The lecture was given under the auspices of First Church of Christ, Scientist. The lecturer was introduced by Willis F. Gross of Roxbury, who said in part,—

"The earnest seeker for religious truth feels that he is justly entitled to what there is in another's faith that will increase his faith; that he has a right to know what there is in another's light that will help him to live a better life. The Christian believes that truth is one and universal, and that it belongs to no person or class of persons, to the exclusion of others, and he is ever ready to supply his brother's need so far as he is able. We have found in Christian Science that which has helped us in many ways, and we would gladly share it with you.—*Correspondence*."

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

"Not as the world giveth."

THE summary of a letter written by General Nogi, which recently appeared in the news columns of the daily press, presents a welcome break in the monotony of the dispatches which have previously chronicled the death of at least seventy-five thousand men in the siege of Port Arthur, for it indicates that the generous courtesy which should ever govern the actions of a brave man has survived the carnage of one of the most sanguinary campaigns in history. The press dispatch to which we refer is as follows:—

"Nagasaki, Japan, January 16.—General Nogi has written to the governor here, commending General Stoessel to his consideration. Nogi points out that the former Russian commander at Port Arthur is now neither a prisoner nor an enemy, but a foreign gentleman who has meritoriously served his country."

Notwithstanding the credit due to the writer of this letter for his generous treatment of a vanquished foe, we must remember that war and the conditions entailed by it are not good, and no matter how chivalrous those who engage in war may be, nor with what courage they deport themselves, the entire system is wrong. It is but the perpetuation of the doctrine that "might makes right," which commenced with Cain and has continued throughout countless generations of mortals. So long as war is looked upon as glorious, and as being the final tribunal of nations, so long will it continue, but fortunately for the world there is evidence that the tide is turning. The great success achieved by the United States in its policy of negotiating arbitration treaties with the principal nations of the world, surely points to the coming of that reign of universal peace which the prophets foretold, and which must come at such time as the true concept of Jesus' teachings is attained.

One result of the war now in progress in the far East is the awakening of humanity to the utter folly and wickedness of such means of settling the differences of nations, and quite naturally the advocacy of international arbitration has been much to the fore in all public discussions of the subject. The letter of Governor Montague of Virginia, recently published in the *New York World*, is a strong and timely argument in favor of arbitration, and in calling attention to the "large class of controversies between nations" which have been settled by this means, the governor has done his share toward ushering in the reign of "reason, justice, and humanity" which should control the intercourse of nations. There is great significance in the declaration that "man must be greater than matter, and his standard must be the spirit and not the sword." Governor Montague's letter is as follows:—

"The settlement of a large class of controversies between nations by arbitration is one of the notable signs of our times. The boundary lines of governments should not be a barrier to the sway of reason, justice, and humanity. Man must not live against man, nor nation against nation; but man must live for man and nation for nation; for thus is heard the voice of reason and thus is seen the light of justice. Man must be greater than matter, and his standard must be the spirit and not the sword. Therefore, arbitration, and not war, is a note that harmonizes well with the celestial chant commemorated by this [Christmas] day."

We may be sure that the reign of universal peace is dawning, notwithstanding the "wars and rumors of wars" which mark these early years of the twentieth century, but this universal peace can come only in the way of God's appointing. Of this way, our Leader, Mrs. Eddy, recently wrote for *The Boston Globe*:—

"Peace is the promise and reward of rightness. Governments have no right to engraft in civilization the burlesque of uncivil economics. War is in itself an evil, barbarous, devilish; victory in error is defeat in Truth; war is not in the domain of good, it weakens power and must finally fall pierced by its own sword.

"The Principle of all power is God, and God is Love. Whatever brings into human thought or action an opposite element is never requisite, never a necessity, in so much as it is not sanctioned by the law of God, the law of Love. The Founder of Christianity said, 'My peace I give unto you; not as the world giveth, give I unto you.'

"Christian Science reinforces Christ's sayings and doings, its Principle demonstrates peace; and Christianity is the chain of scientific being reappearing in all ages, maintaining its obvious correspondence with the Scriptures and uniting all periods in the design of God. The first commandment in the Hebrew decalogue—'Thou shalt have no other gods before me'—obeyed, is sufficient to still all strife. God is the divine Mind, hence the sequence, had all peoples one Mind peace would reign."

We can but entertain the hope that the courtesy and kindness of General Nogi's letter may be the forerunner of that loving kindness among men and nations which will end all war.

ARCHIBALD McLELLAN.

Endurance.

It is generally conceded that, with the passing of the years, some of the old-time virtues which could ill be spared have been given a minor place in the estimate of mankind. Doubtless this is largely due to the fact that it is now comparatively easy to indulge all the reasonable demands of personal comfort without calling into exercise the more sturdy elements of character. Prominent among the Christian virtues is one which finds frequent and honorable mention in the Scriptures; namely, endurance, which the dictionaries define as the ability "To remain firm . . . to continue under pain or distress without being overcome." In the Bible it is made clear that the Divine name and nature,—all the Divine qualities,—shall "endure forever," and Christian Science teaches that in Divine consciousness there is no struggle with opposing elements, since God and His manifestation constitute and include the all of being. It is only in the knowledge of this eternal fact that we can properly understand and respond to the inspiring words of the Master and the apostles which make endurance an all-important factor in the emergence of the race from its self-imposed bondage to sin, disease, and death. The pity is that the real significance of the word is so generally misunderstood that it has almost come to mean submission to some phase of error. The Apostle James says, "Blessed is the man that endureth temptation," which clearly means that he is blessed who passes through temptation and is unaffected by it,—remains firm in his loyalty to right, and is able to give proof of its supremacy over wrong in whatever form it may assail him. "He that endureth unto the end, the same shall be saved," said Jesus, and he *knew*, because he had proved the powerlessness of evil to pierce the armor of him who is allied with Truth. To such as he the poet's words apply,—

Who seems a promontory of rock,
That, compassed round with turbulent sound,
In middle ocean meets the surging shock,
Tempest-buffeted, citadel-crowned.

Christian Science not only teaches us how to "endure," it also shows that the assaults of error make no impression upon the one who is spiritually sustained in his struggle. The Bible tells of Moses who "endured as seeing him

who is invisible." We read of his long life of "endless toil and endeavor," of his untiring efforts to establish the idea of one God, one Mind, and then we are told that when he was a hundred and twenty years of age "his eye was not dim, nor his natural force abated." It ought to be clear to all that if the divine Principle who thus sustained Moses and enabled him to "endure" to the end of his earthly problem had been understood by mankind through the long centuries, as Truth is now understood in Christian Science, the moral, intellectual, and spiritual condition of humanity would be far different to-day.

At the close of the Sermon on the Mount, after the great Teacher had turned the searchlight of Truth upon all the errors of mortal mind, he pictured in vivid terms the storm which, sooner or later, overtakes all who have come into a material sense of existence. We here find outlined two widely different conditions of thought,—that which has accepted the truth and that which builds upon error, but to both alike, there come the rain, the winds, and the floods. At this point of their experience there seems to be no difference in their condition or prospects, but the difference is there, and it consists in the wisdom, or understanding, of him who builds upon the rock,—Christ, Truth,—and who proves by demonstration that it is the truth and no human opinion which insures the safety of his superstructure and gives endurance to his unfolding spiritual sense. When the storm is over the faithful find a strength unknown before. With St. Peter they now say, "The word of the Lord endureth forever."

ANNIE M. KNOTT.

The Gain of "Giving Up."

Nothing worth keeping is ever lost.

A REVELATION of truth is always indicated when the religious terms with which we are familiar come to have a more spiritual, more practical, more inspiring significance, and the application of this simple test brings satisfying assurance to every faithful student of Christian Science that this is indeed a divine light which has been thrown upon the erstwhile obscure pathways and problems of human life.

One of the multiplied subjects which have thus been made more luminous and intelligible for Christian Scientists is that of sacrifice, self-surrender for Christ and for humanity. Religion has always been associated with the thought of necessity for the giving up, not only of those things which are out of keeping with a high ideal, but of many others which have been thought of as good in themselves and which have yielded a degree at least of innocent pleasure and satisfaction. This idea has found its extreme emphasis in asceticism, to some form of which unnumbered heroic souls have ever been devoted. To-day, however, the dominant religious thought is far removed from the mediæval idea of sacrifice, and a great many Christian people are verging upon the world's contented indifference respecting the whole matter.

At such an hour Christian Science has come with its illuminating teaching that the indissoluble union between Principle and its idea, God and the true man, makes unfailing provision for his every need. He is linked to infinite good, and therefore the acquirement of the "riches of his inheritance in Christ Jesus" is but an awakening, not to what shall be, but to what is. Thus for the true man there is no possible "giving up" of any real good, since all things are eternally his by virtue of his relation to the source of being. His every reflection of good can but increase his own store; for everything he gives, there is an hundredfold return to him in the giving. Like the diamond, his worth is but magnified by the splendors of his radiation.

Sacrifice, when thought of as a voluntary parting with good for the sake of others, pertains, therefore, to the human concept alone, and they who with St. Paul have risen to a more exalted plane of spiritual apprehension, are coming to understand, as did he, that "the sense of sacrifice

is but the measure of incompleteness," and that no condition, experience, or demand is able to separate man from the love of God, which is revealed in Christ Jesus.

This higher point of view gives the true perspective to all our human sacrifice and service. Here we may make and maintain the true spiritual estimate of values, honor as did Jesus the lesser and incidental opportunities for ministry to our brother-man, upon the plane of his sense of need, and make that contribution of time, money, patience, and loving indifference to stupidity and ill desert, perchance, which may oftentimes prepare the way for an offering of the Bread of Life. Here we may understand the deeper meaning of the apostle's words, "I count all things but loss for the excellency of the knowledge of Christ Jesus my Lord: for whom I have suffered the loss of all things, and do count them but refuse that I may win Christ." He realized, as may we, that the things which are to be parted with for Christ are but the products of error. The requirement of Truth is that we give up our false sense of things, and this alone. God is not playing fast and loose with His children, bestowing upon them all good and then exacting from them, to their penury, but only urging them to quit the husks and the swine that they may possess and enjoy all the fulness of their patrimony as His own.

With the aspiring, the Christ-ideal is ever far ahead of achievement, the theoretical apprehension in advance of demonstration, and to such, sacrifice becomes an appreciable gain,—loyalty to the highest motive brings that reward which Paul describes as "peace and joy in the Holy Ghost." It is for others to learn that we can find no gain in giving up so long as false sense—the sensually satisfying—is retained in desire. We may yield the satisfaction, but we make no sacrifice, for it is our longing for it which links falsity to human consciousness. This is its point of contact and stronghold, and hence, the possibility of "giving up" our false sense,—of making the only true and divinely required sacrifice, is reserved for him who, through spiritual awaking, has come to see the utter undesirability of that sense and all it offers.

JOHN B. WILLIS.

Letters to our Leader.

Fall River, January 17, 1905.

Rev. Mary Baker Eddy.

Pleasant View, Concord, N. H.

Dear Leader:—It may please you to know how the money is coming in for The Mother Church Building Fund. The amount received for the month of December, 1904, was \$101,611.49. Total receipts for the Building Fund, from June, 1902, to January 2, 1905, \$712,832.04; paid out to date, \$386,041.12; balance on hand January 2, 1905, \$326,790.92.

The letters received with the donations show a beautiful spirit. Many of the branch churches have taken the money that was saved for their local churches and given it to The Mother Church, for, as they declare, if the Vine does not flourish the branches cannot. The Sunday School children, according to letters received, are very much interested, and are doing a noble work for our Cause. Many loving references have been made to your letter in the December *Journal*, which I feel sure would be exceedingly pleasing to you.

Sincerely your loving student,

STEPHEN A. CHASE.

Boston, Mass., January 18, 1905.

Beloved Leader and Teacher:—You will be pleased to hear that one of our members who attended the Wednesday evening meeting last week was healed, during the reading from Science and Health, of a stubborn ailment that had been troubling her all day. The selections brought out the fact that the Christ-healing is the foundation of our Church, and many beautiful testimonies were given. One lady told how she was healed at one of the services. She was scarcely able to walk, and came to church under great diffi-

culties, but she went home perfectly well. A lady recently wrote me gratefully of her healing during the service on New Year's day.

These experiences make me pray more earnestly that the divine Word may be uttered with understanding and accomplish the Divine purpose, and that it may not be hindered nor reversed.

Your loving student,
HERMANN S. HERING.

Chicago, January, 1905.

Rev. Mary Baker G. Eddy.

Beloved Leader:—We of Fifth Church of Christ, Scientist, Chicago, assembled in annual meeting, in recounting our blessings, are awakened to a deeper sense of gratitude to Him who giveth every perfect gift, for the appearing of Christ Jesus, and the second coming of Christ in His revealed word,—Science and Health,—God's most precious gift through you, His Revelator, to a suffering world. Your heaven-born ministry of love is beyond human estimate, and through it you have pledged to us the existence of Love infinite, awakening us from the world's sleep so that we are striving understandingly to keep the two royal commandments, "Thou shalt have no other gods before me" and "Love thy neighbor as thyself," and we humbly rejoice in progress. Two years ago, on January 8, this church was formed,—two hundred and forty-six going out from First Church to make room for the strangers seeking Christ's comfort. We have grown in unity and numbers; our membership is now four hundred and fifty-seven. In a few months our own church home will be ready for us, well located and with a seating capacity for one thousand. Our corner-stone is of granite from your home city, and with its contents was contributed by the children of the Sunday School. At this point our work stands for many victories won. The funds for The Mother Church and Fifth Church have been most happily accumulated together, the demonstration required for one being the avenue for a deeper interest in, and a fuller giving to, the other. We hear of cases of healing in our services, we see the signs of regeneration in our lives, and we know that thought is traveling heavenward.

Never will the medium of human words express our love, our hearts' deep gratitude to you who have defined infinite Love to us by living it. The influence of your teaching to-day fills the earth, rousing all nations and peoples, and this great work will never cease until all shall proclaim "God dwells with men." May our deeds, yet more than our words, rise up and call you blessed.

Lovingly yours,

J. U. HIGINBOTHAM,	MRS. FLORENCE T. PAGE,
JAMES H. DAVIS,	MRS. GERTRUDE S. ROSE,
ROBERT P. WALKER,	MRS. JEANNETTE R. GOODMAN,
J. PORTER JOPLIN,	MRS. CARRIE LOUISE DOTY,
W. K. DOTY.	MRS. MABEL BROWN CARRY.

Trustees.

Directors.

Denver, Col., December 21, 1904.

Rev. Mary Baker G. Eddy.

Beloved Leader, Teacher, and Guide:—The approaching Christmas-tide was never so dear to me as at this time, and it seems fitting that I should express it in a letter to you. The joy your letter gave me words can never express. The light of understanding that dawned upon me so feebly over nineteen years ago is growing brighter "unto the perfect day." My Bible and Science and Health were never so dear and clear as now. The months spent with you, dear one, have enabled me to meet the most difficult problems that have confronted me all these years, and it is being done with the light of Love.

My gratitude can only be shown in doing the work, and my prayer is, "Give me grace for to-day."

I am faithfully and lovingly your humble student,

ELLA PECK SWEET.

Testimonies of Healing.

Words are inadequate to express the blessings I have realized from the study of Christian Science. In childhood I was taught that God sent sickness as a punishment for sin. As I grew into womanhood my views changed; I joined an orthodox church, and for some years was devoted to its teaching. I was taken with a sudden illness which was pronounced fatal. The best of physicians hesitated to diagnose the case, but they finally agreed that it was purpura, and said that few such cases were reported and that they were considered incurable. In the face of all discouragement I still lingered for a year, when other complications arose and seemed to promise but one result. I had been limited to a certain diet, and during this time I practised gymnastics, tried the bran cure, in fact every remedy I could hear of was tried, including change of climate, but to no avail. The question arose, Why all this suffering, when I supposed I had been a Christian? Friends tried to console me with the thought that it was God's will, but this did not coalesce with what I considered a God of mercy to be. I pondered these questions hours and days, finally deciding to my own satisfaction that no one knew anything about it, it was all speculation, and I concluded that the atheist's theory was as nearly right as any other, and that I would take my chances.

One day a friend called, and during conversation said she knew of a lady who had been healed by Christian Science after the doctors had failed. I asked her to write her friend and ascertain if such was the case. In a few days I received a beautiful letter stating the facts, and it said very emphatically that Christian Science had healed her and she knew it.

I decided to send for a Christian Scientist and at least have a talk with her. She called promptly and I was ready with a volley of questions, to which she kindly replied that I had better wait until I could study out those things for myself. She, however, said it was not spiritualism, mesmerism, hypnotism, or any other "ism," but that it was the religion which Jesus taught and practised. I asked if she believed that God sent sickness. She replied, "God is Love and knows no evil." This was a different idea of God than I had ever been taught, and I felt—here is an anchor. I asked her to give me a treatment, and I fell asleep with a sense of peace, something I had not experienced for weeks, without an opiate. I awakened the next morning much brighter and happier. She brought some copies of *The Christian Science Journal* the next day, and I devoted all my time to the reading of the testimonies. I decided that I would get up, much against the wish of my nurse and family; and in a day or two I realized that I did not need a nurse and dismissed her. I asked for a cane and when left alone would get up and walk around the room. In a week I thought I would go down stairs, which I did. The family was frightened and thought I was surely losing my mind. I asked the Scientist if I could eat everything I wished, and she said that I could. I partook of anything on the family table, and for about three months I ate very heartily, for I had been starved.

I was then wearing glasses and had been assured by an oculist that I would always have to do so, but I decided that they would have to go with the other things already discarded. My healing was slow, but what an awakening it was, to know that God is Love. I read Science and Health a great deal, and have never doubted the truth of its teaching.

My husband was attending a college of dental surgery, and I feared his opinion of my new method of treatment, and for some time he did oppose it rigidly. The practitioner said it would be all right if I applied the little understanding I had, and I found this to be true. Little by little the stone was rolled away, and my husband also

recognized the power of divine Love to heal all our diseases. Eight years have passed and I feel that it has been the most profitable period of my life. I am learning the way of Life that brings peace and rest, here and now.

To our noble, loving Leader, Mrs. Eddy, I can best express my gratitude in three words: "God bless you."

To the one who piloted me through the storms and waves of error, I owe a debt that can only be paid by returning what she helped me to reflect; namely, love.

ROSELLA WILSON, Toledo, O.

About six years ago I was sick and miserable, and could see no end to my financial troubles. I never had any faith in medicine, and was dissatisfied with the orthodox teaching. I felt that I was the most discouraged person on earth, but Christian Science came to my rescue, and saved me from the grave. I was healed of many different ailments, but if there is any one thing that I am more grateful for than another, it is this: I used to be in constant fear of death, and now, I am thankful to say, I am entirely free from this fear. I am learning how to live through the understanding of Christian Science, as taught in "Science and Health with Key to the Scriptures" by Mrs. Eddy. A few weeks ago I was called to my sister's home. Her little boy, two years old, was taken with a severe case of pneumonia. My sister, being a student of Christian Science, telephoned to her teacher for help and the child was healed in a short time.

I cannot express the gratitude I felt at that time for this truth. It certainly seemed as if death had been overcome. I am thankful to Mrs. Eddy, and to my teacher for the understanding I have of Christian Science.

MRS. JOHANNA HARMS, Bloomington, Ill.

In looking back to the time before I began to study Christian Science, I find that most of my memories are associated with illness. My mother had been an invalid ever since I can remember; the doctor was a daily visitor; my sister, brother, and I had our full share of the ailments prevalent among children, while I can hardly remember a Sunday when my father was not suffering from a violent sick headache. It seems strange, now, that with so much to disgust us with error, so much to discourage us with medicine, we were so long in finding God. But at last, when my mother had no other place to turn to, no other remedy to take, she sought help from Christian Science, and it was the light that led us out of the darkness into an understanding of God which heals the sick.

Since my mother's healing, which was quite remarkable, Christian Science has gradually opened the eyes of the entire family to the truth about God and man. We have learned to know God as the ever-present, unfailing healer of all our diseases; we have learned to know God's law as a law unto us; and we have learned that all that was true, all that was possible, in the time of Moses, of the prophets, of Jesus, is true and possible now. Every day brings new proofs of the adequacy of Christian Science. One demonstration, which impressed me greatly, was made for me not long after I began studying Science and Health. Both of my ears were badly frozen one cold night about four years ago, frozen so that one of them had turned black and the other was badly discolored on the following morning, but they were completely healed within three days, and I suffered no pain from them after the first night. They have been exposed to the coldest weather there has been since then, but have not given me any further trouble.

Recently, I was healed of a dislocated bone in my foot, so that I was able to walk without pain and without limping, in six days, though the bone did not assume its normal position until later. About two months after the completion of this demonstration, a man with whom I was

walking slipped on an icy sidewalk and fell, violently striking the bone that had been dislocated with his foot as it slid out. He remarked that it wouldn't have hurt him so much if he hadn't fallen on his lame leg, and I was very glad to have occasion to give thanks silently that God does not heal by halves, and that I was not babying a lame foot.

There are many more instances of Christian Science healing that I might speak of, and much might be said of the continued health and strength which have taken the place of suffering and weakness in this family; and there is yet more,—Christian Science also heals sin. When I think of all the bitterness, the morbidity, the anger, jealousy, and discord of many names that have been wiped out of my life, and of the peace and content that Christian Science has brought me instead, I feel that I owe much gratitude to God that there lives in this age an individual so pure, so patient, so faithful, that her eyes could see the light, her ears hear the word, and as she received she freely gave to "the people which sat in darkness."

HELEN C. POTTER, Kalamazoo, Mich.

Having seen so many beautiful demonstrations in this truth, I deem it my duty to let others know what it has done for our family. About nine years ago, Christian Science found my wife. While she was visiting a friend in the country she heard of Christian Science and received it gladly, for she would have accepted anything that could give relief from her chronic headaches and defective eyesight. This friend told her that she should try Christian Science, and she talked with a practitioner who told my wife that she could be healed if she wanted to, and remarked that God gave man dominion over the whole earth. In this way the truth was brought to our family, and a tract was the only literature we had until we bought Science and Health, which we did not at first understand. Well do I remember the remark that I made in those days. I had bought Shakespeare's writings a good many years ago, and when I commenced to read, I found them too deep for me, so I bought a dictionary to help me understand them. When I commenced reading Science and Health, I looked to the dictionary in the same way, thinking more of the letter than the spirit, but we have gradually grown to an understanding of this truth and are very grateful. It has brought to our family what no physician had been able to do,—health and happiness. Our physician had told my wife that he could do nothing more for her, and that no medicine could cure her, if she would not stop worrying over those who had passed on from the family.

Our way in Christian Science was not carpeted with flowers, and so it came that one morning I had a very sick family, that is, to the senses. While I was getting ready for my daily work my family had to retire again. I thought I was brave, but I soon found that I was not spared, for I had not gone very far when an intense headache came on, accompanied with dizziness. We had been overcome with coal-gas during the night. Through Christian Science this manifestation was destroyed, and in the evening everybody was well again. And so one demonstration has followed another when we have been faithful to Truth. Many an ailment has been removed which had baffled the regular physician.

We certainly are grateful for this truth, grateful to those who have brought it to us, as well as to our dear Leader.—JOHN SCHOEN, Milwaukee, Wis.

About twelve years ago I graduated from the Nurses Training School in Newburyport, Mass. After following my profession several years, I broke down from overwork. My physician said that I was worn out, both mentally and physically, so I gave up my work and put myself under his treatment. Although he was very kind and did all he could for me, I did not improve, and he suggested my going

to a nerve asylum. I decided to do as he thought best, and I was there several months, but did not feel that I was gaining any, so I made another change. I went into the country among friends, where I had rest and pleasant surroundings, and while there I improved so that I was able to come home and start my work again in a small way. After working a little, the agony of mind returned; I seemed in despair: "the cloud hung thick around me, darkening the light of day." Still I kept on with my work, though feeling that if I did not get relief soon I should be obliged to give it up again. I knew that I could get no help from *materia medica*, and my heart cried out, "Where can I go for help?" when out of the silence a still, small voice whispered "Christian Science," and I grasped the thought as a drowning man would grasp at a straw.

I had heard very little of Christian Science, and nothing favorable, but I felt that it was my last resort, and I said, I will try it. Before many hours had elapsed I went to see a practitioner. She had talked with me only a little when the clouds seemed to separate and I saw a ray of light. Before I left her office I had put myself under treatment. I took Science and Health to read, and soon the clouds rolled away and the sun shone for me once more.

I began at once to attend the meetings when my work would allow. It was not long before I united with the church in this city and later with The Mother Church. I gradually stopped nursing under *materia medica*. I have been healed of a number of ailments, among which are neuralgia and canker in the mouth, with which I had suffered from childhood. My heart goes out in gratitude to God, and to Mrs. Eddy, through whom this wonderful truth has been revealed to the world.

EMMA F. ANDREWS, Newburyport, Mass.

To-day, with the sun shining in at my window, and a peace in my heart that can be naught but a ray from the "Sun of righteousness," I am impelled to reflect it in an expression of love and gratitude. Three years ago, what a contrast! Lonely, unhappy, suffering, submerged in a cloud of fear that seemed to preclude the possibility of sunshine. A well-known physician had informed me that a serious operation for an internal growth was necessary. In addition, I was enduring sleepless nights of pain from an enlargement in my breast which I had guarded from my friends with vigilant secrecy for several years. In an agony of fear, lest submission to a double operation be inevitable, I paced my room in the dead of night, one moment endeavoring to face the facts courageously, the next repeating, "No knife shall touch me; I'll die first." Tonics were administered to compel my nerves to be calm, but in vain, and when I failed to keep an appointment with my physician and a specialist who had been summoned, simply because I could not endure a reiteration of the verdict, a letter was received assuring me that I was taking my life in my hands by the delay.

At this juncture a friend suggested Christian Science. I thought it might at least allay the nervousness during the preparation for the coming ordeal. What it did prepare me for, was the reception of the truth, for I was spared the ordeal. I was completely healed by Truth as revealed in Christian Science, and with the marvelous healing was awakened the desire for an understanding of the Divine power which could be thus demonstrated. Gleams of golden light fleck my way in response to this desire, which grows day by day, constantly calling for more and more of the truth, and the demand will continue until the perfect knowledge of Christ is gained.

There are no words adequate to express my gratitude to God for the healing inspiration of Christ, Truth, and its revelation through the wonderful book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. I am most

grateful to her for enduring what no human being could patiently withstand unless upheld by divine Love.

SAIDEE VERE MILNE, New York, N. Y.

An instance of the efficiency of the understanding of Christian Science, even in a small degree, and a reliance upon Truth alone in the treatment of croup, may be of interest to some reader who has children. One evening last winter our little three-year-old boy manifested all the symptoms of a severe cold. Under the parents' Christian Science treatment he was put to bed early in the evening, and when the family retired at a later hour he was resting naturally. About midnight, however, the child's restlessness awakened the parents. The little one then showed those alarming symptoms of croup which have so often brought terror to homes where there are children. The sound of a loved child's labored breathing arouses that fear which is cast out only by divine Love. The truth was declared at once, and the treatment had continued not more than fifteen minutes when the little one showed evident signs of relief, and turned to his father, saying, "Papa, me sing 'Shepherd, show me how to go'" (Miscellaneous Writings, p. 397). He was told to do so. In his baby way he tried to sing it, but could not on account of the seeming condition in his throat. He was told to repeat the words, and thus completed the first verse of the hymn. Soon he went to sleep, and slept peacefully until morning. The singing of this favorite hymn was his baby concept of a Christian Science treatment. His first words after waking expressed his gratitude for relief, and all were thankful, though some of the family were very much surprised, to see the little fellow in his usual place at breakfast the following morning.

The practical application of Mrs. Eddy's teachings and the direct results gained therefrom, are the occasion of our inexpressible gratitude to her for all she has done and is doing for humanity through Christian Science. Much as Christian Science is to us as the only preventative and healing agent, it is vastly more to us as a religion. The incident above related, one of many which are similar, means much in the experience of a business man who is studying and trying to live the teachings of Christian Science.

A. L. MCBRIDE, Kansas City, Mo.

It is nearly ten years since I received my first treatment in Christian Science and was healed of chronic spinal-meningitis. The physician who had attended me through two acute attacks of the disease, said I would never be well or strong, and that I would be liable to repeated attacks as long as I lived and might at any time be rendered helpless. About two years and a half later, I met a lady who told me she had been healed of spinal trouble and heart disease through Christian Science, when five doctors had pronounced her case hopeless. She looked so well and happy that I asked her to explain it to me, saying that while I would like to be healed, I would rather suffer than accept anything which would lead me away from true Christianity. She explained enough for me to see that Christian Science was nothing to be afraid of, as I had thought, but was rather the higher understanding of the Scriptures which heals as Jesus did, and as he taught his disciples to do.

A month later I was visiting in the mountains and was taken with the worst attack I ever had. Medicine which had before given me relief had no effect and I was brought home and had an interview with the Christian Scientist (the only one I knew). She talked with me for a while, answered my questions, and then gave me a treatment. I was much relieved and was able to take a long car ride that evening. The next morning when I awoke, the pain seemed worse than ever, and it seemed that it would be impossible to dress myself, but I thought, Now is the time to prove what Christian Science can do for me. I began

to dress with much difficulty, meanwhile denying the evidence of the physical senses and declaring that God is omnipotent, omniscient, and omnipresent. I tried to realize the meaning of the words and that I was God's spiritual child, and by the time I was dressed all pain had left and I felt that I was healed. I went downstairs and prepared breakfast for the household. I gained strength rapidly and was able to do harder work than I had ever done before. When I had been under treatment a few days I discovered that my eyes were healed. I had worn glasses for nearly three years, and a specialist had refitted my eyes with glasses three months before. He told me that I would always have to wear these glasses, as I had astigmatism and muscular weakness, but I have never worn them since nor needed them. I was also healed of rheumatism of many years' standing, supposed to be due to heredity, and I was free from that trouble for several years, when there seemed to be a return of it but in a different form, and it was overcome through Christian Science. I received class instruction from one of Mrs. Eddy's students and it has been a great help to me.

For several years prior to my introduction to Christian Science I had felt dissatisfied with my religious experience, as a church member, and was earnestly seeking for more light, so when I began to read Science and Health it was a revelation to me, and I knew that I had found the absolute truth. I have had many trials of my faith, but God has been a very present help in every time of need, and the trials have only served to strengthen and purify me. I am deeply grateful to the one who first showed me the way and through whose efforts I was healed, also to my teacher, and to the Publishing Society for our literature, but above all to our dear Leader who has given to the world this great truth.—MRS. LENA WATERS, Denver, Col.

If the following experience should prove helpful to any who may be coming out of a like situation, the purpose of this writing will have been accomplished. I began the study of Christian Science five years ago, not at first for physical healing, but in the earnest endeavor to find spiritual light, the serious hope of finding something which would help me to be good. One perusal of Science and Health left me with the firm conviction that in Christian Science I would find the aid I earnestly sought. This conviction I could not define, but it was none the less firm, and every day since then a steadily increasing amount of time has been given to the study of Christian Science. In my early experience I was healed of a severe stomach trouble, which I was supposed to have inherited, and felt that some slight progress toward my desired end,—a good life expressed, was gained. The progress, however, appeared very slight, and for more than three years there seemed to be a very slow growth as a Scientist, though during the latter part of this time I was giving hours daily to the study of Science. I felt dimly that it was not legitimate for me to gain the truth and manifest it in good deeds and words so slowly, but I did not awake to the consciousness of one of the seeming obstacles until some months later.

During all my experience as a student of Science and Health, I had been an active member of a large and very reputable woman's club, had been an observer of the desire for office, the human sense of criticism, and other recognized factors of such an organization. Here I also found much good and much love, but about a year ago, after receiving class instruction, I felt impelled to withdraw from the club in order to have more time to study Christian Science. Then there came to me, and almost immediately, a larger, more operative sense of truth than I had ever had before, and this one year has given me more understanding and more ability to use this understanding than the four previous years had done. I had remained a club member

longer than I desired, because of the argument that the purifying thought of Scientists was needed there as much as elsewhere, but very soon after my withdrawal, many opportunities to give help through Christian Science were supplied, so that my sense of usefulness was greatly enlarged.

I feel deeply that the new By-law relating to clubs is one for which Scientists will find themselves increasingly grateful, and that it is another proof of the loving wisdom manifested through our Leader.

GENEVA MARY CLIPPINGER, Chicago, Ill.

I wish to express my gratitude for what Christian Science has done, and is doing, for me. About two and a half years ago Christian Science found me in a very bad state, both physically and mentally. I was suffering from insomnia in its worst form, having gone over two weeks without any sleep. I had one of the best physicians in this city, who tried all kinds of opiates, chloroform included, to put me to sleep, but nothing gave me even temporary relief. I knew I could last but a few days, and had given up all hope, when a friend suggested that I try Christian Science. I accepted it most willingly, and went to a gentleman who is a practitioner. He asked me if I was ready to give up doctors and medicine. I told him that I was, as they could do nothing for me. He gave me a treatment, and to my surprise I went home and slept. I have not suffered from insomnia since that time. This was to me a beautiful demonstration, and showed me that Christian Science is the truth Christ Jesus taught. Along with insomnia, I had a stomach trouble of eighteen years' standing, and this also was healed in three weeks. I have never taken a drop of medicine since, and am most grateful to God for these many blessings. I am also grateful to the practitioner, and to Mrs. Eddy who, through her pure life, as God's messenger, has brought to suffering humanity this glorious truth which does indeed make us free from sickness and sin.—J. W. MCGUIRE, St. Louis, Mo.

When I first met with Christian Science, the dear practitioner who had been so patient with me, told me of God as Mind. I could not understand, but I felt that she had something that I too wanted,—a better understanding of God. I was a Sunday School teacher, and was trying, to the best of my ability, to live a Christian life, and felt the responsibility of helping my scholars to do the same, but after reading Science and Health I saw that I was a blind leader of the blind. I had for a long time felt the need of a better understanding of God and had earnestly prayed to God to reveal Himself to me. I know now that divine Love was leading me all the way to Christian Science. I am reading Science and Health now for the third time and can understand the Bible so much better. In the old way, I used to be getting ready to die, but now I am learning how to live forever. I love to think of God as Love, Truth, divine Principle. I gain so much by reading the *Journals*, and *Sentinels*, also in a daily study of the Bible Lessons. I have experienced some healing, and I do not know what I would do now without Christian Science.

AGNES WALKER, Mitchellville, Md.

Living, as I do, away out in South Dakota, I seldom see any one but my own family, and no Christian Scientists. Our periodicals are beacon lights in the wilderness, and always bring the lessons I need. I have had many trials since coming into Science, but they are nothing to what I had before, for now, if I listen, I can hear the voice of Him whose power stilled the tempest, and all is harmony.

MRS. ZILLAH COOPER, Sturgis, S. Dak.

From our Exchanges.

A BUSINESS MAN'S NEW YEAR ENDEAVOR:—To be joyous in my work, moderate in my pleasures, chary in my confidences, faithful in my friendships; to be energetic, but not excitable; enthusiastic, but not fanatical; loyal to the truth as I see it, but ever open-minded to the newer light; to abhor gush as I would profanity, and hate cant as I would a lie; to be careful in my promises, punctual in my engagements, candid with myself, and frank with others; to discourage shams and rejoice in all that is beautiful and true; to do my work and live my life so that neither shall require defence or apology; to honor no one simply because rich or famous, and despise no one because humble or poor; to be gentle and considerate toward the weak, respectful yet self-respecting toward the great, courteous to all, obsequious to none; to seek wisdom from great books and inspiration from good men; to invigorate my mind with noble thoughts as I do my body with sunshine and fresh air; to prize all sweet human friendships and seek to make at least one home happy; to have charity for the erring, sympathy for the sorrowing, cheer for the despondent; to leave the world a little better off because of me; and to leave it, when I must, bravely and cheerfully, with faith in God and good-will to all my fellow-men—this shall be my endeavor during the coming year.—*The Congregationalist*.

President Wilson of Princeton says,—

"If you wish your children to be Christians, you must really take the trouble to be Christians yourselves. Those are the only terms upon which the home will work the gracious miracle. And you cannot shift this thing by sending your children to Sunday School. You may remedy many things, but you cannot shift this responsibility. If the children do not get this into their blood atmospherically they are not going to get it into their blood at all until, it may be, they come to a period of life where the influence of Christian lives outside of the home may profoundly affect them and govern their consciences."

The New Year will prove a truly happy one only to those who welcome it as affording a grand opportunity for doing for others. The selfish man overreaches himself even in his self-seeking, which can yield him no real joy, though it may seem to gain him various lesser goods and temporary gratifications of whim or appetite. The Christian altruist, on the other hand, not only lays up for himself a treasure in heaven, but even upon earth enters into the reward of a joyous satisfaction over duty well done, and into the glad consciousness of having improved the lot of some of his fellow-men, and rendered the world a bit brighter for his having lived in it.—*New York Observer*.

It is a misuse of terms to speak of "new truth." There can be no new truth. What is true has always been true, and always will be. There may be new understandings of truth, as there have been in the past. Wisdom did not die with the fathers, nor will it expire with us. Only care should be taken, when a new view is presented for our acceptance, to test it by the standard of truth that divine wisdom has given us. The "noble Bereans" took the right course when new views were submitted to them—they "searched the Scriptures daily, whether these things were so."—*The Examiner*.

Unless we mistake, beneath all these addresses about Christianity, and beneath much of the criticism of institutional and formulated Christianity, there is a strong movement toward getting down and back to the absolutely essential and fundamental things. There is a weariness stealing over the world at the substitution of the traditions of men for the commandments of God.—*The Watchman*.

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, \$5. Twelve or more to one address, \$4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, \$1 per copy; \$5 per half dozen; \$9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, Treasurer.
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, \$2.40 per annum; \$1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, \$1.00 in advance; all other countries, \$1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

Works on Christian Science

Written by Rev. MARY BAKER G. EDDY

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid \$3 18

Two to twelve books (cloth only) to one address, each, prepaid 3 00
Twelve or more books to one address, each, prepaid 2 75

Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid 4 00
Twelve or more to one address, each, prepaid 3 75

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid 5 00
Twelve or more to one address, each, prepaid 4 75

Levant, divinity circuit, leather-lined, round corners, gilt edges, silk-sewed, heavy Oxford India Bible Paper, wide margins, each, prepaid 6 00
Twelve or more to one address, each, prepaid 5 75

Orders for Science and Health, in lots of twelve or more to one address, may include any or all the different styles of binding.

A COMPLETE CONCORDANCE to Science and Health with Key to the Scriptures, 595 pp., 10 x 7. Bound in cloth, marbled edges. Price, single copy, prepaid . . . \$5 00
Twelve or more copies to one address, each 4 50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions. Price (cloth), each, prepaid 2 25
Twelve or more books to one address, each, prepaid 2 00

Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4 00
Twelve or more to one address, each, prepaid 3 75

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5 00
Twelve or more to one address, each, prepaid 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem. Single book, prepaid \$3 00
Twelve or more books to one address, each, prepaid 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science, 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; \$3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea: 120 pages, cloth covers, gilt edges. Prices, prepaid, \$1.06; \$5.00 half dozen; \$9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, \$1.06; \$5.00 half dozen; \$9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, \$2.50.

CHRISTIAN SCIENCE versus PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, \$2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, \$4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; \$4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, \$1.00; six copies to one address, \$5.00; twelve copies to one address, \$9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; \$5.00 per dozen.

Direct all orders for above works, and make remittances payable to

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.
 Ten copies or more to one address, one year, each copy, ninety-five cents.
 Twenty-five copies or more to one address, one year, each copy, ninety cents.
 Fifty copies or more to one address, one year, each copy, eighty cents.
 For Foreign subscriptions add, for postage, fifty cents per copy to rates given.
 Six months' subscriptions received at half the above rates.
 No subscription received for less than six months.
 Subscriptions to the *Sentinel* will be entered to begin with the first of the month.
 The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, \$1.65.
 Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, \$1.40; one hundred copies, \$2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

A protocol between the Dominican Government and the American Minister, Mr. Dawson, and Commodore A. C. Dillingham, United States Navy, in behalf of the United States Government, was signed January 21, at San Domingo. The principal conditions were that the United States Government guaranteed the complete integrity of Dominican territory, agreed to undertake the adjustment of all obligations of the Dominican Government, foreign and domestic, and thousands of payments, to adjust unreasonable claims and to determine the validity and amount of pending claims. The United States Government would take charge of the existing custom houses and those to be created. Out of the revenues collected at the custom houses of the Republic, the United States Government would deliver to the Dominican Government forty-five per cent for the necessities of the budget. Secretary Hay will send to the Senate a treaty to take the place of this protocol. Dominican exiles, headed by a former vice-president of San Domingo, have entered a national protest against the protocol. It is estimated that the first year \$900,000 would be receivable monthly. San Domingo's foreign trade amounts to about \$8,000,000 a year.

The Hepburn Railroad-Rate Bill, just introduced in the House, amending the Interstate Commerce Act, provides that upon complaint the Interstate Commerce Commission shall declare and order what shall be a just and reasonable rate, the same to take effect in sixty days, the carrier having an appeal to a Court of Commerce. Carriers refusing to obey an order of the Commission are subject to a penalty of \$5,000 a day. An appeal from the Court of Commerce can only be taken to the Supreme Court of the United States. The present Interstate Commerce Commission is abolished, and a new commission created, composed of seven commissioners at \$7,000 a year, the terms of the commissioners to be ten years. A Court of Commerce is to be composed of five Circuit Judges of the United States, to be appointed by the Chief Justice of the Supreme Court.

It is reported that a combination of the

forty-three leading telephone companies of the United States and Canada has already been effected and will be formally announced this month. The American Telephone and Telegraph Company is said to have engineered the deal and secured interests of forty-two other companies, which will be combined in a new concern, capitalized at \$250,000,000, to establish a trans-continental system.

Cambridge University, England, has unanimously decided to accept the challenge issued by Columbia, Harvard, Yale, and Princeton for another international cable chess match for the possession of the Rice trophy. Oxford is also expected to join in the contest. The dates named by the American colleges are April 14 and 15.

The river and harbor bill presented in the House carries cash appropriations amounting to about \$20,000,000 and authorizations amounting to about \$25,000,000 more. There has been no river and harbor bill since 1902. The bill authorizes no new projects.

Foreign.

Not only has President Castro terminated his negotiations with Minister Bowen relating to a settlement of the issues between the United States and Venezuela, but he has done the same with the diplomatic representatives of the European Powers also charged with negotiations touching claims of their own Governments of a like character.

At a recent meeting of the paper and wood pulp manufacturers of Canada it was unanimously resolved that in the interests of the Dominion every effort should be made to enact legislation to prohibit the export of logs and pulp wood, and a special committee was appointed to prepare a petition to lay before Parliament.

About five thousand tons of steel rails are being shipped to Swatow, China, for the building of a railroad from there toward Hankow. It is understood that an American Company has the contract for building the road and that orders for rolling stock are under consideration.

In the French Chamber of Deputies the Commerce Committee reported last week the Government proposition to create a universal exposition in Paris in 1920, to commemorate the founding of the French Republic.

Industrial and Commercial.

The introduction of improved machinery in its manufacture, says *The Scientific American*, has made the American cooperage business the largest in the world. There are upwards of 300,000,000 barrels and circular packages manufactured in this country annually, and the demand increases so that this output must be steadily broadened in order to keep pace with the growth of business. The largest consumption of barrels is in the cement business, which approximately demands 35,000,000 a year for the trade, while flour comes next with a demand for 22,500,000; fence staples, bolts, nuts, and nails require 18,000,000, and sugar 15,000,000. Roasted coffee, spices, crockery, and fruits and vegetables use up about 5,000,000 barrels a year each, while the glassware trade, baking powder companies, distilled liquor manufacturers, and candy, tobacco, and cheese packers are big users of barrels, averaging in each trade from 2,000,000 to 3,000,000 barrels. The consumption of barrels for molasses, oil, lard, and pork is also enormous, while dry paint, glue, snuff, oatmeal, screws, castings, and general hardware articles annually increase the demand on the cooperage supply.

The largest diamond ever heard of has been found near Pretoria. The stone weighs 2,032 carats, and is said to be a pure white diamond of good quality. It is locally valued at from \$3,500,000 to \$4,000,000. The biggest diamond previously heard of was the 971-carat diamond presented to Pope Leo XIII. in 1895 by the late President Kruger

of the Transvaal. The famous Kohinoor diamond originally weighed about 800 carats. When Queen Victoria came into possession of it in 1850 it had been cut down to 1861-16 carats, and it was afterwards reduced to 1061-16 carats. The Great Mogul, which mysteriously disappeared at the sacking of Delhi, is described as weighing 280 carats. The Orloff, mounted in the imperial sceptre of Russia, weighs 193 carats. The Regent, among the most perfect in water and cutting, originally known as the Pitt diamond, weighed in the rough 410 carats, which was reduced in cutting to 1363-4 carats. This stone, purchased by the Duke of Orleans in 1717 for the French crown, is now the property of the French Republic, and is valued at \$2,500,000. The Victoria, or Imperial diamond, weighs 180 carats, and was purchased by the Nizam of Hyderabad for \$1,500,000. The diamond just found in South Africa weighs nearly two pounds troy.

The Southern Cotton Association, just organized at New Orleans, calls upon the cotton planters of the South to hold their cotton on their own farms, steadfastly refusing to sell for less than ten cents a pound at the ports of Galveston, New Orleans, Mobile, Savannah, Brunswick, and Charleston; to co-operate with the Bureau of Statistics of the Department of Agriculture by furnishing accurate and reliable statistics of the cotton crop; to diversify their crops, to make cotton a surplus crop, and to place themselves out of reach of the one crop evil.

The Ansonia Brass & Copper Company of Connecticut has a contract for 4,500,000 pounds of copper cable for the Mexican Light, Heat & Power Company, a Canadian corporation. It is said to be the largest single order of its kind on record. Nexaca, where the power is to be generated to supply Mexico City with electricity for light and power, is 120 miles northeast of the capital.

Fourteen electric mountain railways are now under construction in Switzerland. Within the course of a few years all the leading Alpine heights can be reached by mountain railways. Switzerland is spending many millions on these enterprises. The Jungfrau and Chamounix railways will be open for passenger traffic by the summer of 1906.

General.

"The difference between the cities of Pompeii and Herculaneum," says Professor Waldstein, who is lecturing in this country in favor of excavating Herculaneum, "was that Pompeii, though much influenced by Hellenic culture, was never a real center of Greek civilization, whereas Herculaneum, a distinctly Hellenic foundation, ever was a representative home of Greek art and literature, as the spasmodic excavations already made have shown. Pompeii was a purely commercial town; not a single manuscript has been found there, while at Herculaneum the unsystematic excavations of the past have yielded from one villa alone 1,750 papyri."

At New York recently \$223,225 was realized by the auction sale of 43 water colors and 53 oil paintings, the collection of Thomas E. Waggaman of Washington, D. C. The highest figure of the sale was \$40,200 for Mauve's "Sheep Coming Out of a Forest." This picture, painted nearly thirty years ago, was sold to Mr. Waggaman in the early eighties for \$2,000. Other high prices of the sale were \$5,200 for Corot's "Lake Nell," \$4,500 for Corot's "Ville d'Avray," and \$4,000 for Daubigny's "Summer Landscape." A Van Dyck, said to have cost Mr. Waggaman \$50,000, went for \$1,500, and a Sir Joshua Reynolds, for which he paid \$7,000, sold for \$1,800.

A committee of fourteen persons, twelve artists and two critics, appointed to pass on the genuineness of the disputed Velasquez portrait of Philip IV. of Spain, recently purchased by the Boston Museum of Fine Arts, with one exception report strongly in its favor.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

Silent Victories.

REV. MARTIN SINDELL.

THE Psalmist looked farther into the star-lit canopy than do people ordinarily, when he exclaimed, "The heavens declare the glory of God; and the firmament sheweth his handywork. Day unto day uttereth speech, and night unto night sheweth knowledge." People who have no knowledge of the infinite Creator, and who never have heard "the old, old story," may thoughtlessly tread upon earth's carpet of varied colors, or look in mute astonishment at the splendor of the heavens; but to him who has learned God's alphabet, and who interprets aright the heavens above and the earth beneath, all creation teaches grand lessons, and one of these is that its victories are stately and silent.

Each morning the darkness of the night is overcome, and that easily, because light is real (something), while darkness is unreal (nothing).

No sound of battle greets the ear,
And yet the forces fight;
No cries of pain or flights of cheer
Mark the defeat of night,—
'Tis silent victory!

How often have we watched for the coming of spring. The winter has been so long and cold, its hold so intense that it seemed quite impossible for anything to disturb it. The solid stream, will it ever flow again? The frozen ground, can it ever be clothed with flowers? The trees that now seem so dead, will they be again arrayed in beautiful foliage? In "still, small voice," the reassuring answer comes, "Yes, the sunshine of spring will produce a wondrous change." Summer's day will take the place of winter's night. "The earth, the air, the sky [will] teem with delighted existence." And this marvelous transformation will be effected with ease, in golden silence.

The Spring-time, clad in armor bright,
Fast conquers ice and snow;
Without a groan the Winter Knight
Accepts his overthrow,—
'Tis silent victory!

Rain, rain, rain! Days and days of cloud and storm! Will it ever cease? Will the sun ever shine again? Yes, and the clearing may take place so gently in the night that the sleeping infant is not awakened. If in the day the "conquering hero" comes, 'tis so noiselessly that we are not aware until a flood of sunshine fills the earth.

The clouds so dark, the sun beguiles,
To where we may not know;
The glory of dear nature's smiles
Sets earth and heaven aglow,—
'Tis silent victory!

How long the world had endured the dark night of sin and disease!—a darkness more than Egyptian,—until in the "fulness of time" the Light of the world appeared, the Sun of Righteousness, with healing in his wings. In him was no darkness at all. Silently, too, he came. The earth felt no jar. The heavens were still, save for the angelic refrain, "On earth peace, good will toward men." The presence of Jesus was needed, but though he came to

his own, his own received him not. There was a light in the midst of the darkness, but "the darkness comprehended it not." Here and there this light dispelled the darkness and healed the sinful, but very few had comprehended the truth in its beauty and fulness, otherwise the anguish of darkened rooms would have been lessened.

Nineteen hundred years is but as yesterday when it is passed. Once more the light has appeared, and by its radiance the way to eternal harmony is made plain.

When the Christian Science text-book appeared, it came gently. It was not thrust upon the world by our revered Leader. In the sick-chamber it silently made itself known and felt. It came in the fulness of time and in an hour of dire necessity. The night was black with materialism: clouds of human hypotheses left no opportunity for the Sun of Righteousness to shine in its fulness upon the sick, the diseased, and the dying. The winter of sensuality, avarice, inhumanity, and cold intellectuality seemed all too long and drear, but the dawn of a brighter day began to light up the pathway to health, holiness, and everlasting bliss. Christian Science, replete with divine wisdom, illumines the path more and more as we journey out of matter into Spirit, then "truly our fellowship is with the Father and with His son Jesus Christ."

Now on earth and sea the glad message of peace, good will toward men, once more breaks upon the waiting ear. The "little book" is read in the quiet hour and sheltered nook by the sick and weary children of earth, and from them the burdens of years are rolled away. The flush of health again appears; there is a silent victory.

The world in darkness long had lain,—
But see, the light appears!
The years of night have now been slain
By Love's defeat of fears,—
God's silent victory.

The Influence of Christian Science on the Home Life.

NANETTE L. LUTHER.

IN thinking of the many ways in which Christian Science is uplifting the human race, it seems to me that its influence on the home life is most significant and far reaching. Its purifying effect on the table talk, alone, is doing much toward establishing nobler ideals for our boys and girls, in leading their conversation away from the crimes and other sensational topics which occupy by far the largest, or at least the most prominent, part of the daily papers. Instead of this, thought is turned into more wholesome and instructive channels, toward the beauties displayed by nature in all her varied manifestations, and beyond them to a God of Love. This is certainly a noble work, and it indicates the happier trend of thought in a truly Christian Science home.

To attain the greatest results from Christian Science in the home-life, one must begin with the children. The thought of the child is very easily led, as is shown in the following incident. Two little ones were playing with blocks. One, a boy of seven, wished to fill their houses

"block men," and have these houses destroyed by fire, the people perishing in the flames, with the grand rush of fire engines so dear to the heart of a boy; but the little miss of four put her foot down very vehemently with,—"No, Christian Science does not permit us to play that way. What did mamma read us that Mrs. Eddy said about the way we should think? Let's have these people all going to the lake to a picnic, and this will be the house where they eat their good things." The boy waited an instant; then love prevailed, and he replied, "All right, here goes for a grand good picnic." Does not this little incident show mothers how much may be done with only a little effort? Who can tell the good results to be realized in after years for these children, by putting into practice the teaching of our Leader relative to the guarding of the thoughts of the children from all discordant beliefs.

Children are also very susceptible to the healing power of Truth. They have fewer doubts to overcome, fewer old beliefs to eradicate, ere they give Christian Science a trial. They enter into it with their whole heart. This is just what Truth requires, hence the rapidity with which they are healed from any manifestations of error. A little one went to bed with every symptom of croup, according to the old thought, and found on waking next morning that it had been entirely overcome by Truth, and that he had slept peacefully all night. He exclaimed, "Mamma, what a good God He is to keep me from the old trouble." Here was a ready acknowledgment that Truth can and will conquer all error.

Another result of this influence on the home life is the closeness with which it binds the members of a family together by the bonds of love. Where in the old thought, one rather prided oneself in the making of sharp or even cutting speeches, with a view to giving spice to the conversation, under the new law,—the law of Love,—all this is done away with, and each one vies with the other in bringing out only that which will add to the peace and harmony of the home. Such a life can but have a reflex action, even so far as the school, for children are great imitators, and are apt to reproduce all that their elders give out. Happy is that parent whose children prove by their conversation that divine ideas are being reproduced on the canvas of their thought.

Through right mental training the young may be brought to realize for themselves the need of obedience to God's law, and this lesson will come to them through their understanding of the law of Love. It will show them how much happier and freer life is, when lived under the knowledge that no change of atmosphere or clothing, nor any of the laws laid down by mortal belief, can have power to harm, for one is the lawgiver, even God, the loving Father, who desires for all His children the reign of peace and harmony. It is surely clear that children thus trained would be so protected that when they reached manhood the old beliefs in material law and its penalties would have no power over them. Then, too, this training in Love's school makes the charms of home so great to the boy or girl that the necessity for the gymnasiums, or for clubs of all kinds would be done away with.

An orthodox minister remarked lately, "Give a man or a boy a happy, well regulated home, where he can have his pleasures and comforts, and feel that he is understood and appreciated, and few, very few, will long for club life."

There can be no nobler work for the mothers of the land, than to realize and carry out this ideal of home life, and in no other way can it be done so effectually as along the line of Christian Science, for this is positively the line of true living,—the living of our life so as to reflect God who made man after His own image. Of course the attainment of such a home life takes time and thought, and plenty of it; but if the average woman will spend the same amount of time on the study of the Bible, and Science and Health by Mrs. Eddy, that she now gives to the study of

fashion, there need not be so many mothers with aching hearts, crying out after some way to reach their sons and daughters who are chasing after the illusive pleasures they never find; and these mothers will find their greatest happiness in a life which carries out the thought expressed in the following lines,—

My task—to love some one more dearly every day,
To help some wandering child to find its way,
To ponder o'er some noble thought and pray,
And smile when evening comes.

To follow Truth as blind men seek for light,
To do my best from early dawn till night,
To keep my soul fit for His holy sight,
And answer when he calls.

True Happiness.

J. I. L.

THE sorrows and disappointments of mortal existence show very clearly the awful unreality of what we term human love and affection, which for the most part is love inverted, and therefore beset by fear and hate. We may well ask, Why does mortal man continually seek pleasure and happiness through material sense, since he ever fails in finding it there? This question is one that requires deep study and an earnest effort to reach the metaphysical basis of life.

Ever since the beginning of the dream of material sense, of life in matter, mortal man has believed that he needed something outside of himself for happiness, instead of looking within his own consciousness for it. Now the true idea of man is in the Divine consciousness, and this idea is never dependent upon another person for its manifestation, and cannot, under any consideration, be materialized, or inverted, because it is complete and perfect, and it cannot be separated from God.

Christian Science teaches that man is spiritual now, always has been, and always will be. When, therefore, we claim our rightful heritage, in Spirit, we find that man is "complete in him,"—the Christ. In this complete, individual consciousness, man reflects God, the infinite Father and Mother. To find true happiness, therefore, man must first find that he is not separated from his own true nature, as he now believes he is, but that he is complete; that he can find in God all the sweetness of love and communion that his being craves, and finding it there, he finds his hopes abundantly satisfied. There is no fear of losing the ideal we love, for it is the expression of perfect wisdom, Life, Truth, Love, and purity, in which there is no shadow to mar perfect harmony, the blessedness of eternal happiness and joy.

We all know that even at its best the human sense of love is strongly impregnated with fear, and that fear rather than love is the motive which impels action. It is high time, therefore, that the veil of mesmerism which has so long held the children of men in bondage should be rent in twain, and the truth be known to every one, that the wheat be separated from the chaff, that men may gain the sense of love which is unalloyed, in the understanding of God who is perfect Love. To do this we must find the kingdom of heaven within us, as the Master has said, and when we find it there, we shall be made perfect in Love. What terrible inharmony the world has seen because of this wrong sense of man's true being, and how sad it is to see men and women wearing out their lives in the awful friction which comes through a misunderstanding of the true conditions.

When we master the mesmerism of mortal mind through the realization of our oneness with God, Spirit, in purity and holiness, we can then labor to dissolve the error and bring out the truth of man's nature as being inseparably united to God through Christ. With this understanding of man's true relation of God, and of his own wholeness, it

becomes easy for those who were once weak and dependent to realize the thought of strength, courage, and power that is reflected within their own consciousness, and it is most beautiful and reassuring to know that we cannot by any chance or circumstance be separated from this sweet sense of ever-present Love. Thus are our burdens made light, for we see that neither friends nor enemies have it within their power to harm us, to take away from us that sweet sense of union and communion with divine Love which we feel is so necessary for our happiness and well-being.

The Day Breaks and the Shadows Flee Away.

C. L. E.

THE possession of the complete Concordance to Science and Health has brought to my mind a clearer recognition of the place which the Christian Science text-book is destined to fill in the world's history. A certain amount of historical study shows me that all human opinions and plans have been impotent to solve the problem of harmony,—individual, social, political. All good that has been done is cause for gratitude and rejoicing, but individuals, societies, and governments need an absolute and immutable model whereto they may turn and whereby they may regulate every separate action. "Science and Health with Key to the Scriptures" supplies the world's need. It voices the truth, and in this fact lies its attraction and power. Incredible as it may seem to some, this little book lights the way to true harmony and explains the Principle which alone can effect this harmony. Many of its students have already gained an advanced understanding of Christian Science, but they have likewise discerned that they are but touching the hem of the garment. We, therefore, who are still very young students need not be discouraged that our understanding is not greater. We recognize that at this period we may rest in the acceptance of the inspired statements in that book, the full import of which we have not yet grasped.

Time-born experience will show all mortals that every human thought and thing is altogether vanity and vexation of spirit, because unsupported by God. Then divine Love will lead each one to where the young child lies: yes, to Christian Science as expounded in our text-book, through which divine Mind illumines consciousness, and Truth is perceived.

Let us rejoice over every indication that thought is active, weary of the past and the poor present, of all that is stupid, useless, and unjust. Thanks be to God who is creating and impelling the desire and guiding the research for a purer, happier sense of life. No one is more grateful than the Christian Scientist for every sign of the world's awakening; grateful to those men and women, be they Christian Scientists or not, who, in however seemingly small degree, are aiding in bringing about the kingdom of heaven on earth. We are grateful to God and to them for their honest efforts at well-doing, their patient research, their unselfish toil. It cannot return unto them void; for this we have Christ's word: "Seek, and ye shall find." Even though it be, for a season, merely the discovery of the falsity of material law, yet this is much. Though mortal mind may fancy that it finds ways of its own creation to alleviate and remove sin and suffering, the relief is but temporary. By induction and experience we may fairly conclude that it must eventually turn to Truth to find the only effective solution of earthly problems. Then will that unity of experience in the one Mind, which has already dawned among men, grow into lawful fulness. Then will St. John's definition of God as Love be more clearly understood. True love is coming to light, love free from all that degrades; without hypocrisy; love that is above all kind and just, giving unto all their due; namely, recognition as children of God; doing as we

would be done by; leaving to all liberty of action; resting in the sweet assurance that all live, move, and have their being in God. Then will be understood Mrs. Eddy's definition of God as Principle; the term will no longer seem cold, because we shall be proving in an ascending scale the loving character of Principle as the one cause, animating the countless manifestations of good—even of all. "The earth, O Lord, is full of thy mercy."

If Mrs. Eddy had enunciated only the great fact that all is Mind, she would have immeasurably blessed tired humanity by declaring this priceless truth. Spiritualization of thought follows the study of this truth, and such spiritualization is the great need of mankind, for spiritual thoughts are expressed in spiritual deeds and life. In a harmonious church, Christian Scientists should have a foretaste of the universal church, of divine government, of the establishment of law and order through love. Education, society, home intercourse are being spiritualized, and what if, to sense, chemicalization attend the process,—chemicalization is temporal, hence not to be feared. Let us rejoice that the world's long sleep is being broken.

Perfection.

A. B. MALLORY.

It is safe to say that the foundation of all our striving, of all our ambition and hope in Christian Science, is the desire for perfection; and those who are trying to be Christian Scientists should have, through its teachings, a larger conception of the inclusiveness and scope of the word. Some one has said that perfection consists not so much in doing extraordinary things as in doing ordinary things extraordinarily well. In this may be found a lesson for those who are working in Christian Science, and it may also bring consolation to those whose lot it does not seem to be to make so-called "great demonstrations." All would undoubtedly like to solve great problems, demonstrate marvelous healing, and do things which would illustrate the wonderful power of good, but I fear that some of us often sit still at our Wednesday evening meetings because we deem our own small experiences too uninteresting to be given, and yet we know that Christian Science has an especial claim to the earnest consideration of mankind because its teachings are capable of practical demonstration, and are serviceable in all the affairs of our every-day life. We soon discover that our problems are ever at hand, and they are never so insignificant that we can afford to pass them by. We also learn that if we do the work which comes to us, unselfishly, unflinchingly, and with fidelity to Principle, our progress toward perfection must be marked, and our contribution to the sum-total of the world's happiness and progress must be great.

The injunction, "Be ye therefore perfect, even as your Father which is in heaven is perfect," is not a meaningless phrase, nor a demand impossible of attainment, but one that teems with energy and inspiration. The hourly demonstration over self, over the myriad temptations that seemingly beset our path,—appetite, temper, pride, envy, gloominess, hatred, malice,—and the willingness to extend a helping hand, to give an encouraging word or smile, to dispel darkness and sorrow and replace them with the sunshine and the joy of Truth, to do these things in accordance with the leading of divine Mind, these are surely the means whereby we may do ordinary things extraordinarily well, and thus advance the work which will lead us to perfection,—the realization of our highest hopes.

Difficulty adds to result, as the ramming of the powder sends the bullet the further. I have heard, indeed, that when carrier wants to help his horse up hill, he sets a boy on his back.—GEORGE MACDONALD.

Selected Articles.

All who do not take medicine are by no means Christian Scientists. Healing as taught in Christian Science is practised upon the basis of moral regeneration which results in physical harmony. For, if "by sin came death," by sin must have come those accessories and preliminaries of death called diseases. As these are but effects, neither dieting nor fasting will change them until the producing cause is removed. It is the province of Christian Science to lift man higher in the scale of being, first morally, and as a result physically, and in this process of transformation its practitioners find laws of health, material remedies, physical culture and dieting to be hindrances rather than helps, and they very naturally have recourse to none of these in their system of treatment.

R. STANHOPE EASTERDAY.
Muncie (Ind.) Star.

Christian Scientists do not consider that the healing of the sick through divine aid is any more of a miracle than is the healing or reforming of the sinner through the same means. Jesus did not say nor imply that the healing of the withered hand was a miracle and that the casting out of the seven evils from the Magdalen was unnatural. Both were the natural result of his divine knowledge. He said, "I knew that thou hearest me always." And he also said, "For whether is easier, to say, Thy sins be forgiven thee; or to say, Arise, and walk?" When we consider that a very large percentage of the diseases of the world are the direct result of sin, or sensual excesses, the Christian Church has in its reformatory mission accomplished a vast amount of physical healing; so that to deny Christian healing would be to deny its own works. Christian Scientists do not claim it as a special gift, but that all who will may avail themselves of it. The Bible makes healing a part of the Christian ministry. It is a matter of history that the early Christians healed the sick and even raised the dead during the first centuries of the Christian era.

C. F. HACKETT.
Utica (N. Y.) Press.

It has been urged by many among those who have not experienced the boundless joy of this spiritual healing, that it is not the Christ healing because not instantaneous and not always successful; and also that if Christian Science can heal one it can heal the world. The thought of Jesus was so imbued with the understanding of the divine healing Spirit, that he could so deeply and wisely plant in the ready human thought the seed of Spirit that it would spring at once into visible manifestation. Because this spontaneous fruitage did not follow the prayers and efforts of his disciples and followers in the same degree, because they could not walk the wave, still the tempest and heal the multitudes in the degree their Master did, can it be justly said of them that their light did not have the nature and essence of his light? Because the candle does not dispel as much darkness as the sun, can it be truly said that its light is unlike the light of the sun? The work of Jesus purified, uplifted, and healed the minds of men, and because he knew that God's healing was not partial and fragmentary, but full and complete, the physical healing followed as a necessary result. It has been argued that if Jesus could have healed ten lepers he could have healed all the lepers in Palestine, and that if he were the Son of God, and loved men as he professed, he would have done so, and that because many lepers existed during his time that he did not heal, the conclusion has been erroneously drawn that he did not heal any. He healed none who did not come to him for it, and with some readiness of thought to receive the healing word of God. As it was then so it is now.

JOHN CARVETH.

Among the Churches.

Prison Work in Canon City, Col.

I am sure the Field will be interested in the following letter from the warden of the Colorado State Penitentiary. This gentleman is not at all interested in Christian Science, so far as I know, but he is regarded as one of the best wardens the institution has ever had.

To the Members of First Church of Christ, Scientist,
Canon City, Colorado.

I wish to say that since the commencement of my term as Warden of the Colorado State Penitentiary, I have had occasion to observe the effects of the work of the Christian Science movement in the prison, both in the matter of holding services and the distribution of literature, and it certainly has accomplished much good for the inmates of this institution. It has a tendency to not only make them more tractable while inmates, but in my opinion it gives them more courage and ambition to strive to make better men of themselves when released. I certainly think the movement should meet with encouragement by the management of every penal institution in the country.

Respectfully,
JOHN CLEGHORN, Warden.

Christian Science services are held in the prison chapel on the first Sunday afternoon in each month. The attendance is from four to six hundred, and they tell us that no other service held there brings out so many. At the close of the service, *Sentinels* are distributed, but we have never had enough to meet the demand. We have a list of interested ones to whom we send each week a *Sentinel*, plainly marked with their name and number; these are also sent *Quarterlies*. We have twelve copies of Science and Health in the prison library.

Because of the law, that prisoners of the State Penitentiary cannot remain in Canon City, we cannot follow their lives when they are released, but we have many encouraging letters from the grateful ones who are living sober, industrious lives. We all feel that it is our splendid periodicals, more than personal work, that has interested so many within the walls in Christian Science.

MINNIE S. AVERY.

Central Reading Room, Chicago.

The following extracts from the report of the work of the Reading Room Association for the year 1904 will be of interest: Sales for 1904, \$22,847.54; sales for 1903, \$20,686.41; increase, 1904, \$2,161.13.

It may be remembered that something over a year ago, through the work of the Executive Committee of the Reading Room Association, Science and Health was placed in the library cars of some of the eastern railroads. It is of interest to note that of all the books thus placed only three have had to be replaced this last year. Books are placed in these cars with the understanding that worn or missing copies will be replaced by the Reading Rooms.

The Illinois Central Railroad recently called for six more books for new cars, and fourteen copies of Science and Health have just been placed in the library cars of the Rock Island Railroad.

The following is quoted from the report of the manager of the Reading Room:—

"There is a noticeable increase in the attendance of regular readers as well as of visitors and purchasers. During one week in August we counted 778 visitors, an average of 130 per day, and fully one third of the number were strangers.

"The increase in the sale of literature is also very marked. The sale of *Quarterlies* has greatly increased, 3,850 having been sold this last quarter. In fifteen days, seven hundred *Sentinels* of November 12, containing a reprint of 'What Our Leader Says,' were sold. The day before

Christmas sixty-one copies of *Science and Health* were sold.

"There were also sold during the past year, 3,152 copies of *Science and Health*, showing an average of 262 each month, a gain of 44 over the monthly average of the preceding year. The sale of "Miscellaneous Writings" also shows a gain, 509 having been sold since January 1, 1904, 94 more than the year before; 4,698 *Journals* have been sold, an increase of 720 per year; also 14,981 *Sentinels*, 4,228 more than the year before; and 15,174 *Quarterlies*,—a decided increase."

HARRIET R. WHITE, *Clerk of Executive Committee.*

The White Mountain Church.

It may be of interest to those who have contributed to First Church of Christ, Scientist, White Mountains, Fabyans, N. H., to learn of its recent gift to The Mother Church Building Fund.

After paying all expenses for the year just ended, there were one hundred and seventy-seven dollars in the treasury. From this amount the Advisory Board of White Mountain Church voted to send one hundred dollars to the Building Fund of The Mother Church.

The congregation of this church is drawn from the mountain hotels, and consequently services are held only during the summer months. The church has no local membership. It is an interesting fact that at least two thirds of those attending services at the White Mountain chapel are not Christian Scientists, and many have received their first insight of the subject there.

The church is supported by voluntary contributions from the Field, and this gift is the overflow of such contributions. It expresses the love and gratitude of this branch for The Mother Church, which stands as the landmark of man's mental, moral, and physical freedom.

EMMA C. SHIPMAN.

Iowa City, Ia.

October 25, 1904, dated our first anniversary. Prior to this time, Sunday services had been held for a few months in a public hall and the Wednesday evening meetings in a private home. Our hearts are full of thanksgiving to God for the manifestations of His goodness. Starting with a membership of twelve the year just closed has witnessed a substantial growth.

On the 18th of November, Mr. Edward A. Kimball delivered the first lecture on Christian Science ever given in this city. Being a university town, with three medical schools, a correspondingly large number of hospitals, and a large attendance of students from all over the state, we feel that this lecture has done and will do much for our Cause. The Opera House was well filled with a thoughtful, attentive, and appreciative audience, composed of the best class of citizens.—*Correspondence.*

Long Beach, Cal.

November 20 marked an epoch in the infant church at Long Beach, for on that day we held our first service in Chapel Hall, built with special reference to our needs, with a seating capacity of about three hundred and fifty. Every undertaking has found the means at hand; every need has been supplied as it has arisen, and our watchword is that of our dear Leader, "Hitherto hath the Lord helped us."

Correspondence.

A Correction.

In our reference to Kirksville, Mo., in the *Sentinel* of December 10, the statement respecting the organization of a "Society" should have read *Church*.

The Lectures.

Evansville, Ind.

A lecture on Christian Science was given at Evans Hall, Sunday afternoon [October 9], by the Hon. Clarence A. Buskirk of Princeton, Ind. The lecture was under the auspices of First Church of Christ, Scientist, of Evansville, and the subject was "The Provable and Practical Gospel of Love." The lecturer was introduced by Hon. F. B. Posey, the meeting was well attended and greatly enjoyed by those present.—*Daily News.*

Mr. Posey, in introducing the lecturer, said in part:—

Many fallacies have been universally accepted as true, and many truths have been condemned as error, so that when one comes to present what he sincerely believes to be true he is entitled to a candid hearing; for full and free discussion is the remedy for error. Especially when one comes with Christ's name on his lips is he entitled to be heard respectfully. I therefore take pleasure in presenting my distinguished friend, Hon. Clarence A. Buskirk.

New Orleans, La.

Under the auspices of Second Church of Christ, Scientist, a lecture on Christian Science was given December 4 by Mr. Edward A. Kimball, at Athenæum Hall, before a large, cultured, and attentive audience, the largest that has ever attended a Christian Science lecture in this city, which indicates an increasing interest locally.

The lecturer was introduced by Attorney John Alonzo Woodville, who said in part,—

We take it for granted that everybody wants to know the truth, and we should use the truth not only in religious matters, but in business and every department of life. Reason should not lead man from God, but bring him to the feet of God. If the teachings for which Christian Science stands can bear full light, then there is no doubt on earth that they are bound to succeed. About two thousand years ago Gamaliel said, "If this counsel or this work be of men, it will come to nought: but if it be of God, ye cannot overthrow it," and what was true then is true to-day.—*Correspondence.*

Oregon City, Ore.

About three hundred people assembled at the Congregational Church on Saturday evening [December 10], to hear the lecture on Christian Science by Bicknell Young of Chicago.

The lecturer was introduced by Hon. H. L. Kelly, who said,—

A few years ago there were many people around who were sick; they looked sick, but now, through the help of Christian Science, they are well; they say they are well, they look well, and they are well. These people are numbered, not by thousands, but by hundreds of thousands. A few years ago I should have been ashamed to stand here in the capacity in which I stand to-night. But now I am pleased, nay more, I am delighted, to introduce to you the lecturer, Bicknell Young.—*Oregon City Courier.*

Lectures at other Places.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

[Republished by Request.]

What our Leader Says.

Beloved Christian Scientists:—Keep your minds so filled with Truth and Love that sin, disease, and death cannot enter them. It is plain that nothing can be added to the mind already full. There is no door through which evil can enter, and no space for evil to fill in a mind filled with goodness. Good thoughts are an impervious armor; clad therewith you are completely shielded from the attacks of error of every sort. And not only yourself are safe, but all whom your thoughts rest upon are thereby benefited.

It is the evil-thinker who injures himself with what he would have harm others. Goodness involuntarily resists evil. The evil-thinker takes his own dose and dies of his own physic. The right thinker is safe, and abides under the shadow of the Almighty. His thoughts can only reflect peace, good will, health, and holiness.

MARY BAKER EDDY.

Pleasant View, Concord, N. H.

Christian Science Journal, March, 1899, Vol. XVI., No. 12.

By-law Amended.

ARTICLE XXVI.

PRIVATE COMMUNICATIONS.—SECTION 16. A strictly private communication from the Pastor Emeritus to a member of her church shall not be made public without her written consent. A breach of said trust, or disobedience to her special request, without her written consent, shall prevent a member teaching Christian Science, or holding an office in this church for at least seven years.

Our Literature.

We have been requested to say something further in the *Sentinel* regarding numerous books which, with those who know but little of Christian Science, pass current as authorized or approved Christian Science literature; but this ground has been covered so many times in our periodicals that there seems little more to be said, and we therefore take the liberty of repeating an editorial which appeared in our issue of December 3, 1904. It is as follows:—

"We are in receipt of a letter from one of our subscribers asking us to state what books may properly be called Christian Science literature, also to define the status of several books which she names.

"While it is possible to answer these questions in a very few words, it seems better to go into the matter in a more general way, because of the very considerable number of books of various kinds which have been issued by Christian Scientists within the past few years, and because of other books issued by persons who are not Christian Scientists, but who have mentioned Christian Science in a commendatory manner. As both these classes of books seem to be on the increase, and as they are being extensively advertised among Christian Scientists, it has become a fair question to ask whether any of these publications can be considered as having the official approval of the denomination, or as speaking for the Cause in an authoritative way. The answer which must be made to this question is that the only publications for which the Christian Science Church assumes re-

sponsibility are the writings of Rev. Mary Baker G. Eddy, the Discoverer and Founder of Christian Science, issued through her own publisher, and the periodicals, pamphlets, etc., issued by The Christian Science Publishing Society. All others must be considered as not being Christian Science literature, and as having no more authority to speak for, or bind, the denomination, or to represent the Cause, than would properly be conceded to a book, published by a lay member of the Methodist church, for instance, to bind that denomination, even though the book should set forth the author's views about Methodism, or attempt through fiction to present the doctrines of that faith, in an attractive manner.

"This statement must not be misconstrued to mean that we are passing judgment upon these books. It simply means that they are not Christian Science literature in the sense in which that term is used by Christian Scientists. One of the greatest dangers in their circulation is the inconsiderate acceptance of all their statements as synonymous with the teachings of Christian Science. Another danger is that they may be given out in substitution for the authorized literature which alone is representative of this great movement."

We are told that some Christian Scientists have looked upon these books as the most suitable literature to place in the hands of investigators or beginners, but this seems to us to be a subtle temptation to make Christian Science so easy for our friends that it will not grate harshly upon their established views regarding God, man, and disease. When we accede to such temptations we forget that many of these established views need to be overturned as speedily as possible if the individual is to be benefited; therefore the best service we can render our friends is frankly to take the ground that mortal and material concepts of ethics, economics, religion, and medicine have not saved mankind from the results of their self-imposed laws, and in doing this it is not necessary for us to prepare the way for Science by first presenting a diluted article.

ARCHIBALD McLELLAN.

"The Power of the Word."

AN interesting report of prison work may be found on another page, and perhaps the feature most deserving of notice is the fact that the workers wisely avoided the common mistake of attempting much in the way of personal explanation, and allowed the "word of life" to do its own work, as it surely will, sooner or later. This is not only commendable in prison work, but in all other that is undertaken by Christian Scientists. Mortals are often disposed to force upon others their own undeveloped knowledge of the truth, in an attempted explanation of the meaning of its statements, when it would be far better to let God be "His own interpreter." This does not mean that the eager enthusiasm of the beginner is to be stifled, but simply that it should be wisely directed.

"Have faith in God," said Jesus, a command which means much in Christian Science, and in obeying it we come to have a profound faith in the Word as well,—the truth brought to human consciousness. We should ever remember that the good we do is not the result of anything which originates in ourselves,—that we are not "sufficient of ourselves to think anything as of ourselves; but our sufficiency is of God." Again and again do we find it stated in the Bible that it is the divine Word which heals and saves, and the great Teacher oftentimes reminded his students of its authority and power. He said, "I have given them thy word, . . . sanctify them through thy truth: thy word is truth." As Christian Scientists we have all seen remarkable demonstrations of the power of the Word of Truth, when scientifically realized and silently declared to poor sufferers who, when well-nigh in despair, have sought its divine aid. As Christian Scientists come to see the omnipotence of God's word, and are more content to let it do

its healing and regenerating work without their anxious aid, then there will be a wonderfully increased sense of the harmony which is inseparable from the Truth of being.

There are few, perhaps, who fully appreciate the far-seeing wisdom shown by our Leader in providing the best means whereby "the word of the Lord may have free course and be glorified" apart from the dangers which attach to personal opinion. In all personal statements, the mood of the speaker must be taken into account. Individual bias is usually very tenacious in its hold, and it necessarily finds expression in many attempts to "talk Science." In contrast with all this, we have, in our text-book and the other writings of Mrs. Eddy, statements of absolute and provable Science which will be found as available for human need, centuries hence, as they are to-day. In the Christian Science periodicals the aim is to frame statements of the truth, and of its applicability to human need, which are as free as possible from all personal bias, and which are calculated to appeal to the widely differing conditions of thought and culture on the part of those who seek truth through these channels. The utmost care is also taken to be fair and courteous to those who hold different views from us, and a little thought will disclose the advantage of having all statements thus carefully prepared and subjected to the most rigid criticism before they are sent out on their healing mission.

The message of the Christ is ever the same. It comes to "proclaim liberty" to all who are bound, and surely our utmost care is needed in order that the purpose of divine Love may never fail of its consummation through our distorted views or mistaken efforts; but that the "word of truth" may go to every imprisoned sense, to "bind up the brokenhearted, . . . comfort all that mourn;" and give them "the garment of praise for the spirit of heaviness."

ANNIE M. KNOTT.

A Warranted Optimism.

THAT was a very sensible and suggestive word which Professor James uttered recently, when he said that in the event of our inability to reach a definite judgment respecting any vital question, we would always do well if we allowed our hope and better emotions to tip the scale, and decide for us in favor of an optimistic conclusion. If this bit of practical advice were given the seal of authority, it would speedily banish many a prophet of the undesirable, and the world would be lighted up by a greatly increased number of cheery and helpful faces.

This question of the attitude we are accustomed to assume toward problems which have proved insolvable has very much to do with the peace, the sunniness, and hence the helpful influence of our human lives, and this is especially true of earnest, thoughtful people. The superficial and easy-faring may pass the deeper things with a light touch, but the more serious must wrestle with them, as did Jacob, "until the breaking of the day," and the temptation to which the wise professor refers is not a stranger to Christian Scientists. Their acquired understanding of the nature of substance, and of the relation between God and the universe, including man, has brought them face to face with not a few profound queries which are quite unfamiliar to common thought, and which call for an apprehension of spiritual truth that is far beyond their present attainment. They have the advantage, however, of having something more substantial and unvarying than "hope and good emotions," as the basis of their cheerfulness. Having learned in past experience that even at their best these are too closely allied to material sense to furnish a solid and satisfying ground for faith and joy, they are thankful to have found in the teaching of Christian Science that sure foundation which not only warrants a perennial optimism, but which makes its expression natural and spontaneous,—a foundation which is an irresistible inference from premises the truth of which each may demonstrate for himself.

When, through the solving of many of the lesser problems, the student of mathematics reaches the assurance that he is in touch with an all-embracing and eternal law, he is no longer disturbed by his inability to work out a problem involving facts and formulæ that are not embraced by his present knowledge. He knows that the conquering truth awaits his advancing command of it, and that the answer of every legitimate inquiry is his assured goal. Thus also, when through the healing of sickness, and of sin, the Christ-truth is shown to be present and available, faith has found the final authorization which Jesus named, and which is the true basis of Christian optimism.

We cannot escape the reminder that if Christian Scientists have this sure foundation for a joyous expectancy of good, they are derelict and unworthy indeed if they are ever found indulging the depressions of doubt or the forebodings of fear. It is theirs to realize and maintain unvarying peace of mind and cheeriness of face, and so become a comfort and encouragement to all,—a veritable "vision of gladness" as they go about among men. JOHN B. WILLIS.

Letters to our Leader.

[Telegram.]

London, January 24, 1905.

Rev. Mary Baker G. Eddy,

Pleasant View, Concord, N. H.

First Church of Christ, Scientist, London, assembled in annual business meeting, sends loving and loyal greetings in grateful acknowledgment of your very beautiful and inspiring letter.

C. VIOLET SPILLER, *Clerk*.

New York, January 20, 1905.

Rev. Mary Baker G. Eddy,

Beloved Leader.—The annual meeting of the Central Christian Science Reading Room Association of New York City was held Tuesday evening, January 17, 1905, at Second Church. A good attendance was present, and after several short addresses as to the benefits received through the work of the Association, a motion was made and unanimously carried that the Association send to you, our beloved Leader, a message of loving thanks for making the work of the Association possible, and further, that a brief report of the meeting and the work of the Reading Room be sent to you.

The spirit of unity and harmony which you have always inculcated in Christian Science work was manifested at the meeting. A report of the work is enclosed.

On behalf of the Association, lovingly yours,

R. E. CAREY, *Secretary*.

The following report accompanied Mr. Carey's letter:—

New York, January 20, 1905.

The Central Christian Science Reading Room Association of New York City was formed in November, 1903, by representatives of Second, Third, Fourth, and Fifth Churches, and includes members of these churches and of other Christian Science Churches. A Board of Directors, consisting of two members from Second, Third, Fourth, and Fifth Churches was selected to carry on the work.

A Reading Room was opened at 23 West 23rd Street, New York City, on November 30, 1903, and the summary of reports as given below covers a period of thirteen months, from November 30, 1903, to December 31, 1904.—

Copies of Science and Health sold, 838; copies of "Miscellaneous Writings" sold, 137. In addition to these works of our Leader, Mrs. Eddy, a large number of the publications of The Christian Science Publishing Society were sold, the total sales of all literature being \$7,160.47. The smallest month's sales being February, 1904, \$323.10; the largest being December, 1904, \$1,347.80.

In addition to the sales of literature, the library of the Reading Room has loaned Science and Health 300 times; and "Miscellaneous Writings" 29 times. A large amount

of free literature has been distributed by the librarian from the Room and also by the Distribution Committee, among public and private institutions as follows: the local Fire Department, the Lighthouse stations, Home for Incurables, the Actors' Home, Home for Aged Shipbuilders, Actors' Society of America Professional Women's League, and several Christian Science churches where literature was needed for distribution.

The Room has been visited by Christian Scientists and others from all sections of this country and abroad, and a number of cases of healing have been reported from the reading of the Christian Science literature at the Room. Among the visitors have been representatives from all walks of life and of many religious beliefs, and every effort has been made to preserve the quiet and restful environment of the Room.

The smallest number of visitors was in the month of February, 1904, 652; the largest number in December, 1904, 1,678; total number of visitors for the year, 13,893. The President's report was a general summary of the work. The Treasurer's report shows receipts from all sources \$5,723.36; disbursements, \$5,149.70; balance, \$573.66. Assets (at end of year) which includes stock of literature on hand, \$1,300.26.

The Secretary's report shows a steady increase in membership during the year, about fifty per cent.

The Board of Directors have received several inquiries from the Field as to the work of the Reading Room, and have endeavored to reply to the same in that spirit of Love, which has made the Cause of Christian Science such a factor for the good of humanity.

R. E. CAREY, *Secretary*.

Rev. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—It is with hearts filled with gratitude to God for His manifold blessings on our work, and to you, His faithful servant, for lovingly pointing the way wherein we appreciate and enjoy them, that we have listened to the very encouraging reports of our officers, showing a substantial growth numerically, financially, and spiritually in this branch of the "Mother-Vine." We hereby pledge ourselves to greater effort to follow in the way wherein you are being divinely led; to daily and hourly strive for that Mind to be in us which was also in Christ Jesus; to heal the sick quickly, in that humility, and loving obedience, so beautifully exemplified in your life-work.

Lovingly yours,

Members of First Church of Christ, Scientist, in Annual Meeting assembled.

MRS. EDNA NICHOLS, *Clerk*.

Ogden, Utah, January 12, 1905.

Tampa, Fla., December 7, 1904.

Mrs. Eddy.

Dearly Beloved Leader:—We are only a few loyal workers in the extreme Southern state, and we wish to express our thanks to God and to you, for Christian Science and what it has done for humanity, and is still doing. We have just received a copy of "Science and Health with Key to the Scriptures," ordered for a young man who was healed of several ailments by reading the book which was loaned to him by the Society. He said he must have one of his own. A gentleman attended our service when the subject of the lesson was Mind. After the service he came to me and said he had received most glorious, spiritual light during the reading of the Lesson-Sermon. I know your dear heart will rejoice with us in this. "In him was life; and the life was the light of men."

Love from every member of our association. We heartily approve of all the new By-laws.

Yours faithfully and loyally,

MRS. MATTIE BEACH, *First Reader*.

Testimonies of Healing.

While attending school I was often troubled by my defective eyesight. My eyes were very weak, and at times I was forced to remain at home and sit in a dark room, as the light aggravated the trouble and caused severe pain. One day, when my uncle was at home, I spoke of my determination to get a pair of glasses. (I had already been wearing blue glasses when out of doors to protect my eyes from the dazzling snow.) My uncle protested against this, however, for he had been reading the Christian Science text-book, and he gave me some very convincing illustrations to show that the mind ruled the body completely. His statements greatly impressed me, and shortly afterwards we received a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy. One evening (I shall never forget it), I chanced to hear my mother reading selections from this book to my grandmother. In the part which she read, Mrs. Eddy spoke of the unreality of sickness. This appealed to me as such an original and beautiful idea that I resolved to read the book. From the very first I thought the logic faultless; the original and matchless manner in which the ideas were expressed gave me real delight, and I longed to prove the infallibility of the statements made. I had but a short time to wait, for before I had read Science and Health through my eyes were healed and I realized perfect freedom of sight. I had no occasion to use my blue glasses again, as the snow had no ill effects on my eyes. But this was not all, for not long afterwards I could not attend school as I was suffering from a very bad cold. No one in my home was yet interested in Christian Science, and my mother urged me to use the accustomed remedies. I refused, however, for I was convinced of the truth of Christian Science, and I thought "Now is my opportunity to prove this." The little knowledge which I had was applied, and the result was most satisfactory. In a much shorter time than usual I was completely cured. Now, as I look back to that time, so many physical demonstrations have since been made that I would require a booklet to enumerate them all.

I found Christian Science of inestimable value while pursuing my studies. It enabled me to demonstrate over fatigue so that, if the occasion required it, I could study until early in the morning with no ill effects. Spiritually, Christian Science has indeed proven itself to be a "pearl of great price." I used to read the Bible simply because I felt it a duty; now it affords me true joy to read it, for its meaning is lucid. Whereas formerly I used to be often overcome by the gloomiest moods, now I am learning that joy is permanent, and whereas I used to think mostly of self, now I am learning to think more of others. A thousand and one fears which used to assail me, have fled as mists of error before the sunlight of Truth. I am learning to love those whom, in the old thought, I would have been disposed to hate.

We as Christian Scientists may well love and reverence the one through whose unceasing labors we have been so richly blessed. We can never fully realize what Mrs. Eddy, as the Discoverer and Founder of Christian Science, has had to contend with, and we wish we could tell her personally just what the truth has done for us. There is, however, a better way of showing our gratitude, and that is by emulating her example—healing disease and destroying sin in ourselves and others.

AINSLIE G. McDUGALL, Dauphin, Man.

To be able to bear witness to the great healing power of Truth and Love is to me a positive proof that there is a God. I had been under the treatment of doctors for years, never taking a meal without first taking my medicine. I never traveled without a certain kind of medicine in my satchel, for it seemed at that time to be always needed. A

third operation was thought necessary in my case, since two others had proved failures, but the third one proved a failure as well, and then I said I was through with doctors, that this was the last one I should ever consult. I did not give him up though, until he acknowledged that the operation was not a success. After this I suffered greatly from an injury to my foot, caused through neglect on the nurse's part, but I got crutches and used them after I went home. The doctor called daily to attend to my foot, but I grew worse rather than better, and I finally said to the doctor that I thanked him for all his efforts but that he need not come again.

The day before I went to the sanitarium I had a talk with a Christian Scientist, the first one I had ever met. I had never heard of Christian Science up to this time. After the doctor went away I immediately sent for this lady, who gave me a treatment; that night I had a delightful sleep, and felt very thankful. I shall never forget the time the thought came to me to put on my shoe. I was alone in my room as I looked down to my swollen foot, and it seemed impossible to put on my shoe, but the third time this thought came, I got right up, put on my shoe, and walked several blocks, without crutch or cane; God was my support, the work was done. I have held to Christian Science ever since, and I have never been tempted to take any kind of medicine, or consult a physician since. This was ten years ago. My pathway has not been strewn with roses, but I have clung steadfastly to God, as all Christian Scientists do in the hour of darkness. As Paul says, When I was weak then was I strong. Many times I have found it so.

I am glad I have found God, and I am trying to get nearer Him every day by living the life shown by our Master and explained by Mrs. Eddy in our text-book. To feel that God has no consciousness of sin has brought me out of darkness into His glorious light. I feel a deep love for Mrs. Eddy.—MAY BERGER, Los Angeles, Cal.

I did not come to Christian Science for physical benefits, but through the healing work done for others, which I had seen. I became interested, and saw that while I had no physical ailments I much needed the truth to heal me of pride, envy, jealousy, and especially sensitiveness. From childhood I had been extremely sensitive and at times suffered very much from hurt feelings, but after coming into Christian Science I found that sensitiveness is selfishness and self-love, and through the understanding of this wonderful truth these evils have been in a measure overcome. I wish to give an experience I had recently along this line. One day, while talking with a friend, I was much surprised to hear her make unkind remarks about one who was dear to me. In an instant I felt very rebellious, and while I remarked in a calm tone that she did not understand this person, I was having a severe inward struggle to keep from hating her. Although I tried earnestly to destroy this discordant feeling, it did not seem to yield, and the next day found me with a very severe sense of physical suffering. Error suggested a physical cause for the pain, but that evening, while in conversation with a Christian Scientist, this suffering was mentioned and she said, "How easy it is for us to look for a physical cause. You have admitted a power apart from God." The instant she spoke the word "power" it aroused me to see what I had been doing. Instead of keeping my thought pure and full of love, I had allowed thoughts of hatred to creep in, and this physical manifestation was the result.

The next morning the pain had entirely disappeared. This was a beautiful lesson to me,—a proof that we must pray without ceasing, lest we enter into temptation. Christian Science has done so much for me that I feel the only way I can express my gratitude is by living the truth revealed to us through our dear Leader, Mrs. Eddy.

MRS. EVA B. YATES, Chicago, Ill.

I feel it is my duty to express my gratitude for the many rich blessings received through Christian Science. I have had many proofs of the power of Truth to destroy error. One night as I was preparing to retire, I felt a severe pain in one hip. I was standing near the center of the room when the attack came on, and I tried to get to a chair, but could not take a step, so great was the pain. The thought of calling my husband came to me, but it seemed best to tell no one. The more I tried to voice the truth the more real seemed the error, and for a time all was confusion, till I began to declare God's ever-presence. I then worked my way as best I could to a lounge, and lay down, still declaring the truth. I soon went to sleep, and when I awoke, some time in the night, I was free from pain. The next day, Sunday, I walked to our service, about a half mile, and felt no pain. I rejoice and praise God for the gift of His word,—that "healeth all our diseases," and I also desire to thank our dear Leader, Mrs. Eddy, for all she has done in giving us so many helps in the way.—MOLLIE J. BARNARD, New Virginia, Ia.

It is a little over five years since I became interested in Christian Science. A few months after my healing, which was the cause of my coming into Christian Science, my twelve-year-old daughter was taken to a dentist to have two teeth extracted. The work seemed to be quite difficult and she was restored to consciousness only after a hard struggle. After this she seemed to be greatly changed, and suffered at times with attacks of extreme nervousness. This soon developed into the disease known as St. Vitus' dance. For several months she was a great care, having to be watched constantly day and night, and to be led around and fed by some one. We consulted several physicians, who could do nothing for her and gave her only a few months to live. It had always been difficult for her to talk plainly, as she had stammered considerably from the time she learned to talk. After having been attacked by this nervous disease one could scarcely understand her at all, and at times she would be unable to speak. This was pronounced tongue paralysis. After learning that the physicians could do nothing for her, we decided to try Christian Science. The first few treatments she received at home, as she was unable to go to the practitioner's office, but after a few days she could walk quite a distance without falling. At the end of three weeks she was cured, not only of St. Vitus' dance, but also of stammering.

The case was, of course, watched closely by physicians and neighbors, who knew that the child was in a very critical condition. When they recognized the improvement they were very much astonished, but were unwilling to give Christian Science credit for the healing. I feel very grateful for what Christian Science has done and is still doing for me and my family. Language seems inadequate to express my gratitude for this wonderful truth which has been revealed to us by our dear Leader.

MRS. HENRY KANE, Toledo, O.

The revelation of Truth has come to me through the understanding of Christian Science, and where there was once a wilderness of disquiet, disease, discouragement, and discontent, there is now a haven of rest, peace, and joy, with increase of confidence and courage. Since coming into Christian Science, almost two years ago, many problems, physical and mental, and several diseases, chronic and acute, have been overcome through the knowledge of divine Truth, as revealed in Christian Science. For this my heart goes out in loving gratitude to our beloved Leader, to my dear teacher, and to our regular publications, for an enlarged understanding of God, as well as to every friend who has lovingly given me a "cup of cold water" in His name.

I will relate a case of physical healing which, at the

time, seemed very wonderful, but now only divinely natural. My little girl, then four years of age, had a severe and painful swelling on one side of her neck. At first I paid but little attention to it, thinking it was what is commonly called "a crick," produced by sleeping in an uncomfortable position. This was before I knew anything of Christian Science, and I immediately, upon complaint from her, applied the remedy I had at hand, which was camphorated oil, it being at that time deemed an indispensable article in our home.

The oil, however, failed to alleviate the pain or decrease the swelling, and, becoming alarmed, I called in our physician. After examining her, he pronounced it "swelling of the glands, caused from having contracted cold," and said he could not tell exactly, but it might develop into an abscess, and if so it would have to be lanced. I had always had a horror of any kind of surgery, and determined I would not allow it, if it could possibly be avoided. For a week she was under his treatment, growing worse all the time, having high fever, eating very little; in fact, looking and feeling quite miserable. When the doctor saw that he was not meeting the case, he suggested that I take her to a specialist, who was a mutual friend.

The verdict was that this manifestation should have immediate attention, or it would result in a chronic state of disease, coming and going, and would leave great depressions in her neck. I was quite desperate then, and knew not whither to turn, for I could not reconcile myself to the danger of an operation. "Man's extremity is God's opportunity," and the truth of this statement was certainly made apparent to me, for just after that, another friend came, but with a different message and a different verdict. She told me of the bread of Life, of "the substance of things hoped for, the evidence of things not seen;" she told me of Christian Science, and what it had done and was doing for her; she assured me my child could be healed, and without surgery.

Like a drowning man grasping at a straw, I listened to her words of comfort and assurance, and immediately applied for help. In one week my child was entirely healed, and has remained so to this time. That was two years ago. After this beautiful demonstration of healing I felt that I must investigate its cause; and by so doing I have found the pearl of great price, which has disclosed to my understanding the ever-present divine Principle governing all reality.—C. A. HUTCHINSON, Houston, Texas.

With gratitude to God I acknowledge my lifelong debt to Christian Science. In 1895 I attended my first Christian Science meeting, and was deeply impressed with the earnestness of the people and the love reflected, but as for the spiritual healing of the physical body, I did not believe such a thing to be possible. I bought "Science and Health with Key to the Scriptures," and studied it with the sole purpose of being able to dispute intelligently with the supposedly deluded followers of Christian Science. I pursued the study carefully and thoroughly, and I have had abundant reason since to be glad that I did, for through this study, and the resultant understanding of my relation to God, I was healed of a disease with which I had been afflicted since childhood and for which there was no known remedy. Surely my experience has been the fulfilling in part of the Scripture: "He sent his word and healed them, and delivered them from their destructions." I believe that Science and Health reveals the word referred to by David.

I am thankful that I have learned of divine Principle, and that, in His goodness and mercy to us, He has made it possible, through our beloved Leader and Teacher, Mrs. Eddy, for the world to know that its Redeemer liveth.

CHARLES A. B. BAKER, Kansas City, Mo.

I have been enjoying the fruits of Christian Science for nearly five years. I was brought into the true fold through the healing of a dear friend. I was sadly in need of something better than the old way, as I had been a church member for years but had failed to understand the meaning of the greatest commandment, "Thou shalt have no other gods before me." I had gods many, and was suffering the consequences; but when I commenced to read Science and Health, that wonderful book, I began to see more clearly. I could then read my Bible and understand it better. I was healed by reading Science and Health of an ailment that dated from childhood, and this proved to me that I had found the perfect way. It has been proven to my entire satisfaction that Christian Science heals both sin and disease. I have been, to sense, through deep waters, but divine Love has guided me safely. I know that I am only started on this perfect way, but I am started right, and that means much to me. I get so much comfort and help from our literature that I can never express my thankfulness. My love and gratitude go forth for what Mrs. Eddy has done for me and is doing for humanity. God does bless her, for she dwells in the secret place of the most High.—MRS. A. DRAKE, Republic, Wash.

About three years ago I became acquainted with a Christian Science practitioner. At that time I was badly afflicted with eczema in my feet. I had been troubled with it for eight years and at times I could scarcely walk. I had consulted the best doctors, but they could not do anything for me, so I had made up my mind that I would never get any help; but God sent this dear friend, who gave me Science and Health to read and afterwards gave it to me as a present. I am sure if I had had it ten years ago I would then have been a strong woman. I had not read this dear book long before I could see a great change in my feet, and now they do not trouble me at all. I am very thankful for this great blessing, and the more I read in Science and Health the more I understand the Bible.

MRS. CASSIE ASHLEY, Iroquois, Ill.

I have just finished the reading of Professor Hering's letter to our dear Leader in the *Sentinel* of December 24, and the thought came to me to give to the Field my experience with the Lesson-Sermon mentioned in his letter. I had struggled for a week or more with an old trouble, and it seemed at times as if I must ask for help. On Sunday night, a week before we were to have the Lesson referred to, I sat down with my books and began its study, and it seemed to me that during the five years in which I had known of Christian Science, I had never realized so clearly the meaning of the spiritual creation, nor seen the nothingness of the material, as I did at this time. It was simply a revelation, and after studying this Lesson I was so interested that I went over it all again. I am happy to say that when I arose next morning the old trouble had disappeared.

I find it impossible to express in words my gratitude for Christian Science. I had suffered from stomach trouble in one of its worst forms, also nervous prostration, before knowing of this glorious, new-old truth, but I found that my greatest need was, and is, to be healed of sin, of hate, self-love, and self-will, and to know only one self and that the reflection of infinite good. Christian Science has certainly done wonders for me. My father and a number of our family had passed away with lung trouble, and this fear was suggested over and over again to me, during a struggle, until our Leader's words in "Miscellaneous Writings," page 151, line 24, were discovered, and they met my need. I want to close this testimony with gratitude to the one who was pure enough and brave enough to make it possible for me to know my relationship to God.

LOUIE M. SLAGHT, Los Angeles, Cal.

Even after I became a member of the Christian Science church I did not fully realize what a wonderful, priceless possession was the knowledge of this healing, saving truth, to my family and myself, until an accident occurred which showed me how futile are all devices except reliance upon God. I accidentally burned my little daughter's eye while curling her hair, so that the entire sight was covered with coagulated albumen. Then the thought came to me, How thankful I am for Christian Science.—“With God all things are possible;” whereas, if I had had to depend on material means, I should have despaired of her ever being able to see again. I immediately took her to a practitioner, and the demonstration was completed in less than twenty-four hours.

Another priceless possession is that state of mind which eliminates a mother's fear. Since knowing of Christian Science, the care of my children has been a pleasure, as I know that God protects them from all evil, while before I used to worry constantly for fear the children would fall a prey to the numberless ills which error imposes.

There is much of which I could write in gratitude, for daily help in all our needs, but will close with one more illustration of the power of Truth. At the birth of my last children—twins—I had Science help, and in contrast with my previous experiences, when I was months in recovering, I was well and strong in less than two weeks, with no pain or misery afterward, and the children are manifesting health and harmony. Our thought goes out in love to Mrs. Eddy, and to those who were instrumental in guiding us to the truth.—ANNA C. PARRETT, Goldfield, Col.

For three years Christian Science has been the only physician in our family. Being the mother of four small children, I find it the quickest, safest, and surest remedy for all the diseases which children are supposed to have, according to mortal sense. My youngest child was born under Christian Science treatment. The suffering I had previously gone through, both before and after birth, was entirely overcome. The baby was the picture of health, except that the eyes were so sore they could scarcely be opened, and there were several deep blue marks above and below them. To say that I was distressed by this does not half express it. I could see that the practitioner was working faithfully, and I realized that my fear was growing less, but at the end of five days the marks were more distinct than ever. Then it came to me that some time before the birth there had been a slight explosion when I was lighting a gasoline stove and the flames had set my hair and eyebrows on fire. I told this to the Scientist. She quieted my fear by saying that we must not look to the senses, or to the law of mortal mind, but to God's law, and if we would only believe we would see the glory of God manifested. Each day the birthmark grew lighter and the eyes opened a little more, until at the end of two weeks one could not tell there had ever been a mark on the face. The child is now over a year old, and when I see her running around the house, with her bright, laughing eyes and clear, happy face, I thank God again and again for the great blessing given us through His name. I send this testimony, thinking it wrong to withhold such blessings from those in need of help, and to prove the saying of the Scriptures that we are made “clean through the Word.”

MRS. MINNIE THOMSON, Atchison, Kan.

Jesus fed the hungry, walked on the sea, commanded the waves, and because of this his followers should realize the power of Truth over error of every kind. The world does not acknowledge that the sick are healed to-day as Jesus healed them, yet it is our duty to know the power of divine Love. Once, when I was facing a severe north wind, I found myself freezing because the thought had

come to me that even if I did realize the truth the storm would rage just the same. Then, with many other poor sufferers, I was placed where I had to “know the truth,” and after realizing the allness of good as ever present, I was able to go on my journey without suffering. This showed me that the storm was not in divine Mind, as Jesus proved.—MARY E. WATKINS, Lincoln, Neb.

[Translation.]

Having waited for so long, it is now clear to me that I should relate my experience in Christian Science, and I hope that others may derive benefit therefrom.

One day, while out hunting, I fell and injured my leg, but did not tell my parents of it. A few weeks later the pain became so intense that I could no longer hide it, and went to a physician. He said that the bone was injured, and tried to help me, but in vain. Years passed during which I suffered intensely. I had physicians, but my leg grew worse. It was then decided that it must be amputated, but “Man's extremity is God's opportunity.”

A lady told us of Christian Science; we considered the matter for several days, and then decided to go to Sheboygan to speak with a practitioner there. My mother told her that we had tried so much and had always been disappointed, and begged her to tell us whether I could be healed or not, as we did not wish to hope in vain. The practitioner answered, “Not I, but God, can heal him.” My mother then said, “You may treat him, I will put my trust in God.” The physicians had declared my trouble to be caries of the bones, but in three weeks I went home without crutches, for I needed them no longer. The news of my healing spread swiftly through the town, and how often I had to tell that I was really healed through Christian Science. Six years have passed, and I am well and strong, and can do hard work in the country.

If I were asked to say how grateful I am to God, to Mrs. Eddy, also to the practitioner, and to the lady who told me of Christian Science, it would be impossible for me to express my gratitude in words. Christian Science is very dear to me, it is indeed the light that shines in darkness and brings blessings to every one who will accept it.

HERMANN ULERICH, Plymouth, Wis.

It is with much gratitude to God that I acknowledge some of the benefits received since taking up the study of Christian Science. Five years ago I was perfectly healed of catarrh which the doctors pronounced incurable. Since then we have had many beautiful demonstrations in our family of the power of Truth over error. In cases of accident, the grip, tonsillitis, and other ailments, we have proven that God is an ever-present help. I feel more and more thankful for our Lesson-Sermons, which give us thought for each day.—JENNIE BAYER, Toledo, O.

[Written for the *Sentinel*.]

Retrospection.

J. EDWARD SMITH.

WHEN day is done, dear, can you see
Upon time's page just turned by thee,
One deed of love or mercy traced
By willing hand? or did you waste
Your golden opportunity?

When day is done, doth Sun's decline
Leave darkness in lone heart of thine?
Or doth the light of Truth and Love
Shine brightly? Doth the Heavenly Dove
Brood gently o'er light heart of thine,
When day is done?

From our Exchanges.

If at this Christmas season those men and women upon whom fortune has smiled during years of great prosperity feel moved to make the occasion as joyous as it can be made for their less fortunate fellow-beings, let them consider the wisdom of converting the old spirit of feudal patronage into the living, modern spirit of democracy. Let them resolve to be fair and just first, and generous, if they may be, afterward. Let them determine to take no grasping advantage of opportunity, but rather to extend opportunity to those whose need is not of gifts but of a chance and encouragement to help themselves. For this is the way, and the only way, and, we add, the Christian way, in which, under modern conditions, the reign of peace on earth and of good will among men can be realized.

The Independent.

The Christian is not a foolish optimist. He does not fatuously shut his eyes to the existence of stupendous evils, numerous and widespread. But he believes in the promises of God; he is convinced that there is more good in the world than bad, and that the good is constantly increasing and conquering. The verdict of history and of all common-sense observation is that the world is growing better all the time. Man is getting complete control of his animal appetites, his selfishness, and his passion. He thrills to the exhortation of God, "Be ye perfect," and struggles ever toward the infinite Ideal. The kingdom of God, for whose coming Jesus bade us pray and work and live, is being daily and predominately realized.

Western Christian Advocate.

Nothing is easier than talk and nothing can be more absolutely worthless as a test of life. Phrases that were born of a mighty emotion are caught up and sounded forth by others who have nothing but the phrases. "Sweetly saved" and "precious" and "praise his holy name" furnish no accurate measurement of the user's piety. The man who talks much of the "old Book" may have an unusual love for God and the revelation which God has made, or he may just be talking shop. It is certain that a spirit of charitable judgment furnishes a clearer evidence of the presence of Jesus Christ in the heart than does any amount of pious phrasing when unaccompanied by that charity which "boasteth not itself, is not puffed up."—*The Standard.*

President Merrill of Colgate University, after describing the changed demands which bring the minister's work down from a spiritual and scholarly service to the level of a business calling for organization and all sorts of secular activity, says, "I often hesitate myself to advise the most able young men to enter a calling in which it is probable that their usefulness will be thus curtailed. This result is chargeable to the frivolous character of our churches, which demand variety and entertainment rather than weight of character, experience, and wisdom in their preachers."

The Congregationalist.

To dream through the hour that should be filled with doing is one of the snares and delusions in life. When a noble deed or a clever one is announced as accomplished, what a chorus goes up to the tune of "I thought of that years ago!" And the difference between men who do things and men who do not, lies very often in the mere fact that one goes ahead into action, while the other doesn't, rather than in any superiority of vision. Doing the good deed one thinks of, filling the moments with what one's thought is urging—that is the path to service.

Sunday-school Times.

Look for the best in men and that will bring out the best in yourself.—*The Watchman.*

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 505 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, \$5. Twelve or more to one address, \$4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, \$1 per copy; \$5 per half dozen; \$9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, Treasurer.
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, \$2.40 per annum; \$1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, \$1.00 in advance; all other countries, \$1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH of Rochester, N. Y.

CHRISTIAN SCIENCE. Its Promises and their Fulfillment. By EDWARD A. KIMBALL of Chicago, Ill.

CHRISTIAN SCIENCE. Is it Christian? By Mrs. SUE HARPER MIMS of Atlanta, Ga.

CHRISTIAN SCIENCE. Its Work and Scope. By CAROL NORTON of New York City.

CHRISTIAN SCIENCE. The True Idealism. By ANNIE M. KNOTT.

Price. Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, 75 cents; five hundred copies, \$3.25; one thousand copies, \$6.00. Orders for supplements may be assorted as desired.

German Supplements

CHRISTIAN SCIENCE. Its Promises and their Fulfillment. By EDWARD A. KIMBALL of Chicago, Ill.

CHRISTIAN SCIENCE. The Christianity of Christ. By Rev. IRVING C. TOMLINSON.

Pamphlets

LEGAL ASPECTS OF CHRISTIAN SCIENCE. A compilation of Court Decisions, Opinions of Lawyers, etc. 72 pages.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, \$1.15 each; per dozen, \$9.00; per half dozen, \$5.00. Half Morocco, per copy, prepaid, \$1.40 each; per dozen, \$12.00; per half dozen, \$6.50. Full Morocco, \$2.50 each. Levant, \$3.50 each.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, \$1.50; Six copies, \$7.00; Twelve copies, \$12.00.

THE CHRISTIAN SCIENCE CHURCH. Its Organization and Polity. By CAROL NORTON. Single copy, 20 cents; twelve copies to one address, \$1.75.

LIST OF MEMBERS OF THE MOTHER CHURCH. Single copy, 50 cents; six copies to one address, \$2.50; twelve copies to one address, \$4.50.

COMMUNION HYMN. "Saw ye my Saviour?" Words by Rev. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; \$5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by Rev. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, \$1.00 per copy; \$9.00 per dozen.

THE REVELATION OF CHRISTIANUS, and twenty other poems, by the EARL OF DUNMORE. Dedicated by special permission to the Rev. Mary Baker Eddy. Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials. One copy, \$1.25; six copies to one address, \$6.50; twelve copies to one address, \$12.00.

REMITTANCES! Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago, or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

We ask that no money remittances whatever be made to the Editor or Editorial Department. Address all orders for above literature to

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY
250 HUNTINGTON AVENUE, BOSTON, MASSACHUSETTS

Works on Christian Science

Written by Rev. MARY BAKER G. EDDY

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid \$3 18

Two to twelve books (cloth only) to one address, each, prepaid 3 00

Twelve or more books to one address, each, prepaid 2 75

Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid 4 00
Twelve or more to one address, each, prepaid 3 75

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid 5 00
Twelve or more to one address, each, prepaid 4 75

Levant, divinity circuit, leather-lined, round corners, gilt edges, silk-sewed, heavy Oxford India Bible Paper, wide margins, each, prepaid 6 00
Twelve or more to one address, each, prepaid 5 75

Orders for Science and Health, in lots of twelve or more to one address, may include any or all the different styles of binding.

A COMPLETE CONCORDANCE to Science and Health with Key to the Scriptures, 595 pp., 10 x 7. Bound in cloth, marbled edges. Price, single copy, prepaid . . . \$5 00
Twelve or more copies to one address, each 4 50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid 2 25
Twelve or more books to one address, each, prepaid 2 00

Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4 00
Twelve or more to one address, each, prepaid 3 75

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5 00
Twelve or more to one address, each, prepaid 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid \$3 00
Twelve or more books to one address, each, prepaid 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; \$3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, \$1.06; \$5.00 half dozen; \$9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, \$1.06; \$5.00 half dozen; \$9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, \$2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, \$2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckle edges; 50 pages. Prices, prepaid, 50 cents; per dozen, \$4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckle edges. Prices, prepaid, 50 cents per copy; \$4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, \$1.00; six copies to one address, \$5.00; twelve copies to one address, \$9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; \$5.00 per dozen.

Direct all orders for above works, and make remittances payable to

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, \$1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, \$1.40; one hundred copies, \$2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

The United States Supreme Court, in a decision written by Justice Oliver Wendell Holmes, has unanimously decided in favor of the Government in its case against the Beef Trust. The decision of Judge Grosscup of the United States Circuit Court, granting a permanent injunction, is sustained. Attorney-General Moody argued the case less than three weeks ago. The decision prohibits the continuance of a combination to suppress competition in the purchase of cattle in the stock yards; forbids the combination to maintain uniform prices in meat; and prohibits any combination between the parties involved to obtain discrimination in railroad rates.

President Eliot of Harvard, in his annual report, states his objections to the game of football. He mentions extreme publicity, the large proportion of injuries, the absorption of the undergraduate mind in the subject for two months, the disproportionate exaltation of the football hero in the college world, and mutual distrust and hostility between colleges. The main objection to football, President Eliot says, lies against its moral quality. The undergraduate body, it is reported, recognizes the fairness of the objections, but thinks they can be remedied by proper rules of play.

It has been announced that the sum of \$100,000 allotted by the trustees of the Carnegie Institute to Luther Burbank, the California agriculturalist, will be paid to him in annual instalments of \$10,000. This sum will enable him to devote his entire attention for that period to experiments with new grasses and vegetables. Many important discoveries have been made by him at his home in Santa Rosa during the past twenty-five years.

The California Assembly has passed a bill re-ceding the Yosemite Valley to the Federal Government. The Yosemite Valley was placed under the care of the California State Government by Congress in 1864, thirteen years after its discovery, and provision was made at the time for the eventual return of the land to the Federal Government. The

State made a park of it. This park is now enclosed by the Yosemite National Park, of which it will become a part.

On January 31, the public debt of the United States amounted to \$989,925,619. The deficit for last month was \$6,784,183, and for the seven months of the fiscal year ending January 31, \$28,596,000. Last year at the same time there was a surplus of \$1,574,000.

Foreign.

As a result of the failure of the mining operators to reach an agreement with the striking miners in the Rhenish-Westphalian and Silesian regions, the Prussian Government has intimated the possibility of its nationalizing the mines.

The ratification of the treaty of peace and friendship between Chile and Bolivia at La Paz, Bolivia, and at Santiago, settles all questions between Chile and the neighboring republics with the exception of Peru.

Following the uprising of the Russian workmen in St. Petersburg and the massacre by the troops of a number of them while on their way to petition the "Little Father," the Czar last week met thirty-two of their delegates, representing the leading industrial pursuits of the city, and promised to take steps to meet their desires. The Committee of Ministers to whom was referred the petition of the Zemstvos have reported important recommendations, especially in regard to increasing the powers of the Senate over the Ministers, safeguarding its independence, and enlarging its rights of legislative initiative. The concessions made indicate a realization of the gravity of the present situation. The uprisings of workmen in other parts of the Empire are subsiding. M. Bouligan has been appointed Minister of the Interior to succeed Sviatopolk-Mirsky.

Industrial and Commercial.

The United States Consul at Kehl reports that it has been discovered recently that the slime or residuum from the thermal springs at Baden Baden, Germany, contains very powerful radium. Professor Gertel of Wolfenbittel, Germany, says this radium is forty times more powerful than that found in the residuum of cold water springs or in mud baths. Previously the residuum from the water at Baden Baden was considered worthless by the scientific world, but it is now carefully collected and sent to laboratories.

The total imports into the United States in 1904 were \$1,035,909,197, an increase of four per cent over 1903. The total imports from Cuba in 1904 under reciprocity were \$74,950,992, an increase of about 31 per cent over 1903. The total exports to all parts of the world for 1904 were \$1,451,355,645, a decrease of 2.03 per cent compared with 1903.

Aroostook County, Maine, manufactures annually 175,000,000 feet of long lumber and 250,000,000 shingles, giving employment at the mills to fifteen hundred men, besides thousands in the woods. Its yield of potatoes in 1904 was nearly 10,000,000 bushels.

At Ormond-Daytona Beach, Fla., an 80-horse power De Dietrich car won the 100-mile race for the Vanderbilt trophy last week in 1 hour 18 minutes 24 seconds. The previous record was 2 hours 52 minutes.

General.

Herodotus says that Hecataeus saw in Thebes the statues of 345 high priests of Amon, who had followed one another in regular succession. The story seemed incredible, but it is probably true, says *The Independent*. If true the value of it is that it would give scholars of ancient Egypt a connected chronology, and would justify lists of dynastic kings. These statues, and a multitude of others, Mr. Legrain has found. He has been engaged for some years in repairing and strengthening the famous Temple of Karnak at Thebes. In his work last winter he hit on a great pit in which were heaped pell-mell

hundreds of statues. With them were over a thousand gilded bronze statues of Osiris. Before the season was over he had recovered 450 statues, and he expects to recover as many more. Among these is a great number of priests of Amon. In one case sixteen generations of a priest have been recovered. But the most remarkable statues are those of kings; and they go back as far as the second dynasty. One can easily see the value of such an inscribed Valhalla for chronology and history. There is a statue of Cheops of the great pyramid, of the fourth dynasty, and two of the fifth; also five statues of the twelfth and thirteenth dynasties, including some kings previously unknown. The chef d'œuvre of the whole is a statue of Thothmes III. of the eighteenth dynasty, and it is particularly interesting because the profile of the face is European rather than Egyptian, and reminds one of the statuary of ancient Greece. The statue of the "Heretic King," Amenophis IV., is in fossil wood, and evidently a portrait. There is a good statue of Tithakali, mentioned in the Bible. A valuable result is the proof that the twenty-first, twenty-second, and twenty-third dynasties were contemporaneous. The probabilities are that these statues were regarded as too sacred to be destroyed, and were thrown together at the time when the Ptolemies were repairing the temples.

To those connoisseurs who evince great pride in their collections of Dresden china, says *The Scientific American*, it will come as a great shock to learn that to-day there is no such product under this name, although sold as such. In the course of a prosecution in London, where a firm was prosecuted for selling ware as Dresden and marking the goods as such, it was stated that no china is manufactured at Dresden. The name is applied to the products of the royal factory at Meissen. Furthermore, many pottery decorators at Dresden work upon china that is manufactured at different places, is transferred to that city, receives its imprint, and is then disposed of as Dresden china.

We are glad to announce, says *The Independent*, that the Austrian excavators at the ancient city of Taanach, in South Palestine, have found several tablets with cuneiform inscriptions which go back to the time of the Egyptian rule in Palestine, some 1,400 years before Christ, perhaps of the period of those at Tel-el-Amarna in Egypt, which have thrown so much light on the condition of Palestine before the Israelites entered the land. They have not yet been published, but will be soon. Only one such tablet had ever been found before in Palestine, that found by Mr Bliss in Lachish.

The steamship City of Sydney, from Central American ports, brings news of a violent eruption of Momotombo volcano, which is six thousand feet high and whose base forms a promontory in Lake Nicaragua. On January 16 thick vapors were seen rising from the top of the mountain, and that night Momotombo's summit was a blazing torch, lighting the land as far as the coast and casting the glare of its fire far out to sea. Momotombo was in active eruption about fifteen years ago. It is surrounded by valuable coffee plantations.

Engineers of the New York Department of Bridges are reported to have determined that the Brooklyn Bridge ought to be almost completely rebuilt in order to insure complete safety. The bridge has been subjected to strains which were not contemplated when the structure was planned. To do this will require at least two years.

The total number of admissions to the Museum of Fine Arts, Boston, in 1904 was 248,235. Of these 21,119 were paid admissions. The average number of Sunday visitors was 2,239.

The latest bulletin issued from the Lick Observatory contains the account of another hundred new double stars discovered and measured there.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, WATCH." Jesus.

From our Contributors.

The Pearl of Great Price.

JOHN CARVETH.

"AGAIN the kingdom of heaven is like unto a merchantman seeking goodly pearls; who when he found one pearl of great price went and sold all that he had and bought it."

What is the pearl of great price to-day? Is it not the scientific Christianity that heals the sick and sinful beliefs of mortals through the spiritual understanding of God and man,—the Christianity which rejects all finite premises, and accepts the divine Mind as the only Cause and basis of every real effect? Surely every parable of Jesus indicates that on this basis alone can scientific Christianity be attained. He also declared and demonstrated that this pearl had within it all the elements of substantial wealth. The true, the real, the spiritual church may be said to embrace the ideas of infinite Mind in action, manifesting life, love, health, holiness, harmony,—divine beauty and sweetness. As human consciousness, through the invincible activity of scientific Christianity, recognizes even in a degree this divine energy, thought opens to the bountiful fruition of this Christ-awakened sense of church. Through the scientific demonstration of health and holiness, thought is ever ascending the mountain slope for higher gleams of deific light and Love. As this quickened and quickening thought begins to build in human consciousness a type of divine health and purity, so likewise it begins to build in this consciousness a type of the true church, whose members may represent in ever-advancing degree the mental healing of our great Master, who was the highest earthly type of the spiritual idea.

Recognizing at this hour the divine wisdom which has guided our Leader, we also recognize and gratefully accept her counsel that, in this day of its infancy among us, the Cause of Christian Science needs church edifices, wherein the healing gospel of Truth may be preached to the poor in spirit,—the meek and ready hearts of our fellowmen. Spiritual healing, church building, and church maintenance are inseparable links in the chain of scientific Christian work to-day, as our Leader has shown us, both by example and precept. It is therefore highly important for us to see that all these means of grace are of vital significance to us at the present stage of our spiritual growth, and that if we fail to take the steps which they demand we are likely to lose some valuable lessons without which our future progress will be uncertain and unsatisfactory. It is often observed that when a person opposes one of these means of progress he will ere long oppose all.

To be lukewarm in respect to one invariably leads the way to lukewarmness respecting all. The law of the unity of truth is often counterfeited in the so-called law of the unity of error. We, therefore, of this fold and faith go forth in the might and majesty of Truth to undertake, willingly and gladly, our Master's work in these varied avenues of activity.

To-day scientific thought beholds the crumbling walls of all forms of theology that are built on material foundations. The atomic theory of creation, including man, which Christian scholars and ministers have in recent years so largely

and generally sanctioned, is apparently severing the life-arteries of religious thought and action, and for some it is robbing the Scriptures of their blessed light of truth and making them but the wordy history of tottering error. The bugle call of Christian Science bids us go forth, in the panoply of Love, to redeem needy humanity from perishing beliefs which are permeated with materialism and vain human philosophy. Fellow-workers in the vineyard of God, let us awake to the demands of the hour and march in the armor of that Truth that heals and saves, bearing each other's burdens, and showing to the world a light which it may safely and joyfully follow. This is the opportune time. Our work is as grand as it is great. Let us continue to remember that the truth of Christian Science which is at work to-day moulding and chiseling human character, is the grandest manifestation of being. It is the soil of hope, the root of true love, the cement of families, and the only safe and permanent bond of social and national union. It is the Rock of Ages, the pillar of progress, and the beacon light to high and holy activities of mind and heart. It calms the turbulent waters of human ambition, stills the tempest of revenge, arrests the hand of greed, stops the headlong cataract of material pomp, and spreads the mantle of loving charity over the sinful acts of the returning prodigal. It breaks the chains of oppression and sets the captive free. It fills and refills the empty hand of want, and adorns the splendor of wealth with the munificence of kindly and benevolent giving. It returns the wandering and wayward and lifts and relifts the sorrowing and heavy laden.

Whatever would dim this blessed light is the arch-enemy of the race, even though it come in the name of scholarship and science. Human learning may rock the earth to and fro, in the vain attempt to sully this healing and saving truth, yet in the years to come men will listen for its advancing tread, as it draws near to make all men free. In this light of scientific Christian faith we come to understand the Pauline declaration that "the wisdom of this world is foolishness with God," that every human fabric reared on the foundation of material belief and human philosophy is naught but darkness as compared with that wisdom whose basis is the one eternal divine Mind.

From this infinite Life-fountain only streams of living waters can flow into the heart of humanity. Love's dew-drops, falling here and there on humble thought, refreshing the earth with gladsome cheer and hope, give gleams of matchless beauty and glory. This divine understanding goes to the bed of pain and with the silent whisperings of Love's message it stills the turbulence of hate and fear and enthrones the harmony of gentleness and peace. It raises the fallen, comforts the broken-hearted, and dries the tears of grief. At the midnight watch it rekindles the ebbing embers of earthly light with the immortal sparks of divinity, and at the last it closes forever the open gate of death through the abounding presence and power of Life. The promise that the Comforter should come to abide with us forever is fulfilled, the dawn of an eternal day is at hand.

What a treasure is ours, and the best of all is that its attainment is within the reach of all who are willing to follow the way which is pointed out by the spiritual sense of Scripture as revealed in our text-book, "Science and Health with Key to the Scriptures."

A Divided House.

REV. T. HOWARD WILSON.

To those who acknowledge God as the one supreme creator, the following proposition will be self-evident: God is the author of evil, or He is not. If God is the author of evil, then evil is an essential part of His creation and is indestructible. If God is the author of evil, it would be irreverent and sinful in man to attempt its destruction. If God creates sickness, man should not attempt to remove it, either by prayer or drugs. If God sends affliction to make us better, then the thing we should pray for is more affliction, inasmuch as spiritual development is what we should desire at any cost. If some cases of affliction are sent to reprove and make us better, how are we to determine these specific cases? If we pray for the sick in any case where God has sent the affliction, we are manifestly intruding our finite sense of things within the Holy of Holies, and what possible faith can we have in our prayers, if we are always conscious that what we ask may not be God's will? To say "Thy will be done" means that the finite human sense yields to the infinite, spiritual sense, that the human will is lost in the divine. This is in nowise a passive resignation to sickness or sin or death, but it is a submission to God's will that these very things may be overcome. Men do not glory in tribulations to which they are passively submissive, but they do glory in them when conscious of that God-given power which enables them to overcome and make these tribulations "stepping-stones of their dead selves to higher things."

If God, the only creator, did not create evil, then evil does not exist. All that evil ever is, is a false sense opposing the true sense, and when the true sense is discerned, the false sense disappears. It should be clear that God cannot be the author of good and evil any more than the same fountain can send forth both bitter and sweet waters. Omnipotent good cannot be opposed by any degree of evil whatsoever, else omnipotent good becomes less than omnipotent. Omnipresent Love cannot be opposed by any degree of hate whatsoever, else omnipresent Love becomes less than omnipresence. The admission of any power opposed to God would deprive God of His power over all and make Him less than All in all.

From the gospels we learn that Christ Jesus was never obedient to so-called material laws. He walked on the waters, hushed the winds, healed the sick, and raised the dead in opposition to these laws, but in entire obedience to spiritual law. He healed the sick and saved from sin through the consciousness of man's unity with God. He depended constantly upon spiritual law, and proved it un-failing.

Christ did not die to teach us how to die, he overcame death and thus taught us how to live. It is from the graves of carnal consciousness that we are to be resurrected. With the embrace in our consciousness of the truths which Christ taught, our resurrection is becoming a fact of constant unfoldment.

If God ever bestowed upon inanimate drugs a healing efficacy, then drugs should heal in every case where they are applied. If God made drugs to heal sickness, He must have been conscious of all the ills that flesh is heir to, else how could He have provided remedies for them? If God were conscious of all the diseases in the earth, they could not be cured, for they would be facts in the unchangeable divine Mind. Whatever God knows is an eternal fact, otherwise God must at some time lose a part of His intelligence. If God is omnipotent, why should we use drugs to assist omnipotence? If God can heal the sick, why should we depend on any lesser power? Can we put faith in material drugs, and in God at the same time, and expect our prayers to be answered? Can a house be divided against itself and stand? Does God wish His servants to go forth and preach the gospel while burdened with disease? If

God intended that we should be aided by material remedies, why did not Christ Jesus reveal this fact and give some knowledge of *materia medica* laws for our use, instead of depending solely on Spirit, God? Thousands of Christian Scientists depend absolutely upon God for health and strength: and do they do wrong?

With St. Paul, Christian Scientists "look not at the things which are seen, but at the things which are not seen: for the things which are seen are temporal; but the things which are not seen are eternal." "For they that are after the flesh do mind the things of the flesh; but they that are after the Spirit the things of the Spirit." To a materialist these statements may appear unreasonable; contrariwise "the wisdom of this world is foolishness with God."

If it is true that Christ is always with us (Matthew, 18 : 20), then it is evident that we must interpret our own lives in the light of the divine presence, for eternity is now, and we should know that God's kingdom is come, and that the rule of Truth and Love is to be established in consciousness by ceasing to yield obedience to the carnal mind. Christian Scientists accept as a proof of Christ's presence the test which he himself gave to John the Baptist, viz., by the work of healing. That Christian Science is accomplishing this work, none can doubt who will take the trouble to investigate the facts. If any one believes in the reality of evil, it is evident that his faith is built upon physical sense testimony, and this same sense testimony would eliminate God from His own universe, for God cannot be known through the physical senses. To know Spirit, we must be spiritual, and that Mind must be in us which was also in Christ Jesus.

Lesson from the New Church Building.

OLIVE F. HUMPHREY.

ONE day, in passing the new edifice for The Mother Church now being built in Boston, it was observed that each stone was numbered so as to show the builder its proper place. This brought out the thought that each individual has his rightful place in God's universal temple, and no matter how small the stone may be, it is essential to the building, and the work cannot be completed until each stone is found and placed in its proper position. It was also noticed that some of the smaller stones seemed to add the most of beauty, bringing out the perfect lines and giving the finishing touches to the design. A few days later, while watching the workmen as they placed a large stone in one of the columns, I noted the care which they exercised in getting it true. It seemed to be perfectly set in its place, but just then the overseer came, and taking his rule measured it on all sides, and I heard him say, "About a sixteenth of an inch," and the workman, by striking it with a heavy timber, got it into its exact place. Here, then, was a lesson in exactness. We not only have our rightful place in the "building of God," but we must be in our exact place, or the perfectness of the entire structure is not demonstrated.

It is in the building of the true church, the Christ-consciousness, that we are most concerned. We should strive to have divine Principle,—the one Mind,—guide and govern our every act and thought, so that when "judgment" is laid "to the line, and righteousness to the plummet" we may be found, not only in the right place, but exact and true; and when this effort is honestly and persistently made we are able to reflect to others the redeeming, saving power of Truth and Love.

It is interesting to note that Isaiah foresaw the time for this exact measuring and judging to be in connection with the coming of the Christ. Through the "new spiritual idea" which has come to the world in Christian Science, God is revealed as divine Principle and man as His idea. This gives us the perfect model, and as the walls of our ma-

terial structure are being reared, may we not with profit watch more closely the building going on in our own consciousness, to see that each thought is fit to be judged by the great overseer and found to be true to Principle?

"Therefore thus saith the Lord God, Behold, I lay in Zion for a foundation a stone, a tried stone, a precious corner-stone, a sure foundation: . . . Judgment also will I lay to the line, and righteousness to the plummet: and the hail shall sweep away the refuge of lies. . . . And your covenant with death shall be disannulled, and your agreement with hell shall not stand."

The One Hundred and Nineteenth Psalm.

L. M. C.

THE 119th Psalm is the longest of the sacred songs. It has a hundred and seventy-six verses and is divided into sections of eight verses, each section being headed by a letter of the Hebrew alphabet. This Psalm was written by Ezra, the "greatest teacher of the Scripture," to be sung by the captives on their homeward journey from Babylon to Jerusalem. It is an elaborate apotheosis of the law of God, and is intended to show the blessings which spring from piety and obedience. The word "law" occurs twenty-five times; "statutes," twenty-two times; "judgments," twenty-one; "commandments," "precepts," and "testimonies" are each used more than twenty times. This reiteration seems intended to show the need of constantly recalling the laws to mind.

"O how love I thy law! it is my meditation all the day." "Great peace have they which love thy law: and nothing shall offend them." "I have inclined mine heart to perform thy statutes alway, even unto the end." "Thou art good, and doest good; teach me thy statutes." "Seven times a day do I praise thee because of thy righteous judgments." "Thou hast commanded us to keep thy precepts diligently." "I will delight myself in thy commandments, which I have loved." "Blessed are they that keep his testimonies, and that seek him with the whole heart."

Law, as here employed, is a generic term, and denotes whatever is commanded by one who has a right to require obedience. "Statute" refers to a particular law, and precept evidently indicates some direction or rule which was authoritative. The "commandments" referred to undoubtedly point to the Decalogue as given to Moses, while "testimonies" are in reference to the "Two tables of testimony," written with the "finger of God," which were brought down from the mountain and kept so sacredly in the ark.

Christian Scientists who are endeavoring to find their way out of the mazes of mortal mind, may learn a lesson from the Israelites of old, who sang and sang again of their laws, precepts, and commandments. Thus should we perseveringly seek to have all of God's laws impressed upon our thought, and in so doing we should include the by-laws and rules contained in the Manual of The Mother Church, which are given us by our beloved Leader as a guide through perplexing situations into the promised haven of harmony. We should each consult the Manual and become familiar with its contents, and prayerfully meditate upon all its requirements. Thus, by a better acquaintance with its counsel and requirements, we shall be prepared to take the requisite steps in patience, humility, and self-abnegation. We shall also be forearmed with the true defence against malice or strife, we shall be enabled to give prompt and scientific replies to questions regarding our rules and regulations, "and be ready always to give an answer to every man that asketh" us a reason of the hope that is in us, with meekness and fear. In Christian Science we can indeed say with love and gratitude, "Thy word is a lamp unto my feet, and a light unto my path."

Harmful Negation.

REV. WILLIAM P. MCKENZIE.

THE public teachers, pastors, and others who decry Christian Science, have need to be careful lest the arguments they use wrest from them historical Christianity as well as practical and operative Christianity. Taking the authentic testimonies in regard to healing, such as maintain their proof in lives devoted to higher ends than formerly, a larger number may be known than are recorded specifically in the New Testament. To deny the hand of God in practical and present Christianity, to deny the continuance of God's power to heal, is close to denying that such power was ever manifested. If the testimony of living men healed of incurable diseases, redeemed from atheism and despair, re-born by purification of mind and revelation of spiritual truth,—testimony sometimes given under oath, and unshaken by all the subtle or brutal cross-examination of adverse attorneys,—is to be rejected, how shall we be assured of the credibility of those who testified so long ago? We agree to Euclid's propositions because we find them provable now. If it be found that the Science of Christianity is provable now, and this is the experience of Christian Scientists, how satisfying and faith-inspiring becomes the record which tells how the sick were healed in past times when God was revealed by Jesus to his disciples as the healing and saving Mind.

Gulliver and the Lilliputians.

ALICE L. HAMILTON.

WHEN looking recently at a picture of Gulliver bound by the Lilliputians, the thought of its meaning in the light of Christian Science came to me. Gulliver seemed typical of mortal man, and the Lilliputians of the little errors which bind and oppress him. In the story we are told that they were only able to tie him with their little threads (which to them seemed strong ropes) because he was asleep. If he had been awake and watchful he would have laughed at their belief that these threads had power to hold him, but in his sleep he had let them creep all over him and bind him securely, as they thought. In the picture, even his hair is fastened to little pegs in the ground, so that he had to make a mighty effort to get free. Each little thread alone could have been snapped at once, but a mighty and prolonged effort was needed to break so many. Thus it happens that, if we are dozing and not watchful, we will surely find that numerous threads of error have been fastened upon us, and it will require much faithful work to break or undo them.

[Written for the *Sentinel*.]

There is a Land.

YSABEL DE WITTE KAPLAN.

THERE is a land where Truth abides,
And Love, and Life, and harmony.
Ah, trav'ler on your weary way,
Tarry not, tho' skies seem gray,
And rough and long the road may be!

Let not the barriers o'er the path
Hinder our journey towards its goal.
Know that, surmounted, they will mean
A brighter sky and fields more green.
Courage, and onward, then, my soul!

There is a land where Truth abides;
The road is straight, and broad, and free.
Lift but your eyes from off the sod,
And know that you are one with God,
And Love, and Life, and harmony!

Selected Articles.

The Spread of Disease.

The free and unscrupulous advertising of disease symptoms is conceded by most people to be harmful, yet very little is said against such practice, and few note to what extent disease becomes prevalent because of it. When we consider the robust health which our ancestors possessed in the days when less was known of disease, we are obliged to admit that with the increase of material knowledge has come an increase of maladies. Many types and symptoms of disease exist to-day which were not known in earlier days, and it might be well to study the cause of this condition.

It is claimed that physicians are better able to cope with certain forms of disease than in former years; that they deal more effectually with contagious diseases. This may be true, since fear is a great factor in the production of disease, and especially those of infectious and contagious types. It is probably easier for the kind, assuring physician to heal acute sickness than to overcome chronic troubles. This can be accounted for on the basis that all causation is mental, that disease operates in the mind of the patient before it is manifested on the body. Though a patient may not be conscious of any fear of specific disease, his fear of the general uncertainty of health and the laws of contagion places him in a position where he has a standing invitation to all sorts of trouble. He should dwell in the consciousness of the omnipotence and omnipresence of God, and thereby close the door against the intrusion of disorder. It is reasonable, therefore, to conclude that much ado about disease and trouble tends to keep the mind filled with prospective calamity, and not only fosters unrest but makes the individual a more easy prey to disease and trouble. Even accidents and catastrophes more readily reach the fearful than those who are calm and composed. Sensational stories about casualties, vivid pictures of disease in its varied symptoms, are not healthful, for the reason that whatever is entertained in mind is likely to be expressed in body. They tend to obscure exalted ideals. We should keep in mind the thought of God's child as protected, sheltered, and sustained by the divine presence and power, if we would be free from fear and anxiety. Thus we would conform to the requirements set forth in the Scriptural text, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you."

There is no promise in the Scriptures of safety and rest in the contemplation of evils, discords, imperfections, and diseases. This is the promise, "Thou wilt keep him in perfect peace, whose mind is stayed on thee." Many an individual, after the careful study of a specific disease, has contracted a well-developed case of that disease. Many a person, by the careful study of symptoms in a medical advertisement, has planted seed from which he has developed the very symptoms and disease which have been so vividly portrayed to him. How often a retrospection of one's troubles has brought about their renewal. In the writing of news reports, and in the recounting of dangerous experiences and horrible conditions, the temptation is to indulge in a vivid portrayal, if not an exaggeration. Even Christian Scientists, in their effort to make a good impression by presenting a striking contrast between the "before and after taking," sometimes enter altogether too much into the horrors of disease; they thus make it seem the more real.

I am sure Christian Scientists intend to be honest, and I am equally confident that if their portrayals of disease are presented in a simple, conservative way, they will still be sufficiently marvelous and impressive. We may assume that all speakers and writers desire to present a fair and honest statement of facts, but unless they are restrained by a knowledge of the harm which is produced by evil tongue and pen pictures, they are likely to yield to the

temptation of exaggeration, and thereby effect unnecessary ill.

We are of the opinion that this practice, in itself, is more conducive of disease than the much-dreaded contagion, and the mere fact that it is encouraged by the very men who pretend to be philanthropists, and to be aiming at the protection of the community, betrays a lack of consistency and indicates a straining out of gnats and a swallowing of camels. It is strange how some people, under the pretence of being public benefactors, are guilty of the grossest violations of the public welfare. Some spend a lifetime complaining about the selfishness of those politicians who are in power, simply because they desire to be in their places and in turn exercise their selfish authority. What we need is to know that divine Principle governs man. When it is understood that the same power which protects and saves from disease provides for all our wants, and when mankind is governed accordingly, then disease, poverty, trouble of every description will begin to be permanently destroyed.

ALFRED FARLOW.
Boston Times.

Science and Immortality.

Dr. William Osler, in his Ingersoll lecture on "Science and Immortality," finds nothing in scientific discoveries to buttress the idea of immortality. But, on the other hand, he finds nothing which disproves it. The most that he can say for himself is that he would rather be mistaken with Plato than be right with those who deny altogether the life after death.

But it need occasion no surprise that modern science finds no proof of immortality. The processes and the instruments of science are not fitted for such an investigation. It remains forever true that the things of the spirit are spiritually discerned. It is not to the telescope and the microscope but to the human consciousness that the appeal lies. The soul is not less real because its connection with the outward physical frame and its control over it remain inscrutable mysteries.

It is upon the sense that God is good and just, that this life is incomplete and full of inequity, that the soul has too great dignity and value to be extinguished at death, and that the craving for immortality would not have been implanted in the human heart if it were not to be satisfied,—upon these and upon whatever revelation is made to men through written words or spiritual communications, upon these and not upon the processes of science, the hope of immortality must rest.

Editorial in *The Boston Journal*.

Another Physician becomes a Christian Scientist.

Evanston people were surprised this week to hear that Dr. F. H. Edwards, 1562 Maple Avenue, had joined the Christian Science Church. According to members of the church congregation, Dr. Edwards was made a member of the church Sunday morning. While Dr. Edwards' action was a surprise to many of his friends in Evanston, it had been known for a long time by members of the Christian Science Church that he intended joining that body. Dr. Edwards is a well-known physician and has enjoyed a lucrative practice in Evanston for years.

Dr. Edwards graduated from Rush Medical College and later from the Chicago College of Homœopathy. He studied at Vienna and other places in Europe, and has practised medicine ten years, six of which have been spent in Evanston. Much of Dr. Edwards' time has been given to scientific and philosophical research, and he began the investigations about fifteen years ago which culminated in his joining the Christian Science Church.

Evanston (Ill.) Index.

The Lectures.

Little Rock, Ark.

Mr. Edward A. Kimball of Chicago gave an able lecture last night [November 28] to a good audience at Old Concordia. The speaker was introduced by Gen. B. W. Green, who said in part,—

Ladies and Gentlemen:—We may not comprehend the teachings of Science and Health, but we appreciate the lives of its followers. There are in our city many living epistles of this faith, known and read of all men. It is gratifying to me to be able to testify to their good work, their pure and useful lives, their long suffering, kindness, gentleness, meekness, temperance, faith, joy, peace, and love. We are told in the Scriptures that these characteristics are the fruits of the Spirit, and they add to this summing up of character, obedience to the divine command, heal the sick.—*Arkansas Democrat.*

Aberdeen, Wash.

That Bicknell Young is an interesting speaker was evinced by the attendance at his lecture on Christian Science at the Congregational Church last evening [December 4]. His address was a most notable one. He was introduced by J. B. Bridges of this city, who spoke in part as follows:—

It is my belief that the breadth and depth of a man's education, intelligence, and thought is measured largely by his willingness to hear and heed the arguments of others. He who confines himself to his own narrow life, he who is not willing to become acquainted with children other than those of his own thoughts, he who would compel all others to learn from him and who will not be taught by others, he who lives in the satisfaction of his own learning and wisdom, has not and will not accomplish much good in this world.

An idea should not be refused admission simply because it is new, or startling; an argument should not be rejected simply because it is novel and does not follow the usual beaten path which our minds are accustomed to follow.

We know this, that Christian Science has such wise and learned advocates that we may well hesitate to reject it, without first having given it due consideration. Of this one thing I am convinced: that the ideas, the sentiments of this church are as grand, as beautiful, as sublime as the human mind can conceive of or the human heart encompass. Whether these beautiful ideas and sentiments can be made to materialize, and be made of practical use in this cold, complex, and doubting world, I do not know.

Aberdeen Bulletin.

New York, N. Y.

On Friday evening, December 9, Judge Septimus J. Hanna delivered a lecture on Christian Science at Second Church of Christ, Scientist, New York City. He was introduced by Mrs. Laura Lathrop, who spoke in part as follows:—

My Friends:—For twenty years I have been proving that Christian Science can heal the sick. I have seen shortened limbs lengthened, crooked spines made straight; I have seen the worst forms of heart disease, scrofula, cancer, tumors, and other severe diseases entirely healed; but, better than all this, I have seen the wonderful regenerative powers of Christian Science. It is a great deal, my friends, to have Christian Science bring to you the hope that it does, to tell you that good is the only substance, that joy and happiness, health and strength are the great realities, to tell you that sorrow and suffering, sin, sick-

ness, and death are the unrealities; but it tells you more than this. It tells you that by studying the Bible and "Science and Health with Key to the Scriptures" written by Mrs. Eddy, you can prove this statement, and through the proving of it, lift your burdens.

Jesus came to bring full salvation, and salvation would not be full did it not heal the sick. Jesus understood this, for he not only saved the sinner but he healed the sick and raised the dead. Christian Science teaches us how to acquaint ourselves now with God and be at peace. It teaches us how to understand God and thereby find life eternal. It teaches us to love Him with all our heart, our mind, our strength, and to love each other as Jesus loved us.—*Correspondence.*

St. Louis, Mo.

Hon. Clarence A. Buskirk, former Attorney General of the State of Indiana, delivered a very able and most interesting lecture at the Olympic Theatre, January 15, on the subject of "The Provable and Practical Gospel of Love," under the auspices of Second Church of Christ, Scientist. The house was packed, there being from two thousand to twenty-two hundred people present. The lecturer was introduced by Judge J. E. McKeighan of St. Louis, who said in substance,—

A few weeks ago, in a lecture in a neighborhood of this city, it was truly, as well as wittily, said by one of our Christian Science lecturers, that "Christian Scientists do not profess to be better than others, but they do profess to be better than they were before they accepted Christian Science." Those of us who have been fortunate enough to have derived the benefits which follow Christian Science study and experience, know that it brings to its followers improved physical health as a sure and certain companion of increasing spiritual understanding and growth.

Sandusky, O.—Hon. Clarence A. Buskirk, January 8.

Growth in Chicago.

ANNUAL meetings of the six Christian Science churches in Chicago and one in Evanston were held last night [January 12] and officers were elected for another year. All of the meetings were well attended.

The last year has been one of great growth for the denomination. Although definite figures were not available yesterday, it was estimated that the increase in membership in this city since the last annual meeting has been between twenty and twenty-five per cent. The Evanston church has had an increase in membership of about twenty per cent. The growth of the denomination since the first church was established, almost a score of years ago, has necessitated, from time to time, the founding of new churches. To accommodate the increased membership, Fourth and Fifth Churches have constructed magnificent new homes, the former at Harvard Avenue and Sixty-eighth Street, and the latter in Madison Avenue near Forty-ninth Street. These are now under roof and will be ready for occupancy in the spring.

Membership in First Church has increased to such an extent that the organization of another church in a comparatively short time is being discussed. The percentage of increased membership has been evenly divided between the different organizations.—*Chicago Record Herald.*

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

From the Isles of the Sea.

Nassau, N. P., Bahamas, January 16, 1905.

Reverend Mary Baker G. Eddy, Concord, N. H.

Dear Leader:—We, the Christian Scientists in Nassau, wish to convey to you our thanks and gratitude for your kind thought expressed in sending copies of "Rudimental Divine Science" for distribution here. We feel sure that they will bring a blessing to those who receive them. We are endeavoring to show forth in our lives our gratitude to you for the understanding of Truth which your pure life has enabled you to receive and give forth.

We remain, dear Leader, in the Christ-love.

T. H. C. LOFTHOUSE.

On behalf of the Christian Scientists in Nassau, Bahamas.

MRS. EDDY'S REPLY.

Christian Scientists, Nassau, N. P., Bahama Islands.

Beloved Brethren:—May you in a distant isle of the sea know "no night there," no sorrow, no pain. May His peaceful presence guard and guide you.

Lovingly yours,

MARY BAKER G. EDDY.

"One thing is needful."

THE prominent place which the healing work of Jesus and his immediate followers occupies in the New Testament record of our Master's earthly career, justifies the emphasis given by Christian Science to the need of similar work to-day, and those persons who have criticised the amount of space which our periodicals devote to testimonies of healing should bear this in mind. The fact that Jesus gave so much attention to this work, and commanded his followers to do the works that he was doing, leaves no room for doubt as to his estimate of the importance of spiritual healing as an integral part of his gospel, an essential of the Christian life. His answer to John's messenger certainly showed that by his "mighty works" he hoped to establish the truth of his claim to be the Messiah.

That Christian Science is Apostolic Christianity must be established by practical results obtained in healing the sick and reforming the sinful, and it is our duty to make known these fruits of its teachings. No matter how pious Christian Scientists may be, or how regularly they attend the services in our churches, they differ but little from other good people unless they are able to show forth in their lives some measure of the healing gospel commended and commanded by our Master.

Rev. William J. Dawson, the well-known English evangelist, who is now in the United States, recently said in a sermon, "If Christ had remained only the poet of the Galilean Lake, there would have been no redemption for you and me. He would have added something to the world's wisdom, but he never would have broken up the depth of the world's heart. . . . We are at the end of a great many things. We are at the end of materialism as a philosophy, if not as a practice, for thinking men have given up materialism as a theory of the universe. We are at the end, also, of the theory that human salvation can be obtained by purely social means. We have tried it. Some good has been done, but it has not gone very deep.

We have come to the end pretty near of our faith in culture as being able in itself to do all that is necessary for the redemption of mankind. It can do a great deal, no doubt, to help us, but culture can prove just as hostile to virtue as is ignorance."

These words indicate a recognition that mere intellectual or perfunctory theology is not doing the work of Christianity, and that something more and better is needed if humanity is to be saved. Christian Scientists feel sure that this something is the healing of sickness and sin, and the testimonies of the thousands who have experienced the blessings of this latter-day revival of Apostolic Christianity surely point to the ultimate salvation of the race, as the works of the Master are given equal recognition with his words.

ARCHIBALD McLELLAN.

Law and Testimony.

IN every legal trial the essential elements of law and testimony must be considered. To both of these, frequent reference is made in the Scriptures, and since the earliest days mankind has had, perforce, to give heed to them, for the false sense of law and the overwhelming weight of false testimony concerning man has made of mortal existence a long and hopeless trial, in which equal condemnation has seemingly been meted out to the just and the unjust, and because of this many have cried out in the poet's mournful strain,—

Why urge the long, unequal fight,
Since Truth has fallen in the street,
Or lift anew the trampled light,
Quenched by the heedless millions' feet?

That such a suggestion should come to those who accept as true the testimony of material sense, with its terrible evidences of sin, disease, and death, is little wonder, indeed the belief in their reality explains, if it does not justify, the despairing outburst of Job's wife, "Dost thou still retain thine integrity? curse God, and die." How great, then, must be the glad surprise of those who grasp for the first time the full import of the apostle's words,—*"If ye be led by the Spirit, ye are not under the law,"* and his triumphant declaration of the annulment of the supposed law of sin and death by the operation of *"the law of the Spirit of life."*

When a litigant knows that he has the law on his side he is prepared to abide the final issue, regardless of the adverse testimony which may be presented. Such was the attitude of Christ Jesus towards the opposing material sense of the world which denied his declaration of the reality of spiritual law and rejected the evidence of its power which he offered. He said to Nicodemus, *"We speak that we do know, and testify that we have seen; and ye receive not our witness."* John said, *"He that cometh from heaven is above all. And what he hath seen and heard, that he testifieth; and no man receiveth his testimony."* How unspeakably sad are these words, and how we should rejoice that they no longer apply to mankind at large, as they did when they were uttered. To-day there are thousands who not only accept every word of his testimony and seek it as men seek for "hid treasure," but who also offer their own corroborative testimony of the truth of every statement he made,—testimony which proves indisputably that the law which heals the sick and the sinful is still in force. These have learned, in Christian Science, that spiritual law and testimony may not be divorced, inasmuch as, together, they constitute our sure defence when we are charged with contempt of that mortal opinion which arrogates to itself the sacred name of law.

In the preparation of our defence against error we should never forget that the character of a witness is always taken into account, hence the necessity for living the truth we profess to love. This done, we shall hear the grand chorus of triumph over all evil, *"now is come salvation and strength,"* for the accuser that has so long denied the testimony of Truth, the accuser that would have us believe we

can neither heal nor be healed by the law of Spirit, is "cast down," and how? A mighty voice from heaven answers, "By the word of their testimony." Are we fully aroused to the deep import of this Apocalyptic prophecy, and are we, as individuals, aiding to the utmost in its fulfilment? If our supreme desire is to do this, we shall find countless opportunities to prove our sincerity. The law which sets free has been made known in our text-book, Science and Health, and although its validity is denied by the carnal mind, the evidence of its operation is now overwhelming. We need to testify, however, not only by our faithfulness to Truth and our fearlessness in telling of its power, but by extending the protection of a tender Christ-like love to all "our brethren" who, by their testimony, challenge the world, that together we may rejoice in beholding "the kingdom of our God, and the power of his Christ."

ANNIE M. KNOTT.

"Whom ye ignorantly worship."

To determine the "hidden influence" of a life, one need but acquaint himself with the law which that life honors. Whether the homage be conscious or unconscious, we aid in the fulfilment of that law whose sovereignty we recognize, and its moral quality is invariably disclosed in the effects of our thinking.

At an early date in their experience most Christian Scientists awaken to a realization of the fact that, however worthy their conscious motive or instinctive impulse, they have, in truth, been giving effectiveness to the most cruel and unjust mortal laws by consenting to and declaring their authority and power; and the exceeding sinfulness of sin is revealed to them, as never before, when they perceive that it is constantly converting human sympathy and would-be kindness into instruments of torture, and of death perchance, for those most tenderly loved.

All thoughtful people recognize the causal relation, in human belief, of the laws of heredity, contagion, decrepitude, the incurability of disease, etc., to human sorrow and suffering. All know that, by their heartless and unjust edicts, the little ones have been beaten with many stripes and the aged burdened with a weight of woe; that their rule has defeated hope, shattered faith, dried up the fountains of joy, and filled the centuries with the outcries of agony. And yet men have not simply tolerated the outrage of these impositions, they have insistently affirmed the legitimacy of their sway and the inevitableness of their scourge. More than this, Christian people have dignified their rule by recognizing it as an ordering of nature, even a part of the divine provision, and under these circumstances is it any wonder if many have questioned the loveliness of a God who is thus accredited?

To human sense the rule of these mortal laws is subtle, insidious, irresistible, and utterly unfeeling. They ask no vote of confidence and are not honored or sustained by an open ballot, they find their sufficient basis and support in the world's erroneous beliefs, superstitions, fears, and false sympathies. To illustrate: Some months since a group of teachers were talking in subdued tones of the sad lot of an associate who had recently suffered the amputation of a limb, and one was overheard to say, "The trouble began in his foot, and as soon as I learned the nature of the sore, I was sure that he would lose his leg if not his life!" "Yes, poor fellow," answered another, "and this is but the beginning of the end. The disease is liable to break out again in the other foot, and then—" the voice grew inaudible, but a murmur of sad assent passed over the company as they turned, with heavy hearts, to their several tasks. The listener had learned somewhat of Christian Science, and was made very thoughtful by the incident; doubly so, a few months later, when it was again brought to his remembrance by one who said, "The Professor has gone. You know he lost a leg some months ago, and his friends all feared then that the trouble would soon

break out again, and so it did. How dreadful these things are,—and the poor wife, how my heart bleeds for her!"

They were all kind, loving men, and gladly would they have made any sacrifice for their suffering friend, and yet in their thoughtless assertion and support of the mortal laws which brought him to an untimely end, they were not *for*, but *against* him.

An awakening to the startling truth respecting these things, which is revealed in Christian Science, will bring to every thoughtful heart an uplifting appreciation of the significance to human history of Mrs. Eddy's life-work and ministry, for all must see the completeness of the transformation of thought and habit which is to be effected in the life of every true Christian Scientist, when the laws of God—of eternal and unchanging good—alone, are honored, and every thought is brought into captivity "to the obedience of Christ."

More than this, every awakened man will be humbled by the realization of what his past ignorance and false beliefs may have signified in fastening affliction upon the innocent and the well beloved. As he sees the little children whose wan faces and deformed limbs tell of the cruel dominion of the mortal belief he has so long honored as law, and so often buttressed by thought, word, and deed, he will voice as never before the publican's humble cry, "God be merciful to me a sinner!" And as he rises from his knees, it will be to swear eternal fealty to—

The chivalry
That dares the right, and
Disregards alike the "yea"
And "nay" o' the world.

It will be to consecrate, as never before, his every moment and his every power to the realization of our "high calling of God in Christ Jesus," to resist every wicked and cruel thought or thing, as he serves and asserts, against every assault of temptation and of fear, "the law of the Spirit of life in Christ Jesus" which alone maketh free "from the law of sin and death." JOHN B. WILLIS.

Letters to our Leader.

Southsea, England, January 26, 1905.

Dearest Sister:—A few days ago Mrs. Bannon, Queen's Gate, London, S. W., showed to my husband and myself an original Icelandic Bible, printed at the time of the Reformation. Remembering your reference in Science and Health to the Icelandic translation, I looked up the passage in Genesis,—Good creating man after His good Mind,—and found God called "Gut"* (good), all through the first chapter. And where it reads in the Common Version in second chapter, "Lord God," I saw the words "Gut DROTTER" (Good BEAST OF BURDEN). Tier is a German word as well, and means beast or animal. Jesus must have referred to this in saying, "Come unto me all ye that are burdened and heavy laden," also St. John in speaking of the image of the beast. In St. John's vision of creation I read again "Gut" only. I should like to mention that I am German by birth.

I am happy to have had this opportunity of writing to you, to be able to express the unlimited gratitude of my husband and myself for the revelation of Truth through you, and that you have thus been the means of our awakening out of a dark sense of materialism into a glorious and infinite light.

Yours lovingly,

HELENE HEUGH.

*Spelled in German and pronounced long u.

Philadelphia, Pa., December 16, 1904.

Rev. Mary Baker G. Eddy, Concord, N. H.

Dear Mrs. Eddy:—A friend who recently became interested in Christian Science, had occasion, a few days ago, to visit a local second-hand bookstore, one of the largest of its kind in America. While there, it occurred to him that he might be able to procure a used copy of Science

and Health. He made known his desire to the manager of the store, who replied, in substance, as follows:—

"That is one book, which, though it has had a very large issue, is rarely sold at second hand. We seldom have one offered to us."

On every side, tiers upon tiers of shelves and racks were piled high with the works of thousands of the world's writers, ancient and modern, great and small, profound and shallow, representing well-nigh every shade and phase of literary expression in the realms of philosophy, poetry, science, art, fiction, and religion, but among the almost innumerable volumes, was not one of the more than 300,000 copies of the Christian Science text-book.

Lovingly yours,
FRANK BELL.

Appleton, Wis., December 15, 1904.

Dear Leader:—To-night, while comparing your present edition of Science and Health with the edition of two volumes, I realized in a measure the labor that you have had during these twenty years. After reading the chapter called, "Demonology" (in the edition of two volumes), I felt that I must express my gratitude to you for opening this silent mental seal, making plain the working of mortal mind, and also how to attain the Christ Mind which obliterates the human or mortal mind. You were, indeed, brave. To-day, your book speaks for itself in the good that it has done, for all who have caught even a gleam of its truth. It has helped me in every way, and surely for this I am grateful. My desire is ever to realize the Christ Mind in myself and others, and thus to aid you.

Lovingly, your student's student,
WILLIAM C. KAUFMAN.

London W., England.

Beloved Leader:—For nearly seven years Science and Health has been to me a pillar of cloud by day, and of fire by night, lighting the way of truth, making the Bible clear, and enabling me to understand, in a small degree, the One "altogether lovely." It has been to me, and to members of my family, a very present help in time of trouble. The blessings we have received are countless. May we express to you our deepest, heartfelt gratitude and love for your unselfish labor which is blessing the whole world.

Lovingly yours,
G. ALEXANDER.

A Pearl from Abroad.

London, S. W., January 10, 1905.

Rev. Mary Baker Eddy, Concord, N. H.

Dear Leader:—The workers in the Sunday School of First Church of Christ, Scientist, London, England, have asked me to express to you something of the gain that has always come to them in striving to follow, with absolute loyalty of thought, your loving guidance. It is a great pleasure to them to know that, in their endeavor to put the teaching of our text-book into practice, they were led to anticipate the new by-law, and so were found teaching in exact accordance with its direction. Even when they have not clearly understood the guidance you have given them, they have realized how, in your own words, they were ready if they were but willing to obey, and in their conscious loyalty they have gained some perception of that law of obedience which made our Master "as a little child."

You have shown us that to become as little children is to gain the highest qualification we can have as workers in the Sunday School, for as we begin to understand how to be simple and faithful, as are they, we begin also to understand and to possess that which is the chief glory of childhood, the power to keep ourselves "unspotted from the world."

FREDERICK DIXON.

Testimonies of Healing.

In my old thought I believed that to help one's fellow-man in every way, but more especially in a religious way, was a part of each one's duty. Now the sense of duty has slipped away, and in its place I find a longing, oh, so great, to have every one share with me the knowledge of this beautiful truth. I think I am right when I say that no one but a Christian Scientist can appreciate the joy, the peace, and the freedom which I have felt ever since I became interested in Christian Science. I had never been a strong girl, but in the winter of 1900 I became so ill that I had to give up my studies and many other duties. Extreme nervousness and melancholia were said to be the trouble. My doctor gave me first one kind of medicine and then another, and ordered me to walk as much as possible. I can truthfully say that I followed his instructions as closely as I could. The walking I could not always manage, for at times I was very weak and often suffered great pain. My appetite left me, and I was subject to long crying spells which were most distressing to my kind relatives. I was under the doctor's care from January until the middle of July, when I went to the seashore, well supplied with medicines and with the doctor's words ringing in my ears: "If you are not better when you return, you may need to have an operation performed, and even after that you must not expect to be entirely free from nervousness."

I spent six weeks at the seashore, living most of the time out of doors and doing all I could to grow well and strong; but, I must also add, living with the dread thought that I had inherited melancholia from my father, and that I had it in an exaggerated form. I shall not dwell on the misery of those awful days and nights, for on my return to Brooklyn in September my aunt told me of Christian Science. She knew very little about it, but we agreed that at any rate it would do me no injury. The blessed relief that came to me almost immediately, has come to many through Christian Science, but no one, I am sure, is more grateful for it than I, though I did not seem so at first. I thought it was all very well that I should be healed by Christian Science, but that I should attend the church services, or read what seemed to me the dry literature, was quite too much to expect. But again I was led to it, this time to gain relief from a trouble which I now know to have had no more reality than the envy and jealousy which caused it. It seemed that an irreparable breach had come between me and one whom I loved dearly. Again my troubles dissolved, as darkness before the light, and now I am thankful for the understanding which enables me to know that they can never return, for they were nothing but bad dreams and, as we all know, a dream is but a phase of belief which vanishes when one awakes. I am awake now, and I am striving to show others the beauty of this glorious truth which makes free. I have proved in many ways that the Principle of Christian Science is perfect, and that the truth never fails when it is strictly adhered to. Discord in my home was one of the errors I had to meet, and I have had many beautiful demonstrations of the power of Love over selfishness and inharmoniousness.

Until I came to St. Johns nothing was known of Christian Science here, as there was not another Scientist on the island, nor within two and a half days' journey. Now one of my friends is reading our literature and trying to become a Scientist, and another friend has accepted the faith and has proved its truth on several occasions. We two read the Lesson-Sermon on Sunday. Here, on the most easterly point of land on this side of the ocean, where we can see the broad Atlantic, we read the same Lessons that our fellow-Scientists all the world over are reading. We who are in the isolated places of the world have indeed reason to be grateful to our Publishing Society for its noble work. To the friends who have so kindly helped me, to my patient teacher, and to that dear one who

made known to me this glorious truth, I would show my gratitude by earnestly striving to let my light shine before men, humbly knowing all the while that of myself I can do nothing, but I can apply, every hour of the day, the knowledge that it is God who worketh in me, "both to will and to do of His good pleasure."

BESSIE BERWICK, St. Johns, Newfoundland.

I beg to enclose a testimony from a lady residing in this Field, whose healing has occurred recently. The writer of it will be very grateful for its publication in our periodicals. I myself am writing to you because I can vouch for its truth.—W. W. WILDING, M.R.C.S., L.R.C.P.

The writer of this letter, which refers to the following testimony, was a practising physician for twelve years and is now a Christian Scientist.—[ED.]

I feel very grateful for the help Christian Science has been to me, as I was under the doctor's care for nearly twenty years. My trouble centered in the brain and spinal cord. I suffered great pain in my head and yet more dreadfully in my back, and began to have shaking attacks in one arm, which gradually reached all my body. At times my head, arms, and legs would all be shaking, and these the doctor called spasmodic attacks. The shaking was followed by the cramping of my limbs, and then loss of power. I tried going away for change of air, and all the other means that the doctors could suggest, but with very little benefit. If I did gain a little, I always soon lost it. Music had a strange effect upon me,—I lost consciousness if a band was allowed to play in passing my home, which was a great trial as I was very fond of music. For six years I was not able to walk, or move my legs at all, and for the last three years, after an attack of influenza, I was in bed most of the time. My back was so stiff at times that it could not be bent, and for eight or ten days at a time my arms became like my legs,—perfectly powerless. I was not able to move even a finger, having to be both washed and fed. For ten years I was not able to move my back or even turn myself in bed. The doctor plainly saw that my body would be completely powerless, and at this time advised me to try Christian Science, since it had come to his knowledge that a case had been marvelously healed by it.

I did so, and am thankful to say that in a few hours after treatment I regained power in my legs, and now have recovered completely from all signs of paralysis. My joy at regaining my liberty, after being helpless so long, was very great. Soon after, however, I fell and broke my leg, but that has been healed, and I am truly thankful to God for His healing love revealed to me through Christian Science.—E. TWEEDALE, Rochdale, Lancashire, England.

It is with gratitude that I write of my healing in Christian Science. I was wholly unable to do anything, except to walk the floor and rock in a chair, and the physician called my sickness nervous prostration. At the time I was taken ill, my husband, who is a physician, was out of the city, and not knowing how bad a condition I was in, he wrote me to call in another physician,—a friend of his. After examining my case, this doctor told me that if I was not very careful I would lose my mind. I could not sleep and did not care to eat. I was steadily getting worse, and thought of committing suicide, for it seemed utterly impossible to live in the conditions which then existed. On my husband's return he was very much alarmed, and met the attending physician in consultation, but without any relief to me. He then took me to Toledo, O., to a brother of his, also a physician, who tried to cure me, but without any avail.

One day I cried out in my agony, Oh, if there were only something to cure one who cannot stand the suffering any longer. A short time after that my sister-in-law said to me, "I would not give up hope; I do not care if we both have

husbands who are physicians, I would try some one else." She then mentioned Christian Science (I had never heard the name before), saying its followers did not give any medicine, and that God did the healing. It was not very hard for me to give up the medicine, for I had seen that there was nothing in it for me, and when she told me of a lady who was being treated in Christian Science, and who was getting along nicely, it awoke an interest, and we went and I took treatment. I was not healed right away, however. I would get discouraged, and say I was not coming back any more for I was not getting better, though my friends saw that I was. Then my sister-in-law would go to see the practitioner, and I would always go back. Through the Christian Scientist's understanding of the power of God to heal the sick, I was healed, and now my life is full of hope and cheer.

I feel that words are empty to express what Christian Science has done for me, and is still doing. I have a heart full of thanks for our Leader, Mrs. Eddy, for the self-sacrificing life she has lived, which has enabled her to be the Discoverer of this wonderful truth.

MRS. ELIZABETH A. GEORGE, Dayton, O.

A little over a year ago I was suffering greatly with an inherited trouble,—salt rheum,—and my hands were raw, itching, and bleeding. Medical treatment having no effect whatever, my husband, who had looked into Christian Science a little, asked me why I did not try it, consequently I called on a practitioner and commenced treatment. At the time I was wearing eyeglasses for farsightedness, as without them the pain was always intense. At my second call the practitioner suggested that I take them off, which I did, and have never needed glasses since.

A stomach trouble which had existed from birth also disappeared, and I ate whatever I wanted and all I wanted without thinking that it might distress me. The salt rheum hung on, however, and with my many doubts and fears it grew worse; but I had a strong feeling that God was able and willing to heal me, and the practitioner was very patient and kind. It took a year before the healing was done, but to-day my hands are clear and entirely healed, and I am most happy that I kept on in Science.

Christian Science has helped my husband and myself in many ways, and the beauty of Science is that it helps in the smallest needs of our every-day life. Only those who have tasted and seen the goodness of God as revealed in this teaching can appreciate the love and gratitude that Christian Scientists have for their beloved Leader, Mrs. Eddy, and to all the kind friends who have helped them in the way to a realization of Immanuel.—God with us.

PAULINE E. BIGELOW, Boston, Mass.

I did not come into Christian Science through physical healing, neither had I any religious belief to give up. Through reading and thinking, my mother had left her church when we were children; but she always held a belief in a Supreme Being, who was not the cause of all the ills of the world. I grew up in the same thought, but I see now that it was a belief without understanding. When I first heard of Christian Science, over eleven years ago, I knew scarcely any English, and the dear friend who told me of it had but a limited knowledge of French. Her part was made still harder because I did not want to hear the Bible mentioned at all, nor even the name of God. In spite of these hindrances, my friend succeeded in explaining, half in English and half in French, what Christian Science is. I understood a little then, in a theoretical way, and I remember exclaiming, "How beautiful! How grand!" What I grasped of it that winter was very, very little, as I see it now, and for the three following years, during which English grew more familiar, what served to prove to me the truth of Christian Science was, that I had a few small demonstrations with my limited understanding of it. I

kept reading the few passages of Science and Health which I could understand well, and added some others all the time.

During the winter of 1894-95, I read Victor Hugo's "William Shakespeare." In it, he speaks of the great poets,—men of genius who lived through all the ages,—including Job, Isaiah, David, Ezekiel, and since he spoke of them so highly I felt that I must know them,—read them. My prejudice toward the Bible was the prejudice of ignorance. I opened the Bible, and saw how foolish I had been. I have always read the Bible in English as I do not realize the same benefit from the French version. My growth in Christian Science has been rather slow, because I firmly believed that I was good, and that I had very little to do to stay so, but under the searchlight of Truth I had to learn that this was not the case.

My gratitude for Christian Science, to Mrs. Eddy, and to the friends who have helped me along, is both deep and sincere.—F. DUCLOS, Evanston, Ill.

I have been relieved of fear and hate through Christian Science. I had a fear that threatened to terminate in insanity, as I worked in an asylum at the age of fifteen, and had some vivid pictures of insanity in my thought. I found that the study of Christian Science brings light instead of darkness. Not only was my fear of insanity overcome, but I have been helped and strengthened in many ways. I used to have dreadful headaches in which I seemed to lose my memory, whereas now I never have those headaches and there is an increasing clearness of memory. As the mental strength has increased, the physical has proportionately improved, till I feel that nothing needs to be done in a slack manner for need of strength. When I first began to demonstrate the power of Mind over the body, it seemed impossible to drag myself around, but I remembered the teachings of our Leader, and was thereby strengthened to do my duty. Instead of being faint and tired when I started my work, I felt strong and rested when I had finished it, which proved to me that Truth gives us all the strength we need. Many other ailments were overcome, such as hernia, backache, toothache, rheumatism of my right shoulder, etc. The last-named trouble seemed to follow disobedience in my children or their disregard for what I told them. When I took it home to myself, and corrected it by obedience to my Divine parent, I was pleased to see the children lovingly listen to my instructions and carefully carry them out.

I desire to give most loving thanks to God, and to Mrs. Eddy for all the help I have received through her. May all the dear ones through whose influence I have been helped receive a blessing in return.

ANNA E. PAULSON, Genoa, Neb.

I would like to tell, if I could, all the good that has come to me and my household through Christian Science, and give expression to the love and gratitude I owe to God for the blessings bestowed upon us and all the world through our Leader, Mrs. Eddy. The first demonstration of physical healing in Christian Science that I saw convinced me that this Science is the truth, and I was not long in trying it for myself, though the operation of putting off the old that I might put on the new, puzzled me sorely. I dreaded the criticism and opposition of those who saw not as I saw, which meant at that time practically every one I knew, and for a while I was depressed thereby, though I did not give up. I came, however, to understand something of how it is that with God all things are possible, and that I did not need to cover the whole ground at one step. My liberation from illness was rather slow, and really came only as my understanding grew. All who knew me were amazed at the change in my appearance, many telling me that they had supposed I was "not to be here long."

I am truly thankful for the bodily aid, but that is not

all. The study of Christian Science, as revealed in its textbook, "Science and Health with Key to the Scriptures," has given me a spiritual knowledge of God and of man's relation to Him that I would not exchange for anything earthly. There are struggles yet, in my endeavor to overcome sin and sickness, but the Master's words, spiritually understood and scientifically applied, in keeping with the teaching of Christian Science, have not failed me, and have enabled me to help others out of bondage.

SARAH J. BAILEY, Kansas City, Mo.

I wish to tell what Christian Science has done for me. A dear friend was helped by it many years ago, after suffering untold agony at a surgical institute. She often used to make her home with us for months at a time, and so led my mother and myself, also some others, to study and love Christian Science. I was troubled with catarrh, and it seemed impossible for me to breathe at all through one nostril, and I was constantly troubled with a cold. Besides this a serious stomach trouble had tormented me since childhood. In later years it grew worse, and the pain after eating seemed so unbearable that I finally feared to eat.

Our Christian Science friend was visiting us while I was thus suffering, and my mother asked her to take my case. She had helped me with headache, toothache, etc., but the catarrh and stomach trouble were slow in yielding, and as I was an only child there was much fear expressed by near relatives, besides many fears of my own to overcome. She asked me to study especially the third paragraph on page 462 of Science and Health, also to study in the Bible daily. Now I know that I am healed of both the catarrh and stomach trouble, for I can breathe freely through both of my nostrils, also eat and drink anything I like.

May God bless dear Mrs. Eddy and all loyal Christian Scientists.—CLARA HENNINGS, Chicago, Ill.

Two years ago I was an invalid, suffering from chronic ailments of eighteen years' standing, one of which was consumption. I had also suffered terribly for years with neuralgia and a nervous trouble my physicians had given up as incurable. I had tried many medicines and remedies without getting relief. Finally, our kind family physician, who had done all in his power to relieve my great suffering, told my husband that he could do no more but that change of climate might help me. I felt that I was doomed to suffer always. My life was so full of pain that I did not desire to live. When I had given up all hope, a kind friend begged me to try Christian Science. I took absent treatment and in three months I was healed, and now I know the truth that has set me free from all my suffering. I am well and strong and can do all the hard work I want to do without feeling hurt by it. The world seems new and God now seems very near to me always. I am happy and free and I give God all the glory. I also feel that I must tell of all the happiness and the good which I have received through Christian Science.

MRS. MARY F. PHILPOTT, Mount Ida, Ark.

I deem it a great privilege to testify to the merits of Christian Science. It has been my constant companion for nearly seven years, and I have seen some very beautiful demonstrations brought about by the understanding of this truth. I have been healed of epilepsy of several years' standing, after losing all faith that doctors or medicines could cure me. I found that I had not only been healed of epilepsy, but that a great mental change had taken place, and I began to realize that life had a different view for me, a view more beautiful and grand than I had ever anticipated. It opened up my true consciousness, and gave to me the thought, "Thy will be done," in terms that I never knew before. Though I have walked through deep waters, I

have stood firm to Christian Science, simply because I knew it to be the truth.

May God bless our Leader, Mrs. Eddy, more and more, is the sincere desire of multitudes who have accepted the truth that she has so nobly promulgated to a hungry and waiting world.—W. F. GUNSON, Brantford, Can.

It required disease, suffering, sorrow, a desolate home from which my wife had passed on, to lead me into the truth. Although an officer in an orthodox church for many years, and a firm believer in its teaching, I had not found rest for my heart until Christian Science dawned upon me. A few years before I came to any knowledge of the truth, I made application for a pension under the claim of "Malarial poisoning and its results," which, according to the doctor, included stomach, liver, and kidney trouble, supposed to affect my heart, together with frequent rheumatic conditions. My pension of fourteen dollars per month came to me about the time I began to look into Christian Science, and my diseased condition began to disappear on receiving class instruction from one of Mrs. Eddy's students. In a little while I felt that I was no longer an invalid, and each time my voucher came I was putting my signature to a lie. I tried to talk to my teacher about it, but could not express just what I felt; so I had to work out of this error myself. I debated for a long time, and had a fearful struggle. Mortal mind would say, "The money belongs to you, and you ought to have made application at the close of the war and had it long ago; you were paid in money not worth thirty-three cents on the dollar, and in justice it is yours." And what a time I had for many months. I began to go backward, became very depressed, and old ailments came up again in the struggle. I was losing my sense of the healing power of Truth which had come to me with class instruction. In the midnight of the tempest, Love whispered, "Lo, I am with you alway," and again, "God shall supply all your need according to his riches in glory by Christ Jesus," and again the clear teaching of our text-book, *Science and Health*, with assurance of the divine supply for all our need. These came to me over and over again with clearest tone. Finally I caught a great light from these words of Habakkuk, "Although the fig tree shall not blossom, neither shall fruit be in the vines; the labor of the olive shall fail, and the fields shall yield no meat; the flock shall be cut off from the fold, and there shall be no herd in the stalls: yet I will rejoice in the Lord, I will joy in the God of my salvation," and in the resolve which followed it I had rest. I then declared, "Pension, you must go." I returned my certificate of claim and voucher to the department, stating that through Christian Science I had been healed of my diseases, and that I wished my claim immediately cancelled. After a time a special examiner came to see me, to find out if I was in my right mind; but after a very pleasant visit he took my deposition and departed much pleased and surprised, he said, at the case. My request was soon granted. A deep, glad satisfaction came to me immediately; my work in Christian Science became more marked with wonderful demonstrations of the power of divine Love. Truth provides and protects with the same hand. What pleasing views we have from the writings of that wonderful woman—our Leader. I thank God that we are thus learning to know divine Love. I trust this may help some wrestling fellow-sufferers.

ROBERT WADDELL, West Mitchell, Ia.

I wish to tell what Christian Science has done for me and my family. It has been a great spiritual uplift to me, as I was subject to down-hearted spells which would last three and four days. My life then seemed miserable, but the truth has made me free, and such thoughts never enter my mind since learning of Christian Science. Through the reading of the good literature of Christian Science my

husband was healed of typhoid fever, in four weeks. He was never confined to his bed and never took any medicine, but walked a distance of one mile to a doctor's office to be convinced of what was wrong to the mortal sense. He was told it was typhoid fever, and that he would do well if he was able to go to work in two months. He was able to go to work on the Monday following and has been in good health ever since. We are very thankful to the dear practitioner who has been so faithful and kind to us. Our three little children have been healed of scarlet fever, whooping cough, measles, and other ills through Christian Science. We feel very grateful to Mrs. Eddy for this blessed truth.—MRS. HENRY GARRETT, Lancaster, O.

For the revelation of Christian Science to this age through our beloved Leader, Mrs. Eddy, our measure of indebtedness to God is, as the years pass, continually filled to overflowing. During the last seven years our text-book, "*Science and Health with Key to the Scriptures*," has unfolded to my vision the purity, perfection, and grandeur of God's creation; and has led me to see the Christ, made manifest in the flesh, reconciling us to the Father. Christian Science came to me when I had given up all hope of finding health, peace, or happiness in this world, and found me waiting with much curiosity to see what would be the outcome of the whole jumble of human thought and experience through which I had passed. But instead of passing through death, I was brought unto the portals of Life. My progress in Christian Science has been slow, and some of the old chronic ailments have yielded only by degrees; but strength and courage have been constantly given to me, while peace and happiness are becoming the realities of existence. Three years ago I married, and came out to start a new home in the West. Guided by divine intelligence, difficulties have been met and overcome, evils seen to be powerless, and mortal mind theories proved to be without foundation.

Living at a distance from other students, the Lesson-Sermons and the *Sentinel* and *Journal* have been of untold value to me. Words fail to express my gratitude to God for these and all other manifestations of Love. I rejoice to think of the true meaning of Church as given in *Science and Health*, and feel grateful for the privilege of membership within this church.

MRS. E. SIMPSON, Poplar Creek, B. C.

[Written for the *Sentinel*.]

The Awakening.

FLORENCE V. EDDS.

As wakes a babe from sleep, to lift glad eyes
And eager hands unto some best-loved face,
So woke I to the truth of paradise,
Dear Father-Mother God. Thou good and wise,
Impart to me Thy perfect strength and grace.

Backward I trace, thro' all the heavy night,
Signs of Thy patient watching. Thou hast healed
My weary doubts and fears. Before Thy might
The darkness fled, and all is rosy light.
Morning and Love have come! Thou art revealed!

Ay, Thou dost fill my life! No passing breath
Of seeming wrong can harm Thy very own.
Thou art omnipotent! No sin nor death
Is here. "I am the Life," Christ saith.
Daily I share with him Thy mighty throne.

God's child! the heir of God! O high, sweet thought!
To serve Him in the temple, and to prove
The steadfastness with which my soul is fraught.
How wondrously the perfect Mind hath wrought!
And I, the living image of His love!

From our Exchanges.

We are so conscious that our own purposes are not always the noblest and the best, that we are very apt, in seeking to interpret the will of God, to assume that His purpose in these respects is a counterpart of our own. Some have not hesitated to attribute to God a caprice, and sometimes a malignity, that, if manifested in man, they would unequivocally condemn. They recognize that the use of power is one of the severest tests of manhood, but they find it difficult to believe that the employment of omnipotence is controlled by the finest and noblest moral dispositions.

Certainly one of the most wholesome things that we can do, as we enter upon the new period that opens with the year, is to emancipate ourselves from unwarranted and ignoble conceptions of the relation of God to men. There is a great deal of preaching about the divine love, but very often the main thought of that great revelation of God's nature is completely missed. It is assumed that the divine love is practically synonymous with an easy overlooking of sin, whereas the contrary is the truth. If the love of God means the highest and greatest things, it means that God constantly and energetically desires that men shall have the best things in the universe and be fit to have them. It means that the life of every one of us is encompassed by a spiritual atmosphere and influence that are working for the highest realization of every kind of good for us.

The Watchman.

As one surveys the world of religious belief and ritual, one naturally turns to the ancient faiths that preceded Christianity. The significant fact in connection with them is that they, too, like Christianity, are in a stage of unrest, of dissatisfaction with institutional forms, and are convinced of the inadequacy of the older forms of statement. Throughout Asia, in India, Japan, China, Persia, reform is the watchword with an ever-increasing minority of intelligent Buddhists, Brahmins, and Zoroastrians. The coming of Christianity has forced a reformation movement in all of the great ethnic faiths, that is leading them to make aggressive missionary efforts in their own behalf, to expressions of greater regard for the welfare of the masses, to hearty identification with the patriotism of the hour in all its phases—as in the Japan of to-day.

The Congregationalist.

So the "Light that lighteth every man that cometh into the world" was always in the world, and always will be in the world as long as God is love and man has need of Him. The coming of Christ to the Church was in order that we might know that God is. It was the revelation of a perpetual incarnation; the revelation of an unseen but eternal presence. Too long we have stood at the foot of the cross or at the door of the tomb, and not seen the stone rolled away and the triumphant Saviour emerging. Too long we have thought of the life of Christ as ending with his passion and death, but the greatest part of his life is his post-resurrection life.

LYMAN ABBOTT.

The Outlook.

"But if he came to-night," we fondly say, "the guest-rooms would gladly be opened for him." Would they? Is it proven? He has come repeatedly and found no room. How many the homes and churches that will be filled with feverish, fretful men and women next Sunday, we know not. We do know that because of inability to distinguish between things eternal and things temporal many have left no room in their lives for what is most worth while.

Pacific Baptist.

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, \$5. Twelve or more to one address, \$4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, \$1 per copy; \$5 per half dozen; \$9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.

Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, Treasurer.

Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, \$2.40 per annum; \$1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, \$1.00 in advance; all other countries, \$1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH of Rochester, N. Y.

CHRISTIAN SCIENCE. Its Promises and their Fulfillment. By EDWARD A. KIMBALL of Chicago, Ill.

CHRISTIAN SCIENCE. Is it Christian? By Mrs. SUE HARPER MIMS of Atlanta, Ga.

CHRISTIAN SCIENCE. Its Work and Scope. By CAROL NORTON of New York City.

CHRISTIAN SCIENCE. The True Idealism. By ANNIE M. KNOTT.

Price. Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, 75 cents; five hundred copies, \$3.25; one thousand copies, \$6.00. Orders for supplements may be assorted as desired.

German Supplements

CHRISTIAN SCIENCE. Its Promises and their Fulfillment. By EDWARD A. KIMBALL of Chicago, Ill.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid \$3 00
•Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; \$3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea: 120 pages, cloth covers, gilt edges. Prices, prepaid, \$1.00; \$5.00 half dozen; \$9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science: containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion: 132 pages. Prices, prepaid, \$1.00; \$5.00 half dozen; \$9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, \$2.50.

CHRISTIAN SCIENCE versus PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, \$2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, \$4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; \$4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, \$1.00; six copies to one address, \$5.00; twelve copies to one address, \$9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; \$5.00 per dozen.

Direct all orders for above works, and make remittances payable to

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

Steps to compel the removal from the New York subway stations of the advertising signs which have given so much offence to the artistic tastes of many of its patrons, have been taken by Mayor McClellan. The Mayor's action followed the receipt of an opinion from the Corporation Counsel stating that the operating company had no legal right to use the subway stations for the display of advertisements and advising the Mayor that he had the right to remove the objectionable signs by force. Accordingly, the subway company has been notified that the signs must be immediately removed. This action has been followed by the issuance of temporary injunctions restraining the city from removing the signs, slot machines, and newspaper stands.

The President has arranged for the following transfers in the high European diplomatic posts, which he contemplates putting into force March 4, or soon after: Ambassador McCormick, now at St. Petersburg, to Paris to succeed Ambassador Porter; George von L. Meyer, Ambassador to Italy, to St. Petersburg; Henry White, Secretary of Embassy at London, to be Ambassador to Italy; Henry L. Wilson, Minister to Chile, to be made Minister to Belgium, succeeding Lawrence Townsend of Pennsylvania, who retires from the diplomatic service. It is generally understood that Whitelaw Reid of New York will succeed Ambassador Choate in London.

The plan for an annual exchange of professors recently agreed upon by Harvard University and the Prussian Ministry of Education, has been put into effect by the appointment of Francis Greenwood Peabody, D.D., Plummer professor of Christian morals, chairman of the Board of Preachers and dean of the Faculty of Divinity, as Harvard lecturer at Berlin for the first half of the next academic year.

It is said that much of the opposition manifested in San Domingo to the proposed American fiscal protectorate, springs from the desire of many Dominicans that the United States should take entire charge of

their Government, instead of the customs revenues alone. They prefer that the Washington Government should occupy the Republic as it did Cuba, and set it, too, upon its feet.

Harvard alumni have undertaken a movement to raise a fund of \$2,500,000 to be turned over to the College at its next commencement for the specific purpose of allowing the college to increase the salaries of its teachers to a point where offers from without will not draw away its valued men.

The House, February 9, by the decisive vote of 326 to 17, adopted the Esch-Townsend combination railroad rate bill, which had been endorsed by the Administration and is a substitute for the Hepburn bill. The final vote showed that it was practically considered a non-partisan measure.

A bill has been presented in the House providing a government for the Panama Canal Zone. The bill abolishes the present Panama Commission without casting any reflections upon that board. Its object is to separate the administrative problems from the engineering problems.

The Senate Committee on Foreign Relations has authorized a favorable report on the bill providing for the appointment of a minister to Morocco.

The Kansas House, by a vote of 65 to 49, has passed a bill permitting women to vote for Presidential electors.

Foreign.

The British Government has decided to withdraw all the infantry battalions from the West Indian colonies at an early date. A high officer is reported as saying: "It appears to me that the British Government has determined to take President Roosevelt at his word and accept his definition of the Monroe Doctrine. If the United States is prepared to prevent any territory in the Western Hemisphere from falling into European hands, if it is already under government by Americans, and, in case of territory now owned by European Powers, from being taken over by other Powers in Europe, then the necessity for Great Britain's maintenance of ships and troops in the West Indian possessions ceases, at least to a very large extent. Why, for example, should we be at the expense of keeping soldiers at Barbados, Bermuda, and Jamaica, when those islands are quite as secure from foreign invasion as is Cuba or Porto Rico?"

Foreign Secretary Lansdowne has proposed to the concert of Europe the appointment of a Christian Governor General of Macedonia, with powers and responsibilities similar to those of Prince George in Crete. Thus far little sympathy has been expressed with the British proposition, with the exception of Italy. The British Government opposes the Austro-Russian scheme for financial control, considering that the finances of Macedonia should be controlled by an international commission of all the Powers signatory of the Berlin treaty.

Considerable interest has been manifested in the coming ocean yacht race from Sandy Hook to the Lizard for the cup offered by the German Emperor. The trophy offered by the Kaiser is a magnificent one. A number of entries have already been made and more are expected before the time limit, April 1.

King Oscar of Sweden has for the second time handed the reins of government over to the Crown Prince Gustavus.

On February 6 a year had elapsed since the breaking off of diplomatic relations between Russia and Japan.

Industrial and Commercial.

The new Brown wire bound gun now being tested at Sandy Hook is guaranteed by its inventor to have a carrying range of fifty-nine miles. It has a tangential strength at the muzzle capable of withstanding a

powder pressure of between 90,000 and 100,000 pounds to the square inch, or about 30,000 pounds more than any other gun in existence. The new gun in the tests thus far has developed a velocity of 3,200 feet a second, or fully 300 feet a second more than any gun of similar calibre.

Keokuk, Iowa, has been authorized by Congress to harness the immense water-power of the Mississippi River at Keokuk Rapids, a few miles above the city. The bill authorizes the construction of a \$5,000,000 dam. The proposed dam, as a power producer, will take rank with the works at Niagara Falls and the Assuan dam in Egypt, and is expected to produce enough power to operate all the manufactures of south-eastern Iowa and the adjacent parts of Illinois.

The total production of Bessemer steel ingots and castings in 1904 was 7,859,140 gross tons, against 8,592,829 tons in 1903, a decrease of 733,689 tons, or over 8.5 per cent. The production in 1902 was the largest in its history—9,138,363 tons.

The working force at the Baldwin Locomotive Works at Philadelphia has been increased to 13,500 men, and a night shift of about 5,000 men keep the plant in operation from nightfall to daylight.

The value of india rubber imported into the United States has grown from \$10,000,000 in 1884 to \$44,000,000 in 1904.

General.

Within sight of Victoria Falls, says *The World's Work*, is the most wonderful bridge in the world, spanning the Zambesi River at a point where the river disappears into a deep cañon and zigzags its way through the cliffs for a mile. The peculiarity in the construction of the bridge is that, owing to the great height above the water, the depth of the stream, and the precipitous banks, no staging or scaffolding could be used. Accordingly, a cantilever structure is being built simultaneously from each end until the sides of the arch, 500 feet long, meet in the centre. The total length of the bridge will be 650 feet. A rough measurement calculated from rail level to low-water level showed a height of 420 feet. The high-water level will be about forty feet less. The bridge will be the highest in the world. The nearest to it is the Viaduct du Viar, in France, which is 375 feet above the bottom of the valley it crosses.

Sir William White, former director of naval construction, at the recent Motor Show at the Crystal Palace, London, pointed to the economies in weight which will follow the adoption of the explosion, or motor engine at sea. The reciprocating steam engine, with the necessary boilers, fuel, and water, weighs six times as much as the explosion engine, with its fuel, for the same power, speed, and range of action. If it is possible, he said, to combine the turbine principle with the explosion engine, all the anticipations of the past will be exceeded and express speeds at sea can be attained.

Gainsborough's "Duchess of Gloucester" and Andrea del Sarto's "Holy Family" have been brought to New York by a member of a London firm. The owners estimate the value of these paintings at \$60,000 each. The pictures are at the Metropolitan Museum of Art. It is said that the Museum has the refusal of the del Sarto.

There are several wooden railroads in the United States and Canada. One is in the Province of Quebec and is twenty-four miles long. The rails are of maple and the trains run smoothly over them at the rate of twenty-five miles an hour.

With the temperature at Rome this winter reaching five degrees below zero, and with snow in North Africa on the same day that it was 39 in the Arctic Circle, the winter is considered a freak.

From our Contributors.

The Right of Inheritance.

HAYNE DAVIS.

THERE is a provision of law under which if one who has no right to land occupies it, adversely to the true owner, for twenty years, this gives him a better title to it than the true owner. But if the owner be under age during this period of occupation, a higher law comes in, annuls this law, and restores to the child his rightful estate.

Suppose a case in which the true owner is a child during the time of adverse occupancy, and when he claims his inheritance the occupant asserts his right because he has been in possession for the required length of time, and points to the law which sustains him in his position. Unless the child asserts his childhood, and relies on the higher law, the decision of the court would be given according to the lower law, because only those facts to which it applies have been brought out. The child would, therefore, lose his inheritance, though there existed a law under which he would be able to regain it, simply because he did not assert and maintain the facts which call into operation the higher law. This may illustrate what we must do to come into our inheritance as children of God.

Impostors, false beliefs, claim to be in possession under authority of material law. The heirs are deceived as to their origin and birth in the first place, and as to the law in the second. They do not realize that they are sons of God, and because sons, "heirs of God, and joint-heirs with Christ." In the second place, they have been deceived as to the spiritual law under which they are entitled now to the possession of their inheritance. Ignorant of the spiritual facts of being, ignorant of the inheritance to which this entitles them, and of the way of coming into it, men remain inactive while impostors, false beliefs, continue to deprive them of their inheritance.

Jesus Christ taught that all men may become sons of God, also what their inheritance as sons of God is, and he demonstrated how they may come into it. He calls upon them to follow him, not only in conduct but into the kingdom of God. Many devout Christians, touched by his word, that we are sons of God, may question and fear lest they detract from his divinity by overestimating the significance of this word respecting themselves. Those who obey his call, and do in his name the works he did, as he commanded, are best able to say what relation he bears to them. Any questioning is apt to prevent the response to his call, if it does not make us doubt the fact of our being sons of God.

At Jesus' baptism, it is written, there was a voice from heaven saying, "This is my beloved Son, in whom I am well pleased." And when he had fasted forty days and forty nights, he was an hungered. And when the tempter came to him, he said, "If thou be the Son of God, command that these stones be made bread." And again he saith to him, "If thou be the Son of God, cast thyself down: for it is written, He shall give his angels charge concerning thee:

. . . . Jesus said unto him, It is written again, Thou shalt not tempt the Lord thy God."

Not once, but more than once, the temptation to doubt his sonship assailed Christ Jesus, and how, therefore, can we expect to escape the temptation to doubt our sonship?

We have St. John's statement for the fact that we are sons of God, and his revelation of the inheritance to which this spiritual fact entitles us. In order that we may come into this inheritance, we must assert the fact most vigorously when the greatest cry of material sense is raised against it. Otherwise, though sons of God, and joint-heirs with Christ Jesus, the enemies which he overcame, and which he will enable us to overcome if we follow his commandments, will continue to keep us out of our inheritance, and we will be held under the material law of sickness, sin, and death, instead of the spiritual law of health, holiness, and life in God. Though entitled to say with St. Paul, "the law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death," we will continue to submit to the law of sin and death until we realize that, having once had a revelation of this truth, we must claim our inheritance, and continually prove that we are sons of God, and entitled to dominion over every material sense.

In our case against material sense, which claims a perpetual right according to the material law, we have a cloud of witnesses. The son of Abraham was born contrary to material law. The holy men of God, through many ages, lived contrary to material law, having come into a large part of their inheritance as sons of God. In the fulness of time Jesus Christ rose above every material law, declared the spiritual law and demonstrated the allness of Life according to it, so that no man need remain in doubt as to his ability to enter into his rightful inheritance. There is, moreover, a great cloud of witnesses about us, each of whom has come into some part of his inheritance as a son of God, thereby proving our right to come into ours, and also disclosing to us the way to gain the mastery over the temptations which would keep us out, contrary to the command of God. These witnesses can only strengthen us in our faith in the justice of our claim. We remain out of our inheritance until we lay claim to it, and win the verdict, even as others have done, against one error, and then another, until we shall have risen to the height of spiritual understanding, with all sense of error destroyed. The winning of the victory over one false sense will increase our confidence, and be the prelude to an unrelenting war against everything that is unlike God and unworthy of His son.

Having been much hindered by an unwillingness to declare a truth not at the moment plain to me, I have been helped by a knowledge of these two provisions of our law, one of which nullifies the other, and I have been enabled thereby to stand for my inheritance, asserting the fact and the law which entitles me to it, even when false suggestion would make me doubt both. I have learned in Christian Science that the words and works of Christ Jesus as recorded in the Bible are worthy of acceptance, and that it is not only my right but my duty to finish the work he has given me to do. The joy set before those who faithfully follow

Christ, cannot be taken away, but it can be enlarged by the gratitude of those delivered from the bonds of sin and material sense by the mighty working of the power of God. And as we become more faithful and are delivered from other phases of error we shall be more grateful to God our Father, to our Lord Jesus Christ, and to our Leader for her faithfulness to God which abounds to our help.

The enemies against whom we must fight, resort to deception in this contest. They falsely allege that we are not sons of God, that there is no spiritual law which entitles us as sons of God to superiority over every material condition, that we are material and that there is a material law which cannot be broken, which binds us during this life at least. The fact is that we are not material, that there is no material law except as believed by us, when deceived by the falsehood of material-sense advocates. And when in truth, belief in the reality of the material law has vanished from our consciousness, and an understanding of spiritual law has dawned, the victory is won. The advocates of sin, disease, and death cannot bring their case to trial. Their only chance is to keep the false sense dominant in mortal mind; and as soon as we have gained an understanding respecting a given point in our spiritual birthright, they are forced to abandon that case and concentrate deception on some other point, just as the tempter shifted from bread to falling from high places, and from that to worldly power and glory. Surely, with Jesus Christ as our "advocate with the Father," with all the prophets and apostles, and men of God, in former times, and with the cloud of witnesses by whom we are now encompassed about, we can win our inheritance, casting aside the sin that doth so easily beset us, and running with patience the race that is set before us.

The Dignity of Christian Science.

EZRA M. BUSWELL.

"God is Love," and we draw near to Him in living the life marked out for us by Jesus. He went about doing good. Neither by word nor act did his life express that which was not a credit to his Father. Christian Scientists profess to love him and to follow his example. The love that flowed out from his pure life healed the sick and rebuked sin. His followers, striving to be and do like him, should express much gentleness, patience, and love. Such students are faithful sentinels on the watchtower of noble desire, guarding well their own thoughts. Their love for God is expressed in love for humanity. But this love for their fellow-beings is not the expression of a common type of mortal sense. It is not mere sensual attraction, for this finds neither encouragement nor excuse in Christian Science. A true Christian is above reproach because he is honestly and persistently striving to live up to the Christ standard, seeking to express purity and propriety in thought and in deed.

Those who allow themselves to be drawn into a subtle snare of sin, through undue familiarity between the sexes, soon learn that "the wages of sin is death." Jesus said, "What I say unto you I say unto all, Watch." No one so much as the Christian Science practitioner needs to faithfully heed this most important warning. We cannot compromise with an enemy. "Let your communication be, Yea, yea; Nay, nay: for whatsoever is more than these cometh of evil." This command, given in the Sermon on the Mount, must be carefully obeyed. There is no half-way ground. We must not only shun evil, but the very appearance of it must be avoided. The blush of shame should be felt by every Christian Scientist who withholds his condemnation of the least disregard of the marriage vows.

God blesses every noble, brave seeker after righteousness and purity who stands like a rock to uphold the dignity of

the Cause of Christian Science as he is taught in our text-book, Science and Health. Dignity of purpose and purity of thought illumine every page of this book. If we listen to its teachings, and obey them, it is well. James said, "When lust hath conceived, it bringeth forth sin: and sin, when it is finished, bringeth forth death." Christian Science teaches that we can, and must, overcome all error. We never repent for having resisted evil, but to yield to its subtle suggestions cuts deep wounds, and the ointment of extenuation does not heal. "He that dwelleth in the secret place of the most High" is sheltered from temptation and from sin. It is our Father's good pleasure to give us the kingdom. James says also, "Resist the devil, and he will flee from you." God gives to man the moral right and the ability to do right, and there is no freedom apart from that doing.

May we all lift our thought to the heights, and daily prove, in lives of purity and unvarying propriety, that we are worthy the name we bear.

The Prodigal Son.

R. M. STROTHER.

To realize in any measure the truth of the statement that God's work is complete, and that He has ordered, decreed, and provided all things for man, is helpful, and those who are just turning to Christian Science are encouraged and stimulated when they are made to understand that the work to be done, the steps to be taken, are theirs. In a recent conversation along these lines with one who was seeking help and who had expressed a desire to know something of Christian Science, that pearl of parables,—the parable of the prodigal son,—was made use of with good effect. The thought expressed was this: as mortals we have wandered into a far country, far away from God, and we feed mentally on husks, the material things of the world, until we find ourselves starving, and then we resolve to return to our Father's house. When we have started on the journey, and are "yet a great way off," He lovingly meets us, reveals Himself to us, and accompanies us all the way to the abiding place of divine Love. Arriving there, we find great abundance, and it dawns upon us that all the while we were feeding on husks there was a full supply in our Father's house, and we did not enjoy it simply because we sought for it in the wrong direction. The process of coming to our Father is purely mental, and the parable illustrates clearly the point in question; viz., that God has already done all things well, that in His house everything is provided for His children, and it only remains for us to claim our heritage. It also makes clear the fact that God will welcome us and guide us into His kingdom when we resolve to leave materiality and start on the way Spiritward. One who has sought substance, and peace, and happiness in all the highways and byways of the world is in a position to appreciate the parable of the prodigal son.

A Mirage.

K. B. J.

THE expression, "the false testimony of the physical senses," used to puzzle me when I first began to study Christian Science. The dear practitioner, so positive as to that statement, proved it by healing me, through Christian Science, of ailments which had refused to yield to *materia medica*; but still I did not understand it, until helped by the memory of an unusual phenomenon.

Some years ago, while traveling through western Kansas, the conductor called the attention of his passengers to a mirage,—an unusual thing in that country. We looked out and saw, it seemed half a mile away, a clump of palms, surrounded by a small grassy expanse, suggesting a spring.

The country through which we were passing, treeless and barren, was very desolate, but the nodding fronds were more inviting. Every person in the five or six coaches composing the train saw the mirage, saw it for over an hour, and found, upon comparing notes, that they all saw exactly the same thing. Yet there was nothing there to see. The sense of sight said, There is a clump of palms. Reason and geographical knowledge said, There is nothing there, palms do not grow in a country where the thermometer in winter sometimes drops to thirty-five degrees below zero; moreover, this country has all been accurately surveyed by government surveyors, and not a trace of palms was found. Furthermore, we were traveling at thirty miles an hour, and, had there been a clump of trees, we would have passed them even as a town is passed and lost to view, but these palms never changed their seeming position. They appeared to keep pace with the train.

It is with deep personal gratitude that I think of our Leader's unflinching courage, and her consecration to the service of God,—infinite Love,—in arousing us from the nightmare of material illusions and in pointing out to us the way to health and holiness.

Thoughts for Business Men.

H. P. T.

LET US rise in the morning with the knowledge that divine Love is looking straight into our hearts and urging us to go forward on the pathway of harmony and righteousness throughout the day. Let us breakfast in the atmosphere of peace and love, and let our thought, ever and anon, be a silent whisper of thankfulness for the infinite blessing of ever-present divine help and guidance.

Let us go to business with a silent prayer for the loved ones at home and for divine direction in perpetuating their happiness and well-being. Let us meet our business competitor on a plane of conscious fraternity, knowing that there is no discord in the divine Mind, and that, as children of that Mind, all should reflect only truth, honor, and brotherly love. Let us bring to every business transaction the Golden Rule, and expect a kindred compliance from our business neighbor.

Let us dismiss as unreal,—not of God,—all thoughts of anger, malice, hate, spite, jealous rivalry, and charge our consciousness with the ideas of Mind reflected in kindness, love, and good-will, knowing that Soul is conscious of all we do, say, think, feel, or hear, that is right. Let us strive to see in our business rival our Father's image, and send no thought toward him that will not cheer and purify.

Let us return to our homes with our hearts free from error, and share the blessings of the day with the loved ones in orisons of thankfulness and love. We shall then have the sweet consciousness that we have tried to follow the example of our Master during the day, and thus proved ourselves worthy to bear his name.

Loving our Brother.

MYRTIE A. TENNY.

I WAS much impressed at a recent testimonial meeting by the statement that it sometimes seems much easier to love our enemies than to love each other, and the thought came to me why this is so. We are striving to live in the one Mind, as we are taught in Christian Science, and this brings us into a closeness of mental touch with our brothers of which we little dreamed in the past. Each one stands forth without disguise, as it were. Our opportunities are thus enlarged for knowing the faults of those nearest to us, and, with all our desire to be good and true, it seems easier sometimes, through the uncovering of error, to see faults than to discover virtues. We little realize how much we

demand of each other, how we look for perfection in our brother and forget that we ourselves are far from perfect. Until we are perfect we have no right to demand perfection in others, however much we may hope for and anticipate it. These conditions and close relations do not pertain to our enemies, they are not subjected to the same close and constant scrutiny, and hence their objectionable features are not so carefully noted and thought upon.

When we learn to love as Jesus loved, and see only the perfect man, we shall love both our enemies and our friends. Christian Science reveals and casts out all evil, destroying envy, malice, jealousy, self-seeking, and strife. It is helpful to think of our own imperfection when the shortcomings of another seem very apparent. It is well to ask ourselves if we are sure that we could do better under like circumstances. If we are keeping our own thought-gardens free from noxious weeds, our time will be fully occupied and we shall not be tempted to criticise others. Our Leader's counsel given in "Miscellaneous Writings," page 224, is wonderfully helpful in dealing with these problems.

Perfection is not gained easily nor quickly, but through constant watchfulness and prayer. We each come into Christian Science with all our personal peculiarities, faults of temperament, and disabilities of environment, but if we come with the honest and sincere desire to be better and do better, we shall drop these "grounds of offence" one by one, as we would discard any unworthy habit as soon as it is discovered.

Simple Lessons.

G. I. F.

THE sayings of children sometimes bring out in a simple way some of the truths which older people often ponder a good while before grasping. A little fellow of my acquaintance was afraid in the dark, having been excited by the rushing of fire engines to a nearby fire. As his cousin was taking him upstairs to bed, he reached out his hand to take hold of hers, and she asked him why he wanted to do so. He replied that he was afraid there was a fire engine in the house. She thought she would reason out the matter a little, and said, "If there were an engine here, what could I do?" He thought a minute and replied, "I know that you know there is no fire engine in this house." This illustrates the condition of thought in which one goes to another for help in Christian Science. When fear takes possession of thought it may make itself manifest in some form of sickness, and the one affected may be unable to see the unreasonableness of the fear well enough to destroy it. He would, therefore, go to some one for help, some one who knows that there is no reality in the fear or its effect.

Another incident may be of interest as showing the quickness of the child thought to perceive the truth. A little girl was not feeling well, and it was suggested that the practitioner, who had done considerable work for the family at different times, be sent for. The child spoke up and said, "Why do you send for —, she is not God?" This remark, dropped so innocently, carries with it a deep lesson in regard to individual reliance on the power of God. His promises are for all, and the humblest and seemingly weakest follower of Christ has God close at hand, as well as the most experienced practitioner. This is not given as an argument against asking for help from another, for we are told to bear one another's burdens, and there are times when most of us need aid in working out our problems, but to remind ourselves of the power which really does the healing, and which is always at hand.

Be noble, and the nobleness that lies in other men, sleeping but never dead, will rise in majesty to meet thine own.

LOWELL.

Selected Articles.

The contention that the cures effected by Christian Scientists are duplicated in "Suggestive Therapeutics" and other so-called systems based on human will power, does not take into consideration the fact that the healing of the physical is not all of Christian Science, it is simply incidental to the regenerative and reformatory mission in which Christian Scientists are engaged. In proportion as this becomes recognized, is Christian Science taking its rightful place in the respect and esteem of right thinking people.

JOHN L. RENDALL.
Kecokuk (Ia.) Constitution.

As there are still some who believe that the mere acceptance of Mrs. Eddy's teachings should give her followers immunity from death, it may be well to say that Christian Science is essentially a practical religion, and that its adherents only claim that it will benefit those who conform to its teachings. The failure of individuals to derive health and strength from Christian Science does not in any way invalidate its truth. It will be generally conceded that an unsuccessful attempt to solve an algebraic equation would not reflect against the law of mathematics.

RICHARD P. VERRALL.
Ononta (N. Y.) Star.

Christian Science inculcates the greatest compassion for suffering, for all kinds of suffering, physical, mental, and moral, but it also teaches that the most practical kind of sympathy for the sick man is that which leads him out of his suffering. The man who is starving does not need a recipe for bread making. He wants bread. Kind words and tender sympathy for his misfortune are welcome, but he must have a practical application of that charity which will relieve his distress. Christian Science does not ignore pain. It heals it.

WILLARD S. MATTOX.
New Haven (Conn.) Union.

It might be well to state that Christian Scientists do not claim immunity from those things which ordinarily leave their impress upon the physical senses. In the same way as do other Christians, they proclaim that the God whom they worship is Spirit, and that man made in His image and likeness must of necessity be spiritual. To demonstrate this self-evident truth, it is necessary for man eventually to prove his absolute dominion over things material; and the Christian Scientist sees no other way to reach this ultimate than to exercise this dominion, in so far as he is able, right here and now, and thereby to proclaim, as in the words of our Saviour: "The kingdom of heaven is at hand."

ALBERT E. MILLER.
Reading (Pa.) Eagle.

In looking over our exchanges we find columns of "resolutions of condolence," and in most cases they start with the stereotyped clause, "Whereas, it has pleased God," etc. It matters not what follows, these resolutions start out the same way. A loving mother may have been removed from the family circle; a father, the breadwinner, may have been stricken down by some fatal accident, or some little child, the idol of the household, may have been called away, leaving fond parents with broken hearts; and the lodge says, "Whereas, it has pleased God to afflict," etc. Does it please God to afflict His children? Does not the great loving heart of God throb in sympathy with the poor, broken-hearted mother? Let us quit saying that it has pleased God to afflict any one. God is Love, and it does not please Love to cause sorrow. You are only an earthly parent, but when your little child comes to you with break-

ing heart you share its sorrow and find no pleasure in its distress. Is God's love less than your love? The next time you draft resolutions ask yourself this question, and leave out the "Whereas, it has pleased God to afflict," etc.

Odd Fellows Review.

The Bible describes God as the same yesterday, to-day, and forever, as being without variableness, or shadow of turning. The office of prayer is not to change God's immutable ways, but to assist him who prays into a more harmonious relation with God's laws, as a spiritual being. When the fading plant is carried out of the dark cellar into the sunshine and rain, it is not for the purpose of altering the sunshine and rain, but to bring the plant into a more harmonious relation with them. Christian Science teaches the need of seeking to understand God's eternal and immutable laws governing us as spiritual beings, and that we cannot hope to avail ourselves of the uses of these laws in any scientific manner, to overcome our discords, except according to the measure of our understanding of them.

Christian Science utterly denies supernaturalism; it regards the "miracles" performed by Jesus, by the primitive Christians, and by the ministry of modern Christian Science, as altogether in conformity with, and not in opposition to or a suspension of, God's unchanging laws. Christian Science emphasizes the need to test, apply, and prove what we understand of God's laws, as fast as we learn them, and teaches that only by this practical method can we truly understand them and increase our understanding for further tests and demonstrations.

HON. CLARENCE A. BUSKIRK
Indianapolis (Ind.) Sentinel.

The Christian Science movement, which is growing so rapidly in our land to-day, is a national product of a world-wide demand. A religion that claims to heal the sick, reform the sinner, overcome bad habits, such as the use of liquors, to banish discord, and bind up the broken-hearted, by the power of God, acting intelligently through His own law, is not to be lightly set aside, and if such a system proves its words by its works, it warrants investigation. Its followers believe that Christian Science does all these things, is doing them daily in many parts of the civilized world and especially in a large degree in our own country. They claim it to be purely Scriptural, being a revival, or restoration, of primitive apostolic Christianity "with signs following," the same religion that Jesus, our great Master, so successfully preached and demonstrated, and that was so metaphysically taught by the Apostle Paul. And, in addition to the signal demonstration of healing that is being made, it expounds the Science of being, explains cause and effect, the nature of God, man, and the universe, and shows man how he may be reconciled to his heavenly Father and be at peace.

The spiritual interpretation of the Bible is natural and beautiful, bringing a spirit of rational common sense to the study of the Word of God, applying it to the needs of human life here and now, and working out the vexatious problems of existence with precision and logic. It illuminates the sacred page with the light of inspiration, so that the Word of God is being rendered practical as never before.

Let those who are disposed to criticise Christian Science carefully read the Scriptures in the light of its teaching, and with a fervent desire to know the truth of the matter. When this is done, they will be surprised at their change of thought. It will lead them to set aside their conceptions of what Christian Science is and what it does, and give them a clear conception of the worth and work of a noble reformatory movement.

EDWARD E. NORWOOD.
Washington (D. C.) Post.

Among the Churches.

Growth in London, England.

The members of Second Church of Christ, Scientist, London, feel deeply grateful for the progress made in the past year. The love and unity we have experienced have been a source of strength and encouragement to all.

The increase of members since last January is fifty-one, making a total membership of one hundred and eighty-five. The Book Room report shows the following increase in the sale of literature: in 1903 there were sold three hundred and nine copies of *Science and Health*; in 1904, five hundred and thirty-five copies. Our Leader's other works, 1903, three hundred and eighty-one copies; 1904, six hundred and forty-eight copies.

First and Second Churches have formed a joint committee for the object of placing *Science and Health* and the *Sentinel* and *Journal* in the public libraries in and around London, First Church taking the south district, and Second Church the north. So far there are a few libraries only that have not as yet accepted our offers, which is very satisfactory, as it is felt that so much good can be done through this channel.

We had a most beautiful Thanksgiving service on the last day of the old year. Thirty-four testimonies were given, and but for the limited time at our disposal many more would have been forthcoming. The collection, taken on this occasion for The Mother Church Building Fund, amounted to ninety pounds.—GERALD H. WALENN, *Clerk*.

Laying of Corner-stone in San Jose, Cal.

In accordance with the custom of the Christian Science denomination, the laying of the corner-stone of the new edifice of First Church of Christ, Scientist, of this city, was accomplished with very simple but impressive services, in the presence of the officials of the church and the building committee and architect. The fine corner-stone is the gift of Allen H. Armstrong, C.S.B., of Seattle, who organized the church in this city and who was for some years its First Reader.

The new structure is located on St. James Street, between First and Second, and it faces St. James Park. The lot, building, and furnishing will aggregate a cost of \$40,000. Work on the building is progressing rapidly, but it is not anticipated that it will be ready for occupancy before the summer months.—*San Jose (Cal.) Mercury*.

Ann Arbor, Mich.

Christian Science Publishing Society:—

It was my pleasure not long since to present to The University of Michigan, located at Ann Arbor, a file of *The Christian Science Journal*, from volume nine to twenty-one, and I have received the following note of acknowledgment from the librarian.

KATE HOLBROOK PIERCE, Detroit, Mich.

Ann Arbor, December 6, 1904.

Dear Madam:—I found on my return to the library, the complete copies of volumes nine to twenty-one, inclusive, of *The Christian Science Journal* so kindly sent by you. We are very grateful for these, and I wish to express both the thanks of the library authorities and my own gratification at the acquisition. We now have the set from Vol. VI. to XXI., inclusive. Again thanking you, I remain,
Very sincerely yours,

RAYMOND C. DAVIS, *Librarian*.

What the ear never heard, and the eye has not seen,
Remains what is lovely and true!

It is not abroad, as the foolish contends,

'Tis within, and upon thine own ardor depends.

SCHILLER.

The Lectures.

Santa Ana, Cal.

A large, attentive audience assembled in the Opera House yesterday afternoon [January 8], to listen to Mr. Bicknell Young's lecture on Christian Science. Mr. A. J. Padgham introduced the speaker, saying in part,—

A familiar hymn reads, "The seekers of the Light are one." If this be true, we meet here to-day on common ground; for all men are in one way or another seekers after truth. We may not all pursue the same method or line of reasoning in obtaining truth, but all are seekers after truth. Our object in inviting you to hear the lecture this afternoon is to point the way to Truth through Christian Science.

Santa Ana Blade.

Salina, Kan.

Judge William G. Ewing of Chicago lectured in the Opera House, January 13. The lecturer was introduced by Hon. T. L. Bond, a leading lawyer of central Kansas, who said in part:—

God, the Terrible, is vanishing, and divine Love everywhere appears. We more fully comprehend the teachings of Jesus of Nazareth, and belief in the fatherhood of God and the brotherhood of man is becoming universal. Altruism is overshadowing egotism, and the helpful life is admitted to be the successful life. He who neglects to do good, fails to be good. Whoever is self-sufficient will never reach the heights, while "he that humbleth himself shall be exalted." Any association which seeks to harmonize humanity and divinity is a worthy one. Any society which emphasizes the necessity of doing good, deserves commendation.—*Correspondence*.

Cleveland, O.

One of the most notable gatherings of Christian Scientists held in Cleveland in recent years filled the Chamber of Commerce Auditorium yesterday afternoon [January 15], to hear Mrs. Sue Harper Mims of Atlanta, Ga. The seating capacity of the auditorium was taxed to its utmost and fully five hundred people were unable to gain admittance.

The lecturer was introduced by Mrs. Lida W. Fitzpatrick, former First Reader of Second Church of Christ, Scientist, who spoke in part as follows:—

Those who have been healed by Christian Science, testify also to the benefits received spiritually, the healing witnessing to the spiritual origin. The earnest, honest desires of Christian people for centuries,—to know more about the teaching of Jesus and how his works were performed,—those prayers are being answered in Christian Science, and the command of Jesus to preach and heal is being obeyed.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Heaven.

IN response to an invitation received by her from the *New York American*, Mrs. Eddy has contributed a brief but comprehensive article upon a subject which has engaged the attention of humanity for centuries. We feel sure that our Leader's words will bring light to many.

Mrs. Eddy's article is as follows:—

Concord, N. H., February 9, 1905.

To the *New York American*.

Is heaven spiritual?

Heaven is spiritual—heaven is harmony, infinite, boundless bliss. The dying or the departed enter heaven in proportion to their progress, fitness to partake of its quality and quantity. One individual may awaken first, from his dream of life in matter, with a sense of music; another with that of relief from fear or suffering, and still another with a bitter sense of lost opportunities and remorse. Heaven is the reign of divine Science. Material thought tends to obscure spiritual understanding, to darken the true conception of man's divine Principle, Love, wherein and whereby soul is emancipated and environed with everlasting Life. Our great Teacher hath said,—

"Behold, the kingdom of God is within you"—within man's spiritual understanding of all the divine modes, means, forms, expression or manifestation of goodness and happiness.

MARY BAKER EDDY.

The Expected Revival.

UPON every side we hear the prophecy of a great religious revival which is to sweep over all Christendom. Scarcely a day goes by in which this prophecy is not repeated in some religious paper, or by some minister whose sermon is reported in the daily press, and the work of the American evangelists now in England, and of an English evangelist who has recently come to America, are referred to as forerunners of an extensive or universal revival which shall awaken the people of all Christian lands. Just when this revival is to take place, and the precise form it will assume, has not been outlined, but that the time is not far distant seems clear to all who feel competent to read the signs of the times.

We sincerely hope that this promise of a great spiritual awakening is to be fulfilled, and that the world is about to enter into an experience such as it has not known for centuries, an experience for whose counterpart we must go back to the day of Pentecost. And when this great awakening comes, we hope that it will come as a revival of the whole of Jesus' gospel, his gospel of healing,—of mighty works,—as well as his gospel of preaching.

Whether such revivals as have been conducted from the time of Finney to the present day have been of permanent value to the cause of religion, is a question upon which even those who have taken part in them are not agreed, but there can be no question about humanity's need of the moral and spiritual regeneration which these revivals promise, and which they are intended to supply. Whatever doubt there may be as to the permanent value of these movements comes largely from the fact that those who have conducted

them in the past have directed the larger part of their appeal to the emotions, with the result that later on the ecstasy of many of the so-called converts has subsided, and they have relapsed into their former ways of life. The reverse of this contention is, however, that, even if this be true, the number who remain faithful to their profession of reform is sufficient to justify the expenditure of time, labor, and money involved in this Christian endeavor, and that while the result is never quite what is hoped for, it always represents a distinct advance.

While Christian Scientists are most glad to see whatever good may come from these spiritual awakenings of all classes of society, they can but feel that much more would be accomplished if the great weight of the appeal to men were made to their reason rather than to their emotions. It is in this regard that Christian Scientists differ from their fellow-Christians in making known the message of Christ's ministry. They do not aim to present a dogmatic belief of salvation after death. On the contrary, they present Christianity as a provable, demonstrable system, based upon unchanging, divine Principle, a system whose logic is invincible because its premise is sound and its conclusions follow in orderly sequence, bringing salvation from both sickness and sin.

Just as in the days of Jesus of Nazareth, the sick are healed to-day through Christian Science, in a lawful and orderly manner, not in opposition to divine law, but in demonstration of its power and adaptability to all human needs. The sinful are reformed, the sorrowing are comforted by the operation of divine law, and the appeal of this law is to the reason of mankind and not to its emotions. The large congregations in attendance upon the services of the Christian Science churches are not attracted by the magnetic eloquence of brilliant pulpit orators, but by the reasonable, logical, and demonstrable teachings of Christ Jesus as they are presented in the Scriptures and elucidated in Science and Health.

Whether or not this predicted revival takes place, the prophecy of its coming is a sign of spiritual aspiration and of the unrest which is so prevalent in religious thought to-day, and which will find peace in nothing short of scientific Christianity.

A great religious revival commenced in 1866, when Mrs. Eddy discovered Christian Science, and the effects of this discovery have been apparent in many ways, but in no way more certain than in stimulating a desire for a return to primitive, Apostolic Christianity.

ARCHIBALD McLELLAN.

A Snowflake.

Muse on Nature with a poet's eye.—CAMPBELL.

STANDING at the window these days, and watching the snowflakes as they trustingly wander down through the air, or scurry by, with fleeter wing, when the winter wind cries Haste, how instinctively does inquiring thought mount heavenward! These dainty visitors disclose, "e'en to dullards," something of their lavish beauty, and he who notes their elaborate traceries, their exquisite finish, their purity, and their completeness, can but think deeply of the wisdom and power which, in aerial spaces near and far, is fashioning "the treasures of the snow." To him, as to all who feel the quickening appeal of nature's unflecked glories, there will come in such an hour impelling queries like those propounded to Job. "Who hath begotten the drops of dew?" "And the hoary frost of heaven, who hath gendered it?" These delicate jewels of snow, came they by chance? If not, then is He wondrously wise indeed who has chosen the storm-cloud for his studio, and who clogs our winter ways with the seemingly discarded trifles of His handiwork. And to think that so great an artist should be so near and we know so little of Him!

Solicited as we are, every hour and upon every hand, by multiplied and constantly varying appeals to our sense of

the beautiful, it is impossible to think that they have no ministry and no meaning. A great artist would not thus display his thought to men, had he no message to communicate; nor would he, did he not recognize the possibility of an appreciative response.

The fact is, that we have been robbed of the benefit of the guiding and glorifying revelations of our heavenly Father by our consent to the persuasions of material philosophy, which, in effect, has declared the infinite removal of God, who is said to come into touch with humanity through secondary causes, and through these alone; and against this teaching Christian Science is in pronounced and intelligent revolt. When philosophy essays to substitute matter for Spirit as the basis of nature, it would displace, in human belief, the manifestations of infinite Mind with the phenomena of so-called "natural law." This is the deepest offence of materiality, that it would secrete our God. Denying the poet's insight, that

The course of Nature is the art of God,

its exponents would rob the beauty and wisdom of nature's revelations of all their spiritual suggestiveness. They are willing that we should be astonished and delighted with the products of an inexplicable mechanism, but they object to our being inspired and redeemed through the manifestations of divine Love.

One cannot follow the Old Testament writers, in their constant recognitions of the immediate presence of God, from which the accepted doctrine of secondary causes has entirely separated the great body of Christian thought, without realizing the greatness of the loss expressed in the contrast between the past and present of religious faith. The writers of the 148th Psalm and of the thirty-eighth chapter of Job may have had a very anthropomorphic sense of God's relation to the punishment of evil-doers, but in their sense of the divine nearness they have contributed to the strength and courage of fainting souls in all ages.

The effort of many earnest and sincere Christian teachers to awaken and buttress faith in God, has utterly failed for the reason that, believing in the reality of matter, it has been impossible to relieve God of responsibility for the unjust and destructive phenomena of human experience; but with an understanding of the teaching of Christian Science that God's universe is wholly spiritual, the falsities of human belief respecting matter and material law are seen to have no contact with, or significance to, His world, however great the confusion, contradiction, and conflict they bring to the world of mortal sense. The awakened, the more spiritual thought is thus enabled, in the measure of its own transformation, to enter into and enjoy the redemption of nature. Beauty of tone, color, form, design, and adjustment, these are no longer linked to matter,—the body of death,—but are thought of continually as the purposeful manifestations and appeal of that Life which is altogether lovely. The snowflake, with every other sweet expression of intelligence and of beauty, thus escapes the thrall of materiality, and becomes the messenger of that divine Love which in every experience and every event seeks the exaltation of our thought, the spiritualization of humanity.

JOHN B. WILLIS.

"Let us reason together."

WHEN one invites another to the discussion of any subject, the one invited may properly ask what he is to gain thereby. The prophet Isaiah gives the invitation of the Supreme Being in these words, "Come now, and let us reason together;" and it is accompanied by a promise which is indeed startling to the human sense; viz., "Though your sins be as scarlet, they shall be as white as snow: though they be red like crimson, they shall be as wool." It is surely self-evident that a great expansion of the human faculties is necessary in order to grasp adequately the import of these words. Although the appeal is made to reason, the

result which is promised would seem wholly to transcend possibility, if we take into account the limitations of mortal experience, but this whole question hinges upon what premises are accepted as the statements of fact, or reality.

Students of Christian Science may sometimes be at a disadvantage, in the world's judgment, because they apparently reject reason, when in fact they do no such thing. What they do is to reject premises which they formerly accepted, premises which are held as fundamental truths by mankind at large. On analysis, however, they will frequently be found to be mere human opinions concerning being and its laws,—prevailing beliefs which have been undergoing a slow process of change with the passing of the centuries. In consequence of the acceptance of incorrect premises, all reasoning on the subject of being must necessarily lead to wrong conclusions, and until the true basis is reached,—until absolute Principle is discerned and understood,—all processes of reasoning are only relatively correct. The teaching and the demonstration of Christ Jesus sustained each other and proved that he understood reality, and yet his reasoning appeared unreasonable to those whose accepted premises were based upon material evidence. He substantially said to the sinners who sought his compassionate aid, "Though your sins be as scarlet, they shall be as white as snow," and of the one who was hopelessly ill,—even of him who had passed the mortal bound of life,—he said, "though he were dead, yet shall he live." If such statements as these had not been supported by corresponding demonstrations, we could hardly wonder at the accusations of the multitude who testified against him at his trial, saying, "We found this fellow perverting the nation."

If we are to accept as a finality the seeming material evidences of the operation of law, any statement which denies its authority or its processes would be unreasonable. It is certainly contrary to human experience to look for the immediate cleansing of the sinful or the instantaneous healing of the sick, yet Truth bids us "reason together," that we may see the possibility of this great wonder, to human sense.

In one of Scott's stories of the crusades, the meeting of Saladin and an English knight in the wilds of Arabia is vividly portrayed. The sultan, who rode a steed of the desert, sneered at the heavy horse of the other, which sank deep in the sand at every step. The knight responded to this by saying that in his own country his horse could walk across a lake without sinking, to which the Saracen, who had never seen ice, replied, "Thou liest." Illustrations could be multiplied indefinitely, all showing the unreasonableness of any proposition to one unacquainted with the facts which it represents, or who holds opinions, to him well-grounded, which contradict the proposition. Festus, who knew nothing but a false, material sense of existence, said to Paul, who reasoned concerning spiritual reality, "Thou art mad." In spite, however, of many condemnatory statements which have been heedlessly hurled at those who hold to the spiritual sense of being, the fact remains that even the reason is never satisfied until divine Principle is understood in Science. Like "Noah's weary dove," thought finds no true resting place until it responds to the tender call of divine Love,—"Come now, and let us reason together." Then is revealed the true basis for that right reason, no less than for that affection which is worthy of man's capabilities as a child of God.

Our text-book teaches that right reason is not at war with revelation, but supports it, and this is proven by the continuous demonstrations which are made in Christian Science of the actuality and reality of spiritual law. When our reasoning is supported by demonstration, we may be sure that we have at least begun to "think God's thoughts after Him," and may legitimately anticipate the fulfilment of the great and glorious promises of the word of God.

ANNIE M. KNOTT.

Letters to our Leader.

Milwaukee, Wis., January 29, 1905.

Rev. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Dear Leader:—At a meeting of the members of First Church of Christ, Scientist, held before Christmas, your article entitled "Holiday Gifts" was read, and it was suggested that each family of Christian Scientists should refrain from making their usual gifts to each other, and send the amount which would have been thus expended, to The Mother Church Building Fund. This idea met with a loving response, and special envelopes were prepared for the purpose and collected on Christmas morning at the service, where all felt a sense of love and peace, as the result of the sacrifice so willingly made. There was one gift of fifty-three dollars from a laboring man who was at the time without work; also a diamond and opal ring was found in another envelope, upon which was written, "A sacrifice God knows." The total amount of the offering was one thousand four hundred and thirty-six dollars, which has been forwarded to Mr. Chase.

At the Communion service, held the second Sunday after Christmas, the congregation was larger, and has been since, than ever before. This growth has necessitated evening services, the first of which was held January 22, and was well attended.

We believe that the success and prosperity of the branch churches depend upon their loving obedience to you, the one whom God has chosen to lead them from "sense to Soul."

Yours with love,

JEANIE A. CONGER, C.S.B.

MARY C. PHELPS.

EDW. S. MOLDENHAUER.

Committee.

Boston, Mass., February 6, 1905.

Rev. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Dear Leader:—An impulse, prompted by long cherished love, gratitude, and a desire to express to you personally my thankfulness for the small portion of mortality that has been removed from my thought through the influence of Christian Science, has moved me to write you. When I think of the long road you have traversed to reach your present position in Mind, the question comes, What new thing could we tell our Leader, by way of experience or revelation? Nothing. You know every step we must take to reach the higher altitudes of thought, and that we must follow in no other footprints than those left by the humble carpenter from the straggling village of Nazareth up to the heavenly Shekinah. The marks of that measured tread had been covered by the dust of years. Strutting pride either fell short of them or overstepped them, but never fitted its foot into the eternal imprints. The rising and settling dust-clouds were the only results of its futile work, until your tears washed away the dust from the first footprint, and God touched your hand, and the direction of a path was discovered,—the old, old way from Bethlehem to Beulah.

There is one little thing I would like to tell of, which took place during the sacred period of the healing of our father, the aged gentleman who recovered after he had passed his one hundredth year. Once, when he was wandering a little, he called me to his bedside and, after asking me to assure him that I was his daughter, said, "Wipe away all these tears that are on my cheeks." Putting my arm around his shoulders and pressing a handkerchief to his face I laid him back upon the pillows. From the heaven that was right around us, came the comforting and inspiring message, "And God shall wipe away all tears from their eyes." After a few moments of silence I looked at the dear face and it was calm in peaceful sleep.

Afterwards, when away from father, my Christian Science literature was thrown out into the street, and I was ejected from my home, because I had dared to write the testimony of his healing, it was proven again that the Christianity which comes through Christian Science is a sustaining one; for my ejection led to my coming here, where I studied Christian Science twelve years ago.

How beautiful The Mother Church with its atmosphere of peace! Yet your teachings are revealing to us a realm far beyond the material, and we may see, that while our heavenly Father knows nothing of the material, He knows the thoughts and motives which are bringing out the true Church,—knows them because they are His own. Through your teachings Christian Scientists can echo the words of King David in his most sublime prayer at the close of his work on the building of the temple of the Lord, "For all things come of thee, and of thine own have we given thee."

A loving learner,

MILDRED R. BELL.

St. Louis, Mo., December 22, 1904.

Rev. Mary Baker G. Eddy,

Pleasant View, Concord, N. H.

Beloved Leader and Teacher:—With deep love I desire to inform you that my Students' Association is sending, to-day, a draft for ten hundred and fifty dollars to Mr. Stephen A. Chase, Fall River, Mass., as their Christmas present to you, for The Mother Church Building Fund. This contribution is in addition to any amounts heretofore subscribed by individual members, or through First Church of Christ, Scientist, here, which, by the way, has pledged an additional sum of ten thousand dollars, to be forwarded at an early date.

This little token, dear Leader, is accompanied by a spirit of love and gratitude to you, deeper than human tongue or pen can express. We hereby pledge ourselves to love one another, to live nearer to God, and thus walk more closely in your footsteps.

I enclose a copy of letter from the Association, forwarded to Mr. Chase to-day.

Faithfully and lovingly yours,

JAMES A. LOGWOOD.

(Copy.)

St. Louis, Mo., December 22, 1904.

Mr. Stephen A. Chase, Treasurer,

Fall River, Mass.

Dear Mr. Chase:—At the recent annual meeting of the St. Louis Christian Science Institute Association,—James A. Logwood, C.S.B., Teacher,—it was unanimously agreed that we avail ourselves of the privilege granted in our Leader's letter in the *Sentinel* of November 5, and express the loving regard we have for her, by tendering her, as a Christmas gift, a special contribution to the Building Fund of The Mother Church. It is therefore my privilege to enclose herewith, on behalf of our Association, a draft for one thousand and fifty dollars. This loving effort to manifest our appreciation of all that our Leader has done for us, is entirely independent of our individual or collective subscriptions to the Building Fund, and is intended simply as an evidence of our love and gratitude to the one who has brought us out of darkness into light.

With every good wish for the rapid completion of the building which represents so much to the further extension of the Cause of Christian Science, I remain,

Yours in Truth,

H. A. STUART, Secretary.

Happy day when, all appetites controlled, all passions subdued, all matter subjugated, Mind—all conquering Mind—shall live and move, the monarch of the world.

ABRAHAM LINCOLN.

Testimonies of Healing.

Having received so much benefit, both physical and mental, through Christian Science, I would like to tell a few of the many blessings which have come to me. Through Christian Science I was healed of pulmonary disease, stomach trouble, sick headache, insomnia, and extreme nervousness. I was beset with fears on every side, afraid of everything. I was under the doctor's care most of the time. My whole body seemed to be in constant trouble. Christian Science was brought to me in an hour of great need, and I accepted its healing right away. It was just what I was longing for,—the Christ-healing. I was not healed instantaneously, but with the healing the light of Truth dawned on my darkened sense.

My heart overflows with gratitude to our dear Leader, Mrs. Eddy, for her loving devotion as the Discoverer of Christian Science. I am indeed thankful for this blessed truth. It has taught me how to demonstrate the healing power of Love and Life. Surely we have found the way to harmony,—heaven and wholeness. My prayer is that I may live in obedience to Christ, and that I may realize more love and spiritual understanding.

MRS. ELIZABETH W. FRICK, Los Angeles, Cal.

If there ever was a man who was tossed to and fro like the waves of the sea, I was that man. I was an admirer of all the well-known agnostic writers, but some years ago I thought I was soundly converted to Christianity and united with the church. My church relationship proved very unsatisfactory to me, and I asked to have my name erased from the list of their membership, which request was granted with seeming reluctance. I was then induced by friends to try the hidden mysteries of spiritualism. I am thankful to God that the days of "Lo, here," and "lo, there," are past with me, and I can truly say that I have drunk of the water that quenches thirst for all time. This water is the pure gospel of Christ as explained by that grand woman, Mrs. Eddy.

One of the greatest benefits which I have received by coming into Christian Science, is the complete rooting out of every vestige of skepticism that continually clung to me. The truth of Christian Science has been completely demonstrated in my own case. Although seventy years old I have the strength and vigor of younger manhood. When questioned as to how it is that a man of my age can stand such hard labor, my answer is that I believe in a religion, or philosophy, which improves a man bodily and mentally. I have been able to stay the grip, and drive out pains, by declaring the truth. There are but two Christian Scientists in our little town, and we strive to be "wise as serpents and harmless as doves." There is no Christian Science organization nearer than about forty miles from us. My heart yearns for relationship with the church which has Jesus Christ for its chief corner-stone.

I. W. NEWCOMB, Tangent, Ore.

[Translation.]

For many years I was afflicted with asthma, also heart and stomach trouble. It was a great exertion for me to do any work, and the work in the field I almost had to abandon. Last autumn I was so weak that I could no longer be up and around, and I could not take any more medicine. I had given up all hope of recovery and the physician had declared that it was impossible for me to get well. I then heard of Christian Science, and that I could be healed through its efficacy. I subscribed for *Der Christian Science Herald* and began to read, and at the same time went to see a practitioner in Zurich, who explained to me what Christian Science is. In a few weeks I was healed,—entirely free from my troubles.

My family and myself find it impossible to express in

words our gratitude to God for the blessings we have received through Christian Science.

FRAU M. KELLER, Müllheim, Ct. Thurgau, Switzerland.

In April, 1898, my physician advised me to make my will, and make every provision for my four children. My husband had died of consumption, the October previous, and the responsibility of the youngest child, then a baby, whom the doctors said had inherited her father's disease, led me to write to my cousin in Friendship, N. Y., asking her to take and care for my little one. This cousin advised me to try Christian Science, and sent me a practitioner's name and address, though she knew how serious my trouble was, as I had been a great sufferer from cancer of the stomach for many years; I cannot, in fact, remember when I was free from pain. This constant suffering had given me a gloomy view of life, and I felt a longing for death, thinking that it would bring me relief. I wrote, however, to the practitioner my cousin mentioned, so that she would feel that I had done all in my power to avert this evil, but without a particle of faith in the result.

The same evening, though I had not felt able to go driving for some time, I had the desire to visit my sister, who lived in another village, ten miles away. On the way there I stopped for my brother and sister, who lived some miles from me, to have them join me. After arriving at my sister's, she prepared a lunch for us, and urged me to partake of the same food the others did, though knowing I had not been able to eat solid food for some time. This seemed like madness to me, for I had not eaten a meal without taking medicine in many years, and I had forgotten to bring any with me; but upon being urged, I ate heartily, and enjoyed the meal without any bad effects. Next morning, after having slept peacefully all night, I had the desire to take a walk in the fresh air, so my sister-in-law accompanied me, wondering all the way at my strength. When we returned we found that we had gone two miles. Needless to say that, with this proof of the uselessness of medicine, on my return home I gathered my bottles together and threw them away.

Next morning I received a letter from the practitioner, saying that he had received my letter, and had given me a treatment on Saturday evening, contrary to my expectations, as I thought he would not receive the letter until Monday. At the same time, I received a copy of "Science and Health with Key to the Scriptures," with instructions to study it, and this turned my thought to the divine source of healing.

Ever since then my life has been changed from darkness to light, and every disease has faded away into nothingness. As I came into the truth, my children reflected my changed condition, and my little one is entirely well.

MRS. HOWARD W. SPIKER, Niagara Falls, N. Y.

Something over a year ago I came into Christian Science, not for the healing alone, although I had received many benefits before commencing to study it. I had been enabled to leave off glasses, and to have my eyes perfectly well and strong. I had also received help when my throat was so sore that I could not sing, so that for five years I have taken no medicine. At last, however, I came to Christian Science for help to live a life that seemed too full of sorrow to endure, and comfort and help have come to me since realizing that divine Love is my guide. Upon leaving America, I was suffering from a very severe attack of bronchitis,—not being able to fill my last engagement. I had treatment before leaving, but the trouble did not yield. It was suggested that the ocean trip would soon relieve me, but instead I grew worse, so that when I arrived in London it was with the worst kind of fear, for every one there said it would be impossible to get over the trouble in the damp atmosphere. After struggling with these conditions for a week, I was introduced to a Christian Scientist, who treated

me, and within a week's time I was quite free from the cough and was able to sing. The influenza went very soon after.

I feel the deepest love and gratitude for that wonderful woman, Mrs. Eddy, and for the loving Scientists who have shown me the way in this healing truth. When I arrived in London, I did not know a person, but it was not long before I felt I had a host of good friends. In the London churches they certainly reflect much of love. Christian Science has done so much for me that I feel I must tell about it, for there may be others who are suffering as I was from a miserable throat trouble. If we could all realize that it is "In atmosphere of love divine, we live, and move, and breathe," climate would have no effect on us.—SIBYL SAMMIS, London, England.

I cannot be thankful enough for what Christian Science has brought to me. Four and a half years ago I was a forlorn and miserable wreck of a girl. My sense of nervousness was so great that I could not keep my body still. For years I had not known what it was to awake in the morning without a severe headache. I was also a sufferer from colds which affected my lungs and voice. Besides these bodily ills, a great sorrow, over what seemed the cruel and useless death of a dearly loved brother, overshadowed me and made me bitter toward a God who was called loving and yet was supposed to be the cause of such trouble. Such a God was no Father to me. When Christian Science was first brought to our house to aid a dear relative, I scoffed at the idea of man's attempting to do what God either could not or would not do. I made the practitioner's efforts much harder than they should have been. I have always been sorry since then that I did not help instead of hinder her. Not long after this I was glad to try the treatments for myself, and although it was a year and a half after I began to be helped by Christian Science before I was free from all the miserable ailments, the time of my slow healing was very peaceful and happy. Other members of our family have grown to love this truth about God and man since then, and I cannot adequately express my own love for it. I am now learning to help others, and there is no work I love so well as that of freeing sufferers from their false sense of things. The instances of healing that have appeared under my earnest work are daily increasing in number and beauty. There is nothing in the world that can make us so happy as to be the instruments of bringing health and peace to those who are miserable.

MISS HARRIET A. WOODCOCK, Troy, N. Y.

The first Christian Science service which I attended seemed nothing more to me than a form of worship differing somewhat from those to which I had been accustomed. For years I had been looking for something not to be found in the churches,—a sure foundation on which to build,—something which would make our own surroundings more harmonious and enable us to be a practical help to others. I felt that no theory was of any use unless it could be brought daily and hourly into the individual lives of men and women, making them healthier, happier, and able to do their work better. Like hundreds of others I failed in trying to reconcile the suffering, sorrow, and injustice which seemed to abound everywhere, with the idea of an omnipotent God whose name is Love. Ultimately I gave up the search, but the hope never died that at some time the mystery of it all would be revealed.

When the meaning of Christian Science dawned on me, I felt that it was what I had been looking for, yet its promises seemed so extravagant that I sometimes smiled at the thought of believing them. A copy of Science and Health was, however, lent me, and with this book I had no difficulty. Nothing can ever alter the conviction which came to me in reading it. I simply knew it was true.

The message it brought to me so distinctly at first was that found in the First Epistle of John, "God is light, and in Him is no darkness at all,"—no sin, no sorrow, no disease, no death; that in this God we live and move and have our being. He is omnipotent, therefore evil is not supreme. The sweetness of this message was sufficient to heal me of fatigue and worry. My work became easier, it was no longer a burden. The fear and dislike of the cold weather, which used to make me so miserable, quite disappeared. I can now be as comfortable in winter as in summer. This glimmer of light brought such a sense of relief and peace that for a time I rested there, till I learned that we cannot at present linger on the Mount of Transfiguration. We have to come down to the valleys where the shadows of mortal beliefs have gathered, and work our way up.

Since I have had the privilege of class teaching, many opportunities of witnessing the power of Truth, in various directions, have been given me. I am grateful for Christian Science.

The knowledge of Truth is at all times a source of unspeakable comfort. To be steadfast in the midst of difficulties,—to be loyal, not so much in words as in *living* Christian Science, thus showing our gratitude to God and to the Leader who has uncovered for us the meaning of the wonderful words and works of Jesus of Nazareth,—this is both our duty and our great privilege.

MARGARET H. ANDERSON, Edinburgh, Scotland.

In the hope that some one may find encouragement to seek help through Christian Science, I gladly and gratefully give this testimony. I had heard of Christian Science some months before accepting it, in fact some of my relatives had been healed thereby.

A year ago last February I was led to give Christian Science a trial. I called upon a practitioner, while visiting relatives in Chicago, and after a short talk on the fundamentals of the religion and its claim that the healing power of God is at hand now, as in the days of the early Christians, I decided to give it a trial. At that time I was very miserable, suffering from almost every ill to which mortals are subject. During the treatment that followed I was healed of many small ailments, and I immediately began the study of "Science and Health with Key to the Scriptures" by our beloved Leader, Mrs. Eddy. As the truth is opened up to me, and I gain a more thorough spiritual understanding, all other troubles are leaving me. Through the study of our text-book, the Bible has become a book I love to read, and from which I now can gain understanding; "whereas I was blind, now I see." It is the greatest blessing of all to be able to see spiritually; it has indeed placed all things in a new light. My constant and unceasing prayer is for greater light and understanding.

There is one demonstration I feel I must relate. There was to be a lecture on Christian Science in our city, and I had been looking forward with great pleasure to the coming of that evening, as I had never heard a lecture on the subject now nearest my thought. The morning arrived, and with it a sense of severe suffering from an old ailment which the physicians had named neuralgia of the stomach and heart. I immediately denied the reality of the ailment, and read my Bible and Science and Health and thought of every good passage I could recall in both, but with little avail. I would become a little better, only to have another attack worse than the previous; and so it continued until three o'clock in the afternoon. I feared that it would prevent me from hearing the lecture, and presently the pain became so great I felt I could endure it no longer. I realized that I had not the understanding to meet it myself, so I sent a note to my teacher. I took up my Bible and read some beautiful and soothing passages. In less than an hour from the time the note was delivered

all manifestation of error had entirely disappeared. I was able to attend the lecture and enjoy it.

I have passed through sorrow, but I can truthfully say, God has never forsaken me, that underneath have been the "everlasting arms." How grateful we should be that one disciple was pure enough to perceive this great truth which was revealed to her through spiritual sense, that she was enabled to make it plain to receptive minds, and that some time all will know that God reigns supreme now.

Perhaps the average person would say that the story I have taken so many words to tell includes all that I have gained, but no. All that I have gained in physical betterment is not to be compared with what I have gained in the knowledge of God and my true relation to Him. I now understand that a true knowledge of God results in an utter denial of all other gods, and in the destruction of disease; that it is by knowing God as omnipotent good, and not a mixture of good and evil, that I am made free from sin and sickness. It is now a joy to live and work in striving to demonstrate the truth, and to forget the dream which seemed to give reality to the belief of life in matter.

With heartfelt, loving gratitude for our Leader's unparalleled work, I join in rejoicing with others who have come to know the blessings of Christian Science.

MRS. JOHN M. HALL, Indianapolis, Ind.

I became interested in Christian Science about five years ago, when my wife was healed through Christian Science, and two years later I found it to be the truth, for myself. I had a felon on my finger which gave me severe pain. I tried everything, but could get no relief. It grew worse and more painful, so I made up my mind to go to a practitioner for help. After a treatment was given the pain left, and I went home knowing that Christian Science cures all manner of diseases, and leaves no bad effects, but brings joy and gladness. This was on Saturday morning, and I at once went to sleep and slept until the next morning. On Monday morning I went to work as usual. My employer and the men in the factory who had seen my finger, were surprised at the healing. Through this experience I gained an abiding faith in God's ever-presence. Words fail to express my thanks to Mrs. Eddy who has stood the storm and been faithful in bringing us this revelation of Truth which heals the sick and the sinful.

PHILIP REIST, Berlin, Ont.

The force of early training was so strong that I lived with Christian Scientists for five years before I became conscious of needing that which I did not have. After losing all interest and satisfaction in a material sense of religion, and for a period caring naught for anything religious, I found that I was unable to cope with some very adverse conditions, and made up my mind to read Science and Health. During these five years I had been unwilling to read even a single page of the text-book or *The Christian Science Journal*, but I now bought a copy of Science and Health and began to read it in earnest. Never before did I find a book so interesting as this one. I could scarcely wait until I had read it through, and before I had finished the first reading I became thoroughly convinced that it contained the truth which makes free. Though I had but little need of physical healing, the continued reading and efforts to prove what I read to be true brought me gradually a larger freedom from old beliefs and a better state of physical health than I had ever known before. Soon I became a regular attendant at the Sunday morning and Wednesday evening meetings, and after two years I was privileged to have class instruction. During the progress of the class I lost all doubt and anxiety as to whether or not the teaching of "Science and Health with Key to the Scriptures" is true.

It is now five years since I first read Science and Health,

and in that time every good thing that has been mine to have, use, and enjoy, in home, business, and otherwise, has come to me directly through Christian Science. While appreciative of all the good received in my early years and teaching, I am grateful for the better health and larger outlook which has come to me through Christian Science; but I am grateful most of all for the genuine spiritual uplifting; the abiding peace; the rest of soul; the love of the Bible, of God, and of His children, which have resulted from my study and effort to be a real Christian Scientist.

To the *Sentinel* and *Journal*, and to each and every one who is helping to spread this blessed truth, I cannot be too thankful, and especially to our beloved Leader, Mrs. Eddy, who has opened the Bible for us and shown us the perfect adaptability and practicability of Jesus' teachings for our every need.—EDWARD L. RIPLEY, Kansas City, Mo.

Thirteen years ago I was a physical wreck, having been given up by several doctors. I went to St. Joseph, Mo., to try another physician, but received no benefit. I was then led to try Christian Science, and after attending one of their services, where they all looked so happy, I decided to take treatment. I did so, and was healed in a very short time. The next spring I had the privilege of class instruction and became a member of First Church of Christ, Scientist, in St. Joseph, Mo., and later on a member of The Mother Church also.

Words fail to express my gratitude to God and to dear Mrs. Eddy for all the blessings I have received, both spiritually and physically. I am also thankful to my faithful teacher.—MRS. MINNIE WEYER, Centralia, Kan.

I wish to tell how much benefit I have received through the understanding of Christian Science. I find it to be what I was searching for. When many material remedies failed to help me out of so much misery I was very greatly discouraged, but still had a fond hope that there was help for me. It seemed to me that there was truth somewhere, if I could only find it. I am glad to say it was not long before Science and Health was placed in my hands, and I was wonderfully healed. It is now my daily companion, and I am ever thankful to God, to our Leader, Mrs. Eddy, and to all who helped to show me the way.

KATHERINE MEYER, Rose Creek, Minn.

[Written for the *Sentinel*.]

The Golden Year.

ROSE SEELYE-MILLER.

O GOLDEN year, so swift, so sweet,
Thou passest by on hurrying feet.
When thou art gone, thou art not dead,
'Tis simply that thy feet have fled.

O golden year, for thee entwine
The sweetest flowers upon our shrine.
We'll not forget thee, though we may
Welcome another's coming day.

Thou'rt knit in every golden band,
In every fibre of life's strand;
In warp, in woof, and silvern sheen,
With many a roseate thread between.

And when we wake from mortal dreams,
Where Truth's white light eternal streams,
We'll know thou'rt but a shining strand
In time's unbroken, endless band.

From our Exchanges.

We speak of pagan lands, of paganism, as of things remote, not observable from either our front or back windows,—places to send missionaries to, and to support them by contributions in labors of which we are little conscious. We speak of the missionary spirit as of a different kind of religion from any with which we are practically acquainted, perhaps as of a holier and better kind.

Then in another great class we place Christian nations, so-called Christian institutions and civilization, Christian ideals, with a self-congratulatory feeling, a certain consciousness of superiority and of virtue.

But the fact is there is no such hard and fixed line as we believe. There are pagans in Christendom, and there may be Christians in the so-called pagan lands who never heard the name of Christ. We should be as liberal as Saint Paul was, as Jesus himself, who called those who did his works his followers, and those who were not against him his friends.—*The Christian Register*.

Sin in all its forms and manifestations is a violation of the law of God, and tends always and everywhere to destruction and ruin. It has taken long weary years for men to discover this truth. Righteousness has as its fruit quietness and assurance forever, and hence tends to stability, to health, to permanence, to long life. One may not, cannot, do all that must be done to drive out sin and bring in peace, but he can ally himself with forces which tend toward holiness and righteousness in the earth. One cannot make all homes ideal, but he can do his part in making one home a fair type of the heavenly home, and through that home give the members of other homes right ideals and a correct standard.—*Pacific Christian Advocate*.

Looked at rightly there is nothing so intolerant of evil, or so exacting and almost exorbitant in its requirement, as the divine love that demands that men shall have the best the resources of God can bestow, because they are fit to have them. The idea that God desires to have men happy independently of their righteousness, is surely one of the grossest perversions of ethical principles. What satisfaction would it give any parent to know that his daughter was happy in a life of vice? Such tidings would give him the keenest pain. God desires our happiness, but only the happiness which is the flower of righteousness.

The Watchman.

A man said it was hard not to believe a certain phase of a new teaching; it was so attractive he wished to believe it. Then soon these words of Julius Hare came, "The question is not whether a doctrine is beautiful, but whether it is true. When we want to go to a place, we don't ask whether the road leads through a pretty country, but whether it is the right road, the road pointed out by authority, the turnpike road." The deepest philosophy assures us that the True and the Beautiful are one. Our trouble is that sometimes we consider this or that beautiful when it is not truly so.—*Pacific Baptist*.

He who looks for Christ to-day will not find him in a humble manger, but in countless homes, in halls of state, on the college campus, in the sweeping currents of trade, and on the world's battlefields. The Christ life is becoming practicable, even from a novelty point of view, because the world is becoming purer as the light of his truth pervades it, and the reign of peace and good-will, though still far away, is "the divine event toward which the whole creation moves."

REV. DANIEL DORCHESTER, JR.
Christian Advocate.

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of *SCIENCE AND HEALTH*, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in *SCIENCE AND HEALTH*. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, \$5. Twelve or more to one address, \$4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, \$1 per copy; \$5 per half dozen; \$9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, Treasurer.
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, \$2.40 per annum; \$1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, \$1.00 in advance; all other countries, \$1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid \$3 00
Twelve or more books to one address, each, prepaid . . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science, 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; \$3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea: 120 pages, cloth covers, gilt edges. Prices, prepaid, \$1.00; \$5.00 half dozen; \$9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion: 132 pages. Prices, prepaid, \$1.00; \$5.00 half dozen; \$9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, \$2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, \$2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, \$4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; \$4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, \$1.00; six copies to one address, \$5.00; twelve copies to one address, \$9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; \$5.00 per dozen.

Direct all orders for above works, and make remittances payable to

National.

The President has instructed Secretary Garfield to conduct an investigation into the affairs of the Standard Oil Company. The operations of the company will also be subjected to additional scrutiny as a result of the passage by the House of a resolution providing that the Secretary of Commerce and Labor shall investigate the cause of the low price of crude oil and petroleum, especially in the Kansas field, and the unusually large margins between those prices and the selling prices of refined oil and its by-products. The Secretary is directed to ascertain "whether those conditions have resulted, in whole or in part, from any contract, combination in the form of a trust or otherwise, or conspiracy in restraint of trade and commerce among the several States and Territories, and with foreign countries; also whether the said prices have been controlled, in whole or in part, by any corporation, joint stock company or corporate combination, engaged in interstate and foreign commerce; also whether such corporation, joint stock company or corporate combination, in purchasing crude oil and petroleum, by any mode or practice of discrimination, boycotts, blacklists, or in any manner discriminates against any particular oil field."

The Secretary is further directed to "investigate the organization, capitalization, profits, conduct, and management of the business of such corporations, company or companies, and corporate combinations, if any, and to make early report of his findings according to law, to the end that such information may be used by Congress as a basis for legislation, or by the Department of Justice as a basis for legal proceedings."

The treaties of arbitration that have been negotiated by the State Department with a number of foreign nations, and which were referred to the Senate for ratification, were amended by that body in such a way as virtually to require the consent of the Senate before questions for arbitration could be submitted to The Hague Tribunal. Under the circumstances the treaties in their amended form will not now be submitted by Secretary Hay to the different nations.

It is reported from Caracas that upon the pressure of President Castro the Court has ordered the sequestration of the landed property of the American Asphalt Company in Trinidad. This action of the court brings the asphalt dispute to the point where it is now incumbent upon this Government to take action.

A parcels post treaty between this Government and Great Britain was signed last week by President Roosevelt, Secretary Hay, and Postmaster General Wynne. It has already been signed by the British officials and will take effect April 1.

General Lew Wallace, author, former American Minister to Turkey, and veteran of the Mexican and Civil Wars, passed away at his home in Crawfordsville, Ind., February 15.

Foreign.

King Edward has appointed the Prince of Wales lord warden of the Cinque ports, in succession to Lord Curzon of Kedleston, who has resumed his position as Viceroy of India. But in future Walmer castle, instead of being the warden's residence, will be thrown open to the public. The Cinque ports are a group of seven ports, originally five, Hastings, Romney, Hythe, Dover, and Sandwich, with Winchelsea and Rye added later. The Cinque ports were created by William the Conqueror.

The sixth session of the first Parliament of his reign was opened on the 14th by King Edward with all the historic pageantry which has marked the ceremony since his accession. The sovereign himself read the speech from the throne to the assembled lords and commons in the upper chamber.

The rumor that Emperor Nicholas II has indorsed the scheme for the revival of the Zemski Sobor, or ancient land parliament, which the old emperor revoked in times of stress, has created intense satisfaction among the Liberal classes.

The rumors persist that the question of peace between Russia and Japan has been formally considered by the Czar. It is intimated that Japan has made certain advances toward that object.

Industrial and Commercial.

The Standard Oil Company of New Jersey has just announced a dividend of fifteen per cent. This is for the current quarter. It distributes \$15,000,000 of profits among the shareholders in that \$100,000,000 concern. From 1891 to 1895 this company paid twelve per cent a year. Then the dividend jumped to thirty-one per cent in 1896 and 1897, thirty per cent in 1898, thirty-three per cent in 1899, forty-eight per cent in 1900 and 1901, forty-five per cent in 1902, forty-four per cent in 1903 and thirty-six per cent in 1904. In all, \$406,000,000, or four times the par value of the capital stock, has been paid in dividends.

The Pennsylvania Railroad Company will buy new equipment costing not less than \$25,000,000, this year for its lines east and west of Pittsburg, and if the entire programme is carried out as arranged, the cost will be \$27,000,000. Contracts have been placed with builders for 370 locomotives and 15,300 freight cars. The company has arranged to build 150 additional locomotives in its Juniata shops. Arrangements have been made for such part of two hundred more locomotives as may be needed later, while still another fifty may be built in the Juniata shops.

About three million feet of water-soaked logs have been recovered this winter from the Menominee River, Michigan, a noted logging stream for a half century. The "dead-heads" are well preserved and are really worth more now than when they disappeared beneath the waters, a poor quality of lumber to-day commanding a better price than did the best product years ago. In the zenith of its career as a driving stream, more than 700,000,000 feet of logs were floated down the river.

The aeronauts, MM. Menier, Jacques Faure, and Herbert, recently made an ascent from the Crystal Palace, in London, at 6:45 o'clock in the evening. They passed over the Channel at a speed of seventy miles an hour and arrived at 1 o'clock in the morning at St. Denis, near Paris, beating the previous record for an air voyage between London and Paris.

Another large diamond, weighing 331 carats, has been discovered in the vicinity of the place where the largest diamond ever unearthed was recently found in the Transvaal.

Sixty Pullman and two thousand freight cars are to be received by the Southern Pacific and the Houston and Texas Central this season.

General.

The aggregate results of Southern textile progress in mill building and enlargement for the fourth quarter of 1904 considerably exceed those of the third quarter, but are exceeded by the first and second quarters. During the fourth quarter there were authoritative announcements of eight new mills to be established, with an aggregate of 84,200 spindles and 2,006 looms, an investment of \$1,684,000. There were fourteen mills announced to be enlarged to the extent of 58,280 spindles and 506 looms. This indicates an investment of \$1,165,000. The quarter's total is therefore about 142,000 spindles, an investment of \$2,850,000.

For the entire year some 621,000 spindles and 10,092 looms have been reported, indicating an investment of \$12,420,000, which is larger by about \$2,000,000 than was credited a year ago to the activity of 1903. About seventy-one per cent of the total spindleage of 1904 is being installed by established enterprises.

It is no small discovery now given to the world by Messrs. Grenfell and Hunt, of perhaps the oldest known manuscript fragment of the New Testament, found on papyrus in Egypt, says *The Independent*. It contains some five chapters of Hebrews, and is assigned to the early part of the fourth century. It agrees quite closely with the famous Vatican manuscript B. Nearly all variations between manuscripts are minute; and one of these is of interest in Hebrews, 11:4, where our Greek manuscripts give us, "God bearing witness in respect to his gifts." Wescott, guided by a quotation from Clement of Alexandria, conjectured it should read, "God bearing witness to him in respect of the gifts;" and so it reads in this papyrus, the only manuscript authority for it.

The Luquillo Forest Reserve in Porto Rico, created in January, 1903, embraces about 65,000 acres of land in the eastern and most mountainous part of the island, set aside from certain public lands formerly the property of the Spanish Government. It is a small wilderness of serrated mountains, tropical forests, and torrential streams, covering a large part of the Sierra de Laquillo, a mountain mass separated from the rest of the island by the Valley of the Loiza, the largest river in Porto Rico.

The aggregate annual letter and newspaper mail of the world amounts to 32,500,000,000 pieces, of which 8,500,000,000 go through the United States mails. We have seventy-five thousand postoffices and five hundred thousand miles of postal routes, with a yearly travel over them amounting to five hundred million miles. The service costs over \$150,000,000 a year. The receipts now almost equal the expenditures, and have doubled in the last ten years.

A most unique effect was produced in the city of Rome recently. Snow had fallen and was immediately followed with red dust from the Sahara, covering the ground with what appeared to be blood-red snow.

Conservative estimates place the loss of oranges in Florida from the recent freeze at two hundred and fifty thousand boxes.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

A Parallel from Nature.

LEWIS C. STRANG.

NATURALISTS report that the young of partridges, bred in districts in England where a certain kind of clay abounds, suffer from a peculiar misfortune known as the "balling." Perhaps the chick gets one of its feet wet. A small lump of the clay, possibly no bigger than the head of a pin, adheres to the foot. Thus the mischief begins, for, as the chick wanders about in search of food, the small lump adds to itself more clay, until the soil attached to the foot of the little partridge may increase from a mere speck to a mass weighing several ounces.

The incumbrance, trodden constantly under foot and baked by the sun, becomes of brick-like hardness, and unless some friendly hand comes to the rescue, the fate of a "balled" partridge is pitiful. Day by day the burden gains in size and weight, as the chick scrambles with dragging foot after its fellows, until at length it is unable to move at all.

Very often, however, the youngsters are found before this extremity overtakes them. The clay is carefully soaked from its foot, and the bird is freed from its incubus. Then another curious phenomenon is noticed. The bird without its accustomed ballast can neither fly nor walk. It tumbles at every attempt, and learns the natural mode of locomotion only after persistent efforts. The little "balled" partridges are usually undersized and physically worn, conditions which quickly disappear after the removal of the accumulation of clay.

Christian Scientists who are struggling to rid themselves of accumulations of error, will be able to read many interesting lessons into this unhappy bird experience. They will perhaps note first of all that the bird's acquisition of physical health and strength quickly follows its separation from a vigor-sapping foreign element. They will note, too, that however thoroughly convinced the bird may have been that the ball of clay was a part of itself, in reality the clay was merely an excrescence, an unnatural and unlawful habitation of the bird's environment and not an inherent and essential element of its nature. Man's relation to evil is exactly the same. Evil is an excrescence, and therefore can be removed.

Furthermore, the thing that kept the bird in bondage was ignorance. If the bird had known enough to stand in a pool of water, it could have soaked the clay from its feet with no more trouble to itself than the exercise of a little patience. It was not a lack of means, but simply ignorance as to their utilization, that caused the bird to suffer until some one less a slave to ignorance removed the clay from its foot. Similarly, are we bound by our errors, not because they cannot be removed, but because we are ignorant of the ways and means to help ourselves, or, though acquainted with these means, as is every true Christian Scientist, we are not willing to exercise the patience necessary to escape from our disabilities.

Again, it will be seen that if the partridge chick had been sufficiently wideawake to have cleaned the clay from its foot when it first adhered, no ill consequences would

have followed. It was not the feet that made the mischief, but the quality of the soil in which the feet walked. Nor could the soil have hurt the chick, if the chick had not permitted some of the clay to stick to its foot. So it is with mortals. The first error that adheres to their consciousness forms a nucleus for more error, until at length the accumulated mass of error overpowers them. Mortal man is wont to blame his surroundings for his sins, but, as is the case with the partridge and the clay, sin cannot hurt him unless he consents to make sin a part of himself.

Again, it is evident that the ball of clay had a seeming power over the bird even after it had been taken from its foot. The bird still had to learn the nothingness of that which it had grown to regard as something very real and very tangible. Without the burden to which it had become accustomed, the bird could neither walk nor fly; and doubtless, if it could have expressed its feelings while it was in the midst of the struggle of learning new ways of locomotion, it would have demanded the return of the ball. It is not unlikely, either, that the chick, momentarily overwhelmed by its sense of crowding difficulties, might even have bitterly reproached the tender-hearted and thoughtful individual who, by destroying the incumbrance, had placed it in the way of working out its own salvation.

When, in due course, the bird learned how to walk and fly, its activity proclaimed its realization of true freedom, and proved without the need of further expression how false had been its sense of the ball of clay as a necessary aid to the full attainment of its rights and privileges as a harmoniously developed creature. Is not an analogous condition found among men? It is no more necessary that a man should know evil in order to be good than it is essential that a partridge chick should be nigh unto death on account of a ball of clay attached to its foot in order to learn to walk and fly after the manner of its kind. Even as the partridge, when its efforts to fly resulted in tumbles, would doubtless have called for its ball of clay, had it possessed that privilege, so men sometimes cling tenaciously to their errors after the nothingness of these vain imaginings has been clearly pointed out, and wonder why Christian Science does not heal them as quickly as it does others.

Men sometimes fear to abandon their burdens lest they abandon at the same time a part of their precious selves; or, partially dropping materiality at the earnest solicitation of one who has gone before, and finding it at first difficult to walk in the new way of Spirit, they would fain return to their wearisome balls of clay. Who has not heard those who should be rejoicing over the dawning prospects of physical and mental liberty, complain of the hardness of their lot and declare that they never had such troubles before they tried Christian Science? They are calling for their fetters of clay. Discouraged for the time being by the struggle of learning the right way to progress, they have forgotten that no progress was possible under the old conditions, and that the inevitable end of companionship with an incubus of error is destruction.

It may sometimes seem hard to be a Christian Scientist, but even then the weary one has always at hand the abiding comfort of knowing that it is far harder not to be a Christian Scientist; and he may also learn from the experience of the little partridge that faithful striving will surely bring him the understanding, first how to walk and then how to

fly in the right way. When that happy time does come, our "earth weights" will not only be nothing, but we shall positively know that they are nothing. Their false claim of power will have vanished, and we shall wonder with a mighty wonderment at our own obtuseness in not perceiving long ago the unmistakable unreality of the unreal.

The Prayer of Jabez.

REUBEN POGSON.

And Jabez was more honorable than his brethren: and his mother called his name Jabez, saying, Because I bare him with sorrow. And Jabez called on the God of Israel, saying, Oh that thou wouldest bless me indeed, and enlarge my coast, and that thine hand might be with me, and that thou wouldest keep me from evil, that it may not grieve me! And God granted him that which he requested.

1 CHRONICLES, 4: 9, 10.

It is quite possible that no man has ever had his history written so tersely and yet so fully as Jabez. The very brevity and sweet simplicity of the story as told in those two verses fixes it in one's memory, where a longer narration would have defeated the purpose desired by the narrator. Like the 91st Psalm and other exquisite portions of Scripture, it tells right at the outset the reason for the ensuing success. This bit of literature was not written for mere dramatic effect. The reader is not led into a maze of impossibilities through two volumes, to be disentangled in the third. The first line tells of his high aspiration and attainment, and its reward appears in the last. The value of the story is increased in view of the complexity and falsity of much of our modern civilization.

In the attempted betterment of the masses the economist has at times been at a loss to decide which of two methods of reform is the more effective. Is it better to reform the individual, and allow him to shed abroad the light of his own improved mentality and thus dispel the darkness of ignorance and vice; or to improve the environment of the individual, by securing him a better house, parks, public baths, concerts, etc., and so achieve the same result by another process? To the working man who is already awake to the unsatisfactory conditions of material existence, the economist's decision one way or the other will be of little use in the solution of his immediate problem. The honest poor man doubts on, doubts ever, as to how much he will be benefited by anything outside of his own individual efforts to keep his head above the threatening waves of poverty and sickness. To this man the story of Jabez may be commended. Here is a man who, according to the laws of heredity, should have been sorrowful and dejected; according to the laws of environment, he should have remained limited in his possessions; but, because of his own efforts to realize his relation to God and to act up to his highest conception of right, he fell into neither the pit of self-sympathy nor that of hatred for his fellows. To those who have shared in the belief of Jabez; namely, the curse of mortal mind which declares that in sorrow all children shall be born, this history of how one of our brethren escaped from its seeming dominion will help to show us how to do the same. Has not the least aspiring of us felt the necessity for something better than that which he has already? The dirtiness, sordidness, uselessness, and hopelessness of our methods of obtaining a living have surely burdened even the least sensitive. The limitations of ability, talent, capital, the smallness of our coast-line, the drudgery of a work-and-sleep, sleep-and-work existence, the colorless drab in which our life-picture is painted, the lack of sturdy independence, the cowardice of weak comrades, all go to make lines of discontent and wrinkles of worry upon the twentieth-century worker's face. Why is this so? It is because men do not go straight to Principle. Lost in the mazes of tentative reforms; viewing every thing and question from a finite standpoint; their reasoning founded upon a limited basis, namely the human mind;—all their achievements are strangled by their own sense of limitation and inherent weaknesses.

It has been said that "to have faith in God one must have some conception of what He is capable of doing for us." Does not the interesting story of Jabez illustrate this? In opposition to this, a well-known English authoress has made one of her characters remark to this effect, "We should not pray for anything outside the range of ordinary possibilities." These quotations illustrate the vast difference between the standpoints of their authors. One pushes out beyond the finite to gain some conception of the vastness of the infinite, and then with this increased vision commences to pray; the other would conveniently reduce the power of God to that of a finite being. Many will agree with the first of these two quotations, but will say, "the thing is, how to get there." Evidently the reason for Jabez' getting there is found in the first line of the ninth verse, i.e., "And Jabez was more honorable than his brethren." There is no imputation of dishonesty or dishonor cast upon his brethren, but Jesus has said, "Except your righteousness shall exceed the righteousness of the scribes and Pharisees ye shall in no case enter into the kingdom of heaven;" these statements clearly show that not from a mere state of negative respectability can we obtain a vision of the Divine ability to aid man, but it is by climbing up the highest mount of mortal conception of right that man begins to lose sight of a finite horizon, and, piercing beyond the veil of matter, catches his first glimpse of the mighty All-power. Triumphant mentally over all human laws of heredity, environment, and mortal probabilities, he cries out to the living God, feeling conscious that to know this power aright is life eternal. It now remains for the climber to so lay hold upon his vision, to so continue in his mental triumph, to so fix his gaze Zionward that, should the clouds of olden doubt or the starless night of materialism descend, his experience remains, nevertheless, an abiding consciousness.

The story of Jabez is told so briefly, the answer to his prayer is placed so close to the cry for help, that one might easily run away with the idea that the result came very quickly; but I don't think it did. Personally I know that the real reward for faithful work is not in the mere outward manifestation, although this receives prominence in our testimony meetings. The true recompense is in the growth Godward which has been achieved through working for the result. I might pray to God for the universe, and He might give it to me, but unless with the demonstration had come such growth toward the infinite that I should know what to do with the universe when I got it, I should be not one whit happier, probably less so, than prior to my prayer. Thus, when our demonstrations are protracted, when our coast seems to be getting smaller instead of larger, when evil grieves us and we grieve because we give it the power and place to grieve us, may we remember the words of the Psalmist who also had climbed and seen visions, "The righteous cry, and the Lord heareth, and delivereth them out of all their troubles. . . . The Lord redeemeth the soul of his servants: and none of them that trust in him shall be desolate."

And what has Christian Science to do with it all? the reader may ask. Jabez knew not Christian Science, yet he made his demonstration; what, then, is the need for Science and Health and our Leader? Christian Science has not merely something to do with it, it is It. The Christ knowledge has existed from all eternity, and every one of the ancient seers and prophets who saw that poverty, sickness, and sin were not God-made, and could by spiritual understanding be destroyed, caught a glimpse of the Christ.

Mrs. Eddy has given us in Science and Health, couched in the language of this age, a revelation of Truth. All other prophets and priests did their work for their age, but to the scientific mind of the nineteenth century they have seemed simply to suggest rather than disclose the light we need to-day. The first age in conscious mortal history, according to the Scriptures, was the age of Law, of which Moses was the mouthpiece. Then there came a softer age, when men needed poetry and imagery to feel the

presence of God, and the Psalmists were the revelators. Then, in the age of decadence when truth seemed dead or dying, the prophets sprang up and prophesied the eventual triumph of truth. Later, when the former revelations were smothered in ritualistic grave-clothes, there came one who "spake as never man spake," and what is more, lived as never man lived, thus bringing to humanity the greatest revelation of the eternal Christ the world has ever known. And now, in this age of scientific reasoning and logical deduction, has come one, God-chosen, treading in the pathway of law-giver, psalmist, prophet, and apostle, to smite off the veil of matter that had hid for seventeen centuries the truths our Master lived and taught; one who has given to this age a work which discloses the true spiritual meaning of the Scriptures. She has gathered all the rays into their focal point, and made the God of Israel, the God on whom Jabez called, understandable and therefore lovable. Though there may be some who question her position as a Revelator of eternal Truth to this age, it is certain that it will take more than this age to estimate the real value of Christian Science.

Unfoldment.

FLORA BELLE JOHNSON.

"I THANK my God upon every remembrance of you." At a time of great need, the meaning of this verse dawned upon my consciousness with a radiance born of Truth and Love. As a child groping for light, while in the darkness of mortal belief, I would ask, when told to "Be good." "But how?" I do not remember that the question was ever answered. When I learned in Christian Science that it is not right to touch another's thought unless help is sought, I spent the first year or two in the endeavor not to trespass upon others' rights, but to attend strictly to my own demonstration and accord to others the liberty I claimed for myself; and yet many times I would find myself accusing, condemning, or criticising some one, almost unconsciously. I would then bring thought up instantly to the judgment-seat, and groan at the perversity of mortal mind, at war with the purposes of good.

Now, with the treasures of Truth contained in the Bible unlocked through Science and Health, the way grows clearer and brighter unto the perfect day when we stand "face to face," see "eye to eye," and know that error is no part of our brother. The old belief of criticism was a strong man to be despoiled, for I found I was beset by it on every side, until one day, while studying the lesson with a teacher's Bible, in looking up the references given in the margin, I opened to the text, "I thank my God upon every remembrance of you," and my problem of "how" was solved. The application of this text to my need was evident, and joy took the place of uncertainty. Thereafter, whenever I found myself thinking of another, who might perhaps seem to be lingering along the highway of truth, or manifesting some error, instead of a critical thought I now sent out a glad note of joy, "I thank my God upon every remembrance of you." Then I found in the margin that "remembrance" meant also "mention," and the helpful thought expanded. Whenever another's name was mentioned, the audible or mental word went forth again, I thank my God upon every mention of you. Paul himself speaks of the joy of this method of procedure when he gives thanks for the "fellowship" of those in the faith.

To our Master we owe many beautiful lessons drawn from nature, that of the lilies being especially potent, "Consider the lilies of the field, how they grow." How simple and how wonderful is its deep meaning! We love to watch the flowers as they open their petals and send forth their sweet fragrance, but we do not find fault with the buds because they do not open as soon as we would like. We wait with patience, knowing that when the "fulness of

time" comes for them, we shall see perfect and beautiful blossoms. A half-blown rose is one of the most beautiful objects in the floral world, but a lily-bud is plain and unattractive; yet, when its waxy petals are freed, its exquisite purity and fragrance are unsurpassed. So we too may await the day of perfect unfoldment; and this brings us to the sixth verse of the same chapter, "Being confident of this very thing, that he which hath begun a good work in you will perform it until the day of Jesus Christ."

The Value of Good Expression.

WALDO P. WARREN.

THERE is an art in clear expression which equips with convincing power. It consists in presenting a given thought so clearly that it reaches the understanding of another and thus impels him to action. This art not only wins success in convincing others, but it tends to clearness of thought and keenness of perception, and thus makes reading more profitable. To be content with an imperfect command of expression is to miss much in both growth and service. The best way to acquire this command of language is to study and practise the rules of composition, and acquaint oneself with good literature. A simple style is conceded to be the most effective. It consists in going straight to the point, and by the use of plain words which are readily understood by every one. The clearness with which a truth is stated largely determines its success in displacing error, and the mastery of good expression thus becomes a most important part of our equipment for effective spiritual warfare.

[Written for the *Sentinel*.]

"What think ye?"

J. CRADDOCK JONES.

THINK ye of Mind as but a transient force,
A temporal power within the human breast,
Destroyed when sin has run its wanton course
And wayward man at last is laid at rest?

Think ye of Spirit as a phantom hand
That beckons but to multiply our ills,
And straightway tenders all its spectre band
To lead the hosts of earth where'er it wills?

Think ye of Soul as but a single star.
Set in the orbit of corporeal sense.
To guide us to some firmament afar,
And sin, disease, and death its recompense?

Think ye of Life as but a span of years
Of joy and anguish wrought by mortal breath,—
A martial law, a government of fears,
And man, eternal—counterpart of death?

Think ye of Truth as but a mortal thought,
A voiceless image on a voiceless throne,
Now veiled by error and by error bought,
And sold again like some enchanted stone?

Think ye of Love as but a flick'ring light
Of mammon's greed, or wasting torch of lust,
Extinguished by the gloom of endless night,
When human hopes have crumbled into dust?

Nay, nay, Mind, Spirit, Soul, Life, Truth, and Love,
Immortal cause, immutable and one—
The Father-Mother God, omnipotent above,
And ever-present here. His will be done.

Selected Articles.

An Important Issue.

In your issue of Sunday, January 29, appeared an article concerning the death of a little boy under Christian Science treatment, in which it is stated that the doctors claimed that his life might have been saved if a physician had been called, and anti-toxine used. Where death occurs under Christian Science treatment, this claim is almost invariably put forth, that life could have been saved if a physician had been timely summoned. Your many readers will certainly find difficulty in reconciling the above claim of the doctors with the following item in the same issue of your paper: "At the present time there are only three cases of small-pox, eighteen of scarlet fever, and eight of diphtheria, in the city. Last week there were one hundred and one deaths, of which thirty-nine were children under the age of five years." This is presumably an average record. Of this thirty-nine, only one died under Christian Science treatment. All the others died presumably under treatment by regular physicians. Why should the single death provoke so much comment, and the thirty-eight none at all? If failure in a single case is cause for preventing the Christian Scientist from practising among the sick, what should be done with the system that loses thirty-eight children and sixty-two adults in a single week, especially when among the children of Christian Scientists, where spiritual healing is the sole reliance, death is a very rare event?

It is confidently stated on the best authority, that among those in Detroit, numbering about one thousand, who have relied solely on Christian Science treatment, only two deaths have occurred during the past year, a record that speaks for itself.

In Grand Rapids there is only one Christian Science church. Its Sunday School numbers eighty-three, and the adult membership of the church is one hundred and eighty-three. There have been no deaths in this city among children of any age in the families of Christian Scientists during the past year or more, nor among children of non-Scientists who had no other than Christian Science treatment. This statement is not made in the spirit of exultation, but in grateful thanksgiving for what God does for humanity when it understandingly turns to Him as the sole reliance.

In the item above quoted it is stated that there were thirty-nine deaths, in your city, of children under five years of age in a single week, and how many deaths of the one hundred and one were of children above five years of age, is not stated. In the light of facts, what basis in justice or wisdom is there for the claim that Christian Scientists should be legally debarred from practising among children? Honest investigation will prove that the death rate among Christian Scientists is much below the average, although a large portion of the adult members have come from the ranks of confirmed and hopeless invalids.

The great American heart is too broad and generous at this hour to close the door on the spiritual methods of healing practised and enjoined by the great Master physician, which Christian Scientists are meekly endeavoring to carry out. Their efforts are being crowned with ever-increasing success, and they are attracting people all over the world to their Christly ministrations among the sick and sinful.

JOHN CARVETH.

Detroit (Mich.) Free Press.

If other demoninations never failed in what they consider their God-given means of reformation, or if there never were failures on the part of other systems of healing, the objection to the failures of Christian Scientists might be a valid one. But in view of the still deplorable plight of humanity and the manifest ineffectiveness of the efforts of men to resist evil of all forms, it must be acknowledged

that there is something wrong with present methods, at least to the extent of withholding uncharitable criticism.

Christian Scientists account for failures in much the same way that Jesus accounted for the failure of his disciples in a certain case. He said that it was because of their "unbelief," their lack of the faith which comes of knowledge. It is said even of Jesus that in certain localities he did not many mighty works, "because of their unbelief." He did not indicate that there was any unwillingness or inability on the part of divine power and goodness, but that there was a lack of spirituality on the part of those who needed his aid. These same reasons may explain the failures of Christian Scientists to heal every case to-day. They are not yet far enough advanced in Christian knowledge to preclude all failures. We freely admit that these occur, and do not claim that the moment a person becomes a Christian Scientist he becomes immune from all earthly troubles. Far from it. But we believe that as a body of people we are sick less frequently than others; are sick for a shorter period when we are sick, and have a better time during this undesirable experience. As one has aptly put it, we do not think that we are better than other people, but that we are better than we were. The laborer becomes a better laborer, the mechanic a better mechanic, the business man a better business man, etc.; and more than that, they all experience better health. Our lives and the lives of our friends and families are as dear to us as their own lives and those of their friends and families are to others, and we believe, and with good reason, that we and they are safer in the hands of God than in the hands of any earthly power.

C. F. HACKETT.

Utica (N. Y.) Press.

Science has been defined by an eminent lexicographer as "Understanding of truth." It will thus be seen that true Christianity and true Science are inseparably related. The conjunction of these two great elements has been clearly explained as follows: "The Hebrew Scriptures, culminating in the teachings of Jesus, reveal God, the eternal Mind or Spirit, as Truth and goodness. The world which He has made is, therefore, as His projected or externalized thought or idea, not only true, but also good, and man, who is His offspring, created in His image and likeness, is meant to reflect in himself the divine Life, Truth, and goodness. But as strictly as Mrs. Eddy interprets idealism to be Christian, she no less strictly interprets Christianity, as has been pointed out, to be scientific. Imbued with the modern sense of a vast, orderly system of nature, unfolding before us according to immutable, rational laws, she carries this scientific sense to the Gospel of Jesus and declares its underlying Principle to be as scientifically knowable as the 'Principia' of Newton. Redemption from all evil is as natural to man as gravitation is to nature; one is as immutable and exceptionless as the other, and we can rely upon it with perfect confidence."

RICHARD P. VERRALL.

Elmira (N. Y.) Telegram.

It requires infinite wisdom to correctly judge the character of another, or make a just comparison between two individuals. The gruff sinner may at a certain stage be even nearer to God than the ill-advised conscientious Christian. We believe there are many individuals in the world who would have sufficient spiritual strength to overcome their sufferings, if they but understood that disease is an outlaw to be mastered by the power of God and would assert themselves enough to overcome it. Christian Science affords a keen sense of right, and inculcates a knowledge of the absolute necessity of deportment in accord therewith. It consequently uncovers the most subtle forms of evil, fosters a most ardent desire to depart therefrom, and gives unbounded moral strength.

ALFRED FARLOW.

Boston Times.

Among the Churches.

A Letter from New Zealand.

About fourteen years ago, our city was presented with false metaphysical teaching; the teachers never openly advanced or advocated Christian Science, but formulated lessons of their own, which were made up in a large measure of Christian Science statements. I purchased a copy of Science and Health, and in the newness of my faith I based some good demonstrations on the truth as taught in Mrs. Eddy's book. After a time these teachers were removed under most painful circumstances. For several years Science and Health had been laid aside as a book containing only the alphabet of mental healing, and while I was studying the so-called more advanced literature, I lost peace and power.

I strove faithfully to follow Truth, yet with all my earnestness I was conscious that I did not realize the power of the early days of my study of Science and Health. Defeat met me in every department of my life, and I had lost all faith in material remedies. God seemed to ignore my prayers, and there was no one here to help me, and I knew not where Mrs. Eddy was. Surely I felt that my last condition was worse than my first.

I then threw myself into social and political work, and in 1897 I represented the "Canterbury Women's Institute" at the National Council of Women of New Zealand. Feeling that this work was only dealing with effects, I gave it up, and a year or two after abandoned the struggle. My husband thought I had gone mad when I declared there was no God for me, and stolidly set myself against anything spiritual.

Two years ago, when I lay weak and low, some *Sentinels* were lent to me by an old fellow-student who had happily found Christian Science in a sister colony. I came across Judge Ewing's lecture, "Christian Science, the Religion of Jesus Christ," and as I read and re-read it, it seemed to me the echo of a long-lost voice, and once again I was conscious of a spontaneous desire for the Mind that was in Christ Jesus. Since then I have been busy uprooting and cleansing, and I have no desire for any but genuine Christian Science literature, and many errors in our home have faded before the truth. I have explained thus at length, for I want to show fully how deep in wretchedness even an earnest seeker for truth may become when mistaught; and also to say how deeply I appreciate Mrs. Eddy's loving sympathy for such as myself, which is expressed in "Miscellaneous Writings" (p. 32).

When I think of the experience we all suffered through accepting false teaching all those years ago, I view Mrs. Eddy's sublime life of purity and self-sacrifice with a fervent thanksgiving to Almighty God that His supremacy has been revealed to this age. I trust that my experience will prove to many that the rules laid down by our Leader for the guidance of her followers are but the offspring of spiritual perception and o'erbrooding love that would fain protect loyal hearts from unnecessary suffering through ignorance.

I am sure that the pure influence of Christian Science will eliminate the effects of all erroneous teaching from our city, and my one desire is to help others who have not yet found the true way. Very slowly and very surely my Christian Science friend and myself are discovering more ways of helping others to investigate Christian Science, and I hope for the blessing of our Leader on the work for the Cause at this place, so far away from the central organization. I trust soon to be able to send some testimonies of healing. Some friends meet at my home every week for the study of the Lesson-Sermon, and we are now getting a good deal of Christian Science literature.

Christchurch, New Zealand.

The Lectures.

San Francisco, Cal.

A very successful lecture was given here December 17 by Mr. Bicknell Young to a crowded house, over two thousand being present, and hundreds turned away who were unable to enter. Mr. Young was introduced by Mrs. Eleanor V. LeBlond, First Reader of the local church, who spoke in part as follows:—

My friends, despite cavil and criticism, Christian Science has come, and it is propelled by a power that the world is slow to recognize and acknowledge,—the power of divine Love. There is not a city or town in our broad land, and scarcely a village, that does not bear witness to the healing and saving power of this Science.

The Comforter has come, and in the best way, in the way of God's appointing; and shall we deprive ourselves of its manifold blessings, and question and quibble, simply because the helm of this great Ship has been placed in the gentle, tender, loving hands of a woman? To-day we are learning a new and truer sense of God. We are learning and demonstrating that God is Love. And is it strange, or should it be thought strange, that Love should speak to a weary and waiting world through this most fitting channel, through the pure, loving thought of a woman?

Correspondence.

Park Ridge and Edison Park, Ill.

Edward A. Kimball of Chicago lectured for First Church of Christ, Scientist, December 29. He was introduced as follows:—

I appreciate the honor of being asked to introduce the lecturer of this evening. In the first place, I will introduce myself: I am the pastor of the Congregational Church of Park Ridge. Personally, I am glad to be here this evening and to listen to the truth from the Christian Science standpoint. No church, no society, no organization, not even this church of Christian Science can claim to be alone the custodian of all truth; each and all churches represent some phase of religious truth. As I understand it, Christian Science stands for spiritual Christianity.

The larger and fuller developed mind in men and women dwells not upon the differences which separate and cause division, but upon the great central truth underlying all religious beliefs. It is the truth we need, the truth that shall make us free from ignorance, prejudice, and superstition. If I am thirsty it matters not who brings me the water, a bootblack, a street Arab, or a college president; it is the water I want. So truth, come through whatever channel or source, it is truth I want. So with all honest minds; they seek the truth. Idleness, ignorance, prejudice, and the lack of the courage of our convictions are weights like an incubus enslaving humanity.—Correspondence.

Lectures at other Places.

Batavia, N. Y.—Rev. Arthur R. Vosburgh, November 13.
Fortuna, Cal.—Bicknell Young, December 22.

Canyon City, Tex.—Judge William G. Ewing, January 19.

A Pamphlet in German.

Mr. Alfred Farlow's article, "A Critic Answered," which appeared in the June *Journal*, and which has since had a wide circulation as a pamphlet, is now published in pamphlet form in German. It will thus reach a larger number, and be helpful to them through the removal of many of the current misconceptions of Christian Science. Price, 6 cents each; 60 cents per dozen; \$1.15 for twenty-five copies; \$2.25 for fifty. Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

The Bible Appreciated.

To the question, Is the Bible in danger? the *Christian Register* replies:—

"Yes, it is in danger of being laid upon the shelf never to be read again. Probably the majority of business men never open a Bible, but the cause of this neglect does not lie in the higher criticism or in any of the so-called attacks upon the Bible. Many theories of the origin, duty, and destiny of mankind which, it was claimed, were based upon the Bible, are passing away and with them is passing interest in the book which is held responsible for these outworn doctrines. It may be that the Bible will come again into the place it deserves to hold in the first rank among the records of the past, as the result of the new studies which reveal it in its true character, as a record of the spiritual struggles of some of the most excellent seekers for truth and doers of righteousness who have ever lived upon the earth. The very efforts which have resulted in the total destruction of ancient dogmas concerning the will of God and the nature of man, have brought to light facts of wonderful interest to all students of human progress, and will, in time, cause the Bible to be read with new delight by those who are interested in the history of their race."

If the statement that "probably the majority of business men never open the Bible" is true, then the reason assigned by the *Register* for this lack of interest in the Scriptures is without doubt the correct one, but the business man—the layman—should not be held too strictly to account for this state of affairs. He is not wholly to blame. He has trusted to others for an interpretation of the sacred writings, and they have given him a theory of God which is inconsistent with the highest human ideals, and a Saviour whose healing ministry ceased with the earthly career of our Master. Christian Science is rescuing business men, and other men, from this condition of agnosticism and is revealing to them a God who is Love, a God who is healing the suffering and sorrowing just as they were healed of old in Judæa. It is because of this new-old revelation of Emmanuel that the Bible is so precious to Christian Scientists, and has become their constant companion.

Any one who reads the testimonies which appear in our publications will see that so far as Christian Scientists are concerned the Bible is in no "danger of being laid upon the shelf never to be read again." On the contrary, it is the daily instructor of an ever-increasing number. Persons who have been Bible students for years write that in the light of Science and Health, the Scriptures have taken on an enlarged, more practical, and more spiritual meaning, and that the promises of Jesus are now seen to be possible of fulfilment.

A prominent clergyman, in speaking of the prevailing apathy of the masses, recently said:—

"The reason that some churches in Chicago are nailed up and unused is in the fact that the spiritual was forgotten in other considerations."

If the Bible has been "laid upon the shelf" by any considerable number of persons, it is for a similar reason, and the remedy for this condition must be in a more spiritual apprehension of the truth of the "book of books."

ARCHIBALD McLELLAN.

The Veil of Personality.

Their eyes were holden, that they should not know him.

THE story of the walk to Emmaus, on an afternoon which had been darkened by crushing disappointment, illustrates a human tendency that still abides to the serious disadvantage of our spiritual realization and ministry. The two disciples were sincere and loyal, but they were yet in bondage to a human sense of personality which, in view of recent events, rendered it impossible for them to recognize their Lord, even when he was at their side and speaking lovingly to them. Jesus' effort to raise the thought of his disciples to the recognition of his spiritual selfhood constitutes a salient feature of his ministry. Through all their captivities and humiliations his people had clung to the promises of the perpetuation of the throne of David, and impelled by racial pride, by an aggravated sense of intolerable wrongs, and by the prophet-nourished expectancy of a Messianic deliverer, they trusted that it was he which should redeem Israel.

The disciples evidently shared this universal hope, a hope which was forever blasted when Jesus frankly declared that his kingdom was not an earthly one, and that while a host of angels awaited his call, their service was not to be rendered in a strife for worldly empire. Moreover, his multiplied works of healing led the superstitious among them to look upon him as simply a wonder-worker, an ordinary man who could do extraordinary things, and to these he brought confusion when he said, "My Father worketh hitherto, and I work. . . . I can of mine own self do nothing." In these and many kindred words Jesus tried, again and yet again, to lead their thought away from his human personality, and all it might suggest to them; and the saddening failure of his endeavor to accomplish this, was revealed when he said, near the close of his ministry, "It is expedient for you that I go away." A sincere and loving attachment to his person had come to be an occasion of separation from him! Prior to this he had assured them that he would not leave them comfortless, that they were ever to be one with him, even as he was one with the Father. Both his prayers and his promises precluded the possibility of his separation from them, and, therefore, in declaring the expediency of his going he emphasized the necessity of their escape from that sense of dependence upon his human personality which had so hampered his true appearing, his spiritual self-revelation. Centering their thoughts, their anticipations, their hopes upon the human, the divine had been hidden from them.

The centuries have passed, but the loss attaching to mortal sense remains the same, and companionship with the Christ is still sacrificed for the satisfaction of that human thought which always interdicts, in so far, the attainment of better things. In seeking its own gratification, the human represses spiritual aspiration, and thus renders our eyes "holden" that we cannot see the divine idea. So long as we retain our loved ones in the embrace of a material concept, so long will we contribute to the weaknesses and burdens which materiality has brought them, but the moment we begin to know them in their true estate as the children of God, then does true fellowship,—the reciprocal ministry of Love,—become possible.

As never before since the days of the Master, Christian Science is pressing upon men the realization that the sense of material personality,—the ground of that attachment which always seeks in its object a personal return,—is to be denied and dethroned, and that the recognition of spirituality, the seeing of all in Mind,—that this alone can sustain and satisfy true affection. In a letter to the church of Atlanta, Mrs. Eddy makes an appeal which is reiterated on well-nigh every page of her writings, and which embodies a truth of supreme significance to every aspiring heart. She says,—

"Keep in mind the foundation of Christian Science,—one God, and one Christ; keep personality out of sight,

and Christ's 'blessed are ye' will seal your apostleship" (*Christian Science Journal*, May, 1899).

JOHN B. WILLIS.

Vital and Joyous Religion.

THOUGH there may be a very general disagreement as to the best means of promoting the moral and intellectual advancement of the race, there is no question as to its desirability. Materiality makes strong demands upon mankind, and promises great things in return, but it soon becomes apparent, even to the superficial, that it fails to make good these promises. Men do not find security, much less happiness, in worldly pursuits and possessions, and well is it for those who discover this early enough to spare themselves vain regret and remorse for lost opportunities to gain in spiritual things. None too soon can the individual and the nation learn that it is "righteousness" which exalteth the one as truly as the other. The need of a recognition of this fact was emphasized in a recent sermon, quoted by a religious contemporary, in which the preacher said, "The strength and enthusiasm of present-day manhood has gone into commercial enterprises. . . . The Juggernaut of commercial greed has rolled over, and is crushing out of existence to-day, in the lives of thousands of our best and brightest young men and young women, the higher religious aspirations. . . . I have no faith whatever in the remedy proposed by mere education of the masses, in the building and equipment of large libraries, in the emphasis laid upon great colleges and universities, if these things are in any way whatever divorced from the most profoundly elemental religious conceptions of righteousness."

There are few, if any, right-thinking people who would dissent from these statements, and all would surely agree that the one important consideration for mankind is, how best to attain to the "profoundly elemental religious conceptions of righteousness." Christian Science has unquestionably succeeded in rousing a deeper interest in religion than was ever before experienced by the thousands who are now identified with it. Some of these people had previously been very devout, others had been wholly indifferent to religion, but in both cases their healing by spiritual means awakened an all-absorbing interest in the study of the Bible, and in the consideration and practice of those vital truths which have to do with the uplifting of humanity. Not only do they find it a joy to study the Bible, in the marvelous light thrown upon its teachings by our textbook, *Science and Health*, but in the busiest lives time is found to carry the message of the Christ-love and its healing power to the sick and the sinful.

One of the most encouraging features of this voluntary service is the simplicity and naturalness with which they tell others of the truth that permeates their own thought and blesses their own daily life; indeed, the difficulty is to repress the impulse to tell of it everywhere. An incident is recalled of a business man who had accepted Christian Science. He did not hesitate to say that he had long served the "world, the flesh, and the devil," but he had found his freedom in Christ, Truth, and with it a glad sense of joy which he knew to be abiding. His pleasure was found in bringing others to see the light which was shining upon his path. On one occasion he shared his gladness with others by reading a telegram from a former man of the world who had recently been healed, and who was impelled by his new-found joy to send this message from a distant part of the country, just to tell of a spiritual uplifting which he had received at a Wednesday evening meeting. Those who listened could but remember the Master's words, "Enter thou into the joy of thy Lord." It is this joy which accompanies Christian Scientists wherever they go. It expresses their sense of mental and physical health, and they therefore bring healthful conditions into their social and business life. Their religion is no longer assumed on occasion; it is their very life. It is the knowing

of God, good, knowing Him as Truth, Love, which gives new energy, new hope, new opportunity every day for the exercise of that high and holy sense of religion, wherein

Her priests are all God's faithful sons,
To serve the world raised up.

ANNIE M. KNOTT.

Letters to our Leader.

Boston, Mass., February 15, 1905.

Rev. Mary Baker Eddy,

Pleasant View, Concord, N. H.

Beloved Leader and Teacher:—I am very grateful to you for your gift of the "Legends of Parsifal" which you so kindly sent me. Knowing as I do that your moments are spoken for weeks ahead of their arrival, your thoughtfulness for others is a distinctive mark of the gentlewoman, and the selfless worker for the good of others. The book is a most excellent expression of the Parsifal legends. I became familiar with most of the legends about seven years ago, during the time that I was making a thorough study and analysis of Wagner's harmonic structure and orchestration. I feel that had Christian Science come to the great maestro, he would have seen its truth, for his works "Tannhauser," "Lohengrin," and "Parsifal" show that his thought was centered on the power of purity and righteousness over the sensual and the sinful. "Parsifal" is a remarkable music-drama, and makes an overwhelming appeal by its impressive dignity and religious fervor.

It is a very singular thing that in modern times no two persons have met with such tremendous persecution, abuse, and malicious accusation as have Richard Wagner and yourself. And again comes the parallel, that you have both succeeded. Richard Wagner has revolutionized music in every land where music is known, also the methods of orchestration. Your teachings are now taking firm hold upon the world and are changing to a new and higher standard all that they touch. The great maestro's life was one of eternal vigilance and battle. His own pen for years defended his works. Volumes could be made of the most malicious epithets, vilifications, caricatures, and puns that were printed about him. Cliques banded together secretly, and organized mobs sought by political and financial means to keep his works from being heard, while jealous musicians and critics tried to destroy his sure progress.

You, who are working for a higher Cause than the establishment of musical expression, can realize in your clear vision and your own splendid experience something of the trials of Wagner. He had no clear light to lead him on except his own convictions and extraordinary genius for the combination of tones. Victories in music and art are never enduring nor eternally satisfying. The victories over sin, disease, and death are enduring and satisfying, and lead us to see the great wisdom of God's laws which the Master revealed.

I thank you again for your never-sleeping memory and for the knowledge whereby some of our weak places are pointed out to us and made strong.

Lovingly yours,

WILLIAM LYMAN JOHNSON.

Kansas City, Mo., January 24, 1905.

Rev. Mary Baker G. Eddy, Concord, N. H.

Beloved Leader:—Before the opening of our church on Christmas day, the officers decided to set aside the collection from one of the services for the dear Mother Church Building Fund. This sum, which was seven hundred dollars, was forwarded to Mr. Chase. On the last Sunday of each month we take up a collection for The Mother Church. Many of us have discharged our duty to the local church and shall now bend all our energy towards raising funds for the building of The Mother Church. We know full well that the branches cannot prosper unless the vine is

nourished. When we see the great interest in our Cause which is awakened by the building of a local church, we realize what a wonderful awakening will follow the dedication of The Mother Church.

I have always felt that money is no equivalent for blessings received in Christian Science, and I find my greatest joy in giving to this Cause. Every Christian Scientist in the land should work for the completion of our dear "Temple." For years we have received encouragement and refreshment from our annual meetings in Boston,—we can now show our gratitude by giving liberally to this Fund. You, our dear Leader, have taught us to lay hold of the infinite source of supply; and how much we owe you for this wonderful knowledge! The hundreds and thousands who have been healed and blessed by your teachings should stand ready to respond to your call. I hope you know that your Western helpers, although separated by many miles, are striving to show forth your teachings in their purity, and that they desire to help you in every way. We often long to be near enough to show you by some personal deed how much we love you and how deeply grateful we are for what you have done for us.

With a heart full of gratitude and love, in which my mother and husband join me, I am, Yours,

JENNIE BAIRD SCHOOLEY.

St. Joseph, Mo., February 6, 1905.

Dear Mrs. Eddy:—Since reading the editorial "As to Quotations" in the *Sentinel* of January 21, I have seen how opportune was its appearance. A few days ago a friend presented my husband and myself with a beautifully illuminated copy of your hymn, "Blest Christmas Morn," copied from the Christian Science Hymnal. It surprised me greatly, inasmuch as this form of error had been pointed out so clearly in the *Sentinel*. On reading this copy, I scarcely recognized it as your poem; some words had been transposed, while some were omitted, and others supplied, and the meaning greatly changed,—if meaning there was to some of it.

This was an object-lesson to me, of your great wisdom in this, as in everything you do, and I have been watching carefully lest I should be guilty of quoting from your copyrighted works without permission. I never realized before how prone we are to do this.

Loving yours,

MARY B. HOWE.

Hamilton, O., February 15, 1905.

Rev. Mary Baker G. Eddy.

Dearly Beloved Leader:—My heart has yearned for many weeks to express to you some of my gratitude for the joy and benefits I have received through Christian Science. The thought of unworthiness to intrude upon even one moment of your time has kept me silent until to-day, but the Christ, Truth, which you, dearest Leader, have revealed to us, shows me that there must be no self-condemnation, and I now believe that it might interest you to hear of my healing. About two years ago I went to a faithful student of Christian Science in this city, in a very weak condition physically, with the worst form of lung and stomach trouble. I gave up everything, was willing to become even as "a little child," and was given a treatment, while I read from your book, *Science and Health*, "When the illusion of sickness or sin tempts you, cling steadfastly to God and His idea." From the understanding of the truth which was demonstrated, together with my earnest study of the "little book," I am healed.

May choicest blessings of divine Love be thine always, and may my life of gratitude, stronger than words, prove my love for you and your great gift to humanity, the discovery of Christian Science.

Your loving disciple,

BONNIE C. WESCO.

Testimonies of Healing.

The longer I am in the work of Christian Science, the more grateful I am for the testimonies of healing that are given in the *Sentinel* and *Journal*. The healing of the multitude to-day through spiritual means proves to me that its blessings are for all. Christian Science is teaching me to know myself and is leading me out of false human beliefs. I owe my health and happiness to Mrs. Eddy's discovery. It has lifted me "out of the miry clay, and set my feet upon a rock." Christian Science is showing me how the truth, the Word of God, can be applied to the every-day affairs of life. Science and Health not only tells me what is to be done in order to work out my own salvation, but it shows me how to do it.

Most of my boyhood days were spent in the hands of physicians. From birth I was considered a very weakly child, but my mother was brave, and being much devoted to me did everything within her knowledge and power for my comfort. Sickness and medicine were continually before me, and by the time I reached my teens I thought I knew a material remedy for every ill. I continued in my delusions, because I was never told the real cause of my trouble. Besides being under a leading specialist for two years, I was also an out-door patient of a noted hospital, but I was not healed. It is wonderful how the "little ones" are cared for in the face of all these seeming difficulties. I always used the prayers that I had been taught, and as I grew older I began to ask for wisdom. Little by little I gained a desire for freedom, and my prayers finally led me to the truth. The first week that I heard of Christian Science, I visited the home of dear Christian Science friends, and was at once refreshed by their purity of thought and example. At their invitation I immediately purchased a copy of "Science and Health with Key to the Scriptures," and, after studying it a little while with the Bible, I saw that if the Bible was true Science and Health must also be true. I began to demonstrate over my physical and mental condition, and as soon as the fear and pain began to leave me I felt encouraged to go on. I was healed, and stopped complaining. I kept on studying our text-book, and when I got an understanding in a small degree of the Science of Mind, my first thought was to help others. I was guided where I could progress in Science, and was no longer "carried about with every wind of doctrine," but held to Principle as closely as possible. From the time the healing came into my consciousness, the desire for material remedies left me, because Christian Science at once pointed out the way to get at the cause of discord and disease. All that I had to give up were the false beliefs of mortal mind. Christian Science then taught me to love the church, and to appreciate what it had already done for mankind. I often thought of the old adage, "Charity begins at home," and after three years' preparation I felt able to take Christian Science to my home, where it found, in due time, ready acceptance and willing disciples. This gave me even greater joy than my own healing. The more good I saw accomplished the more love I had for the truth. Christian Science changed my course from the first, and gave me a nobler aim and purpose in life. I was not so easily influenced by other people's shortcomings, when I learned that evil has neither personality nor place. I was not so ready to take offence, when I found out the way to work unselfishly for the upbuilding of the Cause. Divine intelligence alone points out the way. I wanted to progress, and received class instruction. This step, like the rest, opened the way for something higher, and I am thankful to my teacher who gave me a practical understanding of the obligations and duties of a Christian Scientist.

To our Leader, the Discoverer and Founder of Christian Science, I owe just and grateful acknowledgment.

ARTHUR E. JENNINGS, Toledo, O.

I wish to express my gratitude for the many blessings which have come to me in Christian Science. It is about fifteen years since my mother became interested in this teaching, and since that time I have used no material medicines. Before this time I was taking medicine continually, as I was often ill and was not considered strong. Soon after my mother became interested in Christian Science I had an attack of a throat trouble to which I had been subject. I had Christian Science treatment and was in bed for a few days, though not so long as usual. Since that time I have never had to be in bed a day. I do not mean that I have never been ill, but that the troubles have been healed by Christian Science much more quickly than before, and have occasioned me less inconvenience. My general health has also steadily improved. It has been a great help to me in my work, not only enabling me to do it satisfactorily, and usually without fatigue, but in making my relations with those about me pleasant. My work keeps me indoors, sitting still all day, and yet, in spite of predictions to the contrary, my health has not failed, nor has my eyesight, because Christian Science has taught me that my strength is in God and therefore is eternal, and that sight is spiritual and perfect. I am also being helped in the overcoming of a tendency to worry and depression, of discontent, and of a great nervousness and irritability, which are being destroyed by divine Love.

For all these blessings, physical, mental, and spiritual, I am most grateful to God, and to our Leader, Mrs. Eddy, who has showed us how practical for our daily guidance are the teachings of the Bible.

ELIZABETH TRUMAN, Chicago, Ill.

It is about four years since Christian Science first came to our notice, and we are very grateful for the many benefits received through it. The knowledge we have gained has been through "Science and Health with Key to the Scriptures" by Mrs. Eddy. My husband was afflicted with a very severe bowel and stomach trouble, for which he took medicine constantly for five years, but it grew worse all the time, and he was nearing a state of collapse when Christian Science was presented to him. Having tried *materia medica* without any benefit, he had nowhere else to go, so in his misery he concluded to try Christian Science. He engaged a practitioner, and through her patient and faithful work he was healed,—made whole.

Some two years ago our eldest boy, then a child six years of age, was frightfully burned by falling into a kettle of hot lard which had been taken off the stove only a few moments before. Two places on the body, each as large as a saucer, and also two places on his limbs were burned. When his clothing was removed the skin came off with it from the four places. The child was put to bed, and after half an hour's treatment, he was fast asleep, and rested well all night. In about three days afterwards he was wearing all his clothing again. He never made any complaint of the burns whatever. From all appearances he suffered no pain, and in about ten days the burned places were all smoothly healed over and no scars at all were left.

A year and a half later, this same boy went with his father to close the gates of a large dam. He was playing around the edge of the water. A large log had drifted where the dam was full of water and lodged on the sluiceway, and while his father was working to spring the gates so that the log would go down, he called to the boy to go away from the water. Instead of going directly to his father, the boy came up between the water and the log. At this time the gates sprang open, the log was loosed and rolled onto the child and crushed him down in the mud. His father looked around, and did not see the boy, but seeing his hat afloat on the water, he declared that no harm could come to God's child. At this time he was thirty feet distant from the boy, but he sprang from the top of the dam and over the log into the water, up to his waist, and caught the boy by his arm and pulled him out of the

mud and water. He was brought home, a mile and a half in a cold rain, washed and dressed and ate his dinner, and in an hour he was out at play.

I was subject to sick headaches from childhood, seldom a day without a headache, but through Christian Science I am healed. We have also had in our own family cases of bronchitis, quinsy, chilblains, constipation, dysentery, rheumatism, and many other diseases, which have been healed by the truth. For this healing, and the many other blessings which we have received, we wish to express our gratitude to God, also to our Leader, Mrs. Eddy, and to all who have helped us to a better understanding of Truth.

MRS. S. SAULSER, Yankton, Ore.

It is my desire to acknowledge the power of Christian Science to heal. When the last hope was gone, and the shadows of death were fast closing in upon me, I had been praying constantly that I might live, then I heard the name, Christian Science, for the first time. I sent for one of the practitioners, and was snatched, as it were, from the grave. My healing was surely marvelous. The "Peace, be still," of Truth was spoken, the sleepless nights of agony were changed to peaceful sleep and rest, and the days of endless pain were all ended for me. I knew that the grave had been robbed of a victim, and as soon as I was able, I sought to be alone, that I might thank my heavenly Father for so great a deliverance. My healing has been permanent. Truth has gained the victory for at least twelve years, though I am still a child, learning each day to be more grateful. My disposition to rebuke error has caused me to pass through many fiery trials, and had it not been for the blessed truth revealed to the world in Christian Science, I would not be here to-day to thank my heavenly Father for all the good that has come to me.

LULA M. AMICK, Los Angeles, Cal.

I feel that I owe to Christian Science the wonderful change that has taken place in me. I had never paid any attention to Christian Science until August, 1902. At this time I was in a store in Chicago. My wife brought me a copy of Science and Health, and pointing to the back part of the book, where testimonies are given, asked me to read some of them, calling my particular attention to a testimony that fitted my case,—a case of intemperance. I immediately glanced over a few lines, and then said, "This is well put, it will help to sell the book." She said, "Read a little in the beginning of the book," and I promised her that I would. I kept my promise, and the more I read the more interested I became. I received an understanding that never was given me before. I commenced to have faith in God. I prayed that I might have the appetite for intoxicating drinks destroyed. I had been drinking for many years, and the drink had finally become my master. It was the last ray of hope when my wife handed me that now priceless book. The answer to my prayer astonished me as well as others. It was on the tenth day of September, 1902, that I went into a saloon I had been in many times before, and ordered two glasses of beer, one for a friend and one for myself. I raised the glass to my lips, but could not drink the beer. I was embarrassed, and said that the beer was all right but that I could not drink it, and I walked out of that saloon door with no appetite for drink. It is now nearly two years since this happened, and I have never had any desire for it since, for the appetite is destroyed.

This marvelous occurrence produced in me the strongest faith in the ever-presence and power of an all-wise God. I am indeed grateful to our Leader, Mrs. Eddy, for the many valuable instructions I have received from the study of "Science and Health with Key to the Scriptures," and other Christian Science literature. I am a traveling man, have been on the road for over forty years, and have visited all the States, most of them many times. I have had the pleas-

ure this tour of visiting several Christian Science churches in different States and of witnessing the great amount of good they are doing in healing and uplifting humanity. My business keeps me on the road nearly all the time. I am in hopes that I can join the Christian Science church soon. I commenced this tour in August, 1903, and have saved more money than I ever did before, and I have enjoyed the best of health. I have used no medicine since the time the appetite for drink was destroyed. As many said that it would not be long before I would return to my old habits, I have allowed all these months to pass by before giving my testimony. I find many who scoff at the teachings. They know very little of this new-old doctrine, and when I tell them of the magnificent churches there are in the principal cities, and that every walk in life is represented among their members, they seem astonished. Those who condemn do not understand. I am thankful that there are so many who are taking such great interest in the work, and that the truth is known in their lives.

WILLIAM HEYWOOD, Chicago, Ill.

My attention was first called to Christian Science about the year 1887, through the healing of my father of asthma, he having left his home in Lynn, Mass., in 1857, hoping to find in the climate of Minnesota the health which he had failed to find in Massachusetts. He did not, however, find health until he learned that he lived "In atmosphere of love divine." He is now in his eighty-third year, and is still finding, in this atmosphere, freedom from the ills to which the flesh is heir. About two years later, believing that God was both willing and able to heal me, I turned to Him for help. I knew nothing whatever of Christian Science except that it was a religion which heals, and, besides my father, I knew but one Christian Scientist. I went to her for treatment, and in three days I had received so much benefit, both physically and spiritually, I knew that hereafter Christian Science must be my religion and my physician. I purchased a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and began at once to study it.

Acting upon the recommendation of the practitioner, I received class instruction and became a member of the first Christian Science church organized in this city. I soon realized that it would be necessary to prove by works the sincerity of my gratitude to God and also to our beloved Leader. I seem to reap at the present time so much more of love and kindness than I sow, that I stand in awe when I think what the harvest will be when I am able, through the assimilation of the truth of Christian Science, to reflect more perfectly our Father-Mother, God.

MRS. FLORA M. H. LYON, Minneapolis, Minn.

On the 23rd of March, 1900, I received from one of my daughters a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, as a present on my seventy-first birthday. At the time I received this gift I was very busy at my home near Baldy, New Mexico, operating a stamp-mill in the gold camp, and had but little time to read except evenings. I had for company one of my daughters and her little boy, while the men were up on the mountain taking out ore. Although a constant reader of all kinds of papers and books, I had never heard anything of Christian Science, except a short notice that spring in a San Francisco newspaper, from an orthodox clergyman, referring to the Christian Science people in not very complimentary style; but, as I am not influenced by any random talk, I kept on reading my book, and if I came to a knotty place I would mark it with a pencil, as something to think about.

I had been brought up in a French family (Huguenot), and from early training by mother and father, the study of the Ten Commandments, and the advice of my parents

rather to suffer a wrong than to commit one, these had been impressed upon my mind, and as I came to manhood had been my guide in my dealings with others. My experience soon convinced me that, so far as business was concerned, Christianity was a failure, because every time I had commercial transactions with people who professed to be Christians, and many who stood high in their respective communities, my purse would be the lighter. I began to think that there was something seriously wrong in my bringing up, and I gradually drifted into the agnostic theories, but these only found fault with existing theories and did not furnish anything better in their place.

In Mrs. Eddy's book I came across a great deal of thought that was not readily understood at the first reading, but by continued and careful study, and a good deal of help from my knowledge of chemistry and natural philosophy, I soon shook off the belief of sensation in matter,—the so-called elementary substance. As winter set in my young people left for their homes, while I remained alone in my cabin, occupied in building additional machinery for the mill. Snow soon made its appearance at the altitude of 10,080 feet, and I would only go to the postoffice, three and a half miles distant, once a week, using snowshoes, and my time was taken up by my work and in reading Mrs. Eddy's book. One afternoon I put the belt on my circular saw to cut blocks of firewood and also to split a small stick of frame timber. In doing this the stick closed and pinched the saw. I picked up a small wooden wedge and tried to drive it into the saw kerf, but a bit of ice let the stick on to the back of the saw and instantly it flew, with heavy force, into my face, and bouncing off my left cheek fell about twenty feet off on the snow. The blood spattered on the snow next the saw table, and on feeling with my hand there were two wounds, one on the lock of the jaw and another forward, as big as a dollar, on the cheek bone. Now, I thought to myself, there is a case of surgery for you, and without further ceremony I began to treat the case to the best of my knowledge, with the result that the bleeding stopped almost instantly, and so did a thumping pain, which had commenced. I paid no more attention to the matter, but finished my work, and then went to supper. When I washed my face, I felt a big lump on the jawbone, where the block of wood struck, but after my usual reading I went to bed and slept all night until near daylight, when a pain on the right side awoke me. On feeling with my hand there was another big lump on the right side, but I treated it and went to sleep again. I never lost an hour from the hurt, although I found out that my jaw was broken. There is no scar, only a little red spot on my cheek, and the lumps on the bone have long since disappeared.

In summing up all the benefits I have received from the reading of Science and Health, I can but refer to a condition of sickness dating back to the war (1862), when chronic and malignant diarrhoea came near making an end of my material existence. My hearing, also, was seriously impaired from the effect of cannon firing at Shiloh, but it has come back to me, and where I formerly dared not eat an orange, or grapes, I can now eat anything without being hurt. My peace of mind is giving me a rest which I never experienced before during my life, and I have ceased to look away off for the Divine presence that was always near, though I did not know it.

It would be the height of ingratitude on my part not to remember her who has been the means of leading me to the knowledge of the truth, Mrs. Eddy, the Discoverer of Christian Science and the Leader of this practical, everyday religion, as good on week days as on the Sabbath day. Through her teaching I have learned not only how to read the Scriptures but how to understand what I read, and my thanks are many for restored health, for the knowledge of how to keep well, by the study of this truth, and for the help given to many others in distress. To God I give the glory.

LEONARD BIDDLE, Baldy, N. M.

I am now over forty years of age, and for over twenty years I fought against indigestion and its kindred ills with the help of drugs and doctors. Weary and heavy-laden, I was directed to *The Christian Science Journal* by the janitor of Mitchell Library, and through that I found Science and Health by Mrs. Eddy. I now wonder, not only why people oppose, but why every one does not accept Christian Science right away. For my part I had been seeking this for years, and was glad and satisfied when I found it. When I began to study Science and Health my ailment disappeared for a time and all went well. Then it returned and the fight began, but Truth conquered. First the fear went, then the sense of indigestion, and I was free. After some time a gum-boil appeared and was overcome by the truth, though it remained for some days. The last night I got little sleep, and resolved to go to the dentist in the morning, when suddenly the pain was gone and I sailed into calm waters. It did not break, but went back into its own nothingness, so I knew that Truth had conquered again. Since then my work has been in the line of prevention, amidst so-called adverse circumstances in lodgings and change of residence, during which time I have been well and working hard as a blacksmith.

I am sure that if mothers only knew of the help they could render their suffering little ones, they would seek to understand this blessed Science and thank God for the faith of her through whom He has restored to us the knowledge of His healing gospel.

JAMES MARSHALL, Leeds, England.

The calmness, zeal, and heaven-born love manifested by the Christian Scientists whom I first met, appealed to me as being the expression of the holiness for which I longed. When I was told that God is Principle, and that Christian Scientists look to Him in every time of need, I saw at once that they were practising the teachings of the Bible. A great hope and joy came over me when I realized that a new world of absolute goodness is made practical through this truth. That the Bible has become a new book to me is proven by my constant desire to read it. It is becoming my daily guide. Three years have elapsed since I first heard of Christian Science, and great spiritual uplifting has come to me from its teachings. The mental weight of discouragement and discontent with the world has been destroyed, and in place thereof is a correct understanding of God and man's relation to Him.

Oftentimes my heart goes out in gratitude to God, and to the Revelator of Truth in this age, for the goodness and purity which is brought to human consciousness through Christian Science. When I think of the happiness, joy, and peace that has been mine since coming to a knowledge of Christian Science, a deep sense of pity comes over me for those who are slow to acknowledge, or who even resist the Comforter which is filling my every-day life with the sweet sense of Emanuel, "God with us."

ROSE SCHILLER, Utica, N. Y.

I had catarrh for four years, which left me partially deaf. I also had a weak back. A friend advised me to try Christian Science, and I did so, with the result that in about two months I was entirely cured. I can truthfully say that I never felt so well before in my life. My hearing came back, and I feel so strong that my friends often ask me what made such a change in me.

A short time ago my oldest boy came home from school, saying that some of the children in school had scarlet fever, and as he complained of not feeling well I feared that he was catching the fever. The next morning the baby took sick, and I was just going to send for the doctor when the thought came to me, "Why not try Christian Science?" I threw the medicine away and read in Science and Health. Then I took the baby out of bed and dressed him, and he went to playing with the other boy and neither of them

has been sick since. I do sincerely thank God for what He has done for me and I thank the kind friends who have helped me in body and mind. I would not give all I possess for the understanding I have received through this truth. I hope my testimony may help some one who is seeking light.—MRS. MARIA McNEIL, Port Stanley, Ont.

I wish to give my testimony regarding the healing in Christian Science. I had heard of the movement many times, and had literature given me to read, but I carelessly put it aside, not being religiously inclined, and laughed at the supporters of such a religion. I had always been a delicate child, and grew into womanhood under the same conditions. Finally, about a year and a half ago, I had an infant nursing and was stricken with an old trouble, tonsillitis, and was told that I could not take medicine as it might affect the baby. As a last resort, I resolved to try Christian Science, though still having my doubts, and fearing to tell my husband, because he would ridicule me; but, being in such misery, I cared not what became of me. I am happy to say that in forty-eight hours I was a well woman. The disease had usually lasted about three weeks, and it took two weeks more to regain my strength, but my strength returned with the healing in Christian Science. When there has been any sign of the disease it has always been met immediately with Science. I also told the practitioner about the sense of limitation in our finances. She said, "Mind is never limited," and a demonstration of the truth has been made, for my husband is earning double his former salary.

I have learned to love the Bible instead of spurning it, and often pause to reflect what I would do without Christian Science. It is a comfort to know that when we try to keep in the straight path, we see the results even where we little expect to find them.

I desire to express my gratitude to the Leader of this movement, whose indefatigable zeal has led so many sin-stricken, sick, and death-stricken ones back to God, to Life, Truth, and Love. I also thank the patient practitioners, who have helped me on in this "mental journey" to see the path and strive to keep in it.

MRS. ADDIE HILTS, Cleveland, O.

[Written for the *Sentinel*.]

Resolutions.

JENNIE WALBRIDGE BRIGGS.

RESOLVED to live the truth I know,
And by my words and deeds to show
To those in sickness, doubt, and fear
That God is Love and God is near,—

One Father-Mother Love divine,
Whose presence in each heart doth shine,—
And that His allness understood
Makes of all men one brotherhood.

Resolved to think more lovingly
Of all I meet or hear or see,
So that my thoughts may cheer and bless
Some sad hearts in their loneliness.

Resolved to speak for Truth to all
The claims of error, great and small;
Since Truth by its omnipotence
'Gainst error is a sure defence.

Resolved that all my deeds shall be
Like his, whose loving ministry
Through all the ages shall abide,
An inspiration and a guide.

From our Exchanges.

Doubtless there are Christians who are lacking in spirituality, and the defect is a grave one. "God is a Spirit: and they that worship him must worship him in spirit and in truth." The very gravity of the deficiency should make us slow to bring the charge. It is one of the many cases where we do well to remember the words of our Lord Jesus, how he said, "Judge not." Especially should we be slow to bring an accusation of such seriousness against a fellow Christian because he differs from us in his views of doctrine. Nothing is more common than this. A man has a decided opinion concerning inspiration, and believes, as he has a perfect right to do, that his theory of inspiration is the only true one. Is it true that no one can be truly spiritual who refuses to accept this theory? As Baptists we believe certain things with reference to the proper mode and subjects of baptism. Is the man who differs from us at this point necessarily an unspiritual man? Probably some would answer these questions in the affirmative, but such an answer is in direct contradiction of the facts. Pleasing as it might be to some, could we, as a denomination, furnish indubitable evidence that we have a monopoly of spiritual religion, the proof is lacking. Members of Presbyterian, Congregational, and Methodist churches; men and women whom we believe to be mistaken as to the matter of baptism, furnish ample evidence of their love for God and that they are led by His spirit in doing His work. Men who hold to a theory of inspiration differing sharply from our own may, and often do, give full proof that they have the mind of Christ. The fact is that we decide between the verbal and dynamic theories of inspiration, between immersion and sprinkling, according to apparent evidence; that is, with the intellect. A man may be mistaken and yet be not only honest, but profoundly spiritual. Is it not about time that professing Christians should stop indicting those who differ from them doctrinally as lacking in spirituality?

The Standard.

The old pagans put an image of God in the center of their church; Judaism took the image down and put the Bible in its place. To-day God's providence is taking the Bible out, as it took the old idol out, and is saying to us, You must go back of the image to the living faith, back of the Book to the experiences which the Book interprets. You must learn through the voice of Moses and David and Isaiah and Paul to come yourselves into the same presence of God into which they came, and listen to the same voice of God which they heard, and because of which they spoke.

LYMAN ABBOTT.

The Outlook.

So far from its being true that "being good" is something apart from the work of daily life, it is through this work, through our attitude toward it, through our fidelity, patience, and courage in doing it, that we acquire "goodness" at all. The outer life is the arena, the school, the providential discipline of the inner life of manhood and womanhood, of character, of fine and large spiritual attainment.—*The Watchman.*

A man who is afraid of new truth is not quite sure that his old truths are true. A theologian who believes in a progressive revelation of God will be as eager for new light as is a biologist or an astronomer, for he knows that all truths are one and holy, because all are a revelation of the Holy One.

JOSIAH STRONG, D.D.

Homiletic Review.

The spiritual life of the country to-day is suffering because of over-emphasis on points of disagreement and sect-assertion and want of emphasis on points of agreement.

The Congregationalist.

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, \$5. Twelve or more to one address, \$4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, \$1 per copy; \$5 per half dozen; \$9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.

Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, Treasurer.

Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, \$2.40 per annum; \$1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, \$1.00 in advance; all other countries, \$1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid \$3 00

Twelve or more books to one address, each, prepaid 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; \$3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL, 80 pages, cloth covers. Prices, prepaid, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, \$1.06; \$5.00 half dozen; \$9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, \$1.06; \$5.00 half dozen; \$9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, \$2.50.

CHRISTIAN SCIENCE versus PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 36 cents; per dozen, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, \$2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, \$4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; \$4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, \$1.00; six copies to one address, \$5.00; twelve copies to one address, \$9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; \$5.00 per dozen.

Direct all orders for above works, and make remittances payable to

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, \$1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, \$1.40; one hundred copies, \$2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

The Kansas legislature has taken strong action in dealing with the oil question in that State and the methods of the Standard Oil Company. Its lead has been followed also by Missouri, Iowa, Arkansas, Texas, Indiana, Colorado, Wisconsin, Oklahoma. In Kansas the legislature proposes that the State shall refine and sell oil; regulate freight rates in the transportation of oil within the State; declare oil pipe lines "common carriers," and regulate rates for transportation therein.

Representative Scott of Kansas has introduced a bill in Congress placing pipe line companies in the category of common carriers and subject to the interstate commerce laws.

The House has taken action in the matter of railroad rate regulation and passed the Esch-Townsend bill which meets the approval of the Administration. It seems probable, however, that no further action will be taken at present, as the Senate is not inclined to act on that bill or any similar measure at the present session, but will appoint a committee to investigate during the recess and report later. This meets with approval and will give ample time for all interested parties to be heard.

France last week presented to Congress another of the David d'Angers busts of George Washington, to take the place of that destroyed by fire in the Capitol, December 24, 1851. The bust was recently discovered at Angers, France, was purchased by popular subscription and placed in the hands of Ambassador Jusserand for formal presentation to the United States.

The Emperor has presented to Harvard that part of the German exhibit at the St. Louis Exposition which represents the social ethics of Germany. The collection, regarded as a notable accession by the university, will be placed in Emerson Hall, a new building not yet completed, which will be dedicated to the uses of the philosophy department of the university.

The Senate will not take action on the

San Domingo protocol recently submitted by the President until the extra session of the upper branch of Congress, to begin March 4. There is every indication that it will be ratified, now that the Senate has gained its point by forcing the Administration to submit the treaty to that body.

Sir C. Purdon Clarke, director of the Victoria and Albert Museum in London, has succeeded the late General Luigi P. di Cesnola as director of the Metropolitan Museum of Art of New York.

There are now in operation at the Panama Canal three large American steam shovels, with five more to be erected.

Foreign.

The work of cutting the Simplon Tunnel through the Alps, begun in 1898, was completed on the 24th ult. Many unexpected obstacles have been encountered, the most serious being hot springs, which threatened to wreck the whole enterprise. It is hoped to inaugurate the tunnel about March 20.

The length of the Simplon Tunnel from Brig, in Switzerland, to Iselle, on the Italian side of the mountain, is about twelve miles. After piercing very hard rock two miles, powerful cold springs were encountered, then one hundred and fifty feet of shifting material, which required six months' time and \$100,000 to overcome. The Swiss and Italian Governments have jointly financed the undertaking, at the cost of \$15,000,000. A smaller tunnel is to be constructed parallel to the large one, which will be increased so as to permit traffic both ways at the same time. Meanwhile, a half way station will allow the passing of trains.

The Czar, accepting representations of the military superiority of Russia in Manchuria, where her army under Kuropatkin faces the Japanese, and confidently expecting the success of that army, announces his purpose to push the war vigorously. He also feels, in view of the internal conditions, that withdrawal now from the war would be disastrous in its effects upon the temper of his people and his Empire.

The decision of the International Commission of Inquiry into the North Sea incident was publicly announced at the closing session of the commission last Saturday. The decision lengthily sets forth the circumstances and incidents and gives the opinion of the admirals on the various important points involved, and finds that "the opening of fire by Admiral Rozhdestvensky was not justified."

The Cunard line's first turbine steamer, the *Carnarvon*, was launched at Clydebank last week in the presence of a great crowd of people. She is of 21,000 tons register, is 678 feet long, has eight decks and accommodations for 2,656 passengers and a crew of 450 men. The *Carnarvon* is expected to attain a speed of twenty-one knots.

The French Minister of Marine estimates that \$24,000,000 is required this year for expenditures in naval supplies if France is to hold her position among the nations as a naval power.

Industrial and Commercial.

Tropical products are becoming each year an important factor in the importations of the United States. The total value of such products brought into the United States during 1904, including the receipts from Hawaii and Porto Rico, aggregated \$465,000,000. In 1870 the total imports of tropical and sub-tropical products amounted to \$140,000,000; in 1880, \$242,000,000; in 1890, \$298,000,000; in 1900, \$335,000,000. In 1870 tropical products formed thirty per cent of the total imports of the United States; in 1904 they formed forty-three per cent.

The number of cotton mills in India at the end of the fiscal year 1903-4 (March 31, 1904), was 204. The number of spindles was 5,213,344. The number of persons employed (daily average) was 186,271. The nominal

capital and debentures amounted to about \$65,000,000, of which \$50,000,000 was paid up. The production of yarn in the mills is reported at 556,000,000 pounds; the quantity of woven goods, 132,000,000 pounds.

Mitsui & Co., New York agents of the Japanese Government, have placed with a local firm an order for seventy-seven locomotives. The estimated cost of the locomotives is \$1,000,000. The terms of the contract require that the locomotives shall be built as soon as possible, and delivered direct to Korea in lots of twelve, via the Pacific coast.

The twenty-eighth annual report of the Commission of Sea and Shore Fisheries of the State of Maine makes the pack of sardines in 1904, 1,645,657 cases.

General.

At the solicitation of Professor Charles Waldstein, of the University of Cambridge, England, President Roosevelt has consented to become the honorary president of an American committee to co-operate in the excavation of the ancient city of Herculaneum. Professor Waldstein's plan is to have the work of excavation done by national committees, with sovereigns or presidents at their heads, in each country, and an international committee presided over by the King of Italy. The actual work is to be done by an international staff from all countries. Professor Waldstein has also obtained promises of co-operation from England, France, Austria, Sweden, and Italy.

The industrial history of Japan during the past year shows an unusual abundance of nearly all agricultural products, especially rice, this latter being estimated at about 248,145,000 bushels for 1904, an increase of about 17,494,223 as compared with the yield of 1903. The average annual yield of rice since 1891 has been 199,758,794 bushels. Other cereal crops, especially barley and wheat, show considerable increases as compared with previous years. On the basis of the present market value of rice, the increased income of the country from this source is estimated at \$2,820,850 over last year.

Several famous masterpieces from the collection of paintings of the late Adolph E. Borie, Secretary of the Navy in the Cabinet of President Grant, have been purchased privately from the heirs of Mr. Borie. The most important are: "The Laborers' Return," by Jean Francois Millet, for which \$70,000 was paid; "Grazing Scene," by Constant Troyon, for which \$40,000 was given; "The Capture of Goetz von Derlichingen," by Delacroix, \$25,000. The transfer included also one of the smaller Rousseaus, for \$10,000.

Four cypress trees, which according to tradition were planted by Michael Angelo, formerly stood in the cloisters of the Church of Santa Maria Degli Angeli in Rome. In the hurricane of 1888 two of these trees were prostrated, and a storm last week caused the fall of a third. The fourth was so damaged by the fall of the others that it is doomed.

The rare first issue of Charles Lamb's prose version of "Othello," London, 1807, one of the stories which later formed a part of the two-volume edition of "Tales from Shakespeare," by Charles and Mary Lamb, has been sold at auction in New York for \$530.

Norway's coast line—1,700 miles in a straight line—becomes 12,000 miles if followed around the fjords. In these fjords are over 150,000 islands.

Eight pigeons recently flew from Kimberley to Cape Town, a distance of 512 miles, in fourteen hours.

The Tibet survey mission has established the fact that Mount Everest is the highest peak in the world.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

Christian Science Treatment Effective.

SAMUEL GREENWOOD.

If Christian Science in its practical operation did not reform the sinner and heal the sick, it would be neither Christian nor scientific, but a mere caricature of Christianity, deserving all that its misapprehending detractors have said. The fact, however, that it does reclaim the sinner, delivering him permanently from his love of evil, should establish its Christian character, for there is no other way whereby sinners may be saved except through Christ. And its success in healing disease by a definite and specific rule, embracing the intelligent application of truth to human need, should establish its scientific character, for this has been the unattained ideal of all human curative systems. The purpose of Christian Science to save mankind physically as well as spiritually should enlist the sympathy of all good and true men, and its successful achievements should turn the needy with renewed faith toward God. Who without prophetic vision can perceive the tremendous import of these things transpiring to-day, and their broadening horizon of hope for an enslaved race?

The spiritual methods of Christian Science, so silent and invisible in their operation, so effective in visible results, remain a mystery to the materially minded. The theology that retains and maintains a material conception of Divine law, and which sees in Jesus' miracles not its fulfilment but its infringement, may deny that Christians to-day can possibly repeat their Master's works. Material therapeutics also, with matter as its center and circumference, and having no conception of spirituality as the reality of man's being, may be skeptical as to the ability of Christian Scientists to overcome disease through righteousness and prayer. But to both of these conditions Christian Science practice presents for consideration the effective healing of disease, not only without material agencies, will-power, or hypnotism, but after all these had failed.

It has been asserted that while Christian Science may be of some avail in nervous troubles it can have no real effect in more serious and organic diseases. Then what accounts for the diseases of this serious type that have succumbed to its influence, an influence that revived hope when medical fears had prostrated it? Are nerves less material than bones or muscles or brain, etc., that they are susceptible to Christian faith and prayer, while these others are not? And might not one ask, if nervous conditions are so simple of cure, why they are not treated successfully instead of being allowed to pass to Christian Science practitioners? How is it, for instance, that material methods did their best for years to relieve the writer of just such troubles, but without effect, and that thereafter Christian Science came to his rescue?

The truth is that all disease is difficult of permanent cure by unscientific methods, so long as it is admitted that cause and cure proceed alike from matter. Matter cannot reach above or beyond itself, how then can it accomplish the

results for which Jesus found it necessary to appeal to Spirit,—God? Our Master's success in healing demonstrated beyond reasonable dispute the superiority of spiritual over material methods. His Christian system is again presented to men in Christian Science; and although its students have advanced but a little way in their understanding of it, the effectiveness of their treatment of both sin and sickness has engaged the attention of the world. The wisdom of Christian Scientists in seeking to adopt and practise their Master's method for the removal of their sicknesses as well as their sins should not be called in question by those who believe that Jesus understood and used the right way, and that he recommended it to his followers in all ages.

There is no indication that Jesus diagnosed disease as resulting from invisible microscopic germs, or from food, climate, or even heredity, but the records do indicate that he attributed disease to evil thought and deed. He spoke of a sick woman as being bound by Satan, and referred to a man's dumbness as a devil, or evil, and cast it out as such. He told his followers to "cast out devils," by which we believe he meant the evil in men's hearts, which he said was all that could defile them. In the same way, Christian Science deals with sickness as something more than is seen on the physical surface, and hence in healing it goes farther than the removal of a bodily disorder. This treatment is effective over other methods, because it purifies mind as well as body, gives tone to the moral as well as physical nature, and lifts thought to a more spiritual plane.

It is self-evident that to destroy its cause is the only effective means of treating disease. Material methods do not do this, even on their own plane. The supposed material causes of disease flourish to-day even more prolifically than in times past, despite the increase of medical knowledge. If these methods cannot destroy the foe on their own ground, what can mortals expect of them in ministering "to a mind diseased"? After centuries of its practice *materia medica* has not inspired enough confidence, even among its practitioners, to remove the *fear* of disease; a fact which certainly questions its effectiveness.

Medical theories now admit that worry and wickedness make men sick, but what remedy do they offer for either? What can they do to loose the prisoners of evil thoughts? What cure have they for anger or appetite, poverty or passion, malice or meanness, and all the other unrighteous conditions that eventually disturb peace of mind and body? What *can* matter do to counteract sorrow or jealousy or covetousness? Though a man were for his lifetime dosed with drugs, plied with electricity, baths, health foods, hypnotism, or changes of climate, would he be more honest or loving or pure as the result? If not, how are these means superior to, or more effective than Christian Science, which has demonstrated in thousands of instances its ability to overcome these deplorable conditions?

The influence of Christian Science treatment does not reach the patient through the circulation of the blood, or through so-called magnetic conditions, but through the truth of God's infinite presence and power and goodness.

Copyright, 1905, by Mary Baker G. Eddy.

What could convey to men the divine remedy for their ills more quickly or more effectively than this? No matter where patient or practitioner may be materially located, whether in proximity or leagues apart, they are ever within instant touch of this great truth. What could be more potent to offset the evil tendencies in human nature than the recognition of omnipotent good? What could more effectively soothe the fear of mortals, quiet their anger, subdue their passions, or remove their selfishness than the knowledge that Love is infinite? These truths of God's all-presence, all-power, and all-sufficiency, were the source from which Jesus drew in healing the sick and the sinful. What material science or system has proved by its success worthy to unloose the latches of our Master's understanding of truth, or his application of it in overcoming the conditions of mortality?

Christian Science does more than heal disease, or it would not be the whole of Christianity. It seeks out and exterminates the hidden "mental microbes" (Science and Health, p. 164) that poison the thought and disturb the peace of mortals. It restores waning faith in God, lessens the love of sensuality and the desire to do wrong, removes the tendency to worry, lights up the blue depths of despondency and despair, and gently lifts experience above poverty and sordid worldliness into some realization of the plentitude and peace and purity of man's true being in God. Its work, which begins with the healing of disease and discord, goes on to the destruction of all evil works, even to the coming of the kingdom of good in men's hearts, until all that now separates man from God shall have disappeared from human consciousness, and man knows himself even as he is known, the son of God.

The Blessings of Christian Science.

HELEN ROBINSON.

MANY seem to be under the impression that Christian Science is nothing more than a remedial agent in sickness. Now, although the physical healing naturally attracts much attention, it is well to remember that Christian Science means infinitely more. Healing is one of the signs that "shall follow them that believe," and it naturally and inevitably pertains to him who realizes God's allness enough to let the Christ-mind be revealed. Sickness never fails to disappear in proportion as truth appears. If the sick are not healed, the broken-hearted blessed, and the sinful uplifted, it proves beyond cavil that the Christ-mind is not adequately attained.

It was the Mind of Jesus that healed the sick as well as the sinful, and if, as Paul declares, "we are also his offspring," we should follow Christ Jesus in his demonstrations by reflecting the same Mind. If Jesus had thought it good for us to use material methods, would he not have done so himself or have said something about it? Instead of so doing, he healed metaphysically, taught his students to do the same, and said, "these signs shall follow them that believe."

Many are asking, "Why was the practice of healing lost sight of?" We may answer that it calls for more than what is usually meant by the word faith. It requires insight, spiritual perception, the recognition of Immanuel—God with us. It is in many cases easier to overcome sickness in Christian Science than to overcome sin, and the work is more quickly accomplished; but sickness and sin must both disappear, and all materialism, every thought that does not tend to lead man God-ward, must go out under the light of Christian Science: "For he [Christ] must reign, till he hath put all enemies under his feet."

Truth can always be proved when understood, hence, it is "the understanding heart" that we need more than words.—words are but the wrappings of thought, after all.—the

main point is to have the right idea of God and man and to demonstrate its reality. God is divine Love, and "God is a consuming fire," therefore it is Love which burns away the chaff of sensuous belief, and brings to light man's true being as the expression of infinite good.

All down the years thinkers have had glimpses of the Principle of Christian Science, but they have failed to discover the method of its demonstration. These glimpses have, however, been friends along the way, cheering men with the promise of day. There are numerous instances of this that will occur to many. Let me mention one or two which are familiar. Browning says, "There shall never be one lost good. . . . The evil is nothing, is naught, is silence implying sound;" and Carlyle, in his essays on "Heroes," continually dwells upon the necessity of insight, of getting behind mere appearances and reaching the "Heart of Things,"—"A glimpse, that, into the very Heart of the Infinite." So, too, countless others. The very word "insight" pre-supposes some vital truth to be perceived. Are we never to see the underlying truth of creation? Some say not, but Jesus said, "Ye shall know the truth," and his days were given to the effort to make men understand it.

Jesus overcame sickness as well as sin. He thought it worth while, evidently, to spend a great deal of time in the healing of the sick, but he did not begin on the outside. He healed from within, and said, "It is the spirit that quickeneth; the flesh profiteth nothing."

Now, as two and two can never make five, no matter how often we may make the claim, and as a whole problem may be kept from its correct solution by the admission of such an error, even so must we be right in our premise of Life, in order to be right in conclusion; for the truth regarding God and His creation heals metaphysically,—removes the error and reveals the eternal facts of the case; namely, man's true nature as God's child. "Fact answers, if we see into fact," to quote Carlyle again.

Have we not always, in the past, paid more attention to the personality of Jesus than to what he taught? He certainly taught something of vital importance to man. What was the truth he taught? He strove to impart an idea that would transform by "the renewing" of the mind, that would bring us to the understanding of that Truth which was his Life, and lead us to think as he thought,—have the same Mind. Not person, but Principle, is the basis of all true Christianity as it is of all true science. In mortal belief all is based upon a too personal foundation.

'Tis Life whereof our lives are scant,
'Tis Life, not death, for which we pant,
More Life and fuller than we want.

This cry of humanity presses in on our consciousness. Jesus said, "I am come that they might have life, and that they might have it more abundantly." Shall we not, then, in Christ's name, arise and answer the cry in Christ's way?

The less personal and the more unselfed we become, the higher we rise in the scale of being and the clearer are our views of Truth, until we shall have overcome the temptations of this earthly experience and attained the harmony of true living. Outside of the spiritual *knowing* that dispels earth's clouds, how can any one escape being touched by the bitterness of human existence? Think of how we have believed that God made man, and made evil, or at least permitted evil to be a power; made man subject to evil, put him into a material body without giving him an opportunity to object, and then left him to intolerable suffering here, or hereafter, for what he could not help! We ought to know God better than to believe such things of Him. Business men, and men of learning, cool, keen, and calculating, study Christian Science because they have found by experience that it helps them greatly to know what to think and do at all times. It is applicable to every need of man. They, assuredly, do not study it as a pastime, but to make use of the knowledge they thus gain; for, like mathematics, it is practical only when understood aright and applied correctly.

Mrs. Eddy, in deep humility and devotion to Truth, sought until she found the key, and she was pure enough, and far enough above self to give it to the world. If ridicule and misjudgment of her motives awaited her, what then? She went bravely on and proved her words by her deeds, lovingly and tenderly at every step. She was the first in this age to discover how Christ's teaching is to be obeyed, and she followed it implicitly. Who else was to show us the way; to catch the meaning of Jesus' words and the voice of Spirit fully enough to go and do likewise? Suppose she had given up the search and left us to find out for ourselves, how much longer would we have had to wait? We tremble to think what it would have meant to us. The time, happily, had come, and the result is that there are thousands to-day who have found joyousness, peace, health, love to God and man, in place of the old-time bitterness, suffering, and despair.

The longing to be good and true
Has brought the Light again.

Everlasting Rest.

C. L. E.

THE human sense of a need of rest is apparent; and the question may be asked, What brings the most enduring rest? Mrs. Eddy has answered this question once and for all in her discovery of the law of all-harmonious action, and in Christian Science we learn that it is only divine Love which includes and imparts rest, and there is but one rest, the rest which God knows. God is Life, and God is Love, hence Love is Life: and the corollary is,—loving and living. Whatsoever other means mortals may try, in order to extinguish weariness and exhaustion, such means will be found to be false prophets, offering that which, from their very nature, they can never supply.

Wherever materiality has place, there also is imperfection, for materiality and imperfection are synonyms. Spirituality and perfection are synonyms, and spirituality is the manifestation of God,—Spirit, Love,—hence to be spiritual, loving, is to have one God; and this mental condition includes the restfulness of all-harmonious Divinity. Science and Health gives the true explanation and definition of rest on page 519 (line 29). There is always opportunity to take part in "holy work," and perhaps one of the richest blessings diffused through Christian Science is the absolute certainty that work in Science is both holy and effectual. We have many opportunities afforded us by Divine wisdom of studying the spiritual laws of being, and each and all can so labor that every hour of the day, nay, every second, the suggestions and manifestations of evil will be "cast out," and the full appearing of Christ's eternal reign will be unfolded to universal view.

Can any material methods give us a rest from the discords of mortal mind, such as is found in the wholly spiritual rest imparted from divine Mind—a rest which not merely rests the individual, but which imparts itself to all who come within the influence of his thought? What is there more inspiring, reassuring, restful, than the very thought itself that we are working for eternity, the eternal destruction of error, the eternal unfoldment of good? As we let Truth think in us, God work through us, we become avenues for the healing Christ, we experience a rest unutterable and abiding in the degree to which the human yields to the divine. We have learned in Christian Science that humility and joy, this silent, ceaseless prayer, is genuine love, impersonal, purely spiritual, in the world but not of it. The true rest is the only rest; it blesses all, and it is the result of conscious, continuous fruition. We should ever seek to understand the full import of the Scripture, "Rest in the Lord," and the realization of the true sense of rest must come through obedience to the demands of Truth and Love.

Thy Name.

AUGUSTA R. McDONALD.

IN the seventeenth chapter of St. John's gospel we find the words "Thy name" used three times by Jesus in the prayer in which he recounts his life-work somewhat and expresses his ideal for his disciples. In the sixth verse he says, "I have manifested thy name unto the men which thou gavest me out of the world;" and in the twelfth verse, "While I was with them in the world, I kept them in thy name;" and once again, in the last verse of the chapter, "And I have declared unto them thy name, and will declare it."

The use of the phrase seems a little peculiar in connection with the verbs with which it is used. What does it mean to manifest a name, to keep in a name, or to declare a name? Surely the words "thy name" must have a different signification from that usually given them. The latter part of the last verse seems to give a satisfactory solution; "That the love wherewith thou hast loved me may be in them, and I in them." This is given as a consequence of Jesus' declaring his Father's name, and as the reason for that declaration. The writer of this gospel was the "beloved disciple" who seems to have grasped more of Jesus' spiritual meaning than any of the others. In his epistles he dwells much on the thought of love and tells us plainly in one place that "God is love." Jesus "kept them" in God's name by the attraction of Love, and we can attract and hold by no other power.

Jesus' whole life was the declaration of God as Love, for he came to wipe out the concept of God as a stern, wrathful deity, and to reveal Him as a loving, pitiful Father, who knows and supplies every least need of even the least of His creatures. His life-work was a series of demonstrations of the power of Love over all evil. And when, on the last night of his earthly life, he said that he had declared this Love in order that his disciples might have the love wherewith God had loved him, he explained his ideal for his immediate followers and for us, all those who were to believe on him through their word.

Jesus knew how to pray aright, and he could never have asked for an impossibility. He knew that this love was an imperative necessity for his followers if they were to do his works. A revelation of marvelous possibilities comes to us when we realize that this prayer was meant for each of us who believe, and is being answered now: that it is not only our privilege to follow Jesus' example and manifest Love as he did, but it is even our duty, that the world may be redeemed from the claim of evil in all its forms.

Three Gates.

If you are tempted to reveal
A tale some one to you has told
About another, make it pass,
Before you speak, three gates of gold.

These narrow gates—First, "Is it true?"
Then, "Is it needful?" In your mind
Give truthful answer. And the next
Is last and narrowest, "Is it kind?"

And if, to reach your lips at last,
It passes through these gateways three,
Then you may tell the tale, nor fear
What the result of speech may be.

BETH DAY.
The Housekeeper.

Each person knows God from an infallible demonstration in himself, and not on the slender grounds of men's "lo here" interpretations, or "lo there."—WILLIAM PENN.

Selected Articles.

The Church in Concord.

Washington's birthday marks the sixth anniversary of the organization of First Church of Christ, Scientist, of this city. The first anniversary of this important event in the beautiful new church edifice, a gift from the Reverend Mary Baker Eddy, the Discoverer and Founder of Christian Science, to the Concord church, was of more than usual interest.

There was a large number present, and, after the regular service, many visitors accepted the invitation to see the room which has been set aside for Mrs. Eddy's use, and which is open to visitors at the close of the Wednesday night meeting.

In opening the meeting, the First Reader, Rev. Irving C. Tomlinson, C.S.B., briefly referred to the interesting event in the history of the organization of the church, and in fitting terms voiced the gratitude of the members to their revered Leader, Mrs. Eddy, for her munificent gift of the handsome granite church edifice.

Among other things he said,—

"On February 22, 1899, First Church of Christ, Scientist, in Concord, N. H., was organized with seventy-eight charter members. The present membership is two hundred. The meeting place in Christian Science Hall having been outgrown, Mrs. Eddy's loving generosity provided the present handsome church home. The growth of the denomination in these six years has been remarkable. In 1899 the membership of The Mother Church in Boston was 11,300. Now it is 31,423. Then there were 338 Christian Science churches. Now there are 636. Then there were 110 societies. Now there are 260. Then there were 448 places where Christian Science services were held, now there are 896. Then there were perhaps twelve Christian Science church edifices, now there are about 130. Then Science and Health had reached its one hundred and fiftieth edition; now it has passed its 335th, and more copies have been sold during the last twelve months than during the first twelve years."

Many interesting testimonies were given by those present of the help received in Christian Science for the healing of suffering and disease. There were present, as is usual, many visitors from abroad.

The Daily Patriot, Concord, N. H.

The statement that prayer is practically denied by Mrs. Eddy, could not be wider the fact, for the prayer which has as a result the bringing of the earnest seeker into a better sense of communion with God, a sense which destroys fear, despair, distress, and disease, surely speaks for itself; and it is such prayer that Christian Science teaches and that Christian Scientists are striving to approximate, in keeping with the Master's admonition to "pray always," and the results of these efforts encourage them to believe that they do not "ask amiss."

Christian Science may not be readily understood by the critical or superficial investigator, but its deeply Christian character is proven by the healing it brings the sick, the comfort to the sorrowing, and the renewal and reformation of mind to the sensual and sinner. It is significant that Christian Scientists never preach sermons against the beliefs of others, but concede to them the right to worship as they please, and for themselves simply ask the freedom of their own convictions, their constitutional and divine right to worship God after the dictates of their own conscience.

It is narrated in the fifth chapter of the Acts of the Apostles that, by reason of the practical and healing application of their Master's gospel, the followers of the Founder of Christianity had so incensed the professors

of recognized and established religion in their day, that opposition and denunciation were about to culminate in the attempted destruction of these faithful disciples. And at this time, so the sacred story runs, "stood there up one in the council, a Pharisee, named Gamaliel, a doctor of the law, had in reputation among all the people. . . . and said unto them, Ye men of Israel, take heed to yourselves what ye intend to do as touching these men. . . . And now I say unto you, Refrain from these men, and let them alone: for if this counsel or this work be of men, it will come to nought: But if it be of God, ye cannot overthrow it; lest haply ye be found even to fight against God."

May not those who, by reason of differing religious opinions, lack appreciation of the doctrine and application of Christian Science, find counsel worthy of consideration in the wise advice of that ancient doctor of law? Christian Scientists would most earnestly say to all fellow-religionists, regardless of creeds or professions, in the words of Abram to Lot, "Let there be no strife, I pray thee, between me and thee . . . for we be brethren."

DAVID B. OGDEN.

Capital Journal, Salem, Ore.

Christian Science healing has been practised for more than a third of a century, and the vast number of adherents found in the Christian Science church to-day represents but a fractional part of those who have experienced the beneficial results of this healing practice. If a tree is to be judged by its fruits, then it must be conceded that Christian Science long ago proved its right to be considered both safe and sound as a practical method of cure.

Leaving out all question as to the soundness of this teaching from a philosophical or a religious standpoint, it must be apparent even to the most casual observer that Christian Science has had to prove itself worthy of confidence at every step of the way, in order to hold its own against the opposition of every conceivable kind which has sought to overthrow it. Its followers have been recruited largely from the ranks of those who despaired of ever finding relief from pain on this side of the grave, and the measure of their joy at being once again restored to health is unbounded.

It is useless to try to argue with any one respecting the merits of a given subject when the one with whom you argue draws upon personal experience, while you, perchance, talk only from the standpoint of theory. Thus it is that the Christian Scientist finds himself fortified against the possibility of defeat when combating for the faith which he calls his own. He knows whereof he speaks, and nothing can outweigh his knowledge on the subject.

The Christian Scientist adheres to his chosen method of cure, not through any sense of blind faith or fanaticism, but because he has proven its efficacy for himself. He, therefore, exercises the right to choose it as an adequate remedy for those for whom the law makes him responsible, and the individual right in this matter cannot be lightly set aside.

ALBERT E. MILLER.

Wilkesbarre (Pa.) Record.

The following saying of Uncle David Gray expresses the spirit of the times, "Fair play and half the road." The former we, as Christian Scientists, sincerely desire. As for the latter, we ask only that we shall have our proportional share of the freedom of this great land and the equal protection of its laws. We greatly admire and respect the work that is being done by reputable clergymen and physicians. Is there not ample opportunity for each and all to work out their own salvation and destiny in the spirit of those immortal words of Lincoln, "With malice toward none and with charity for all, with firmness in the right as God gives us to see the right, let us strive on to finish the work we are in . . . and to do all which may achieve a just and lasting peace"?

The Lectures.

Pueblo, Col.

At the Grand Opera House [January 17] a large audience heard the interesting lecture delivered by Hon. Clarence A. Buskirk, former Attorney-General of Indiana, on the subject, Christian Science. The speaker was introduced by Mrs. E. W. Palmer in the following manner:—

Friends:—We meet here to-night in the one common interest of all thinking people—the search for truth. All down through the history of time this instinctive desire of men to know the truth is clearly traceable. The wise men of old, following the star of Bethlehem to the babe in the manger, were prompted by the instinct, and to-day we are still seeking truth. Christ Jesus, in his infinite understanding of all things human and divine, makes clear to us the reason for this governing desire which ever leads man's thoughts upward and onward, in these words, "And ye shall know the truth, and the truth shall make you free." It is our God-given right to freedom, that "glorious liberty of the children of God," which is ever impelling us to come into a knowledge of truth and gain our rightful freedom from the ills of the flesh. The speaker will tell you of the revelation of truth in Christian Science and the consequent freedom attending the right understanding of it.

Pueblo Chieftain.

Macon, Ga.

Judge Septimus J. Hanna lectured on Christian Science at the Library, January 24, to a good audience. Judge Hanna was happily introduced by ex-Mayor W. A. Huff, who said in part,—

My desire to be more fully informed on this great religious question grows out of the fact, that for more than three years I have mixed and mingled with these good people—the Christian Scientists of Macon—and have therefore had ample opportunity to observe and study them in their true character. During all this time, I have seen much to admire and nothing to condemn. In all their religious exercises I have heard but one prayer repeated, which was the Lord's Prayer. During all these months and weeks, I have listened to the testimony given, and to the discussions incident to the service so held, and never have I heard an unkind word spoken of, or about, any other Christian organization; not a whisper of jealousy or adverse criticism has ever passed the lips of any of these people, in regard to any other sect or creed of religious worshippers. Perhaps this could not be said of any other denomination of Christians, and the example is at least worthy of emulation.

Christian Scientists may not, on account of their lack of age and experience, be considered strictly orthodox, but from all I have seen, they have at least three definite and fixed articles of religious faith on which they build and do all their church work, and by which they are perfectly willing to be viewed and judged by the world. These articles are Faith, Love, and Charity. These good people are earnest seekers after the truth. They are optimistic as the sunshine; they stand in no shadows. They grope in no darkness. Their faith is full and overflowing. They believe that what has been done can be done again.

Macon News.

Santa Monica, Cal.

The attendance at First Church of Christ, Scientist, [January 12], to hear the lecture on Christian Science, by Mr. Bicknell Young of Chicago, filled the church to its full capacity; and the earnest attention given the speaker showed deep interest in the subject in this community.

Mr. Young was introduced to the audience by Hon. John

D. Works of Los Angeles, formerly judge of the Superior Court of San Diego county, and later one of the associate justices of the Supreme Court of California. Judge Works spoke as follows in presenting the speaker of the evening:—

My Friends:—Every good, conscientious Christian man and woman is seeking for the truth in religion, and endeavoring to exemplify that truth in his or her daily life. This seeking has founded many differing religious denominations and church organizations. Most of these differ but little as to the essentials of their beliefs, but are divided as to non-essentials or matters of form or creed.

But the Christian Science religion differs from all others of the present time, in matters of vital interest to mankind. The so-called orthodox churches believe in the power and willingness of God to heal from sin through the instrumentality of human agencies, by prayer and the preaching of the Gospel; but they do not believe in His power and willingness to heal from sickness and disease through the same instrumentalities and by the same means.

I am here to-night to bear witness to the fact that the command of Jesus Christ Jesus to heal the sick is being obeyed now, by those who believe on him, as it was in the days of his disciples. The sick and diseased are being healed now, as they were then, by the omnipotent power of God, through the understanding and practical application of Christian Science. Thousands of the sick and afflicted have been restored to health and happiness, the drunkard has been regenerated and returned to his family, freed from the baneful habit of drink, the victim of the tobacco habit has been relieved of the depraved taste, profanity has been made odious to those who were profane, ill nature and discord have been banished from the family, peace and harmony restored, and thought and speech and conduct have been exalted and purified,—and all this has been made possible by the consecrated devotion and tireless labors of one good Christian woman, the Founder and Leader of Christian Science, Mrs. Eddy.—*The Outlook.*

Progress in West Palm Beach, Fla.

We are glad to report the progress which is being made in the dissemination of Christian Science in this part of Florida. This place is situated on the west shore of Lake Worth, directly opposite Palm Beach, the most fashionable and probably the most famous winter resort in the United States. We realize that our situation brings added responsibility in our endeavor to demonstrate Christian Science, as we thereby have the opportunity to meet and try to help a large number of people, who come from different places.

Church services were held in private houses, with an average attendance of ten or twelve, from April, 1904, to the first of last January. In the month of December last a church organization of seven members was formed, and during that month our attendance increased so much that we found it necessary to obtain larger and more public quarters. We secured the Masonic Temple, which has a large hall and is very conveniently located near the center of the city, and held our first service there January 8; since which time our attendance has increased to about thirty, and it is increasing from week to week.

At the Wednesday evening meetings many expressions of love and gratitude to our beloved Leader are heard, and thanks are given both for benefits received and for the opportunity to advance to a better and more complete understanding and demonstration of the truth.

Last Sunday (February 5) the contribution was devoted to the Building Fund of The Mother Church, and we have just mailed a draft to Mr. Chase for twenty-five dollars, as a small but loving contribution to the new building, in which we are all much interested.

By order of the Board of Directors.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

The Christian Ministry.

MUCH has been said within the past few years about the marked decrease in the number of students in attendance at the theological schools, and many reasons have been assigned for the evident reluctance on the part of young men to enter upon the Christian ministry as their life-work. President Patton has recently spoken on the subject, and the reason which he advances is worthy of serious consideration. The Providence Journal reports his address as follows:—

"In an address before Drew Theological Seminary Club, Rev. Dr. F. L. Patton, President of Princeton Theological Seminary, has declared that much of the preaching of the present day is a mixture of sociology and sentimentality, and that instead of Christianizing society, the tendency is to socialize Christianity. He also laid part of the responsibility of the diminishing number of candidates for the ministry on professors of philosophy in colleges.

"The difficulty with most men, said Dr. Patton, is this inability to tell where they stand, if they do stand. If they knew where the east was they could probably locate the other points of the compass. One is asked so often why more students in the universities do not come forward to enter the ministry. With their attitude unsettled on philosophical questions they do not see their way clear to enter the ministry. A tremendous amount of responsibility just now rests on the men who hold the chairs of philosophy in the colleges of this land. If their pupils are allowed to take hold of purely materialistic doctrines and cling to them they cannot become ministers of Jesus Christ unless they be hypocrites."

The tendency of the philosophic teaching has been to rely wholly upon a material concept of the universe, and it has thus engendered in the minds of students doubt of the existence of anything and everything which cannot be explained upon a strictly material basis or be demonstrated in a test-tube, therefore it is not strange that Dr. Patton as president of a theological seminary should place much of the blame upon this kind of instruction.

Prof. Shailer Mathews, of Chicago University, in his recent article in the *Standard*, places the responsibility upon the churches rather than upon the schools. He says,—

"The office of the minister as such demands rehabilitation in the mind of the church. You can get good men to suffer privation, actually to be heroes and indeed martyrs, where there is an opportunity to accomplish something; but you can not get good men to sacrifice themselves for a cause they are practically told is not sacred. The church that belittles and mistreats its leaders; whose members do not desire their children to become pastors; whose attitude towards its pastors is niggardly, critical, and unappreciative rather than respectful and co-operative, is simply practising suicide. It may get men, but it will get men who are ready to submit to such treatment. Does it want them? The finest of our young men will always be anxious to serve the divine Master. They will be ready to sacrifice for him and their fellows. They will be eager as teachers, and editors, and Y. M. C. A. workers, and charity workers, and as missionaries to do the very work which the ministry

is intended to do, but as long as the churches depreciate the ministry they will hesitate to be ministers. The distinction they draw is not between Christian activity and indifference to Christian needs. It is drawn sharply between the ministry and other forms of what, for lack of a better word, I must call professional religious and philanthropic work. The revival of interest in the ministry will have to begin in the revival of respect for the office which the minister holds. You cannot turn a prophet into a hired man. . . . Give his office the honor it demands—I will not say the salary it demands—and the question of the ministerial student will be solved."

Whatever may be the reason for the dearth of students in the religious schools, there can be no doubt of the fact that humanity needs the full measure of Christ's gospel, both preaching and healing, and it is because the Church of Christ, Scientist, has responded to this need, that it is making headway so rapidly. Every member of this church is a minister to his fellows and to the world.

ARCHIBALD McLELLAN.

The Demand for a Fair Chance.

ONE of the distinguishing characteristics of our day is its recognition of the limitless possibilities of human achievement. Until recently the tendency in popular thought was to discredit everything out of the ordinary,—perchance condemn it,—simply because it was beyond the range of common experience. A great change has come, however, and it is surely well, for hospitality to new ideas always opens the door to progress, and without it we should be deprived of the many admitted advantages and blessings of modern times. We should remember, however, that the interval between the discovery and projection of a new idea, and the date of its full development and acceptance, is always a period of experimentation which is attended by struggles and disappointments for the discoverer, if not for others. Teachers of physical science are wont to tell their students that while a certain discovery has been made, as for instance in the application of electricity to locomotion, a number of years may elapse before it can become available for practical use. History witnesses that the final success of every enterprise which involves a new idea, is largely dependent upon the discoverer's faithfulness and endurance. He must be prepared to meet and overcome, not only the difficulties which attend the development of his idea, but the opposition which springs from ignorance and self-interest.

Christian Science reveals the fact that every idea which is based upon good is potentially perfect. (Science and Health, p. 353.) That which is not perfect in its nature cannot reach perfection through any process of experimentation. That which has the divine sanction is already perfect in idea, and needs but to be understood by humanity to secure that unhindered development and advance which shall bring its benefits within the reach of the needy. The mental and physical healing of Christian Science has come at a time when the world needs it as never before, and also when it is better prepared to accept it in its entirety than at any other period in human history. Christian Scientists have an undoubted right to that freedom of choice which is inseparable from progress. They do not invade the rights of others, but they do insist upon their own. They insist that time be given them, as it is to all others, to prove the availability of truth and its superiority to all material means as a healing agent.

Christian Science teaches that the understanding of spiritual law annuls the pains and penalties imposed by the supposed operation of material law. It reveals, however, the necessity for orderly processes in the unfoldment and application of this understanding. When Christ Jesus was informed of Herod's purpose to kill him, and thus to stop his healing work, he said, "Go ye, and tell that fox, Be-

hold, I cast out devils, and do cures to-day and to-morrow, and the third day I shall be perfected."

The French philosopher Comte has said that men pass through three stages of development; first, superstitious belief; second, the perception of fundamental truths; and third, a positive knowledge. In keeping with this order, we perceive that the healing work of Christ Jesus has been regarded with a superstitious reverence which forbade any scientific investigation of its basic law,—which indeed denied that it had any such law. This false sense, which has hung as a heavy mist over the thought of Christendom, was pierced by Mrs. Eddy's keen spiritual vision,—her perception of fundamental truth,—and humanity is now invited to investigate the basic truths of Jesus' teaching with a view of attaining that positive knowledge which is applicable to humanity's great need. Her recognition of the divine Principle of being and of spiritual law has thus made possible the certain and satisfying results which appear in the healing of both moral and physical disease, and the time is not far distant when all scientific thinkers will gladly avail themselves of this knowledge of Principle on which alone is based all right thinking. Thus will be fulfilled the Master's prediction, "The third day I shall be perfected,"—a statement which undoubtedly refers to the universal recognition and application of the truth that was the basis of his life-work. Who can claim that his mission is "perfected," so long as his divine Principle is denied and the healing power which accompanies the understanding of that Principle is ignored? Our great joy lies in the fact that we may be "co-workers with him," that we may maintain our inalienable rights and "go on unto perfection."

ANNIE M. KNOTT.

A Rebuke of Prejudice.

DR. MOFFATT, President of Washington and Jefferson College, not long since gave expression to some thoughts regarding so-called religious criticism, on which very many might meditate with profit. He says,—

"The only question for us to ask concerning any results of investigation that are offered to us is, Are they true? If they are true, let our expectations be disappointed and our desires be denied, if they happen to be in conflict with the result.

"Men ought to be judged by the same principle. Are they seekers of the truth, and are they sincere in offering their results as true? If these questions must be answered in the affirmative then they are within their rights. We have no moral right to call them names, nor so to characterize them in public speech as to create a prejudice against them. When we credit them with good motives we do not bind ourselves to accept their conclusions. It may still be an open question with us whether or not they have discovered truth; but if they have sought after truth and do honestly claim to have discovered it we may justly treat them with the same courtesy that we accord to those whose results are more satisfactory to us. To charge them with hostility to the Bible or Christianity for no other reason than that their conclusions are distasteful to us, or untrue in our opinion, is to deny to them the rights that ought to be accorded to all seekers after truth."

These are wise and daring words, and they find endorsement in Mr. Cleveland's late reference to the disappointment experienced when men "evade the moral considerations involved in a controversy" and descend to take counsel of passion and prejudice. How many chapters of discreditable religious history, both ancient and modern, would have been avoided had the truly Christian spirit thus commended but dominated all professing Christian people.

The rise of the Christian Science movement has been marked by a display of unintelligent and untempered criticism such as has not been witnessed before, since the Reformation, and when we take into consideration the

educational advance of modern times, and the present liberality of public thought respecting most questions,—a liberality which presents so great a contrast to that of even John Wesley's time,—the exhibition of caustic and self-satisfied prejudice to which we refer is seen to be altogether without a parallel and without an excuse. While it has surprised us again and again to find the most dignified denominational periodicals catering to narrowing prejudices, it is very encouraging to note that the number of Christian ministers and teachers who entertain Dr. Moffatt's wholesome and progressive view is very rapidly increasing, and the indulgence in cynical, would-be-facetious, and unkind comments respecting sincere truth-seekers of any name, is destined to receive such continued rebuke at their hands as will, in the near future, we hope, free the fields of religious discussion from the intrusion of these noisome effluvia of the dark ages.

The exhibition of critical sensitiveness regarding the faith of others usually indicates that one is in doubt respecting the truth and demonstrability of his own convictions. The chemist who in his laboratory is daily verifying a newly discovered law of physics,—what cares he for the ridicule of one who pooh-poohs the possibility of results at which he has already arrived again and again? With similar unperturbed assurance the faithful Christian Scientist who is witnessing the healing of the sick and sinful through his ministry, may bide his time, knowing that the truth standeth fast, and that prejudice and unbelief must ultimately recognize its sovereignty. In so far as we are entirely sure of our ground, in so far are we prompted to be patient and considerate with those of opposing view. We know that the truth cannot fail, and that the inevitable end of error is self-defeat. Jesus proved for himself and for all humanity that his statements of being were demonstrable. When, therefore, the disciples reported that they had sought to repress one who, though not following the Master, was casting out devils in his name, Jesus could say, "Forbid him not, for he that is not against us is for us." His attitude thus becomes the highest illustration of the fact that to know the truth is to be broad-minded; it is to be incapable of the expression, or the entertainment of a spirit of bigotry.

JOHN B. WILLIS.

Letters to our Leader.

Concord, N. H., Washington's Birthday, 1905.

Beloved Leader:—We remember with gratitude that when the beautiful chimes in our lofty watchtower ring out their glad welcome to the Concord folk for this Wednesday night meeting, it will be the sixth anniversary of the organization of the Concord church.

At the time of its organization there were seventy-eight charter members. Now the membership is two hundred. Then we worshiped in the upper chamber of Christian Science Hall, which your love had thoughtfully provided. Now we gather in the beautiful granite edifice which is your munificent gift to the Concord church. Meanwhile you have been tendered two public receptions at the Concord State Fair, in the presence of the governor and other state officials, at the spontaneous suggestion of some of our foremost citizens; the legislature of New Hampshire, by a well-nigh unanimous vote, has placed itself on record in favor of the unrestricted rights of Christian Scientists in this commonwealth, and the Supreme Bench of your native state has decided every point at issue in favor of Christian Science.

We give God the praise, and rejoice with you in these marked evidences of appreciation upon the part of those who know well the purity and worth of your unselfish life.

Gratefully and lovingly,

IRVING C. TOMLINSON.

New Haven, Conn., February 20, 1905.

Rev. Mary Baker G. Eddy.

Beloved Teacher and Leader:—I refrain from writing you often, as I realize something of how busy you must be in order to watch over and attend so faithfully to every need of your church as you do. I would, however, love to tell you how grateful I am to God for so sweetly leading me out of the ministry of the Methodist Episcopal Church into the glorious understanding of Christian Science and its work.

All through my ministry I deeply longed for the understanding which would enable me not only to save men from their sins, but from sickness and suffering as well, as Jesus Christ told his disciples to do, and this has come to me, through Christian Science. What a joy it is to me to see how Truth wipes out sin, the desire to sin, and all kinds of suffering and pain, and how it heals consumption, cancers, eczema, tumors, all the different diseases to which flesh is heir. The regenerating power of this truth is most interesting to me. We are so thankful we can be members of the Christian Science Church.

We have seen good work done for some of the students at Yale College. Those students who are most deeply interested in Christian Science hold services in one of their rooms every Sunday evening.

It may be of interest to you to know that Rev. J. M. Buckley, D.D., editor of the *New York Christian Advocate*, has recently published in his paper a statistical table of the churches in the United States, in which the Christian Science Church was given its rightful place among other Christian bodies. This seems a step in the right direction. The table shows the numerical strength and the increase or decrease of each denomination for the year 1904.

The increase of the Christian Science Church is remarkable. The table says there are 1,222 Readers, 611 churches, and 66,022 members; an increase of 104 Readers, 52 churches, and 5,739 members; a gain of nearly nine per cent in membership. All the seventeen bodies of Methodists are reported to have 39,977 ministers, 58,530 churches, and 6,256,739 members; an increase of 343 ministers, 172 churches, and 69,244 members, a gain of about one per cent in membership. In commenting upon the Christian Science denomination, the compiler, Mr. H. K. Carroll, LL.D., one of the secretaries of the Missionary Society of the M. E. Church, said in part, "The Christian Scientists are followers of Mrs. Mary Baker Eddy. They hold that consciousness is mind, and mind is God; that soul or spirit is not evil, but the flesh. Evil is unreal; good only is real. Sickness is a fear, and is unreal; in order to cure it man's belief in it must be overthrown. The chief church, a fine structure, is in Boston, and many thousands in Boston and in other cities are counted as members of it."

Dear Leader, we love you more and more as we grow in the understanding of Christian Science, and of what you are, and what you are doing for all mankind, as well as for those of us who have gained something of the light which illuminates your beautiful life and character. Love from Mrs. Simonsen and our dear children.

Lovingly, your humble disciple,

SEVERIN E. SIMONSEN.

Is any man among us prepared like a lute-player when he takes a lute, so that as soon as he has touched the strings, he discovers which are discordant, and tunes the instrument?—EPICTETUS.

A Critic Answered.

A reprint of Mr. Alfred Farlow's article in the *June Journal* is now on sale. Price 3 cents per copy, or 100 copies for \$2.50. Address orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

Testimonies of Healing.

Three years ago last March, I was sitting alone one evening, wondering how it was that we, who had been religiously trained, and who were trying our best to be worthy of the name, Christian, should find it so hard to live up to it, and also have so much trouble in the form of sickness. My husband, since boyhood, had been subject to chronic dysentery, dyspepsia, and heart trouble. At times he suffered so seriously in consequence, that the doctor said it might at any time be heart failure. I lived in constant dread; our last spared child, a little daughter, seemed to inherit the same trouble, and we had lost two with the bowel trouble.

On this evening I took up my husband's paper and read in it a "skit" on Christian Science and thought it expressed small knowledge of the same. I looked for more on the following days and soon saw a reply from Yorkshire; then later, three very plain, clear papers on the subject by the Earl of Dunmore. After this I longed for more, that my loved ones might be healed. My husband also took it up, and during a severe and painful illness which at intervals had troubled me for fourteen years, we sent to a lady practitioner and I was healed in three treatments. My husband then craved help from a gentleman, and in his case the healing was slower than mine, but the advance in the understanding was more sure and his grasp on truth much stronger, so that he was able to help me. For three years we worked together, at first seemingly lifted above all burdens, and we longed for all our dear friends to know the truth, but every effort in this direction brought much sorrow and disappointment.

For two years our progress was very slow; then a brighter time came, and we gave our first testimony at Second Church, in London. We were so encouraged by loving words from Scientists that we were on the hilltop, but soon after I was in the valley again, and we telegraphed to one who had cheered us on the evening when we gave our testimony. She worked so lovingly for me that the hemorrhage and pain soon passed, and in a week I was well, indeed I was up and out of bed in three days, and this time I learned how much better it is to realize for oneself the power of Love to protect from all harm.

Both my husband and myself feel that there is indeed much to learn yet, and much to do, but we were lifted out of hopelessness into the hope which "maketh not ashamed," out of the shadow into the light of Truth; and although we are only on the first rungs of the ladder, we are seeking to climb step by step till we reach "unto the measure of the stature of the fulness of Christ." In spite of our slow progress, we have many demonstrations. We can plainly see that the Christ-Science meets every claim of error if we work rightly. I send this as an expression of gratitude to God, from my husband and myself, and also to His faithful one, Mrs. Eddy, who has made it plain for us; our joy is to know that her reward is from above.

MRS. E. KYLE BATTLE, Thornton Heath, England.

I was brought up in an orthodox faith, but even in my youth I rebelled at the thought of a revengeful God, and the idea of a literal hell, with its accompaniment of fire and brimstone, that was constantly held up to me as part of my religious teaching. I gradually drifted away from the church, and read the writings of various agnostics with approval. I could not believe in the so-called miracles in the New Testament, and even questioned that such a person as Christ Jesus ever existed. Of one thing only was I satisfied; viz., that a supreme power governs the universe through unchanging laws, and that life is immortal.

A year ago last December I had a very severe attack of sciatic rheumatism, which affected my left leg from the hip to the ankle. For a week I was helpless, and then I began slowly to improve, so that I could go to the city and

attend to my affairs, but I could not sleep in comfort, nor could I dress or undress without my wife's assistance. These conditions lasted for four months, when the disease took a turn for the worse, the pain, especially at night, becoming so severe that I found it impossible to rest in bed, and I was compelled to wander about the house, going from lounge to easy-chair, and finding only a few minutes' rest in either. During all this time I had tried a number of remedies, every one of my acquaintances having a different one to suggest, until I came to the conclusion that where there were so many remedies for the same disease, none could be of any value. It was at this time that Christian Science was suggested to me by my wife, but I had only heard it spoken of in jest, and I ridiculed the idea of giving it a trial. I promised, however, to call upon a practitioner if my condition did not show any improvement within a week's time. Instead of improving I grew steadily worse, and finally decided to give Christian Science a trial. Science and Health had been loaned me by a friend and I absorbed the truths expounded therein like one athirst in the wilderness. This was the religion I had been looking for,—revealing a God of Love, and a heaven here and now. Surely "man's extremity is God's opportunity." I called upon a practitioner, was healed in one treatment, and have never been troubled since. I had always been fond of smoking, but the appetite instantly left me, nor have I experienced the slightest desire to use tobacco in any form since that time. I had worn eyeglasses for two years, not being able to read without them with any comfort, and small print I could not make out at all. A few weeks after my healing, I decided that the glasses were not necessary, and I found that the demonstration was made,—I had no need of them any more.

My entire family of seven are now interested in Christian Science, and we have all been wonderfully benefited in many ways. Fear, nervousness, worry, indigestion, constipation, and other ailments (notably asthma of thirty years' standing) have been healed through the power of Truth. It has been my joy and privilege to join Fourth Church of Christ, Scientist, of this city and to have my oldest son also enrolled in the church membership. I am daily striving to send no thought into the world that will not bless, cheer, or heal; and to rise each day into a higher sense of Life and Love.

I can truly say that Christian Science has been a blessing to me and mine, and I wish here to express my gratitude for all the benefits received, not forgetting our various publications which are always eagerly looked for, and above all to our Leader, who has made this saving truth a living presence to us.—ADOLPH BEREND, Chicago, Ill.

Christian Science has done so much for me that it is difficult to find words to express my gratitude. I was left alone in the world at the age of eight years, having lost both mother and father. I was in the care of an aunt who educated me and instructed me in the Bible. I endeavored to do what I thought was my duty, committing to memory many chapters in the Bible, and I rarely ever missed a service at the church. Knowing nothing of the true affection of a mother, I was dissatisfied with life as it seemed. I married very young, my health failed, and the cares of the home kept me, as I then thought, from attending to my religious duties. During eight years of constant suffering, I tried every material remedy, but realized only temporary relief, and still I did not see that God was my only help. I was in utter despair when one of His messengers,—an earnest and faithful practitioner in Christian Science,—came to me and asked me if I really wanted treatment. I knew nothing of its healing power and doubted it as most of us do, but knowing that there were no other means of relief I was eager to try Christian Science. The healing was instantaneous. I read at the practitioner's home the following morning, the "New Birth" by Mrs. Eddy (Miscella-

neous Writings), and found in Truth the Comforter, Mother, Father,—all that I had so longed for in the past years. Though we have trials and temptations there is a never-failing source from which we obtain grace and peace. I am thankful for that blessed book, "Science and Health with Key to the Scriptures," which opens the way to Life, Truth, and Love.—MRS. WILLIE H. DEAKINS, Rome, Ga.

I wish to give something in return for the good that Christian Science has brought me. I am a physician, a graduate of class of 1881, from Jefferson College of Philadelphia, Pa. My health broke down in 1895, and I went West and lived in the mountains in idleness for six years, seeking health. I came back in 1901, and received my first lessons in Christian Science. I was then an inveterate chewer of tobacco. I was prevailed on by friends to try Christian Science, but I had no faith in it. In a week's treatment, however, I was cured, and I have never had any desire for the weed since. I went to studying Science and Health, and was cured of another habit, that of the practice of medicine. I gave this up, and as I knew nothing else, at forty-eight years of age I turned carpenter. I am expecting soon to take class instruction. In the days when I practised medicine I belonged to an orthodox church, and used to attend from a sense of duty, when I had time. Now I go, to our little Christian Science church from a sense of love and a desire for the truth.

W. H. MAGHY, Princeton, Ind.

Six years ago I suffered from a complication of diseases, three of which the physicians pronounced incurable—catarrh, coughing, and constipation. In a year and a half I had twelve spells of nervous prostration, and after every attack the doctors would say, "You will not live through another one of them." I then underwent an operation at the hospital, and after three weeks' treatment the doctors said they could do no more for me, and I went back to my old home to die. I had not heard of Christian Science before, and when it was brought to me I but half trusted it. I thought that if what it claimed to do was true, I would work out my own problem, so I bought Science and Health, but at that time I thought it a very high-priced book. The chapter on "Prayer" was a revelation to me, and in three months I was healed of all my ailments but one—the cough. Two years later this also left me, and has never returned. I have proved that Christian Science does heal through the demonstration of Truth. It has also taught me to love my neighbor as myself. It has uncovered to me different forms of error which I have been able to overcome with God's help.

These beautiful words from the Christian Science hymnal helped me a great deal,—

The mortal sense we must destroy,
If we would bring to light
The wonders of eternal Mind,
Where sense is lost in sight.

I feel deeply grateful to Mrs. Eddy for this glorious truth, and also to the kind friends who first brought it to me. I am also very thankful for the *Sentinel*, *Journal*, and *Quarterly*, and for class instruction.

MRS. E. R. JERGER, East Toledo, O.

Before hearing of Christian Science there was almost nothing among the "works of the flesh" of which I had not known. I drank, although not to excess, played cards, attended horse-races and, like many others, was looking deep among material pleasures for happiness. But this searching in the realm of mortal mind gave me no sense of rest and peace, and it was that for which I longed.

At this time I was an engineer, and oftentimes, in going out on the engine and seeing the beauties of nature, I would ask myself, "Where is God; where can I find Him?" And this unspoken desire did not return to me void. I well

remember coming in one Sunday morning from a trip on the road, and when my wife asked me to attend church with her I replied, "No, I am going to rest." Truly the rest which came to me was the sweetest rest that I ever experienced. Our home was then in the same block with the Christian Science rooms, and as I lay there, half asleep, there came to me the words of the hymn, "Help us to help each other, Lord." As these words came to me, so full of meaning and with a deep sense of love, I sank down on my pillow, and amid sobs promised God from the depths of my heart that if He would show me how to live a Christian life, I would live it.

Shortly after this I attended the Christian Science services and it came to me that I had found the truth for which I had been looking all these years. I soon purchased a copy of *Science and Health* by Mrs. Eddy, and after reading it I became clearly convinced of the truth voiced in it. I at once asked for treatment, and discarded all medicine, pipes, and tobacco, and rejoiced to see them go. Since this truth has come to me I have had many struggles, but the power of Truth and Love has vanquished the belief in error, and now I thank God when an error is uncovered to me, so that it can be met and conquered, for I find that is what brings the true sense of life to my consciousness. When I look back over my experience I can say, as did our Leader, that when this truth found me, I was homesick for heaven, and it is my sincere desire to continue in the pathway which leads to eternal harmony.

In June, 1903, I had the privilege of attending the Communion services in Boston, and also went to Concord, and there had a glimpse of her whose pure life is a beacon to us in our efforts to live closer to God.

This truth is ever with me in my work, and I find that it never fails me. Truly it is only by living up to my highest sense of right that I can thank God for this revelation which has come to us through our loving and faithful Leader.—ANDREW J. CRANDALL, Oneonta, N. Y.

"Imagined he was not badly hurt. Christian Scientist refuses to have a doctor after falling thirty-three feet. . . . when able to speak, preferred to depend on his imagination for his recovery, and do away with the services of a physician."—*Union Sun*, New York, May 19, 1904. [Extract from newspaper report of the following case.—Ed.]

Owing every breath I draw to Christian Science, and never having been grateful enough before to send in my testimony, I now wish to give this experience. While working on a frame dwelling-house at Olcott Beach, my test came to prove Christian Science to be what I had for ten years been saying it was. I was on a scaffold about twenty-four or five feet from the ground when I slipped and fell backward to the ground, striking square on my back. A young man who was passing saw me fall and ran to my assistance. When he reached me I said, "I am not hurt, I do not want any help." I tried to raise myself, but fell flat on my back again. The young man said, "O, no, you're not hurt, you only have a broken back." With that he ran to a store to telephone for a doctor, and a lady who is a Christian Scientist was there. Some one said, "Who is hurt?" and the young man replied, "It's Mr. Robinson, our foreman." The lady then came and requested that I should be taken to her house across the street, and this was done.

My wife and another Scientist were telephoned for, it being a distance of twelve miles to Lockport, where I live. It was two hours before they could arrive and, meanwhile, the brave little woman shut the door to all mortal eyes and tongues, and was with me alone, reading from *Science and Health* and keeping up steady treatment. I kept saying, "Fight on, the victory is ours." When my wife and the Scientist from Lockport arrived I was on my back and could not move hand or foot, while it seemed as though I could not keep still for the pain. They all went bravely

to work for me, and I kept up a steady realization of the truth for myself. In two hours more I was in a peaceful sleep, and though asleep I kept up my treatment, so they say. In an hour more I was able to be moved and, with the help of my strong wife and the practitioner, I stood up and was prepared for bed, and rested fairly well that night.

This all happened on Friday, and on Sunday night my wife wanted to take me home. I thought it was a very risky piece of business, but she seemed so strong in her undertaking that I consented. When the time came to go home the pain seemed to start up, but after treatment, and quicker than I can tell it, the pain disappeared and we were soon on our way home. We reached home safely, but that night all manner of evil thoughts came to me. Our old family doctor had told my wife that he believed I would get better, but that he knew, and everybody knew, that a man weighing one hundred and seventy pounds could not drop twenty-five feet, square on his back, without breaking some bones or displacing some organ.

I mended very rapidly, and on the tenth day I went to the Sunday services, and on the eleventh day I went back to my work. While no one can say whether my bones were broken or any organ displaced, I am satisfied that if I had been without the truth I would not be here to-day. "Who is so great a God as our God?" How He does care for those who trust Him!

I give thanks to Almighty God for the experience, for it has made me so much stronger. It has brought me nearer my co-workers, it has formed a stronger bond of love in my family, it has brought me nearer to God with my every-day work, and it has settled the question of doubt in case of accident. While some seem to pass it off as a lucky case there are those who are watching and will be benefited by it, for they are using common sense in their views. This is only one of the many times I have been helped by Christian Science, for it has healed me of sick headache, dyspepsia, nervous debility, rheumatism, and a severe rupture for which I wore a truss for years.

Christian Science is the truth, and my heart goes out in loving gratitude to those who labored so long to give me instruction in it, and to our Leader through whom these blessings have come to me.

JOSEPH G. ROBINSON, Lockport, N. Y.

I have felt for some time that I should express my thanks for the many blessings I have received from Christian Science. I was led to the study of *Science and Health* through the healing of our little girl. I was a member of an orthodox church at the time, but was not fully satisfied, and had a constant desire (which I afterwards learned was prayer) to know the straight and narrow way. With that desire uppermost in my thought I began to read *Science and Health*, but with no thought of being healed of my physical ailments. Before I had read the "little book" through I found to my great joy and surprise that I was healed of neuralgia, dyspepsia, heart trouble, and general debility, from which I had been a great sufferer for many years. My mental condition was also greatly changed. I had always been of a sad, despondent disposition, but what I have gained of this blessed truth has taught me to be light-hearted and happy. It is about eight years since I became interested in Christian Science, and during that time I have had many trials, which, however, did not leave me where they found me, but always on a higher plane of thought. I have found great comfort in the teachings of our text-book, when trials and temptations presented themselves.

Through the study of "*Science and Health with Key to the Scriptures*" by Mrs. Eddy, and the help I have received from dear friends, I have had many demonstrations of the power of Truth over error, and one, for which I am especially grateful, is the undoubted proof that divine Love can and does destroy sorrow. Words can never express

my gratitude for these blessings, and my desire is to so live that I may be worthy to name the name of Christ, and be a true Christian Scientist.

MRS. HATTIE L. FRANKLIN, Mexico, Mo.

I took up the study of Christian Science over fifteen years ago, although it seems but a very short time to me. At that time the doctors at my home told me I could live only a short time, but that if I would try a change of climate I might live longer; that they had done all they could for me. They said I could not live more than six weeks, so I went to California, to the noted Fulton wells, and tried the mineral waters. This had, however, no effect on me, and the doctor there told me I was too far gone and the change of climate in my condition was too sudden; that I could live longer in Kansas than there. I then left and went to another place, and tried the water there, but received no benefit. Thus I was driven from place to place, with no benefit, and heard nothing but that I could not be cured and that I would die in a short time.

In this condition Christian Science found me, and I was told that I could be healed. After a short talk with my wife, we sent for a Christian Science practitioner. I told her that the doctors said I had quick consumption, that I was spitting blood and had every symptom of consumption. I then commenced taking treatment, and she came the next day, and this was all the present treatments I had. In a short time I was well and at my work again, and have been ever since. In all this time I have not taken a drop of medicine of any kind. Under Christian Science treatment I was also cured of the tobacco habit, the whiskey habit, and profanity. All this is a great blessing to me, it has made me a better man.—C. MILLER, Hutchinson, Kan.

Three years have elapsed since my husband and I became interested in Christian Science. The first Sunday service we attended was the dedication of First Church of Christ, Scientist, in Toledo. We were very much impressed with the beautiful service, and have been regular attendants ever since. I was schooled in an orthodox church and was apparently happy, but the freedom and love I have attained to in Christian Science have filled me with more hope, more joy, and a deeper realization that life is worth the living, if we but follow the teachings of our Master. We have had some beautiful cases of healing in our home. I shall not go into details. I can, however, say that without a doubt Christian Science does heal the sick and sinful. Words fail to express the esteem in which we regard our beloved Leader, Mrs. Eddy, the author of Science and Health.—MABEL C. GUINEY, Toledo, O.

Like a great many others, I was brought to the foot of the cross through suffering. Christian Science found me a little over four years ago, a mental and physical wreck. My home had been broken up through sickness, and my husband sent out of this state on account of having consumption in its last stages hanging over him. I had undergone two operations and was told by the doctors that my only hope of relief from suffering would be to undergo another operation. I should at that time have consented to it, had I had the means, but being without money, and nearly without friends, I turned to Christian Science. It was truly a case when man's extremity is God's opportunity. I knew nothing of Science, but I had reached the stage where I cared not what it was, all that I wanted was relief. I was surprised when told by the practitioner that Christian Scientists rely entirely upon God for help. I became very hopeful when told that God could heal all my sickness, and I expected to be helped at once; which did not prove to be the case, as mine was a very slow case of healing. At times I became discouraged, and would tell the practitioner that I thought I would give up the treatment. I was then trying to study Science and Health, but seemed unable to understand it. This lady in her kind and gentle way

would lead me to other thoughts, and would ask me to be patient a while longer and let Truth do its perfect work.

Truth has done its work with me. Christian Science alone has healed me. I realize to-day that "the inward man" had to be purified before the outward man could become pure. The ailment that drove me to Science was on my face, which was completely covered with sores, and I was ashamed to go out on the street, ashamed to have any one see me. In my anxiety to be rid of this, I seemed to lose sight of my other troubles. I am to-day a living example of what this grand truth can do for humanity.

Like many others, the physical healing seems small to me compared to the spiritual uplifting that I have found in Christian Science. Words seem weak to express my gratitude to God for sending the truth once more to suffering humanity, through Mrs. Eddy. Through it I have been lifted out of sickness, poverty, and despair, into health and a comfortable and loving home. I realize that only by truly striving to follow the Master's commands and reflecting more of the Divine character, as we are taught in Science and Health, can we stand before the world as his true disciples and let our lives speak for us.

I also wish to express my gratitude to the kind lady who stood by me so faithfully in showing me the way from darkness to light.—MRS. C. JOHNSTON, Milwaukee, Wis.

Twenty years ago Christian Science came to me in an hour of severe trial. Always delicate from birth, as I grew to girlhood an illness settled upon me which for five years baffled the physicians, who were most kind, and did all in their power to relieve me, but said there was no hope. I could only wish that the end might come quickly. Suddenly my father passed away, and I thought my grief unbearable. The world looked black, and I asked, "What have I done that God should punish me like this?" A little later I heard of Christian Science and began taking treatment. Never will I forget the peace and rest which came to me, nor the joy when I was made to understand that it was not God who had caused my suffering. The healing came slowly. I stumbled, but only to get up again. To-day I am a well and happy woman. I go to the Father in thankfulness for the work of our Leader, and for the loving care I have received from her students, who have helped me to stand during the dark hours.

My husband never antagonized the Science. He said if I wished to bow down to a Chinese idol, and he saw that I was helped by it, he would make no objection, but he simply could not think as I did. When, after a few years, he, too, saw that it was the Christ-teaching, my cup of joy was full and running over. Our little boy, eleven years of age, does not know the taste of medicine, while many serious ailments have been met for him with Christian Science, and I am grateful.

EVELYN GREEN LEAVITT, New York, N. Y.

The following brief address, delivered by Lincoln just before leaving Springfield, Ill., for Washington to be inaugurated President, is taken from the *Atlantic Monthly*:—

"My Friends:—No one not in my position can appreciate the sadness I feel at this parting. To this people I owe all that I am. Here I have lived more than a quarter of a century; here my children were born and here one of them lies buried. I know not how soon I shall see you again. A duty devolves upon me which is, perhaps, greater than that which has devolved upon any other man since the days of Washington. He never would have succeeded except for the aid of Divine Providence, upon which he at all times relied. I feel that I cannot succeed without the same Divine aid which sustained him, and in the same Almighty Being I place my reliance for support; and I hope you, my friends, will all pray that I may receive that Divine assistance, without which I cannot succeed, but with which success is certain. Again I bid you all an affectionate farewell."

From our Exchanges.

Am I to think that there was a personal God six thousand years ago, or sixty thousand years ago, or six hundred thousand years ago, and that to-day, when I can go out and see him painting the leaves, and starting this fall the beginnings for next year's spring—see the love and life of the ever-present God at work before my eyes, can I think that His personality is gone? No; a thousand times nearer, a thousand times closer. We are in the presence of the great Divine personality. What we mean by personality is this: The Infinite and Eternal Energy, from which all things proceed, is an energy that thinks, that feels, that purposes and does; and is thinking and feeling and purposing and doing as a conscious life, of which ours is but a poor and broken reflection.

The image which in my childhood I formed of God, as a great king sitting upon a great white throne, was really an idol, though it was not formed of stone nor painted upon a canvas. It is not to such an imagination we are to go for a realization of the personality of God. God has personified Himself in human history. He has entered into one human life, and filled that life so full of Himself that in Jesus Christ we see the image of the Invisible God. Christianity is not an episode. The life of Christ is not a historical event completed in three short years. Jesus Christ is the revelation of an Eternal Fact, and the Eternal Fact is the Ever-Present God.

LYMAN ABBOTT.

The Outlook.

A rather despairing estimate of the state of religion in London is given by an Anglican archdeacon, just made a bishop, who divides the people into four classes. The rich, he says, are largely given to the pursuit of pleasure, the sober middle class are absorbed in making money, the poor are so worn with toil that they are incapable of thinking on great questions of life and eternity, while professing Christians spend their energies in theological disputes about which the ordinary laity of all classes neither know nor care anything. Each of these classes exists in our own cities, but along with them are many faithful, self-denying generous Christian workers, and we know that the same is true of London, too.—*The Congregationalist.*

It is the sign of a righteousness already existing within, when one can say, "I hunger and thirst after righteousness." When men cry out, "Oh, my leanness! my leanness!" they are not so lean as they think. The very cry, complaining against it, is not a sign of leanness, but of a measurable fullness. When men seek to be filled with the Holy Spirit it is because the Holy Spirit is already bestowed and is active in their hearts. The cry for likeness to God is the cry of likeness, for more of likeness, and not the cry of unlikeness. God is "nigh unto all them that call upon him." He has already found the soul which is seeking after Him. The seeking is God's voice within the soul.—*The Examiner.*

The gifts and grace of the Spirit of God are divinely imparted and do not come "by blood, by the will of man, or the will of the flesh;" yet it appears from the experience of Elisha that close relationship and fitness of disposition do afford opportunity for the conveyance or transmission of the spirit that characterizes one to another. The disciples of Jesus received his Spirit, and all who believe on Jesus partake of the same Spirit. It is a Christian spirit that marks them in their character, conduct, and influence, and it is gained by personal relation to Jesus himself.

The Watchman.

The great present need in religion is that Christians should let their light shine by incarnating their faith in life.

Homiletic Review.

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, \$5. Twelve or more to one address, \$4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, \$1 per copy; \$5 per half dozen; \$9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.

Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, Treasurer.

Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, \$2.40 per annum; \$1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, \$1.00 in advance; all other countries, \$1.25. Single copies, 10 cents, postpaid.

Twelve or more books to one address, each, prepaid 2 75

Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid 4 00
Twelve or more to one address, each, prepaid 3 75

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid 5 00
Twelve or more to one address, each, prepaid 4 75

Levant, divinity circuit, leather-lined, round corners, gilt edges, silk-sewed, heavy Oxford India Bible Paper, wide margins, each, prepaid 6 00
Twelve or more to one address, each, prepaid 5 75

Orders for Science and Health, in lots of twelve or more to one address, may include any or all the different styles of binding.

A COMPLETE CONCORDANCE to Science and Health with Key to the Scriptures, 595 pp., 10 x 7. Bound in cloth, marbled edges. Price, single copy, prepaid \$5 00
Twelve or more copies to one address, each 4 50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid 2 25
Twelve or more books to one address, each, prepaid 2 00

Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4 00
Twelve or more to one address, each, prepaid 3 75

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5 00
Twelve or more to one address, each, prepaid 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid \$3 00
Twelve or more books to one address, each, prepaid 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science, 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; \$3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL, 80 pages, cloth covers. Prices, prepaid, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, \$1.06; \$5.00 half dozen; \$9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, \$1.06; \$5.00 half dozen; \$9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, \$2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, \$2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, \$4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; \$4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, \$1.00; six copies to one address, \$5.00; twelve copies to one address, \$9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; \$5.00 per dozen.

Direct all orders for above works, and make remittances payable to

National.

The report of the Commissioner of Corporations upon the beef industry has been submitted in compliance with the resolution of the House of Representatives adopted March 7. The report is to the effect that six packing companies—Armour & Co., Swift & Co., Morris & Co., the National Packing Company, the Schwarzschild & Sulzberger Company, and the Cudahy Packing Company—dressed for market in the year 1903 about forty-five per cent of the cattle marketed in the United States; that the average net profit in 1903 for three of the companies was ninety-nine cents per head; that the year 1902, instead of being one of exorbitant profits, was less profitable than usual, and that during the months when the prices of beef were the highest, some at least of the leading packers were actually losing money. The changes in the margin between prices of cattle and beef are in themselves no indications whatever of the change in profits, says the report. Prices and conditions for the years 1902, 1903, and 1904 are reviewed, and the conclusions are stated that the six companies especially discussed are apparently not over-capitalized; that the percentage of profit on the gross volume of business is comparatively small, and that during the years 1902, 1903, and 1904, Swift & Co.'s profits have not exceeded two per cent of the total sales; Cudahy & Co.'s is stated at 1.8 for 1904, and 2.3 per cent for 1902.

With reference to private car lines in the packing industry it is stated that the profit is a very liberal one, a net return of from fourteen to seventeen per cent being indicated.

The monthly statement of the Government receipts and expenditures shows that for the month of February, 1905, the total receipts were \$44,608,072, and the expenditures \$41,461,234. The civil and miscellaneous expenses for February show a decrease of \$1,000,000, and on account of War Department an increase of \$60,000. There also was an increase on account of navy of \$314,000.

The public debt, at the close of business February 28, less cash in the Treasury, amounted to \$989,574,158. The debt is recapitulated as follows: Interest-bearing debt,

\$895,157,530; debt on which interest has ceased since maturity, \$1,417,320; debt bearing no interest, \$383,681,146; total, \$1,280,255,997.

Good relations between the United States and Colombia, which were ruptured when the Washington Government recognized Panama's independence, will soon be restored. Minister Russell at Bogota has informed the State Department that Diego Mendoza has been appointed Minister to the United States. He is a warm friend of President Reyes of Colombia and is a man of culture and tact.

Although the Naval Bill just passed by the Senate authorized the building of two new battleships, the feeling both in the House and Senate is that for the future the policy will be for only one a year, on that point not supporting the radical wishes of the Administration.

The Senate has passed a bill for the incorporation of the American Academy in Rome.

Foreign.

A large and representative gathering at the Mansion House, London, recently, under the presidency of Lord Mayor Pould, appointed a committee to organize a scheme for an international monument to Shakespeare, to be erected in London, the London County Council having agreed to provide a suitable site. The committee is headed by the Princess Louise and contains, besides the names of Premier Balfour, Ambassadors Choate, Cambon, and Wolff-Meternich and practically all the other Ambassadors and Ministers, Field Marshal Lord Roberts, the Duchess of Marlborough, the Countess of Warwick, Lord Rothschild, the Archbishop of Canterbury, the Chief Rabbi, the Lord Mayor, Mrs. Craigie (John Oliver Hobbes), Sir Frederick Treves (surgeon-in-ordinary to the King), Sir E. J. Poynter (president of the Royal Academy), George Meredith, Sir Henry Irving, Ellen Terry, and Beerbohm Tree. Committees will be formed, it was announced, in America and other countries.

Czar Nicholas, in announcing his intention of giving the Russian people a voice in legislation, says: "I am resolved to convene the worthiest men, elected by the people to participate in consideration of executive measures; I am convinced that local needs and experience and sincere speech will insure fruitfulness of legislation; I foresee all the difficulty of this reform while preserving absolutely immutable the fundamental laws; my desire is to attain the welfare of my people by co-operation of the Government with experienced forces of the community."

Industrial and Commercial.

The liabilities of Massachusetts savings banks, according to the report of the Bank Commissioner for 1904, show that the total amount of deposits, \$631,313,800, is divided among 1,766,614 open accounts, being an average of \$357.36 to each, or \$4.25 more than at the corresponding period last year. The deposits show an increase for the year of \$22,898,390. The total amount of the dividends declared was \$21,941,039, being \$893,103 in excess of the amount for the year 1903. The average rate of dividends was 3.75 plus per cent, as compared with 3.709 plus per cent in the preceding year. During the year there were 1,756,003 deposits, amounting to \$105,466,148, an average of \$60.06 each as compared with \$59.25 the year previous. There were during the year 1,420,421 withdrawals, amounting to \$104,508,951, being an average of \$73.58 to each withdrawal, as against \$78.67 last year.

More than 1,000,000,000 pounds of coffee, valued at \$88,000,000, came into the United States last year, practically all for domestic use. During the same period there was exported from the United States 64,256,947 pounds of coffee of foreign production, valued at \$6,468,592. The world's production of coffee in the coffee year 1903-4 was, in round terms, 2,260,000,000 pounds.

The quantity of tomatoes packed in 1904

shows a decrease of about sixteen per cent compared with the previous year's output. The total number of cases for the United States is placed at 8,671,000. Maryland leads among the individual State records with nearly 3,500,000 cases. Indiana ranks second with little more than 1,000,000, and New Jersey third with 800,000.

The annual report of the Pennsylvania Railroad Company shows the gross earnings of all lines operated to be \$118,145,270, and the net earnings, \$29,633,672. The company has awarded contracts for two tunnels under the North River and for the four tunnels under the East River to East Avenue in Long Island City.

General.

That fifty per cent of the results of modern experimental science is good for nothing is, in effect, the statement made by Prof. Karl Pearson, of England, author of "The Grammar of Science."

"We need not so much a method of manipulating present statistics, as a means of getting rid of valueless data altogether. At least fifty per cent of the observations made and the data collected are worthless, and no man, however able, could deduce any result from them at all. In engineer's language we need to 'scrap' about fifty per cent of the products of the nineteenth-century science." Dr. Pearson specifies as notoriously inaccurate meteorologic and medical statistics. Biological and sociological observations are ordinarily even of lower value. He doubts whether "even a small proportion of the biometric data being accumulated in Europe and America could by any amount of ingenuity be made to provide valuable results."

At Hannibal, Mo., enormous deposits of cement, said to be fully equal to the world-renowned Portland, have been discovered. The cave made famous by Mark Twain in "Tom Sawyer" is the center of this valuable deposit, and already hundreds of men are employed in digging the hills away piecemeal. In a few years the walls of this beautiful cavern will be converted into viaducts, retaining walls, bridges, pillars, monuments, houses, and breakwaters, to the building of which this material is adapted. The establishment of the cement works just below Hannibal has placed this town in the ranks of first-class cities. Fifteen hundred men are now employed at the works, and a new plant has just been completed which will give employment to as many more. With the new plant the concern will be able to produce 9,400 barrels of cement per day, four hundred pounds to the barrel.

The size of the Atlantic waves has been carefully measured for the Washington Hydrographic Bureau. In height the waves usually average about thirty feet, but in rough weather they attain from forty to forty-eight feet. During storms they are often from five to six hundred feet long and last ten or eleven seconds, while the longest yet known measured half a mile, and did not spend itself for twenty-three seconds.

An American in Berlin, interested to know where the storks spent their winters, caught one and placed upon its leg a silver ring upon which was engraved "Berlin, 1888." When the bird returned next year it wore another ring which read, "India sends greetings to Berlin."

While excavating for the foundation of the new National Theatre at Mexico City, recently, an ancient fountain was found covered with hieroglyphics, figures of Indian warriors, and priests. Immense pieces of the foundations of some ancient buildings were also found.

There are relatively more sons of wage-earners going to Harvard University now, than there are sons of clergymen. The percentage of business men's sons is 43, of wage-earners' 12.6, and of clergymen's sons 3.6 per cent.

"What I say unto you, I say unto all, WATCH." Jesus.

From our Contributors.

The Seed of Error.

REV. WILLIAM P. MC KENZIE.

IN well-nigh every community there is a story of some man who sought revenge by secretly casting evil seed into his neighbor's field. In one case it was the fluffy, floating seeds of the thistle which a man gathered and committed to the innocent breeze, so that in the subsoil ploughing and cultivating which his neighbor had to do to get rid of the troublesome weeds, about two years' use of his field was lost. In another case it was the yellow wild mustard which grew up in large patches where handfuls of the accursed seed had been liberally scattered in the night. Malice has even been successful in mingling the seed of troublesome and harmful weeds with the true seed which the very owner of the fields himself scattered upon them. All such secret acts of ill-will are vigorously condemned, and yet the sower of hurtful and distressing thoughts in a community is not condemned,—indeed, he is looked up to, if these thoughts are but presented in the name of medical science.

People go to certain sources to find out how to have health, and the theories given them they carefully cultivate, like the farmer who expected a clean crop and good increase; and like him they are surprised often when the crop appears. They sow for health, and with annoyance reap inexplicable and perplexing conditions of ill-health. They thought they had sown only the seed of strength, exuberance, vitality, but find that somehow the seeds of languor, fear, pain, and invalidism have been mingled with their sowing.

We would not say that it is purposeful malice which mixes the seed in every instance. It is rather that self-sufficiency of the human mind, exalted in pride because of its knowledge of evil, which scatters the seed of error. We give all honor to the devoted women who make it a life vocation to help the sick. The trained nurse who brings order into the chaos of a sick-room, establishes quiet and serenity where was panic and disorder, certainly brings blessing, and wins responsive gratitude. Her value for good is in proportion to her appreciation of the privilege of establishing peace instead of pain, and good cheer instead of dread and anticipation of evil. But should such an one "magnify the office" and seek to establish self-importance by recitals to the innocent of a variety of experiences in illness, then such a mind impregnates human consciousness with the seed of error.

A lady whose timorous expectancy of any and all evil for her daughter had become habitual, so that the otherwise serene atmosphere of the daughter's life was perplexed with fogs and sudden storms of fear, met once a trained nurse whose idea of self-magnification was to recite vivid descriptions of the diseases she had seen. She had something new to tell this lady, and descanted upon certain symptoms and sufferings. The daughter had been wholesomely healed by Christian Science at a point when surgery had been prescribed as the only remedy, and had utilized what would have been the surgeon's fee for a trip to Europe, whereby better to fit herself for her profession of teaching, and at this period was well. One evening she was thinking gratefully upon the benefits brought to her by the truth,

and congratulating herself upon her sense of consequent health. But in the night she was attacked violently with an apparently causeless ailment, the sickness being expressed in previously unknown symptoms. The help of a practitioner was secured by telephone, and relief was experienced. Next day the practitioner called, heard from the mother a tearful recital of the symptoms, and was told how exactly they conformed to those depicted by the trained nurse, and how this indicated that the deplorable new disease, heretofore known by a single case, had seized her daughter. Too much terrified by this strange seizure to give utterance to her fears, the mother had kept her dread secret in her heart, and had not informed her daughter, so that she did not know how to meet the conditions. Needless to say, the practitioner was quickly able to separate the tares from the wheat, and destroy with truth whatever influence in thought the seed of error had seemed to gain. This cure was a clear indication of the power of true thought to gather into bundles and utterly destroy the tares that had been nurtured under the impression that they ought to be cultivated. It also indicates the need of guarding against the impregnation of our thought by a hidden mental influence. The inference is plain that we should carefully avoid the rehearsing of the symptoms and sorrows of sickness, and protect the garden of our minds from any sowing therein of the seed of error.

Victory over Drink.

FRANK BELL.

CHRISTIAN SCIENCE has been notably effective in the healing of drunkenness. Why? In large measure because Christian Science supplies rightly that which the drinker seeks wrongly, and in the end vainly, through alcohol. Why do men drink? For a thousand indirect reasons, says the world. But, putting indirection aside, and judging the use of alcohol by its immediate fruits, we ascertain that men drink, in many instances, "to get away from themselves."

What are the troubles of this unsatisfactory "self" from which mortals would escape even into the stupid illusions of intoxication? Many things in general, usually two or three in particular, but all are embraced in a common denominator—limitation. One man seems to become joyous in drink, who, in his sober sense of himself, had doubtless too much of grief, and, whether clearly conscious of the fact or not, he is drinking "to drown his sorrow." The effect points to the cause. Another man in his intoxication acquires an extraordinary conceit as to his personal prowess—strength and dexterity of arm, quickness and accuracy of eye—boastingly confident of his ability "to whip any half-dozen men in town." He has lost for the moment a sense of weakness which probably has been the chief impediment in his career. Another, after imbibing a given quantity of alcohol, acts as though possessing unlimited wealth, notwithstanding the fact that his prevailing thought of himself has been a belief of financial lack.

Similar examples might be cited indefinitely; but these are typical and sufficient to direct attention to the underlying impulse of virtually all forms and degrees of drunkenness; namely, mortal man's yearning to be released from a sense of limitation which he instinctively feels is unjust,

unnatural, and unlawful. If it were possible to measure and compare the mental conditions of drinkers, it would be discovered, probably, that in many cases the degree of drunkenness is in proportion to the individual development of an odious sense of personal incompleteness. Incidentally, this view of alcoholism may explain the futility of warning the drinker against the consequences of his practices. Those who contend that the drunkard does not count the cost of drunkenness speak from observation, not experience. The man who drinks is, as a rule, neither ignorant of the penalty nor indifferent to it. He knows what another debauch will mean to himself and those dependent on him. This very knowledge may beget sufficient fear to counteract the temptation for a while; but the pressing suggestions of a vital need unsupplied—be it health, wealth, happiness, courage, intelligence, fame, or what not—present themselves each day with renewed aggressiveness, until, finally, good intentions, will-power, self-respect, honor, succumb to the cumulative effects of abhorrent mental concepts, and the victim returns to his drink, willing to pay the price for a few hours' indulgence of appetite, and forgetfulness.

Christian Science rescues man from drunkenness by uncovering and destroying the illusions that lie at the bottom of the drinker's desire to forget. It shows him that hope, based on understanding, is not a delusion; that the divine command, "Be ye therefore perfect, even as your Father which is in heaven is perfect," is not a mockery; that the ills from which he has been seeking the fleeting respite of sodden oblivion are only within the realm of mortal false belief, and are unreal; that lack and limitation are merely products of wrong thinking, and that the ready remedy is at hand to every one willing to receive it.

Christian Science bestows on the slave of evil appetite, "beauty for ashes, the oil of joy for mourning, the garment of praise for the spirit of heaviness." It cancels the seeming power of that appetite by annihilating the belief of lack (nothingness) which gave it birth in human consciousness. Thus the man learns that the desire "to get away from himself"—the false sense of a suffering, sorrowful, limited self—was not sinful; on the contrary, it was in the line of his highest right. Only his method was wrong. His attempt to find relief from a sense of incompleteness in the semi-unconsciousness of intoxication was, in effect, to assert the conscious reality and power of lack (nothingness), and to deny the omnipresence and omnipotence of God, of positive good. Therein lay his sin, and thence came his suffering when, on each return from an expedition into forgetfulness, he found the same old limitations, only more arrogant perhaps for his having tried to run away from them. The suffering incidental to this plunging back deeper than ever into the belief that the old self is the real self, has very appropriately been termed remorse.

To the drinker transformed by the renewing of his mind in Christian Science, there is no mental relapse, and consequently no physical reaction. In his wilderness shall waters break out, and streams in his desert. And his parched ground shall become a pool and his thirsty land springs of water—for he has been healed of his sense of appetite as well as of his sense of limitation.

Love.

LLOYD B. COATE.

THE beloved disciple, John, says, "God is love," and Paul's definition of Love is thus rendered in the Twentieth Century New Testament,—*"Love is long-suffering and kind. Love is never envious, never boastful, never conceited, never behaves unbecomingly. She is not self-seeking, not easily provoked, nor does she reckon up her wrongs. She has no sympathy with deceit, but has full sympathy with truth. She is proof against all things, always trustful, always hopeful, always patient. Love never dies."*

In his letter to the Corinthians Paul lays great stress upon the fact that, if the motive is not pure, if it is not an expression of love, all our efforts are vain. It is not what we give or say, but the motive back of it, which is determinative. Thus Jesus declared that one poor woman who gave but a mite contributed more than all others.

Paul's definition of Love answers a momentous question; viz., How may we know when we are worshiping God? As we tread meekly in the path of humility, never envious, never boastful, never conceited, never behaving unbecomingly, then are we proving that our God is divine Love. Such a life lived is the best sermon that can be given to the world; the winds and waves of error beat in vain against it, for it is founded upon the rock, Christ. To illustrate the folly of self-seeking, Jesus once told his disciples not to take the uppermost seats, in the event of their being bidden to a feast, lest one more honorable should come, and they be requested to take lower seats. Self-seeking and self-righteousness are kindred errors, and when overcome in our lives we may know that we are approaching the divine Life; when we are no longer easily provoked and do not give way to temper and passion, then are we proving that God is Love; when we no longer harbor spite and revenge, then are we in possession of the Mind which was manifest in Christ Jesus. Love does not take offence. If pure motives are misjudged, love never reckons up her wrongs. Again, Love "has no sympathy with deceit, but has full sympathy with truth." When we no longer deceive others, misrepresent our affairs, or magnify the faults of others, then are we worshiping God "in spirit and in truth," says Jesus.

Again, "Love is proof against all things, always trustful, always hopeful, always patient. Love never dies." Our only refuge from the darts of error is found in divine Love. Love alone is our Shepherd to lead us out from "the valley of the shadow of death." "He that dwelleth in the secret place of the most High [divine Love] shall abide under the shadow of the Almighty."

When mankind rises to the consciousness of God as divine Love, all fear will depart, and then professing Christians will not be afraid to trust Him in sickness. As we learn more of divine Love and bring it out in our lives, every needed supply will be provided in the family and in the church. There will be no lack in furthering God's Cause in every way, and the places of worship will be thronged, because the world is longing for a place of rest where Love rules supreme. The wonderful growth of Christian Science within the past quarter of a century can be accounted for in no other way, only that its adherents have expressed in their lives such a reflection of divine Love as destroys both sin and sickness. Its continued prosperity is assured so long as we abide in this consciousness.

In that memorable address of Abraham Lincoln near the close of the Civil War, when it was apparent that the Union would be preserved intact, he said, "with malice towards none, with charity [love] for all, . . . let us go on and bind up the Nation's wounds." The thought of divine Love reflected resulted in the consolidation and perpetuation of the States. At the time when God was preparing Abraham Lincoln for so great a mission, He was also preparing our Leader, Mrs. Eddy, for a nobler and higher mission,—to bring to this age a fuller expression of divine Love, which she named Christian Science. This good woman longed to see all mankind, regardless of race, freed from the slavery of sin, sickness, and death. Alone with God she stood fearlessly, and sagaciously and lovingly proclaimed His message which is helping mankind to understand Christ's plan of salvation; to wit: that there is no redemption and no true healing apart from divine Love.

Love is the golden chain that binds
The happy hearts above;
And he's an heir of heaven who finds
His bosom glow with love.

Completeness.

ELIZABETH EARL JONES.

THE Christian Science text-book, "Science and Health with Key to the Scriptures" by our Leader, Mrs. Eddy, is certainly answering the prayers of this age, and teaching hungry hearts what they have all their lives longed to know about God. The illumination which this book has thrown upon the Bible for me, is like that of a great spiritual searchlight, revealing the priceless truths contained therein and bringing them out one by one in their practical value, thus meeting every human need in sickness and in health. Especially comforting and helpful to me has been the revelation in Science and Health of God as both Father and Mother of all; an idea which is all-inclusive and all-satisfying, and which therefore expresses completeness.

Only those who have been motherless from early childhood can know the weary heartaches and empty longings for some one to whom I could turn when in trouble or pain, which I experienced before I began the study of Science and Health. With this new thought of God came a peace and sense of security which no words can express. It filled all the empty places with divine Love, and gave me a new apprehension of the overshadowing power of God. Did this new and broader vision make any the less precious the truth that God is our heavenly Father also? No; on the contrary, it increased my reverence and adoration for the Father of whom Jesus taught.

It is something after this manner that my need was met by Mrs. Eddy's interpretation of the Lord's Prayer, as given on page 16 of Science and Health. When trials arise and courage is needed, or when in need of wisdom, strength, and ability to withstand evil, disease, discouragement, etc.,—when in need of the masculine qualities, so to speak,—then it is that with infinite confidence and trust I can turn to our heavenly Father, whose fulness is reflected in His child,—His image. Fear flees; weakness, doubt, and distrust of one's ability to fulfil all righteousness vanishes before an earnest contemplation of the fatherhood of God, and therefore of the true nature and infinite resources of His child. Thus one's strength becomes as "the strength of ten."

There are, however, other needs besides those of courage, strength, wisdom, etc. At times, in our daily work, there comes a hungry longing for comfort, cheer, and love; a longing for peace and rest, for holier things; an unquenchable thirst for the pure waters of Life; or perchance there steals upon us unawares a lonely, homesick longing. How great is the comfort, that we now know where to turn and find our rest, because we know that God is our tender Mother. All that this word implies, and more, we find in God, and learn from daily experience that "The eternal [Mother] God is thy refuge, and underneath are the everlasting arms." It is because of the sweet companionship between God and man brought out in Christian Science that its earnest, honest followers wear the proverbial "happy look," for we can say with all sincerity that we know in whom we trust, and "who is so great a God as our God?"

I am deeply grateful to God, and to our Leader, for this glorious revelation of Truth, which becomes to us more practical and beautiful day by day. I am also learning daily more and more of the truth of this teaching, and it is with this sense of God's completeness, and of man's completeness in Him, that I love to repeat over and over Mrs. Eddy's beautiful hymn, "Shepherd, show me how to go" (Miscellaneous Writings, p. 397), which is so dear to the hearts of all Christian Scientists. The first and last verses especially meet my daily need of a consciousness of the Father-Mother God.

Truth sets aside speech, act, time, place indeed, but brings nakedly forward now the principle of things highest and least.—ROBERT BROWNING.

Selected Articles.

Appreciated Congratulations.

The Patriot has received many compliments on its new office and work-rooms, but none which it appreciates more than the following from our distinguished fellow-citizen Reverend Mary Baker G. Eddy, who stops long enough in her busy life to give this kindly word of greeting and good cheer,—

Concord, N. H., February 18, 1905.

Mr. Editor New Hampshire *Patriot*.

My dear Mr. Meehan:—Your removal and pleasant office on Main Street compliments our city.

I have wanted to send you something to appear in your paper but have not found the moments in which to prepare it.

The enclosed I send subject to your judgment as to publishing it.

Accept my best wishes for your welfare.

Sincerely yours,

MARY BAKER EDDY.

The following letter, addressed to Mrs. Eddy by one of the many thousands of Christian Scientists of whom she is the revered spiritual Leader, will interest *Patriot* readers as indicating some of the reasons why she is held in such grateful love by an ever-increasing multitude of followers:

Portsmouth, N. H., February 14, 1905.

Beloved Leader:—My thought has been so full of gratitude that I have felt I must express it, and tell you how much of a blessing the truth [Christian Science] is in the county jail. Since October, there have been marked results with four men. One who was sentenced to state's prison for a term of from four to seven years, took with him a New Testament, "Miscellaneous Writings," "Unity of Good," and a *Journal*. He writes that he reads the books diligently, is most grateful for the truth and says, "God has come into my life to stay." He feels that although in prison he is not in bondage, for, he says, "Where the spirit of the Lord is there is liberty."

Another young man, who left about two months ago, after a term of a year in jail, has been greatly transformed, reads the Christian Science literature he took with him, has a good place on a farm, and tries "to be perfect every day." He intends to purchase Science and Health soon.

Another, whom I believe may have been unjustly accused and sentenced, an uneducated Frenchman, without means of procuring witnesses who could have proven an alibi, has been healed of resentment and revenge. He writes that these were all taken away while he was here in the jail, and he is very grateful for the help he received. I worked with him very faithfully to effect this result, and know it was the answer to prayer. He took some Christian Science literature away with him, and I shall send him more.

Still another has attended every service except one, in our rooms, since he left the jail some time ago, and has interested his mother and father, who have come and testified to the help Christian Science has been to them. For these and many other blessings we are indebted to your ceaseless and selfless labors. It was my prayer from a child to bring relief to the unfortunate, and had it not been for this new-old revelation I could neither have lived nor labored.

I wish to tell you what a guide, teacher, and comfort "Miscellaneous Writings" has been to me for years. Recently, when my load seemed so heavy that I needed a sympathizing friend, some Scientist to bring words of encouragement, I opened the book to these words, "O may the love that is talked be felt! and so lived, that when weighed in the scale of God, we be not found wanting. Love is consistent, uniform, sympathetic, self-sacrificing, unutterably kind, even that which lays all upon the altar and

speechless and alone bears all burdens, suffers all inflictions, endures all piercing for the sake of others and the kingdom of heaven's sake." I had found my need supplied through impersonal Truth.

Last night, after having struggled with many claims of hatred of Truth, I felt quite overwhelmed, when I thought of the following sentence in "Pulpit and Press," "You have simply to preserve a scientific positive sense of unity with your Divine source and daily demonstrate this." I immediately committed to memory pages 5 to 7½, and when I had done this, the load, both physical and mental, was lifted.

I realize more and more that, in proportion as we are meek, and grateful to you for your gift to mankind of the real meaning of Christ's gospel, are we released from the claims of animal magnetism.

Surely we can say with the apostle, "Thanks be to God, which giveth us the victory through our Lord Jesus Christ."

When I have thought of writing it would seem my message would not justify my taking so much of your time, but the gratitude of my heart must be expressed. It is my prayer and hope that your followers may all be faithful, so there may be no need of the patient rebuke, "Could ye not watch with me one hour?"

Trusting you may read this message of love and gratitude, I am in humility and love,

Faithfully your follower,

ADA G. WHITE.

There are many valuable suggestions in the above, and especially for those having the care of criminals. It is clear that there is a better way.

The Daily Patriot, Concord, N. H.

Who shall Judge?

State legislatures are at work grinding out the usual season's grist of laws. Out in Nebraska the state law-making body has delivered itself of one which provides: "It shall be unlawful for any person to attempt to cure mental or physical ailments, real or imaginary, for pay, without first obtaining a license to practise the healing art from the state board of health."

It is declared that this is a blow at Christian Scientists, and very likely that is what it is meant to be, for the state board of health is composed of and controlled by physicians, and every one knows in what regard the practitioners of medicine hold the cult called Christian Scientists.

Without meaning to endorse Christian Science, we call attention to what this bill would lead, if followed to its ultimate conclusion.

Nothing is more generally believed than that sin and immorality are diseases of the mind, and Christian ministers, school-teachers, managers of reformatories, and religious and ethical teachers, in many cases proceed upon this theory. It is a tenet of the Christian Scientists. It will be seen, therefore, that the blow is not alone at Christian Scientists, although the state board might so apply it. But if the essence of the law were applied without prejudice it would apply to all those mentioned.

The dispatches state that this bill was lobbied through by physicians who openly stated that it was aimed at the followers of Mrs. Eddy. The world does not deny the value of medical science and every one knows what great strides it has recently made. But the Nebraska doctors could be in better business. The intelligence of the people is sufficient to guard themselves. They do not need the protecting arm of the law in this regard. Furthermore, when one considers that in the name of medicine horrible tortures have been inflicted needlessly and to the harm of the sick, and that which is believed to be the correct remedy to-day and universally commended is as generally condemned to-morrow, what with hot water to-day and cold water

to-morrow, allopathy this year and homœopathy next year, purging and then sweating, ice compresses one moment and hot-water bags the next, it would seem that the medical men are not now in a position to dictate in this regard.

Editorial *Glens Falls* (N. Y.) *Post*.

The Scourge of Fear.

The health department of Chicago was not established primarily to frighten people to death, and perhaps that is not its present intention, but the effects of its germ bulletins upon sensitive natures must be exceedingly shocking.

It is quite in accord with good medical opinion and common sense to say that the "warnings" sent out by our health department often tend to foster the conditions that they are intended to end. Telling people who may be suffering from a passing cold that the influenza—or grip—is in the air; that it is more widespread and fatal than at any time since 1891; that they must, therefore, be constantly on their guard against the influenza microbe, which is lurking in everything they eat and drink, in their homes, in their offices, in the workshops, and in public places—warning them not to come into contact with those who have the disease,—as if they knew who had it, or could avoid such contact if they did,—cautioning them to go to bed the moment they think they have it, and practically advising them to imagine that they have it, whether they have it or not—is about the very worst advice that could be given.

If a fraction of the people who are troubled with common colds in this community to-day should become as thoroughly frightened as the health department would have them; should cease to eat, drink, mingle with their fellow-men and be merry; should go home and go to bed and imagine themselves in the clutches of the grip microbe, business would have to suspend, and the rest of the country would be justified in establishing a quarantine against us.

Since this seems to be the end the health department is seeking—though it may be seeking it ignorantly—would it not be advisable to organize a municipal disease department at once, whose duty it shall be to acquaint the people with the fact that the vast majority of them are well, that most of them never felt better in their lives, and that most of them may continue to be well just as long as they refuse to believe themselves to be sick?

Editorial in *Chicago Inter Ocean*.

"If the courts listen to the devotees of any given school of physicians, nothing short of the services of such a physician will answer the requirements of the law. The homœopath, the eclectic, the electric, the magnetic, and possibly even the allopathist himself, may all be guilty of manslaughter, if the prejudices of the community are to be allowed to determine what is and what is not proper medical treatment.

"If, therefore, any person believes that prayer will be efficacious in his case, and that drugs will not do him any good, will not the legislature deprive him of the proper means to secure his recovery, should it provide that his friends be fined or sent to jail, in the event of his death, because they did not provide what some one else thinks is proper medical treatment, during his sickness?"

Excerpts from Editorial *Portland* (Me.) *Express*.

Every now and then some person takes a fling at Christian Science, the reflection or criticism, as the case may be, often being made through thoughtlessness or misinformation. One of the best evidences that there is something solid and meritorious in Christian Science is the fact that many splendid men and women profess the faith. It is true in this city and as true elsewhere, and thus the considerate are compelled to pause and reflect.

Editorial *Pueblo* (Col.) *Indicator*.

Among the Churches.

Corner-stone Laid.

The corner-stone of First Church of Christ, Scientist, of San Diego, Cal., was laid Saturday morning, December 31, 1904, at ten o'clock. Our hearts are filled with gratitude for this onward step of our little band of workers, made possible through God's love for His children. We number only fifty-three resident members, but through Christian Science we are beginning to learn that we can do all things good and necessary.—F. M. M.

Generous Children.

Omaha, Neb., January 16, 1905.

Mr. Stephen A. Chase,

Treasurer of the Building Fund.

Dear Brother:—Our Sunday School organization, recognizing the building and completion of The Mother Church Auditorium as the work of this hour, rejoice in being permitted to lend their aid in rearing this stately structure by contributing the entire amount of our Sunday School local building fund to this end, knowing that He who has prospered this movement will refill this little treasury when our own hour of church building arrives. I might add that this will make a total of \$425 which our Sunday School has contributed to this fund.

GEORGE MILLER, *Secretary of Sunday School.*

Church Dedication in Indianapolis, Ind.

On a site which ten weeks ago was devoted to tennis courts, there now stands, complete and ready for occupancy, a handsome church building, the home of the congregation of Second Church of Christ, Scientist. Services, after the nature of those held by Christian Scientists the world over, will be held in the new church to-morrow [January 1].

This church was organized in August, 1903, with a membership of ten and a congregation of perhaps fifty. Now the church has enrolled more than a half hundred members and the congregation includes about three hundred persons.—*Indianapolis (Ind.) Star.*

Gains in Kingston, Canada.

A short time ago the board of First Church of Christ, Scientist, decided to ask the members if they wished to contribute our local church building fund to the Building Fund of The Mother Church. At a meeting of members called for the purpose, it was unanimously agreed to avail ourselves of the opportunity to show our loyalty and gratitude to our dear Leader who has labored so untiringly and unselfishly for us all.

Not long after, a brick church building in one of the best sections of the city was thrown on the market at a nominal figure. We decided to secure it, but not to let the acquisition of the church property interfere with further contributions to The Mother Church Building Fund. The amount required for our church was obtained by simply making the need known.

MRS. BEATRICE W. KINNEAR, *Clerk.*

A Pamphlet in German.

MR. ALFRED FARLOW's article, "A Critic Answered," which appeared in the June *Journal*, and which has since had a wide circulation as a pamphlet, is now published in pamphlet form in German. It will thus reach a larger number, and be helpful to them through the removal of many of the current misconceptions of Christian Science. Price, 6 cents each; 60 cents per dozen; \$1.15 for twenty-five copies; \$2.25 for fifty. Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

The Lectures.

New Orleans, La.

Judge Septimus J. Hanna received a warm welcome from the large audience that assembled in Newcomb College Hall last night [January 30] to hear him. Dr. Henry Wilder Foote, pastor of the First Unitarian Church, who presided and introduced Judge Hanna, said in part,—

Every lover of truth, whatever opinion he may hold, is glad to hear a true man tell freely the vision of the spiritual life as he has received it. We welcome him who comes with a message of the Spirit upon his lips, whatever name he may bear, whatever creed he may profess.

Daily Picayune.

Des Moines, Ia.

Mr. Bicknell Young of Chicago lectured on Christian Science at the Christian Science Church edifice, February 14. He was introduced by Mr. John McLennan, ex-County Attorney, who said in part,—

We all know that during the past thirty-five or forty years a wonderful change has taken place in the Christian world. Old dogmas and doctrines have given place to something better, a broader charity which respects the honest convictions of every man. This includes the recognition that heaven begins with man's consciousness of truth and right; that truth, not error, love, not hate, must ever control humanity. This I say is the tendency of the Christian world to-day in some measure, irrespective of name or denomination.

All truth was not discovered in a moment or an age, it has taken eighteen centuries to produce what we see about us called Christian civilization. Mrs. Eddy, the Discoverer and Founder of Christian Science, claims to have uncovered the wonder of the ages, and why, my friends, may it not all be true? Science is but knowledge of anything, arranged and systematized; and to say that the basic truths taught by the lowly Nazarene, when applied will give man a sound body, cast out all dark shadows from his soul, and make his life honest, cheerful, and happy, is perhaps, after all, scientific, and not less reasonable than, for example, the statement of the astronomer that a certain star is a "fixed" one.

There is a deep ignorance among thousands of refined and cultured people, even in this city, concerning the teachings of Christian Science. It is a fact admitted by all who know, that the family lives of Christian Scientists are to the greatest extent peaceful and harmonious. They have made a deep impress in each community; and may we not hope that this will reach beyond the community to the municipality, and from the municipality to the State, and from the State to the Nation, until all the evil dreams of war and revolution are destroyed?—*Correspondence.*

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

An Interesting Symposium.

The *Boston Herald* of Sunday, March 5, contained a very interesting symposium based upon President Roosevelt's message on divorce, recently sent to the Senate and House of Representatives. Among the contributors to this symposium were Rev. Mary Baker G. Eddy, Governor Douglas of Massachusetts, Bishop Potter, Thomas Bailey Aldrich, President Henry S. Pritchett of the Massachusetts Institute of Technology, Rabbi Charles Fleischer, Prof. Arlo Bates, and others. The following article was contributed by Mrs. Eddy:—

PREVENTION AND CURE FOR DIVORCE.

THE nuptial vow should never be annulled so long as the *morale* of marriage is preserved. The frequency of divorce shows the imperative nature of this relationship to be losing ground, hence that some fundamental error is engrafted therein. What is this error? If the motives of human affection are right the affections are enduring and achieving. What God hath joined together man may not sunder.

Divorce and war should be exterminated, and on the principle of law and gospel, the maintenance of individual rights, the justice of civil codes, and the power of Truth uplifting the motives of men. Two commandments of the Hebrew Decalogue, namely, "Thou shalt not commit adultery," "Thou shalt not kill," obeyed, will eliminate those two flagrant evils. On what hath not a "Thus saith the Lord" I am as silent as the dumb centuries without a living Divina.

This time-world flutters in my thought as an unreal shadow, and I can only solace the sore ills of mankind by a lively battle with "the world, the flesh and the devil," in which Love is the liberator and gives man the victory over himself. Truth canonized by life and love lays the axe at the root of all evil, and lifts the curtain on the Science of being, the Science of wedlock, of living and of loving—and ascends the scale of life harmoniously. Look high enough and you see the heart of humanity warming and winning. Look long enough and you see male and female one—sex or gender eliminated—and the name man meaning woman as well, and the universe, all included in one infinite Mind and reflected in the intelligent compound idea, image or likeness called man, showing forth the infinite divine Principle, Love, called God, wedded to the Lamb—pledged to innocence, purity, perfection. Then shall humanity have learned that "they which shall be accounted worthy to obtain that world, and the resurrection from the dead, neither marry, nor are given in marriage: neither can they die any more: for they are equal unto the angels; and are the children of God." Luke, 20 : 35, 36. This, therefore, was Christ's plan of salvation from divorce.

All are but parts of one stupendous whole,
Whose body nature is, and God the Soul.—Pope.

Mrs. Eddy in Good Health.

THE following excerpts are from an article written by a reporter for *The New York Herald* and published in last Sunday's issue of that paper.

"Pleasant View, Concord, N. H.

"Saturday.

"Editor *New York Herald*, New York.

"Dear Mr. Editor:—A representative of the *Herald* called to-day to inform me of the rumor that I had deceased some three months ago. This is an oft-repeated falsehood. I granted him a moment's interview, hoping you would refute this rumor in the next edition of your paper. I am in my usual good health, drive out every day, and attend to my regular business.

MARY BAKER G. EDDY.

"To him who seeketh to find truth an ocular demonstration is by far the most satisfactory, although oftentimes even the eyes are fooled, notwithstanding the old saw that 'hearing is believing and seeing is the naked truth.' My visit to Mrs. Mary Baker G. Eddy, Founder of Christian Science, at her home, in Concord, N. H., would have remained unwritten had it not been for the receipt of the despatch from this remarkable woman printed above, expressing the hope that the *Herald* would refute the constantly recurring rumor that Mrs. Eddy is dead, and that she has been dead anywhere 'from two to nine months,' and her death kept a secret until such time as, for church reasons, it would be determined proper that her hundreds of thousands of followers should have the truth revealed to them.

"Mrs. Eddy's despatch raised an embargo that had forbid a *Herald* reporter from taking advantage of a few minutes in the presence of Mrs. Eddy in her library to obtain an interview with the author of Science and Health for newspaper publication. . . .

"In a few minutes the door opened and an elderly man, in clerical garb, bade me enter. I entered the vestibule and then the hallway. It was bright and withal homelike and comfortable in its oaken finishings.

"I was ushered into the cosily but not extravagantly furnished parlor at the right. My host invited me to be seated, and, drawing up a chair, faced me. He did not say so, but I knew he wanted to know about my mission. No, I was not speaking with Mr. Frye. I asked his name, but it was not given to me.

"Then I explained the persistency of the rumor of the death of Mrs. Eddy and that the *Herald* had determined once and for all to either prove or disprove the truth of the report. We were discussing the matter when another man walked in upon us. It was Mr. Frye, a very pleasant-faced man, with hair slightly tinged with gray and with a short gray mustache. Delightful of manners, easy, and graceful, Mr. Frye has a bright smiling eye.

"He greeted me cheerfully and said that he had read my letter to Mrs. Eddy and that she would see me in her library for a few minutes. It was stipulated that there was to be no interview for publication and I acquiesced. In a few minutes, possibly three, Mr. Frye said Mrs. Eddy was ready to see me and I followed him up the front stairs, where at the left the library door stood open. I let Mr. Frye precede me to the door and in a few seconds Mrs. Eddy came toward me and extended her hand in greeting.

"As Mrs. Eddy spoke her face lighted sweetly, a motherly expression, and the brightness of the large, full eyes bespoke the owner's mental activity. Her tall figure was exquisitely gowned in black silk of becoming and modish cut. Her welcome was cordial, but withal I could not but feel the exigencies of my quest for facts had not been without their exactions in thus compelling Mrs. Eddy to stand before me to prove that she still lived. But her grace and charm softened the difficulty and hardship of that visit and I left Pleasant View with a mind filled with peculiar thoughts.

"Mrs. Eddy still lives and apparently is enjoying the normal health of one of her years."

We feel sure that our readers will join with us in thanking the *Herald* for so promptly and unequivocally refuting this "oft-repeated falsehood" which has been circulated

quite industriously in order to impugn the good faith of Mrs. Eddy and her followers.

Just why those to whom humanity is deeply indebted should be misrepresented and maligned is somewhat of a mystery to all who do not understand the subtle nature of evil, but that this is no new phase of the workings of the evil one is proved by Jesus' query to those who sought to take him in the Temple, "Many good works have I shewed you from my Father: for which of those do you stone me?" "The world, the flesh, and the devil" were active in bearing false witness even in those early days.

Is it not time to change all this, and to inaugurate an era of truth-telling? Certainly nothing has been gained for the world by the campaign of untruthfulness which has been waged for forty years against Christian Science and its Founder. Why not stop it? Why not join in helping along the good work which Christian Science is doing, even if its doctrines are not accepted, instead of hindering this work by raising doubt in the minds of those who have vainly looked for health and salvation in other quarters?

The truth about Christian Science is not concealed. Science and Health and the other writings of Mrs. Eddy fully explain and teach the letter and the spirit of this saving gospel; and the fruits of these teachings are manifest in the lives of thousands of good people throughout the world.

Is it solely because Christian Science is healing the sick that its followers are so persistently misrepresented? We doubt it. Almost all sick persons desire to get well, and those who are well wish to retain their health. Is it not, then, because this healing of the sick through Christian Science is indissolubly connected with the destruction of evil that those who practise it are stoned?

ARCHIBALD McLELLAN.

Rumor.

What an indefinite, fleeting, intangible thing is a rumor; how fast it travels, and how it grows and assumes shape and the forms of truth as it progresses.

Away, last fall, some idle gossip, through pique or disappointment, said in a joke or with malicious intent that Rev. Mary Baker G. Eddy of this city had died.

The person who conceived the falsehood told it well and it was believed, and forthwith it took on wings and spread and was accepted,—accepted in New York, accepted in Boston, and it seems from reports, accepted even in Concord, or at least there were those who would not venture denial.

The *New York Herald* proposed to run the rumor to earth and be in a position to definitely affirm its truth or flatly contradict the falsehood.

At much labor and expense it sought the fountainhead of the rumor as it thought, only to find that another in western Pennsylvania—a doctor—was responsible. A reporter was sent to see the doctor, but the doctor having learned the object of the reporter's visit, refused to be seen or interviewed, which act lent suspicion to the truth of the report.

A reporter was then sent to Concord with instruction to see Mrs. Eddy personally, if possible. He came, he met the gracious lady, talked with her, and in Sunday's *Herald*, in a page story of most kindly intent, the publishers taught every reader that this great central figure in our religious world and in Concord's civic world, was very much alive, very kind and courteous, and very fully occupied with responsible and far-reaching offices and duties.

A lie well told is so subtle that those at a distance may be excused for believing it, but how a resident of Concord could be deceived is not so easily understood.

Mrs. Eddy drives daily through our main streets and on almost all occasions the windows of her carriage are open and her face and figure may be seen, and that face and figure are well known to at least a thousand of our best citizens, men and women.

Whenever a public enterprise is undertaken, looking to a broadening of Concord's usefulness, the advancement of her interests or the relief of her poor, Mrs. Eddy sets the pace of giving, and when all others are inactive or indifferent or non-responsive, appeal to her is not in vain.

In the face of such ever-present evidence it is hard to understand how any citizen of Concord could knowingly be deceived or misled by idle gossip and baseless rumor.

Editorial in *The Daily Patriot*, Concord, N. H.

Letters to our Leader.

Atlanta, Ga., February 19, 1905.

Rev. Mary Baker G. Eddy,

Pleasant View, Concord, N. H.

Beloved Leader:—Many years ago my eyes were opened to the light of infinite Love, our Father-Mother God, through the study of that wondrous book, "Science and Health with Key to the Scriptures," with the aid of my dear teacher, in this southland. The thought of "Immanuel, or God with us," learned therein, was new to me, but my awakened consciousness perceived the Christ-Principle and I was healed of many troubles, one the belief that a just and loving God had taken my dear mother and father. With my higher understanding of God as Love, I have been able to comfort those that mourn. I have pondered much our Master's words, "Behold, the kingdom of God is within you," and I am daily striving, and praying, for the purity of thought that leads to Spirit. "Blessed are the pure in heart: for they shall see God," has always been my favorite beatitude. As I read your beautiful article on "Heaven" in a recent number of the *Sentinel*, I desired to express my deep love and gratitude for all that has come to me through your teaching and consecrated life. I am sure your definition of heaven will bring peace and comfort to all who read it. With tenderest love for all you are doing to uplift humanity, I am,

Yours faithfully,
MARGARET C. HALL.

Pasadena, Cal., February 13, 1905.

Rev. Mary Baker Eddy,

Pleasant View, Concord, N. H.

Beloved Leader:—The children of the Sunday School of First Church of Christ, Scientist, Pasadena, Cal., take great pleasure in sending you a box of Oonshui oranges, which they hope you will enjoy.

We have felt for some time the need of a more explicit rule for our guidance in the Sunday School, and we feel that this very important branch of the church work has received an added impetus since we received and adopted the new By-law. It is helping us in making the demonstration of more impersonal teaching; which, of course, means growth to both teacher and pupil. We desire to express our great sense of gratitude for the By-law, given to help and guide us in our work, and we shall ever endeavor to yield loving obedience to that high thought which has always proved so wise and helpful in the past.

Thanking you for your tender love and watchful guidance of these, your little followers, I remain,

Lovingly yours,

MARY SCOBAY CHAMBERLAIN, *Superintendent*.

Chicago, Ill., February 15, 1905.

Our Revered and Loved Leader:—Like Mary Magdalene I humbly offer the "perfume of gratitude" and "oil of gladness" for the blessings that Christian Science has bestowed upon me, and for the essence of truth as found in our text-book, Science and Health, which is indeed the

Key to the Scriptures and to man's right living. It led me from the brink of the grave; it saved me from the precipice of self-destruction; it gently lifted me out of the pit of poverty, and is now guiding me through the Red Sea of error. I feel sure that by obediently following the teachings of Christian Science we shall reach the "Moreb Height" of understanding, where God awaits us.

Yours with respectful affection,

HILDA HELLGREN.

Lynchburg, Va., February 3, 1905.

Dear Leader:—Our tardiness in acknowledging your loving kindness is not due to a lack of appreciation. We have only waited for a fuller attendance than was possible January 25, so that all might share in the thanksgiving. We have never before had a text-book for the society; the Reader always using her own copy, and we feel that your dear gift will greatly enrich our services, giving us, as it does, a widening and deepening consciousness of the love you bear to all your children. It is as if the staff on which we lean had suddenly blossomed afresh, and we pray that we may be found fruitful in faithfulness and patience, and, ever following your footsteps, draw nearer to God and His divine idea.

The quickened sense of our love for you which your gift awakens, enables us to realize that our "duty to our Leader" includes the love of each organization as a whole, and each individual as a part, that "The whole body fitly joined together and compacted by that which every joint supplieth, according to the effectual working in the measure of every part, maketh increase of the body unto the edifying of itself in love."

The Christian Science Society of Lynchburg.

ANNIE RODE, *Clerk*.

Darjeeling, India, January 8, 1905.

Dear Mrs. Eddy:—We are up in the Himalaya Mountains, and it is all so grand and glorious that my heart sings constantly, "Glory to God in the highest." We went out early yesterday morning to see the sun rise. At first all was darkness and mist and one of the party said we would not see the mountains. Your words came to me, that Love "chased the clouds away," and before long the sun came in all his glory, the clear, straight rays piercing the mist until it sank off into the valley in a sea of blue and grey clouds of the softest tints. Then the light touched the mountains, bringing out one peak after another, and, finally, Kinchinjinga, the highest peak, stood out in all its grandeur. It was sublime beyond description. I bowed my head before the Creator of the universe, thankful that He also created man in His own "image and likeness," and my thought turned to you who stand on the highest peak of spiritual understanding, revealing to a weary world "the wonders wrought by infinite Love."

We send you our deepest, most grateful love, from the Himalaya Mountains.

ANNA M. CAMPBELL.

Burlington, Ia., February 7, 1905.

Reverend Mary Baker G. Eddy,

Pleasant View, Concord, N. H.

Beloved Leader and Guide:—We, the members of Second Church of Christ, Scientist, just organized, have pledged ourselves to give our mite monthly, toward the Building Fund of The Mother Church, until it is complete. We also thank you for the wisdom and love that has been handed down to us through one of your loyal students, showing us the necessity of watering the tree to support the branches, and through this we are able to feel the great blessing and the unspeakable love that unites us in Christian Science.

Yours in obedience to Christ,

MISS JESSIE LAY, *Clerk*.

Testimonies of Healing.

[Translation.]

About two years ago, I was attacked with a disease which seemed to threaten physical and mental destruction. I went to a physician and submitted myself to his treatment. His statements awakened new hope, and after six weeks' treatment I believed myself well. At his request, I discontinued taking the medicine and soon a relapse followed. I went back to the same physician and was under his care for several weeks, until finally the disease reached a critical stage. All change with different physicians proved ineffective. Each one thought he discovered another disease, until finally I was in the hands of a hypnotist, who declared my whole system to be diseased. After having treatment for a considerable length of time, the result was hopelessness and a worse condition than before. I suffered from nervousness and several organic diseases. After the physicians had failed to help me, I turned to patent medicines, but without avail.

Then came the light of Truth. Through a friend who was healed in Christian Science I heard of this wonderful healing power, but there was a gulf between me and any religious teaching which I thought could not be spanned. In my childhood I had been raised in an orthodox church. I had been taught that God is the creator of all good, yet that sickness, poverty, anxiety, and sorrow were permitted by God, and that man has no right to protest against them. All this made me an opponent of the church. I felt confused by such contradictions and kept aloof from all religious views. This was my state of thought when I sent for a Christian Scientist for the first time. In answer to his question, whether I believed in Christian Science, I told him that I would rather wait for results and that after a scientific proof no blind faith would be needed. I asked for treatment, and improvement began immediately, with the result that I am now perfectly well.

I am a living proof of the truth of Christian Science. Neither years of preaching, nor the strongest material influences could have induced me to give up my views, but the understanding of God, the light of Truth and Love, as well as the signs following, have awakened in me a desire which urges me on into the realm of Mind,—the divine universe which God has prepared for all; and today my name is on the declaration of independence, spiritual freedom.

In love for the good Cause, the highest ideal of humanity, I desire to give honor and due reverence to the Discoverer and Founder of Christian Science. I long for the day when the sunlight of spiritual freedom, the irradiance of Truth and Love, shall enlighten every man. I also desire to express my gratitude to all who have assisted me in finding the way of understanding.

M. MAYR, Milwaukee, Wis.

Six years ago last September, I was feeling very despondent, having had a bad attack of nervous dyspepsia and insomnia, an ailment I had had for about ten years. I had entirely given up hope of ever being well again, because I had been treated by a number of physicians and they had all failed to cure me. I felt as if I had exhausted every remedy, and the only thing left for me to do was to drag out a miserable existence in that condition, and any one who has ever had nervous dyspepsia can appreciate what the future held in store for me. One day, while riding in the street car in this city, thinking very earnestly about the future, the thought came to me very plainly, "Why not try Christian Science? If it doesn't cure you it can't make you any worse." It made such an impression on me, that I went that afternoon to the reading rooms to get some literature,—something that would tell me what Christian Science is, because I knew nothing whatever about it. I bought "No and Yes" by Mrs. Eddy, and some pamphlets,

and read them all that night, but I could not understand them, so I went back the next day to get some others. While I was there I got into conversation with a Christian Scientist who had been healed of an ailment very similar to my own, and before I left I decided to take treatment. I took one every day for five days, and after the third I slept perfectly, something I had not done for years. After the fifth treatment I ate everything I wanted and had a splendid appetite, and the trouble seemed entirely gone; so I stopped the treatments. I soon had another attack, however, which proved that the disease was not entirely overcome, but this second attack was met promptly and destroyed permanently. With the healing came such an overflow of joy that it seemed to me I was submerged in a great ocean of love that could never be exhausted. I walked through the streets as if walking required no effort at all.

Doesn't it seem strange that any one could doubt after such an experience as this? and yet that is just what I did. After two or three months of this glorious uplifted condition I was let gently down to earth again, and then I began to doubt. Error crept in and told me all kinds of foolish things, to which I would listen, not knowing how to distinguish between Truth and error. Because I could not remove mountains and demonstrate the whole of Christian Science, I doubted its Principle, so the next three years I spent groping my way between doubt and belief; but little by little I grasped the truth, and as each ray of light added to my understanding I finally got so I could master the error. When I reached this stage of growth I looked back over the past and could see the mistakes I had made. I could see just where and how I was led by error, thinking it was the truth, and this experience taught me how to guard against error in my future growth.

I am certainly most grateful for what I have received, and I am especially grateful to my teacher for all her loving kindness and patience. I thank God every day of my life for revealing this truth to us through our Leader, Mrs. Eddy. What she must have endured that we might know the truth we will never know. I can only say that I thank God for the privilege of being one of her disciples, and my constant prayer is that I may lead a life that will prove my gratitude for all I have received through Christian Science.

ROBERT FRANCIS FRENCH, New York, N. Y.

It is not easy to explain to myself why I have so long withheld a public expression of my gratitude for all the blessings that have come to me through Christian Science. I had been helped so much, spiritually and physically, and had derived such benefit from the literature and from the church services, that, like many others, I wanted all my relatives to know about Christian Science, and was disappointed when I saw that some would not accept it. I know, however, that they will in time, as those who did endorse its teachings have joined me in the work, and the good seed which has been sown will bring forth good fruit.

A few years ago I heard of Christian Science through a friend whom God had led into this saving truth, but I confess I could not believe in it at first. I was, however, willing to be convinced. I read *Science and Health* and other books by Mrs. Eddy, and soon my doubts were removed. I desire to tell of one of the many ailments that were overcome. I had suffered from rheumatism for several months, had been greatly helped, and felt that I did not need treatment any longer, but I realize now how much fear I had. One day, while in the presence of a practitioner, my heart was suddenly affected, so that I could not do anything for the time being, but as soon as she declared the truth, that ailment was destroyed almost instantaneously. After two weeks I was relieved of all pain, and I have been free from it ever since. For this experience, as well as many others which have proven to me that Christian Science is the truth, words are inadequate to express my gratitude; but we are taught in *Science and*

Health that the most sincere expression of gratitude is in our pure, true living. I am grateful to God for this revelation, also to our dear Leader, and I wish to thank all who patiently helped to unfold this healing truth to me.

MRS. S. C. RAMSDELL, New York, N. Y.

About twelve years ago a dear friend loaned me *Science and Health* and I was greatly impressed with it. Her definition of faith,—“to be worthy of trust,”—appealed to me. Since then I have been healed of many diseases, and now I am strong and able to do all that is required of me. I have found Christian Scientists to be true and loving friends. God has been very good to me in leading me as I have been led, and though I may not yet have attained to all Christian Science teaches, I will run and not be weary, walk and not faint, waiting patiently on the Lord.—MRS. H. M. SAMMET, Cincinnati, O.

Having received so much help from Christian Science, I would like to give expression to my thankfulness to God, and also to Mrs. Eddy for what this truth has done for me and my family. Nine years ago, after trying everything I could think of and after my family physician had worked faithfully for me, I was nearing what I then thought to be the end of my earthly existence. I was healed, in a few treatments, of sciatic rheumatism, and afterwards my little daughter was healed of yellow jaundice in one treatment. I had class instruction from one of Mrs. Eddy's students four years ago, and have since seen many ailments melt away under Christian Science treatment. Since my healing, nine years ago, I have never used a drop of medicine for myself or family.

Instead of being a discordant, sickly family we are now happy, healthy, and peaceful. We thank God daily for this blessed truth.—HENRY C. FRY, Plainfield, Ill.

Years ago, while reading in the Bible, I came across the 91st Psalm, and was impressed with the richness of its promises. Then the sense of discouragement, which had always attended my reading of the Bible, came to me, and I laid it down with a sigh, and gave no more thought to it than to wonder why this word of God which was given to us as a guide and comforter should be so full of promises which were never fulfilled. Probably the least important statement in that psalm, to me, at that time, was the latter part of the fourth verse,—“His truth shall be thy shield and buckler.” It meant absolutely nothing to me. Since coming into some understanding of Christian Science, several years ago, this psalm has been a constant source of unspeakable comfort, but not till one night recently, while repeating each statement, did I realize that Christian Science is the key which has unlocked its treasures to my consciousness. Now I know its every promise to be true, whereas before that key came into my possession they seemed only a mockery to my longing need. This key is the understanding of “His truth.” It becomes our shield and buckler, just as is promised, and opens to our hungry sense the absolute assurance that every promise in this psalm of psalms will most surely be fulfilled as this understanding unfolds. This precious understanding may be found in the study of two books, the Bible, and “*Science and Health with Key to the Scriptures*.” Each year finds me increasingly grateful to our dear Leader, Mrs. Eddy, whose love and obedience are a rebuke and an incentive to greater faithfulness in following the Christ.

Too numerous to mention have been the proofs in my family of what a little understanding of “His truth” can do for us in time of need, and without this consciousness of God as Love, and as an ever-present help, I could not attempt to meet the problems that constantly present themselves to me as a mother.

MRS. EDITH BOWMAN, Berlin, Ont.

I have felt for some time I should give my experience in mental surgery. In May, 1902, going home for lunch, on a bicycle, and while riding down a hill at a rapid gait, I was thrown from the wheel, and falling on my left side with my arm under my head, the bone was broken about half-way between the shoulder and elbow. While the pain was intense, I lay still in the dust, declaring the truth and denying that there could be a break or accident in the realm of divine Love, until a gentleman came to assist me, saying, "he thought I had been stunned." I was only two and a half blocks from home, so I mounted my wheel again and managed to reach it. On arriving there I lay down and asked my little boy to bring me our text-book. He immediately brought Science and Health, which I read for about ten minutes, when all pain left.

I said nothing to my family of the accident, but attended to some duties and was about half an hour late in returning to the office, this being my only loss of time from work. My friends claimed that the arm had not been broken, as it would have been impossible for me to continue my work without having it set, and carrying it in a sling until the bone knit together. Their insistence almost persuaded me that I might have been mistaken, until one of my friends invited me to visit a physician's office where they were experimenting with an X-ray machine. The physician was asked to examine my left arm to see if it differed from the ordinary. On looking through it, he said, "Yes, it has been broken, but whoever set it made a perfect job of it, and you will never have any further trouble from that break." My friend then asked the doctor to show how he could tell where the break had been. The doctor pointed out the place as being slightly thicker at that part, like a piece of steel that had been welded. This was the first of several cases of mental surgery that have come under my notice, and it made a deep impression on me.

For the benefit of others who may have something similar to meet, I will say that I have overcome almost constant attacks of sick headaches, extending back to my earliest recollection. I wish to thank Mrs. Eddy for the Christian Science text-book, "Science and Health with Key to the Scriptures," through the study of which I have been able to overcome much error.

L. C. SNEDAKER, Salt Lake City, Utah.

[Translation.]

I first heard of Christian Science from a dear neighbor about a year ago. At that time I was suffering from an abdominal complaint, the result of a former confinement. This illness caused me so much pain that sometimes I was unable to hold myself up straight when walking, indeed very often I could not leave my bed on account of it, and it also obliged me to give up my occupation as laundress. As *materia medica* had never helped me I decided to seek help in Christian Science. I got some one to treat me, and in less than two weeks my sufferings had disappeared. Very soon after this I was able to begin my work again.

A short time ago another trouble arose. I tried my best with all the understanding I have at present to overcome it, but as soon as I found that I was not able to master it alone I got a practitioner to treat me. In a few days it was quite mastered, and I am now well again and know that I am indebted to God, and to the teachings of Christian Science, for my healing.

FRAU B. RASTATTER-KAGI, Zurich, Switzerland.

Last January, I sought Christian Science treatment for deafness, from which I had suffered at intervals for years, as the result of severe catarrhal colds. In two weeks' treatment my hearing was restored. A few weeks later, however, I again seemed to be deaf. I was too discouraged to ask for treatment, but the practitioner noticed my condition and told me to come to her office the next day. I went, and she talked with me and treated me. I returned

home, hearing mentally the last thought she had expressed, and suddenly one ear opened, and the next morning the other ear, and my hearing has since been perfect. Some months after this I had a severe attack of quinsy, accompanied by high fever, and an abscess on one tonsil. I had on several occasions been confined to my bed, under a physician's care, for two weeks, with similar attacks. The Christian Science practitioner treated me once, and the next morning I was so well that I arose at four o'clock, did a washing, attended to my household duties, which included house cleaning, and in the evening I took a plunge bath, something I had never before dared to do when recovering from this disease.

These beautiful demonstrations over my ailments have made me most grateful to God and to the Leader of Christian Science. I now read daily the Lesson from the *Christian Science Quarterly*, and find it my greatest pleasure and help.—MRS. MARY E. ATKINS, West Chester, Pa.

I want to state that I did not come to Christian Science to be healed. I came because I was unhappy, and Christian Science made me happy. The orthodox religious beliefs failed to rid me of an abominable temper, a desire for continual travel, discontent, hate, and all the other qualities which, compounded together, are a veritable hell. They did not even teach me how wrong these qualities were, but seemed to regard them as something peculiar to mankind, and the temper as something to be held in check only in so much as not to let it lead me to do anything indiscreet or not genteel. I remember telling a friend of the dissatisfaction with which I held all this, and she kindly offered to give me some literature to read which would surely help me. She gave me some *Sentinels* and *Journals*, and these were so much to the point that I inquired about Science and Health, which was so often mentioned in these publications. The friend kindly let me have one to peruse, and I read and re-read it, and then bought one. It has proved more helpful than I anticipated. Christian Science is ridding me of all those qualities that do not belong to God or His creation, and it has lifted me so far out of the former conditions that I sometimes wonder if they ever existed.

The perusal and study of Science and Health has done even more than rid me of a bad temper, etc., it has healed me of my diseases. After reading for about a fortnight, I found myself healed of hereditary constipation, of dreadful and overpowering headaches, and of all the lesser ailments which seemed to take up so much of my time. I never can tell of all the many blessings that have come to me from the study of Science and Health, but I can truly state that Christian Science has brought me to God, and I now know that nothing can ever separate me from divine Love.

I desire to express my gratitude to dear Mrs. Eddy, the Discoverer and Founder of Christian Science, for her unselfed and loving labor in bringing this saving truth to mankind. A few words of thanks must also be given for our Manual, the Concordance, and all the life-giving messages which our beloved Leader has sent to the Field.

VIRGINIA TAYLOR, New York, N. Y.

The sentinel at the post of duty reminds me of negligence in sending my testimony, to tell of blessings received in Christian Science. I humbly offer the following, to add to the volume of thanksgiving sweeping heavenward. Through the reading of Science and Health and the spiritual illumination which followed, I was healed of ulceration of the stomach and kindred troubles, a restless sense of existence, agnosticism, etc. The torture I had endured with the stomach trouble I will not attempt to describe. The attending physician declared that I could live but a short time, and I felt there would be a limit to my endurance of

the torture, but the disease was dissipated into nothingness through Christian Science, which brought me peace.

Like many others I had been seemingly lost in the sea of error, without a compass, yet earnestly and honestly seeking a haven. I had investigated all kinds of religions and philosophies that came under my notice, with the exception of Christian Science, which was not then deemed worthy of inquiry, and yet it held the very truth I was searching for—the light which “shineth in the darkness; and the darkness comprehended it not.” Three years of stubborn resistance to Truth, with increasing suffering, followed—then the light came, and with it a new experience. Now, after nine years of Christian Science experience, under severe tests, it can be truthfully said that it has not failed me in any hour of need.

My daily prayer is that I may be found worthy of the hallowed name, “A Christian Scientist,” and have a deeper sense of gratitude for our beloved Leader, whose tireless vigils have made our burdens less wearisome, and who keeps the torch of Truth upheld firmly where the darkness is most dense. My love for our Leader can but be measured by my obedience to the truth she has taught us. No words can convey the joys of spiritual communion with God, in the light of Christian Science. Demonstration alone gives it adequate expression, and I would say to every sufferer, “O taste and see that the Lord is good.”

J. FRANKLIN JONES, Cincinnati, O.

I have felt for some time that I should like to tell of some of the things which Christian Science has done for our family. I first became interested in this teaching through my own healing. After having been an invalid for years, I was obliged to take to my bed and remain there fourteen months without one ray of light, or one hope that I could be any better; but Christian Science was my deliverer, and has been many times since. I have seen my children healed of diphtheria, whooping cough, measles, and many other ailments, besides deafness and a very badly inflamed eye. Christian Science has taught me how to help my family of small children to know that they are God's children, and that He cares for them every moment. This means much to a mother.

I am very grateful to our dear Leader, and to all those who have helped me to find the way of Life through Christian Science.—MRS. FANNIE E. WILLETT, Brookline, Mass.

On arriving at my daily work one morning, I seemed to be under a sense of great discouragement, with perplexities and difficulties on every hand, when I saw that the *Sentinel* had come. I looked to see if there was anything in it from Mrs. Eddy, and found her letter to the church in Cleveland. As I read it, and thought of her life of selfless toil, all sense of mental uneasiness and discouragement vanished. Two days later, in the endeavor to love more, and to work, watch, and pray, as we are encouraged to do in Science and Health, the understanding came whereby two of the most difficult problems were overcome, and the remainder disappeared into their native nothingness. This letter has so exactly met my need, by giving a broader apprehension of what unselfed love is, that my heart is filled with peace and overflows in thankfulness to our beloved Leader for bringing to us Christian Science, wherein we learn how to follow the Christ; and for all this I desire to show my gratitude in earnest endeavor to be more and more “unselfed.”

MARY ALEXANDER, London, England.

[Translation.]

I give my testimony with a grateful heart for all the blessings I have received through Christian Science. Last February I was taken very ill with pneumonia and pleurisy. The physician whom my relatives called, in their fear (it was not my wish, nor did I take the medicine), said that there was no hope of saving my life. Yet “man's extremity is God's opportunity.” A dear practitioner arrived from

Zurich while I seemed to be dying. She treated me, and from that hour on my condition changed. I began to improve, the fever left, I got well, and my strength gradually returned. My relatives, friends, and the physician called it a miracle, but I knew that God—divine Principle—had healed me. The understanding of Truth makes me happy and profoundly grateful, and it is my desire and prayer that this truth may spread everywhere.

SOPHIE EGGER, Koppigen, Bern, Switzerland.

[Translation.]

I would like to relate a proof of the power of Love. Our little girl, two and a half years old, was suddenly attacked with fever, and in the course of about two days her mouth was swollen, and the tongue and throat were covered with a purulent mass so that she could not partake of any food. The first day I turned the case over to a Christian Science practitioner for treatment, and during the day and night the child enjoyed several hours of peaceful sleep. My husband was, however, rather undecided, and expressed the thought that perhaps we should employ material means, or send for a physician. The practitioner told us to wait, and she worked faithfully. Towards evening the child could take some milk, and the following day the action was natural. In a few days her mouth was healed, and after eight days she was well again.

In the name of my family I here express my sincere gratitude. May God strengthen us in our further understanding of Truth and Love.

IDA PINKERS-BOLLER, Zurich, Switzerland.

I am writing this to let others know how Science has helped me and how it can help them, if they want to be helped. I am a little girl, eight years old, and have worn glasses for two years. The specialist said I would always have to wear them or go entirely blind. Mamma came into Christian Science about four months ago, and I laid my glasses aside. My eyes are better now than they ever were before. I attend the Christian Science Sunday School and I am happy to know that God makes us perfect as He is perfect.—CECIL C. CONNETT, Fort Wayne, Ind.

What to thy dim eyes may seem a stain,
In God's pure light may prove a scar
Won on some hard-fought field
Where you would faint and yield.

Anon.

[Written for the *Sentinel*.]

Come.

J. W. WALKER.

Come unto me, all ye that labor and are heavy laden, and I will give you rest.

WHEN in sickness, want, and woe,
Wand'ring from my Father's home,
Wilful oft, I answered, “No,”
To His loving, patient “Come,
Come, my child, your wand'rings cease.
Come, and dwell with me, in peace.”

Did I heed that gentle voice,
Whispering sweetly in mine ear?
No; for worldly claims and noise
Filled my aching heart with fear.
Still the pleading did not cease—
“Come, and dwell with me, in peace.”

Father, now thy wayward child
Hears Thy voice, and sees the light
Guiding thro' the storm-cloud wild
Into God's own presence bright.
Now at last my wand'rings cease,
For I dwell with Thee, in peace.

From our Exchanges.

We simply call attention to the fact that this "peace of justice," quick to avenge insults, which makes a strong nation at once the judge and jury and executioner in its own suit, and spends more on the machinery of military force than on all measures of public service combined, is not the kind of peace for which Christmas Day is set to remind us. Jesus' method, his spirit, his teaching, are utterly different. The Christmas peace is the peace of the men of good-will. The method is trust; the spirit is humanity. Good-will carries justice with it.

It is important to make this distinction. Millions of people do not yet see how great it is. They still worship force. They confuse the simple life of the Man of Nazareth with external power and material pomp. They look back and worship a sort of war-lord, coming in the skies to punish his enemies. They have yet to learn that good-will is the mightiest force in the universe. They have yet to trust this new force, and to apply it to every kind of problem. They had better not reverence Jesus at all, if they miss the kernel of his teaching. Do they imagine that, if he were addressing the American people, he would bid them build more fighting ships?

CHARLES F. DOLE.
The Christian Register.

In the effort to attain theological sanity religious teachers have often passed into the cold realm of a barren intellectualism. The inference is perhaps natural that liberal theology implies decay of spiritual passion; but there is nothing in the nature of things to make this disaster inevitable. The whole question is largely one of emphasis. I cannot admit that it is necessary to close one's eyes to all the splendid and reverent work of our greatest Biblical critics in order to retain a vision of the cross of Christ. There may have been two Isaiahs or twenty; what has that to do with me, so long as I have the profound spiritual message contained in the book which bears the name of Isaiah? I am indifferent as to whether Bacon or Shakespeare wrote Hamlet, so long as I have Hamlet; and who would insist that a certain critical view of the authorship of Hamlet is imperative before one could be allowed to expound the teachings of the drama? The critic does his work, well or ill as the case may be; I may accept or reject his views, but the message of the book is still mine.

REV. J. W. DAWSON.
The Congregationalist.

The greatest obstacle to religious achievement to-day is not the deplorable apathy—that can be overcome by a genuine religious enthusiasm; nor higher criticism—that can be corrected by living the truth of the Bible; nor the growing spirit of worldliness—the spirit of the Master is more than a match for that, but the atrabilious jeremiads and the disconcerting lamentations of doleful Christians without heart or hope, without faith or force!

E. M. MARTINSON.
The Standard.

Is the "Religion of an Educated Man" a peculiar brand of salvation for collegians? Can the "Religion of a Mature Man" improve upon the sweet simplicity and child-like faith taught in the Gospels? Is there a new edition of the Gospel since Jesus said, "Except ye be converted, and become as little children, ye shall not enter into the kingdom of heaven"?—*Pacific Christian Advocate.*

The richest gifts of God are of a spiritual character and have come through Christ, and they draw from us the highest expression of our gratitude in the words of our lips, the excellence of our lives, and the graciousness of our deeds.—*The Watchman.*

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, \$5. Twelve or more to one address, \$4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, \$1 per copy; \$5 per half dozen; \$9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, Treasurer.
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, \$2.40 per annum; \$1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, \$1.00 in advance; all other countries, \$1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

Works on Christian Science

Written by Rev. MARY BAKER G. EDDY

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid \$3 18

Two to twelve books (cloth only) to one address, each, prepaid 3 00

Twelve or more books to one address, each, prepaid 2 75

Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid 4 00

Twelve or more to one address, each, prepaid 3 75

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid 5 00

Twelve or more to one address, each, prepaid 4 75

Levant, divinity circuit, leather-lined, round corners, gilt edges, silk-sewed, heavy Oxford India Bible Paper, wide margins, each, prepaid 6 00

Twelve or more to one address, each, prepaid 5 75

Orders for Science and Health, in lots of twelve or more to one address, may include any or all the different styles of binding.

A COMPLETE CONCORDANCE to Science and Health with Key to the Scriptures, 595 pp., 10 x 7. Bound in cloth, marbled edges. Price, single copy, prepaid \$5 00

Twelve or more copies to one address, each 4 50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), each, prepaid 2 25

Twelve or more books to one address, each, prepaid 2 00

Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4 00

Twelve or more to one address, each, prepaid 3 75

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5 00

Twelve or more to one address, each, prepaid 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.

Single book, prepaid \$3 00

Twelve or more books to one address, each, prepaid 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science, 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; \$3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL, 80 pages, cloth covers. Prices, prepaid, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea: 120 pages, cloth covers, gilt edges. Prices, prepaid, \$1.00; \$5.00 half dozen; \$9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, \$1.00; \$5.00 half dozen; \$9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, \$2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, \$2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, \$4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; \$4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, \$1.00; six copies to one address, \$5.00; twelve copies to one address, \$9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; \$5.00 per dozen.

Associate Editors.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, \$1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, \$1.40; one hundred copies, \$2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

It is expected that the commission created by the President to consider the subject of naturalization will be ready to report at the next session of Congress. Numerous instances of gross fraud and error in connection with the application of the present naturalization laws have been reported by Federal officers and the inadequacy of the present laws has involved the State Department in much correspondence with foreign governments. It is well known that there have been many fraudulent and improvident naturalizations and a wholesale forgery and sale of spurious papers. The Commission in its deliberations will doubtless consider restricting naturalization to certain courts; defining the testimony necessary for naturalization; using distinctive paper to prevent counterfeiting; separating declarations of intention from final certificates; requiring specific dates as to birth, and arrival in this country; and the return of all papers at stated intervals.

The following nominations were confirmed by the Senate: Ambassadors Extraordinary and Plenipotentiary—Whitelaw Reid, New York, to Great Britain; Robert S. McCormick, Illinois, to France; George von L. Meyer, Massachusetts, to Russia; Edwin H. Conger, Iowa, to Mexico; Henry White, Rhode Island, to Italy.

Envoys Extraordinary and Ministers Plenipotentiary—William Woodville Rockhill, District of Columbia, to China; David J. Hill, New York, to the Netherlands; Henry Lane Wilson, Washington, to Belgium; William Miller Collier, New York, to Spain; Brutus J. Clay, Kentucky, Switzerland; Thomas J. O'Brien, Michigan, to Denmark; Charles H. Graves, Minnesota, to Sweden and Norway; Edward C. O'Brien, New York, to Paraguay and Uruguay; John B. Jackson, New Jersey, to Greece and Montenegro, and diplomatic agent in Bulgaria; John W. Riddle, Minnesota, to Roumania and Serbia; Samuel R. Gummere, New Jersey, to Morocco.

The treaty with San Domingo, drawn by Dominicans, when reported by the Senate Committee on Foreign Relations, had been amended to eliminate all reference to the

Monroe Doctrine; to fix a time limit for the collection by the United States of the revenues of the Republic; provision for scaling down unreasonable debts and claims; to avoid committing the United States to responsibility for future debts; to provide that no adjustment of debts shall be undertaken except at the request of San Domingo and the claimant Government either for itself or citizens.

The members of President Roosevelt's Cabinet are: John Hay, District of Columbia, Secretary of State; Leslie M. Shaw, Iowa, Secretary of the Treasury; William H. Taft, Ohio, Secretary of War; William H. Moody, Massachusetts, Attorney-General; George B. Cortelyou, New York, Postmaster General; Paul Morton, Illinois, Secretary of the Navy; Ethan A. Hitchcock, Missouri, Secretary of the Interior; James Wilson, Iowa, Secretary of Agriculture; Victor H. Metcalf, California, Secretary of Commerce and Labor.

Answers were filed last week in the case of the United States against the General Paper Company, et al., the case being generally known as that against the paper combine. The general answer made by the General Paper Company and its twenty-three co-defendants denies most of the allegations made by the United States. The United States has until the first Monday in April to reply.

Secretary Hitchcock has given out a statement concerning the investigations made by the Department of the Interior into the Oregon public land frauds. It shows that there have been sixty-eight indictments and six convictions. The persons indicted include one United States Senator, two Congressmen, many Government officials, and two women.

The United States Supreme Court has ruled in the case of the Northern Securities Company, which merged the Great Northern and Northern Pacific Companies, that the stockholders of the Northern Securities Company are to receive pro rata amounts of the stock of the two merged companies instead of the original stock that was turned in.

Statements issued for publication in the *Congressional Record* by the members of the House Committee on Appropriations show that the appropriations for the fiscal year ending June 30, 1906 are \$818,478,914. For the previous year they were \$781,172,375.

The Missouri Senate has passed a bill making all pipe lines constructed, or to be constructed, for the purpose of carrying oil, common carriers and placing them under the direction of the Railroad Commissioners.

Foreign.

The reports of the terrible disaster to the Russian army at Mukden under Kuropatkin are confirmed. It is thought he will scarcely succeed in saving even a remnant of his army from destruction or surrender.

The terms of peace that Japan will offer are said to include: Japanese retention of Port Arthur and its peninsula; Japanese protectorate over Korea; Manchuria to be returned to the administration of China; control of the eastern part of the Siberian railroad by an international commission; a war indemnity.

It is said that the Japanese overtures for peace, which have twice before been offered, were refused by Russia because of the demand for an indemnity.

Great Britain, France, and Russia have refused their consent to the proposal of Prince George of Greece to annex Crete to Greece. Another proposal is that Greece should resort to military occupation in the same way as Austria has dealt with Bosnia and Herzegovina, which, however, would destroy the autonomy of the island; still another proposal, which would result in the retention of the autonomy of Crete, is the appointment of a competent European administra-

tor chosen from some neutral, disinterested State. Prince George, however, may be continued in his office of High Commissioner.

M. Yermoloff, the Russian Minister of Agriculture, is stated to have drawn up a scheme for a constitution which, while maintaining the principle of autocracy, grants absolute freedom of conscience, creates a chamber "composed of representative and legislative elements," provides for bettering the condition of workingman and peasant, and gives greater liberty to the Jews.

Paris is to have a statue of Beethoven, the successful design being the work of Jose Charmay, a native of Mauritius. The committee which accepted it was headed by Saint-Saens, Massenet, and Siegfried Wagner. The statue will stand in the Place of the Trocadero.

Count Benckendorff, the Russian Ambassador to Great Britain, has paid \$325,000 to Foreign Secretary Lansdowne in settlement of the North Sea claims, and the incident is thus closed.

Industrial and Commercial.

Apropos to the Kansas legislation dealing with the oil industry in that State, Governor Hoch has received this message from the president of the only independent oil refinery in the State,—

"Shipped first car of oil under the new maximum freight rate law. Old rate \$78.34, new rate \$27.60, saving us on one car \$50.74. Thanks to you and the Legislature of good old Kansas for breaking the monopolistic bonds of the railroads and giving us an opportunity to do business."

The Governor sent the message to both branches of the Legislature.

The Caronia, the first of four great transatlantic liners contracted for by the Cunard Line, the largest vessel ever built on the Clyde, has just made her maiden trip to New York in seven days and nine hours at an average speed of 16.33 knots. She is 675 feet long, 72 feet 6 inches beam, and 97 feet from keel to bridge. Her weight when launched was 13,000 tons, and her displacement when loaded is 30,000 tons. She has eight decks and has accommodations for 3,100 passengers.

Professor Henry Miers, in lecturing to a London audience recently, said that there was no knowledge of the depth to which the South African diamond mines could be worked. The deeper they go the richer they become. Work can be carried on now to a depth of twenty-five hundred feet. It is thought that it might be continued to a depth of five thousand or even ten thousand feet, if the engineering difficulties could be overcome.

The charter granted by the Brotherhood of Locomotive Engineers to the New York engineers connected with the Interborough Railway Company has been recalled because of the alleged violation in their recent strike of a three-year contract with that company. The engineers struck without consulting the officers of the Brotherhood.

The Philadelphia Company has awarded the contracts for its great gas pipe line from Pittsburg to West Virginia to re-enforce the gas supply of Pittsburg. The line will be one hundred and thirty-five miles long, sixteen to thirty-five inches in diameter, of steel tubing.

The apple export of Boston this season leads New York by about 100,000 barrels. New York held the record last year. The total shipment from all Atlantic ports is over two million barrels, which is about a million less than last season.

The exports of farm or agricultural products for the year 1904 were valued at \$859,160,264. The total imports of farm products in 1904 were valued at \$416,454,851.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

When the Winds are Contrary.

BLANCHE H. HOGUE.

THE human heart longs for ease, for present comfort of the flesh, saying within itself, that this world were quite heaven enough, could its promises be kept and its joys be made permanent. Such a life lifts not its eyes above the level of present achievement, nor sees the relationship between the immediate disappointment or trial and the wholesome lesson learned thereby. The youth, in impatience to realize all his dreams, looks to his future material existence as the arena for his triumphs, and only as time and experience expose the temporal and unsatisfying nature of things worldly and material, does he grow to see that nothing save the divinely good endures in the passing of the three-score years and ten. This supreme lesson, that spiritual dominion over the material self is alone great, is well learned when human loss and pain prove, of themselves, the powerlessness of matter to save itself from itself. And all philosophy and theology have united in declaring that humanity's most purifying lessons are learned through these paths of limitation and sorrow.

Christian Science, however, comes to the suffering sense which is striving to be resigned to the incurability of earthly discord, with the actual proof that the discord is curable; and it is just at this point, where material means are at an end and all merely human affection and effort are powerless to rescue and redeem, that the saving Christ-mind finds its opportunity to minister actively to the human need. In the sixth chapter of Mark's Gospel it is recorded that Jesus saw the disciples "toiling in rowing; for the wind was contrary unto them." And he came to them saying, "Be of good cheer: it is I; be not afraid." Surely the Christian to-day can testify, as well, that he hears most clearly the voice of the Christ when the winds are contrary,—hears it most clearly because in such hours he needs it most sorely and listens most earnestly.

• How many times poor human nature forgets its need of God, when the seas are calm! Perfunctory gratitude, perhaps, for all good fortune, characterizes the hours of ease, but the full awakening to the actual vital need for the Christ comes only when the winds are contrary. Thus driven heavenward the Christian learns eventually to trust not the smoothness of mortal mind's waters, and so strives always to lean upon his God. Under the action of Christian Science, the turmoil is subdued by a Divine presence above and beyond the realm of the discord. The contrary winds are not subdued by other winds of opposing direction, nor by the calm which follows in the wake of exhaustion, but are so stilled by the voice of the living Christ that never again can that same storm arise. Christian Science healing does not build for an animal sense of health in matter as against disease in matter, does not eliminate fear by material reasons for encouragement, does not dispel sorrow by bestowing an equally personal sense of joy. It makes no exchange of goods in the realm of materiality, but lifts thought beyond the reach of matter's laws for either disease

or health, fear or courage, sorrow or joy. When Christ walks upon the troubled waters, material law is hushed, and that peace which belongs alone to Christ, which the world cannot control in the giving or the removing, comes, and abides. This is the true Christian healing. This is the spirit of that deliverance which is coming daily to the faithful student of Christian Science. The winds may indeed have been contrary, and the "toiling in rowing" laborious and painful; but the heart which is thus driven to desire its Christ, hears in the right hour, the loving "Be of good cheer: it is I; be not afraid."

When the Christian meets adversity as something which tests his fortitude and develops his strength, he cannot complain of it as hardship, nor lament because of its coming. He faces it cheerfully, as it arises in the course of experience, for he is learning that its uses are indeed sweet. That loss or trial which is so severe that no human desire or will can bring deliverance or adjustment, opens the very heavens of spiritual compensation, and brings the answering Christ into the storm, stilling its fury with the actual overcoming of the forces of evil. How is evil to be destroyed, until its conspiracy has raised such "contrary winds" that its dangers become evident? When the seas are calm the sense of safety is undisturbed, and there is found less effort to seek the saving Christ. If in all the ages there could be found one uniformly happy human life, with all its ambitions gratified, all its desires satisfied, all its efforts successful, there would be argument that the human life can take care of itself, and needs no saviour outside itself. But in all history no such instance may be found; and the lives which stand forth as inspiration to all mankind are those which have been goaded and pricked and stung into spirituality because there was no repose for them in anything less than the highest and the best. Shakespeare has said,—

"When the sea was calm, all boats alike showed mastership in floating."

There must needs be sharp conflict with evil, ere it is proven that no severity nor fury of circumstance can wrest this mastership from man's possession.

The students of Christian Science are striving to discern as their Leader has discerned before them, the meaning of Christ's "coming." And when one has learned that a right thought, however simple, is a Christ-thought, and that the mission of this Christ-thought is to subdue and destroy the opposing self-thought, he has learned the way in which the Christ comes. That Mind "which was also in Christ Jesus," must be expressed by thoughts which are Christ-like in nature. This Christ-mind must impart itself to an individual through these Christ-like thoughts, and each Christ-like thought, while it is entertained, saves the thinker from thinking, at that moment, the destroying thought. In this way, the Comforter comes into every heart which is preparing a place for him, and Christ does indeed subdue the storm. If a pure Christly thought be entertained only faintly or occasionally, in the degree of its presence it has "come," and it has come to save. What a wondrous revelation Christian Science has given the world in this knowledge that present Christly thinking is the individual saving power! The sinner and the sick man are encouraged to cherish the one first thought, how-

ever faint it may be, which brings the message of righteousness and peace and health. For thus cherished, it multiplies, and the first faint answering whisper of the desired Christ must grow into the understanding of the risen and victorious Christly thinking which stilled the tempest through Jesus of Nazareth, and which to-day stills the elements of evil and makes for reformed and purified men and women. Can there be a simpler mental action than this of cherishing, one at a time, the thoughts which are Christ-like in nature? And can there be any other way of casting out, even one at a time, the un-Christ-like thoughts which occasion the contrary winds? Indeed, the way of reformation and salvation is so simple that it is often overlooked, and well may any man rejoice even when the winds become so contrary that they force him to find the Christ in this way of Christ's coming.

• "Work out your own salvation."

ADELE HULL WOLFE.

SOME five years ago, adrift amidst angry waves of illness and despair, I was toiling at the oars when, in the teaching of Christian Science, Christ came walking upon the sea and there was a great calm. Above the roar of the tempest was heard the echo of that immortal voice from Galilee, "Be of good cheer; it is I," and the storm ceased. I knew that Christ had indeed come to dwell among men and was speaking to this age through a prophet raised up from the valley and shadow to bring hope to the world.

After the fashion appointed by man, thirteen years had been vainly spent in seeking immunity from pain. Then suddenly to hear the hymn of freedom voiced after the manner of Christian Science, and to have its rhythm proved through the restoration of mind and body, was almost bewildering. While the ear inclined quickly to catch the refrain of hope uttered in this diapason of peace, it was slow to bend to the warning that all who join the heavenly hosts must pass under the rod which enforces the command, "Work out your own salvation with fear and trembling."

Many bitter lessons had to be learned before the realization came that Christian Science does not permit any one to lie luxuriously back and be comfortably towed into an unearned heaven. Truly there is no royal road to harmony, and, be the healing slow or fast, there are no vicarious crowns in glory. Physical healing comes as the harbinger of redemption, not its attainment; but, thrilling under its beneficent touch, one may mistake a mere loving of Christian Science for the living of it, and then a grieving wonder is aroused that chastening should come.

Let no one cry out, even though the healing seem slow, for all have the mountain of sorrowful effort to climb ere victory is gained. This word, spoken from the vantage-ground of instantaneous deliverance, may cheer some faltering heart. Though healed in a day, yet was the price of conquest over what I now know to have been the predisposing cause of my afflictions, five years of prayer and sacrifice. One may be naturally possessed of a tender, loving nature, able to refrain from angry words during years of injustice, and yet be none the less engaged in digging a yawning grave with the keen blade of resentment. The judgment of man sits above, on the cliff of creed and doctrine, singing its siren song of "justifiable resentment." If those toilers of the sea who are pulling against the waves of persecution do but harken to its luring sound they are bound to find ultimate shipwreck on the rocks of malice and hate.

It was an allopathic physician of some renown who first pointed out to me a fact not sufficiently heeded to-day, that a plague-spot of bitterness in the heart will, if nourished, produce organic disease. Coming from such a credited source, this warning gave pause to thought and pointed to two significant facts. First, that mature years had been attained in perfect health, during which time the heart

had been ever loving and forgiving, and anger and hate almost unknown. Second, that many succeeding years, bearing as they did an unceasing injustice, brought in their wake bodily ills that were ever increasing as resentment bore its natural spawn of hatred.

It was not until that clarion call of Love which is trumpeted by Christian Science penetrated the area of my bitterness and roused me from my dream of resentment, that I was freed from the chains of disease which bound me. This proved that Love does heal. But the day of fresh offences came. Untrained thought, but feebly barring the door against its return, was soon re-admitting the old enemy, and many of the banished ailments also returned. This proved that malice does make ill.

I then learned that the stately form of Christian Science is clothed with the seamless robe of love, and that the touching of the hem of this garment is the only panacea known to stanch an issue of hate. The recognition of the fact that love is the only way out of sense into Soul, drew forth the cry that has issued from many a willing heart: How to love? Pray. Pray in season and out of season and then *do*. Praying is not enough. A careful study of the textbook of Christian Science reveals this saving prayer both in line and in precept. It tells us on every page to immolate self, silence human will, and acquaint ourselves with the fixed Principle of being which cannot change to meet our shifting sense. Doing this, we learn to know the petition that has a divine answer. If it has no such answer it is not prayer but vain babbling. In other words, we have to learn how not to pray amiss.

The declaration, uttered though with bleeding heart and streaming eyes, that Love is the only presence, is holy prayer. To coax unwilling hands into continued service, though stung by the serpent tooth of ingratitude, is to pray aright. Though falsely accused, to wean rebellious thought into ways that accuse not again, is demonstrable prayer. Through such service Christian Science will bring us into the ark of perfect safety, be the waters never so vast and troubled. From its shelter we can keep sending forth swift-winged messengers of supplication, sure that they will return eventually with the olive branch of peace.

Some years ago a sudden blow fell upon me and seemed to paralyze all mental effort. The seeming injustice tempted to violence. Knowing, however, that this demon, once admitted, is the kind that "goeth not out but by prayer and fasting," I took quick action. Utterly unable to formulate a proper supplication, I could at least express aloud the word "Love," and this I did. The fact that this baby lisping brought peace within the hour proved that it was prayer, and that it is the spirit of our appeal which is heard of the Father rather than its learned phrase.

We are not called upon to love any unrighteous deed, but we certainly are called upon to stifle any rebellious thoughts arising therefrom. This task is less arduous when we keep ever before us the fact that we thus summon the "angel of his presence" to roll away the stone from a sense-entombed self. Man's approbation has never yet rolled away that stone, nor will his injustice ever stay the hand of Love, come through the revelation of Christian Science to perform this mission. Faithfully adhering to its precepts we gradually learn to guard our thoughts. We learn that they are entities, going forth like winged things to gather stores after their own kind. Jealously guarding the new queen of hope in the home hive, these thoughts will not gather for her honey of deadly nightshade drawn from the history of past wrongs. They will not feed her upon the cloying sweets of criticism and resentment, knowing that she will become sterile thereby and new birth cannot go on.

"Love your way out; it is the only way," said a wise friend to me in my bitterness of those earlier years. That sounded like mockery then, although he had added, "You can do it." It took five years, but I did do it, and I found

that, from the mountain top of this one victory, the way up the next slope did not seem nearly so precipitous. My constant cry was that I could easily forgive what was gone if only the injustice would cease. This murmuring only served to protract my wandering in the wilderness. Jesus forgave *during* the crucifixion, and that cry from the cross set the seal of oblivion on the old Mosaic law, "An eye for an eye."

The appeal for compassion on a sinning world could be silenced neither by the agony nor the shame of Calvary. It speaks to us again to-day through the lips of a loving woman,—lips that never cease to intercede for a sorrowing race. For this intercession, we who have been restored through its spirit, love to do her honor. No honest heart could do less. The God of love whom she declares unto us has patiently led me during one long watch of the night. He has taught me that we, too, can love though being pierced by the arrow of affliction. Shall I not then bring my thanksgiving offering to the feast of Love prepared for all weary ones who would sit at the table of this demonstrable religion? Its bread of Life, as broken to me, restored capacity so that food could be retained after years of chronic suffering. Its wine of Love inspired to keener vision, so that paining eyes forget their plaint, gave up their glasses, and were made whole. Its Eucharist of Truth endowed with renewed activity, so that a body all unaccustomed to the joy of painless motion could leap as an hart.

This trinity of deliverance, Life, Truth, Love, invites to the morning meal with our Master. Sitting at meat with him we hear the searching question, "Lovest thou me?" Our answer of, "Yea, Lord," is met with the command, "Feed my lambs." Again and yet again are we charged to feed his sheep, and are not the thoughts of our consciousness the sheep of his pasture? Then must we enlist like good shepherds to lead them faithfully into fields of loving kindness, making them to lie down by the still waters of peace and mercy. Then only are we accounted disciples. This is to obey the command, "Work out your own salvation with fear and trembling." When first we catch its stern measures it almost seems as if it is all fearing and trembling; but the hand that ever "tempers the wind to the shorn lamb" mercifully smooths its cadence with the sweet assurance, "For it is God which worketh in you both to will and to do of his good pleasure."

Do I?

M. J.

ONE of the most helpful and fruitful lessons learned in Christian Science is that of minding one's own business. The mesmeric turmoil of conflicting thought is being uncovered by the law and order of true thought, and our efforts to relieve and be relieved of human control, that we may be guided by the Christ-mind, means work and constant work. It therefore behooves the Christian Scientist to watch that he may not entertain any suggestion which would hold him in materiality and try to make him work in the old lines, thus blinding him with over-zeal "to do" instead of to know that God has finished His work, and that it is for us to see it unfold.

A desire to help in problems not our own is subtle, and ignorance of circumstances, caused by an outside view, often tempts us to think our brother could see a little clearer, work a little better, or make more rapid progress than he is making, were our advice taken; and we are thus tempted to offer it unasked. The thought may even present itself that we could heal more quickly the patients of others. We certainly ought to be busy with the reformation of self until asked for help, and then we should spare no effort to reflect Love, but we should avoid every temptation to interfere with another's problems. I take it that if we have the true substance, there will the hungry gather to be fed.

Aid which is forced upon one is not often acceptable or

beneficial, and a young Christian Scientist needs to grow through self-knowledge, humility, and love, not through the acceptance of others' opinions; and often he may profit through the very experiences from which the onlooker would save him, and would grow faster if left more to divine guidance, which brings about the unfolding of his own individuality.

Anxiety to protect "the Cause" may sometimes excuse interference but can never justify it. We can no more protect Christian Science than we can use it, as we were reminded in an excellent article in the *Sentinel*, called "The Tree and its Fruit." So Christian Science can be harmed by no clouds of material sense, since its truth is its own protection, and it also protects each and all in proportion to their knowledge of it and dependence upon it. Strictly to mind one's own business is to "keep busy" purifying one's self that one may be a ready and willing avenue for Truth's work and Truth's call.

[Written for the *Sentinel*.]

Eventide.

BEN. HAWORTH-BOOTH.

SEE how the sunset rays of gleaming gold
Have lit their lamps on Israel's hills,
And soon a solemn silence fills
(As when we pray) the wood, the wave, the wold.

On comes the hour of nature's hush; 'tis night,
"The winter of our discontent;"
But all our hopes and prayers are bent
To know the truth and onward gain the light.

It is the night, but dazzling skies above
Are hung with gems, so wondrous fair,
And earth's enchanting roses wear
Such moonlit semblance to the works of Love!

In yon dark pool the stars of earth now gleam
As fair as those of heaven, and far
More easy-gained than those they are!
Thus may we see, things are not as they seem.

O lend thine aid! and guide and guard and save,
Unseen Interpreter divine,
Who turned life's water into wine,
Who conquered sin and self, and walked the wave.

And Thou who ever heard when Jesus prayed—
Who ever savest deaf and dead mankind,
The sick, the sorrowful, the blind—
To sin-bound, suffering souls, O lend thine aid!

I was walking along one winter's night, hurrying toward home, with my little maiden at my side. Said she,—
"Father, I am going to count the stars."

"Very well," I said, "go on."

By and by I heard her counting—

Two hundred and twenty-three, two hundred and twenty-five. "Oh, dear," she said, "I had no idea there were so many."

Ah, dear friend, I sometimes say, "Now, Master, I am going to count the benefits."

Soon my heart sighs, not with sorrow, but burdened with such goodness, and I say to myself, "I had no idea that there were so many."—MARK GUY PEARSE.

What though thought is invisible, even when effective, seems as transient as the wind that drives the cloud. It is yet free and indestructible, can as little be bound in chains as the aspiring flame; and when once generated takes eternity for its guardian.—BANCROFT.

Selected Articles.

Christian Science in Nebraska.

What the Nebraska legislature proposes to do is not entirely clear, but the dispatches say that a bill has been reported from the committee of the whole which provides that "it shall be unlawful for any person to attempt to cure mental or physical ailments, real or imaginary, for pay, without first obtaining a license to practise the healing art from the state board of health."

This is called in the dispatches "a knockout blow for Christian Scientists," probably because the state board, being composed of regular physicians, will refuse licenses to Christian Science healers. That this is the expectation is likely from the fact that the bill was originated and promoted by the regular physicians, who crowded the hall of the legislature when it was agreed upon.

The *Miner*, without meaning to indorse Christian Science, characterizes this proposed action of the Nebraska legislature as oppressive.

The Nebraska Solons do not appear to have noticed that this bill will apply, if carried to an ultimate conclusion, to Christian ministers and to all religious teachers, if not to school-teachers and managers of reformatories as well as to Christian Scientists. There is nothing more widely believed than that sin and immorality are diseases of the mind, that religion is the cure for them, and that the teachers of religion are the physicians who prescribe the cure. Under this bill, if it becomes a law, every preacher in Nebraska who preaches without a license from the state board should be arrested.

The truth is that many physicians practise Christian Science [as they understand it] to some extent, and one of the foremost physicians in this city, whose specialty is nervous diseases, makes his boast that he does.

The world is exceedingly tired of the intolerance of the medical profession. We do not deny the value of medical science nor the great progress it has made in recent times, but we do know that it is as changeable as the skies, and that with it, as much as with any other science whatever, "the science of to-day is the ignorance of to-morrow." A profession which has in turns pretended to cure everything by bleeding, by purging, by sweating, by cold water, by allopathy, by homœopathy, by eclecticism, by antiseptics, by sleeping out of doors, and by orificial surgery, is in no position to say to anybody, "You are a charlatan and shall not treat disease."—Editorial in *Bisbee* (Ariz.) *Evening Miner*.

As we understand the office of the Christian ministry, it is to teach by example and precept the highest spiritual import of the Bible, to promulgate, elucidate, and make practical the teachings of Jesus Christ; and he who falls short of this defaults in his holy mission. The Bible, from cover to cover, teaches that God is all power, that He is infinite and absolute, that it is He who forgives sin and heals all diseases. The Bible also teaches that Jesus Christ was and is the Son of God, that through his sonship, his relation to the Father, his conformity to the will of the Father, his understanding of God and man, he healed all manner of sin and sickness, and overcame death. No one can believe that Jesus made a mistake or spake falsely when he said that all who believed on him should do similar works.

Christian Scientists are striving to do the will of the Father, to overcome, in themselves, all sense of sin, jealousy, hatred, revenge, and every other material propensity that stands between them and a true understanding of God, to get the beam out of their own eye, that they may see more clearly to assist their brother. They ascribe all power to God and acknowledge none other.

Now a startling problem confronts us. It is being considered in the pew and out of it. It is being discussed in private and in public. Many are looking aghast that the pulpit, which should stand as a unit for the allness, suprem-

acy, and absolute power of God, against all that is unlike Him, should or could call to its aid, or for a moment countenance, a system which utterly repudiates God by attributing all power to the human mind, thereby ignoring the divine power. The very first command is to have no gods, no powers apart from Him. This command is as binding to-day as when first uttered. Is it any wonder that so many are seeking a fold where God's allness is proclaimed, and not only uttered but manifested in loving works; where the vagaries of the carnal mind are being overcome by a realizing sense of the divine Mind; where the daily strife is to vanquish the false human senses by knowing more of God and His law?

A. WILLIS PAINE.

Los Angeles (Cal.) *Herald*.

That the old-fashioned "Now I lay me" is no longer universally approved is shown in the following press dispatch which recently appeared in several daily papers.—[ED.]

Chicago, February 24.—Mrs. Edgar A. Hill, president of the West End Mothers' Council, has started a crusade against the "Now I lay me" prayer, declaring that it is out of date. The council supported her attitude and her resolution to offer in its place some other prayer more poetic.

In her remarks Mrs. Hill took particular exception to the lines,—

And if I die before I wake,

I pray thee, Lord, my soul to take.

She said that the idea was horrible, and that death in the night should not be brought before the young.

One member had the courage to oppose the innovation. "If we take away Santa Claus from childhood, and now remove this old familiar prayer, what will be left for landmarks for the young?" she asked.

Mrs. Hill presented the following substitute, which met the approval of a majority of the council:—

Father, we thank Thee for the night
And for the pleasant morning light,
For rest, and food, and loving care,
And all that makes the world so fair.

Then others offered substitutes for the time-honored "Now I lay me."

Mrs. Robert W. Smith, corresponding secretary of the club, submitted this:—

Jesus, tender Shepherd, hear me,
Bless thy dear lamb to-night;
Through the darkness be thou near me,
Keep me safe till morning light.

The objections which a reverend critic maintains against Christian Science seem to be based upon its departure from the teachings of the established schools of theology. He denounces it as a form of heresy similar to that which the apostles encountered from those faithless teachers who endeavored to prevent Christianity's early teaching, apparently forgetting that this self-same charge can be made against any and all who may have departed from that which considers itself to be the Constituted Church, and claims by virtue of priority the right to determine what shall be regarded as sound Christian doctrine.

It should not be claimed that Christian Scientists are dishonest in aim and purpose, in order to prove their doctrine false and misleading. It is very generally admitted that the standard of intelligence and honesty in the Christian Science church is fully as high as in other religious denominations.

No more is claimed for man in the Christian Science text-book than is claimed for him in the Scriptures; namely, that he is the image and likeness of God. If his "life is hid with Christ in God," and if he daily strives to establish this real self-hood in his consciousness, is he not working for the fulfilment of the prayer, "Thy kingdom come"? It is this innate knowledge of God in man's consciousness which heals and saves from transgression and from its evil effects—sickness and suffering.

ALBERT E. MILLER.

Charleston (W. Va.) *Mail*.

The Lectures.

Austin, Tex.

An interesting lecture was delivered under the auspices of the Christian Science churches of Texas at Hancock Opera House, on Thursday evening [February 2], by Hon. Clarence A. Buskirk, formerly Attorney-General of Indiana. This lecture was given complimentary to the Twenty-ninth legislature, and the public in general was invited to attend. The railroads of Texas gave special rates for the occasion, and the lecture was attended by people from all sections of the state. Mr. Buskirk was introduced by Judge J. J. Eckford of Dallas.—*The Austin Statesman*.

Ogden, Utah.

A good-sized audience assembled last evening [February 4] at the Grand Opera House to hear an exposition of the teachings of Christian Science by Bicknell Young of Chicago. Hon. Joseph Chez, in presenting Mr. Young to the audience, said in part,—

Every age has its predominating thought. The thought of Greece was art, and that thought pursued, made Greece a land of beauty. The thought of Rome was power and conquest, and that over-ruling thought made Rome the mistress of the world. The thought of the early ages was martyrdom, and influenced by it, multitudes gladly gave their lives for Christ. The thought of the Middle Ages was chivalry, and that infused into society some of the noblest and most elevating sentiments by which the world still profits. The thought of the sixteenth century was reform, and that thought rightly understood culminated in the "Council of Trent," one of the greatest events in the history of the church. The thought of the eighteenth century was liberty, and that thought crystallized into the Declaration of Independence at Philadelphia, which has sounded like a trumpet call to the oppressed of every nation, kindred, and tribe. The thought of the twentieth century is Truth, the great Sun of the Universe which radiates from the throne of God, flooding the world with light, warmth, and cheer, dispelling darkness, doubt, and despair.

Truth is the altar at which we all worship. We may have different starting-points, as did the three wise men, but if we are sincerely and earnestly seeking truth, we are certain to reach the same destination, the manger of Bethlehem—the hope of man.—*The Examiner*.

Atlanta Ga.

About two thousand people assembled at the Grand Opera House Sunday [January 22] to hear Judge Septimus J. Hanna lecture on Christian Science. The lecture was given under the auspices of First Church of Christ, Scientist. Judge W. R. Hammond introduced Judge Hanna, saying in part,—

When our Lord stood before Pilate, just before his condemnation and crucifixion, Pilate asked him the memorable question, "What is truth?" The record does not tell us that Jesus made any answer to this question; but his whole life had been an answer, and many of his utterances had been full and explicit on that point. It is as if he said, I embody the truth in my life and teachings. There you will find it. He had said, "Ye shall know the truth, and the truth shall make you free." He referred to the freedom of the human mind from the clouds and mists and darkness of ignorance. He referred to the time when all men would be engaged in the earnest quest after truth, and when no man would dare to throw any hindrances in the way of the inquiring mind. Truth based upon knowledge! What a glorious truth that is! We now hail the dawning of that day. May God speed its bright meridian.

I am not here to make any affirmation or denial respecting the teachings of Christian Science, but I do say that they

present to the world the dual requisites of virtue and honesty on the one hand and a broad intelligence on the other.—*The Atlanta News*.

Kalispell, Mont.

Miss Mary Brookins of Minneapolis lectured in the Opera House Friday night [February 10]. Rev. F. L. Buzzell, pastor of the Methodist church, introduced the speaker, and said in part,—

There are several reasons why I consider the Christian Science people my friends, and not my enemies. They believe in something; they are optimists, and not pessimists; but above all they are seeking to solve the problem of evil, or sin and disease, and is not this the problem of the churches and of the ages? The infidel, the agnostic, and the pessimist ignore this problem, or say it can never be solved. Regardless of how we may differ in the philosophy of this, the greatest question of life, whenever I meet one whose aim is the same as mine, and who also tells me that sin and disease can be overcome, I welcome him as a friend.

Again, the Christian Science people are known as a moral class, and as teaching that which tends to the moral life. They accept Christ historically as their leader, though their philosophical definition of Christ differs from mine. They accept the Bible as a Divine revelation, though they do not interpret it as I do, but with me, and all orthodox Christians, they seek to live and teach the moral life of Christ and the Scriptures.

Many of their converts have been redeemed from lives of sin. I am personally acquainted with a very intelligent lady, whom I once knew to be absolutely indifferent to religion, and of a pessimistic and proud spirit; who, when converted through the Christian Science people, became a new creature. She, for the first time in her life, read the Bible with delight, prayed daily, and took an interest in the religious problems of life. She became humble, cheerful, Christ-like. She had nothing less than what I would call a good dose of old-fashioned orthodox religion.

I care not by what agency, whether by Methodism or Christian Science, only I wish every irreligious person in Kalispell might receive just such a dose. What a moral revolution it would produce in our city! Everybody purifying their spirits by prayer; filling their minds with holy thoughts by reading the inspired Scriptures; all drunkenness, all sensuality, all spirit of hatred and pessimism gone!

A little over a century ago Jesse Lee, the first Methodist preacher who visited Boston, tried in vain for three weeks to find a church or hall or private house in which to preach Methodist Christianity. All considered him a dangerous man, with a dangerous heresy. To-day Methodism, with its six million members and eight million more adherents, with its churches that will seat fifteen million people, has proven itself of God.

Kalispell gives this representative of the Christian Science church a better welcome, and time will prove all things. We orthodox people do not claim to know all truth. We will listen to any message you may have of truth that we may use for the good of men. At least we are learning that we do not have to kill people whose philosophy differs from ours.—*The Inter Lake*.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

The Gospel of Healing.

MOST of us can remember the time, not so very long ago, when the fortunate possessor of a strong and healthy body was looked upon as a person in whom the spiritual nature was entirely lacking or, at the most, only superficially developed, and the clergyman who happened to be blessed with an abundance of health and bodily vigor was secretly suspected of being no better than Friar Tuck. Perhaps this picture may seem rather vivid to some, but, in the main, it will be accepted as a just portrayal of the condition of religious thought which prevailed in no distant past. Happily those days have gone by, and the gospel of good health is now preached by ministers of the orthodox churches as well as by Christian Scientists.

A recent address delivered by a distinguished clergyman of the Episcopal Church is reported by *The Boston Globe* as follows:—

"At the service of the Boston Y. M. C. A. yesterday afternoon Bishop W. N. McVickar, D.D., bishop of Rhode Island, declared that Christianity had often been misrepresented, to the point of perversion, because saints had been pictured as thin, cadaverous products of humanity, physically, and correspondingly weak and eviscerated spiritually. The idea had been incorporated into art and was often seen in the art galleries of the old world.

"The bishop emphasized that true Christianity made a man out of a weakling, and cited the experience of the demoniac who was made whole and brought to his right mind, changed from an irrational and repellent being to a reasonable and capable one.

"The bishop also emphasized the fact that in Jesus Christ and in true Christianity there inheres a genuine human sympathy and helpfulness. Soundness of body and of mind is the natural and inevitable outcome of the beneficence that radiates from the Christ."

The following extracts from the testimony of Mrs. Anna G. Ferguson of Mitchell, S. D., which appeared in the March issue of *The Christian Science Journal*, present abundant proof that "soundness of body and of mind is the natural and inevitable outcome of the beneficence that radiates from the Christ."

"I was reared by devoted Christian parents who, I am confident, lived up to their highest understanding of right. . . . Years passed . . . until my health began to fail, and intense suffering at times made me almost wish to die. Failing to receive any permanent benefit from home physicians during over six years of suffering, I at last went to a famous sanitarium, where they pronounced my trouble a fibroid tumor and said my only hope was in the capital operation. To such a serious ordeal I would not consent, for my courage utterly failed and I felt certain that the shock of the operation would be sure death. . . . My suffering increased, as did also the doses of morphine, which drug was all that made the pain bearable.

"In the mean time one of my dear sisters had become interested in Christian Science, and wrote asking if I would accompany her to Sioux Falls, South Dakota, for treatment. I consented, though thinking it a foolish waste of time and money, and gave the practitioner there to understand I had not come for treatment. . . . On the fourth day of our

stay there my sister was perfectly healed of the terrible chronic sore mouth which had troubled her for nine years, and which able physicians had pronounced incurable. . . .

"After returning home, the thing that I feared came upon me, for my husband was not willing for me to give up medicine, and said I was always wanting to try something new. This seemed a great trial, for I now desired Christian Science above all else. In a few weeks, because he requested it, I once more visited a doctor in Chicago, but I felt it was my last concession to *materia medica*, for my faith in it was entirely gone. . . . I faithfully took the remedies prescribed by the physician, with no relief from the terrible pain which at times seemed more than I could bear, but each day I read my Bible and Science and Health, for I could not let them alone, and every dose of medicine was a rebuke and constantly reminded me that I was violating the first commandment. There was nearly three months of this double-mindedness, then I could no longer endure the bondage which began to seem self-imposed, and I realized that I must forsake all and follow Christ, Truth, even at the risk, as I thought, of incurring my husband's displeasure; so I destroyed all my medicines, and sent a letter to the practitioner at Sioux Falls to treat me.

"In less than one week every symptom of the horrid tumor vanished, and has never returned. The freedom was glorious beyond description. . . . To know and understand something definite and satisfying about God, and really experience a full and free salvation, is as wonderful to me as my physical healing. For such a work of divine Love an eternity of good deeds on my part can alone repay.

"The Bible and Science and Health have ever since been my daily companions, and I can say with the Psalmist, 'O how love I thy law! it is my meditation all the day.'"

ARCHIBALD McLELLAN.

The Rest that Remaineth.

He that overcometh shall inherit all things.

MANY a weary and discouraged soul has been attracted to Christian Science by hearing the testimony of those who witness that it has brought them not only surcease of pain, but rest of mind and content of heart, and through misapprehension there are those who have been led to think that to become a student of Christian Science is immediately to find that exemption from the struggle for subsistence and success which enters so largely into the world's sense of happiness. Later on, when there has come a clearer understanding of the number, the greatness, and the insistency of the demands which the ideal life makes upon us,—when the subtle workings of error, and the extent of its domain in human thought have been partially uncovered, and the warfare with it has been seriously entered upon, then some have been known to express surprise, and even disappointment that their expectations of a quiet, comfortable time, in following the behests of Christian Science, have not been realized. Said one recently, "Can you explain how it is that I should have so many problems to meet? They keep me hustling every minute, and there seems to be no let-up at all." The answer was that the work probably came to him because it had to be done, because with God's help he could do it, and because in the doing he was to realize that spiritual advance for which he had long and earnestly prayed.

Mr. Van Dyke tells us of one Hermas, who came upon "that sadness of youth into which the old cannot enter,"—a sadness more bitter because there is in it "a fever of angry surprise that the world should so soon be a disappointment, and life so soon take on the look of a failure." Despite this, he yet "knew that he must go on," for "his honor, his conscience, his duty" had "bound him." A half-conscious sense of this kind sometimes touches the young Scientist, and it is likely to bring him many an unhappy day if he is unable to analyze the situation, and thus

come to see that the apparent excitement and assault of error is but the reflex mortal aspect of an experience which has untold promise of good; viz., progressive awakening to truth. In the midst of weariness, the glamour of a coveted ease sometimes leads us to forget that the call of God is, and ever has been, to a warfare whose strenuousness was vividly apprehended by St. Paul when he said to the Ephesians, "We wrestle not against flesh and blood, but against principalities, against powers, against the rulers of the darkness of this world, against spiritual wickedness in high places; wherefore take unto you the whole armor of God."

All who recognize the phlegmatic indifference to spiritual things, not only of worldly people, but of the great majority of professed Christians, and who realize that error's outcome is assured if this stupor but remain unbroken,—they know that humanity's supreme need is an awakening, and at whatever cost of pain and human sacrifice. First, we must be made to see our problems, then be stimulated to begin the patient and persistent work of their solution; this accomplished, salvation is half achieved, and herein Christian Science is working mightily for mankind to-day. It not only startles men with the disclosure of the "awful deception" of evil, and that its ability to harm measures to the full our consent to give it place and reality; but it shows them specifically how, through Christ, the evil may be annihilated. It supplies both perceptive and corrective wisdom respecting evil, and thus inaugurates individual resistance to evil by begetting the courage to undertake its overthrow.

It is clear that the number of our problems remains just the same, whether we are conscious of them or not, and it is equally clear that he who is knowing and alert respecting the difficulties he must surmount is a long way in advance of him who is ignorant of them or indifferent to them. The unanticipated difficulties which may present themselves to the young and aggressive student of Christian Science, but represent the resisted inertia of that tide with which he has heretofore drifted in an altogether comfortable listlessness. Now, alive to the imperative necessity of escape from its deathly sweep, he turns his prow up stream, and, as he lays his hands to the oar, he brings himself into entirely new relations to currents of belief whose strength and significance have never before been felt, much less understood. The seeming forces of evil which, hitherto, have silently borne him to their end, now thunder and surge against his counter-endeavor, and the erstwhile quiet of a contented drift is succeeded by the wholesome turmoil of progress against the stream.

But, says one, what of the rest that remaineth to the people of God? Did not the Master say, "My peace I give unto you"? Yea, verily, but note the qualification immediately added, "NOT AS THE WORLD GIVETH, give I unto you. . . . In the world ye shall have tribulation; but be of good cheer; I have overcome the world." Here is the secret and the explanation. Heavenly rest hath no flavor of worldly ease, and he who would rise to a higher plane of being may ascend through spiritual overcoming, alone. Spiritual progress can never be realized so long as we are endeavoring to disown or avoid the difficulties in our path; whatever their nature, it is the province of truth to heal them all, and there is none other way given "whereby we must be saved." The "old man," with all that pertains to him, must be put off, and yet the peace of God is not an aftermath of the struggle, it is coincident with it. The reward of work well done is always more and nobler work. Said Jesus, "My Father worketh hitherto, and I work." Working together with God, the Christ's overcoming, the demonstration of Life, Truth, and Love, in and over the incidents of human experience, frees us, one by one, from sicknesses and from sins, and the joy of true living is won and maintained as the faithful heart finds its own place beneath Love's sheltering wing.

JOHN B. WILLIS.

Our Responsibilities.

THE inaugural address of President Roosevelt has been read with interest in all parts of the world, an interest which attaches not so much to the immediate occasion as to the fact that the ideals of a great and free nation are necessarily expressed at such a time. In referring to present conditions Mr. Roosevelt said,—

"Never before have men tried so vast and formidable an experiment as that of administering the affairs of a continent under the forms of a democratic republic. . . . Upon the success of our experiment much depends; not only as regards our own welfare, but as regards the welfare of mankind. If we fail, the cause of free self-government throughout the world will rock to its foundations; and, therefore, our responsibility is heavy, to ourselves, to the world as it is to-day, and to the generations yet unborn.

"There is no good reason why we should fear the future, but there is every reason why we should face it seriously, neither hiding from ourselves the gravity of the problems before us, nor fearing to approach these problems with the unbending, unflinching purpose to solve them aright. . . . We know that self-government is difficult. We know that no people needs such high traits of character as that people which seeks to govern its affairs aright through the freely expressed will of the free men who compose it. But we have faith that we shall not prove false to the memories of the men of the mighty past. They did their work, they left us the splendid heritage we now enjoy. We in our turn have an assured confidence that we shall be able to leave this heritage unwasted and enlarged to our children and our children's children. To do so we must show, not merely in great crises, but in the every-day affairs of life, the qualities of practical intelligence, of courage, of hardihood and endurance, and, above all, the power of devotion to a lofty ideal, which made great the men who founded this republic."

It is not only true that never before was such a vast undertaking, in the way of government, attempted, but in this country it was entered upon in the face of a well-nigh universal opinion against its success. It cannot be denied that many seemingly undesirable elements have been brought to the citizenship of this country. Not only have the down-trodden and the unfortunate sought its protection, but those as well who were driven by legal or social condemnation from other lands. All these have, however, found in this country at least an opportunity to prove the possibilities of manhood under favorable conditions, and the success of all in doing this, with satisfaction to themselves and with honor to this country, depends upon their intelligent recognition of divine Principle, which is the only foundation of right and of justice, and their unfaltering obedience to its freedom-sustaining laws. The problem of self-government can be rightly solved only as each man sees his relation to this Principle and finds his happiness and prosperity in living in accord with its demands. With all lofty ideals of government Christian Scientists are heartily in sympathy; and they are daily gaining a deeper sense of the infinite possibilities of good; greater faith in their universal realization. Like this nation, Christian Science receives recruits from many widely-differing conditions of human experience,—the sick, the sorrowful, the sinful, the oppressed,—but in this new realm of thought the heavy fetters of age-honored beliefs are stricken off, and here, too, the limitless opportunities which come to all under divine government, awaken new "energy, self-reliance, and individual initiative."

All Christians, the world over, should rejoice as they read of the enthusiasm which was manifested when the President took the oath of office on the Bible. It is another proof that the Bible is to-day honored as never before; and well it may be, for it contains the charter of universal freedom and proclaims a "government and peace" that shall know no end. It teaches us how to defend our rights by

doing right, and as the President has said, with respect to the affairs of the nation,—to approach all our problems “with the unbending, unflinching purpose to solve them aright.” As Christian Scientists we have no excuse for yielding to the besetments of materiality, for in the working out of our individual problems, no less than in those that relate to our Cause, every step of the way is safeguarded by the truth which the study of our text-book reveals, truth which illumines for us all history, secular and sacred, and shows the baseness, the utter failure of the life that is lived for material and personal ends, and the greatness of the immortal aspiration which identifies itself with the unfolding purposes of good.

Like this nation, Christian Scientists have received a glorious heritage from the past as well as unmeasured blessings in the present,—a heritage of truth realized and demonstrated, and they can surely do no less than bend all their energies to the task of passing it on to posterity in all its fulness, thus becoming worthy to claim the promise, “Them that honor me I will honor.”

ANNIE M. KNOTT.

Letters to our Leader.

Hallingbury Place, Bishop's Stortford, England,

February 9, 1905.

Dearest Mrs. Eddy:—Mrs. Colles tells me that it gives you pleasure to receive from your followers expressions of their love and gratitude, and that the knowledge of how you are helping those who are trying to live Christian Science, cheers you on your way and lightens your heavy burden of work. If this be so, then I may venture to express to you in some little measure what I feel as regards yourself, and the new-old truth that has come to us through you. Indeed I love you for your unselfish life-work, and I thank God for giving you to us in this age. I thank you, too, not only for the work of the past, but for that of the present, and for the still more wonderful future that is coming. In this we desire to follow you joyfully in every step of the way on the upward road to Spirit. It is a little more than two years since the blessings of Christian Science came to me and mine. We are nearly all of us going the same road in hope and happiness, and every day of our lives makes us love and revere our dear Leader more.

The truth is growing wonderfully in this old Mother-Country. It is leavening the whole lump in all sorts of ways, but there is more to unlearn over here, of tradition and form, than in America, and much class prejudice in respect of religion to overcome. But the church has woken up to know that it ought to heal and is already much put about how to do it. It is joyful to look forward to new developments in the march of truth. Hoping I have not taken up too much of your time, I can only end as I began, with the truest love and gratitude.

Believe me, dear Mrs. Eddy,

Yours sincerely and gratefully,
(The Lady) ALICE ARCHER HOUBLON.

Atlanta, Ga., February 28, 1905.

Rev. Mary Baker Eddy,

Pleasant View, Concord, N. H.

Beloved Leader:—Recently, while running down a point of law, I had occasion to refer to an old law dictionary entitled, “A Law Dictionary adapted to the Constitution and Laws of the United States of America and of the Several States of the American Union,” by John Bouvier, and published in the year 1858. By chance my attention was drawn to the word “Christianity” on page 227 of Volume I., under which were a number of references to certain statutory enactments and decisions in the United States, some of which may now be in force, though lost sight of, and thinking that possibly an occasion might arise where they could even now be used with telling effect in behalf

of the Cause of Christian Science, I enclose them to you. I have not had an opportunity to make an examination of any of the citations, and it may be that they are valuable only as a matter of history in showing the important, yea, vital part, the spirit of Christianity played in the formation of our government and the making of its laws during the first half century of its existence.

“CHRISTIANITY. The religion established by Jesus Christ.

“2. Christianity has been judicially declared to be a part of the common law of Pennsylvania: 11 Serg. & Rawle, 394; 5 Binn. R. 555; of New York: 8 Johns. R. 291; of Connecticut, 2 Swift's System, 321; of Massachusetts, Dane's Ab. vol. 7, c. 219, a. 2, 19.

“To write or speak contemptuously and maliciously against it, is an indictable offence. Vide Cooper on the Law of Libel, 59 and 114, et seq.; and generally, 1 Russ. on Cr. 217; 1 Hawk, c. 5; 1 Vent. 293; 3 Keb. 607; 1 Barn. & Cress. 26; S. C. 8 Eng. Com. Law R. 14; Barnard, 162; Fitzgib. 66; Roscoe, Cr. Ev. 524; 2 Str. 834; 3 Barn. & Ald. 161; S. C. 5 Eng. Com. Law R. 249; Jeff. Rep. Appx. See 1 Cro. Jac. 421; Vent. 239; 3 Keb. 607; Cooke on Def. 74; 2 How. S. C. Rep. 127, 197 to 201.”

Gratefully,

WM. M. GOODWIN.

Philadelphia, Pa., March 7, 1905.

Rev. Mary Baker G. Eddy.

Dear Leader:—While studying the Lesson-Sermon today, I was so filled with love and gratitude for your patient, noble life, that I must send at once this message. Less than two years ago, while lying at the point of death in one of the hospitals in this city, I was healed in Christian Science. The healing was so beautiful and so rapid, that it was said a miracle was taking place in my room. I knew almost nothing of the teachings of Christian Science at the time, but when my nurse took me out into the hospital hall, a few days after the treatments had commenced, I was conscious that God walked beside me.

I can find no words to express my gratitude to God; to you, His Christ-like messenger; to the faithful practitioner who led me out of that dream, and to the dear teacher who is ever ready to help me on my journey from “sense to Soul.” I have but one desire,—to be true to God and to this holy Cause. In deepest love and gratitude.

Your student's student,

ETHEL M. SIMS.

This, then, is our answer: a man must sacrifice his *sense of self* daily, in order to show his love for his friends. He must destroy all afflictive, human sense of unmerited censure, misconstrued motives, misunderstood aspirations. Despite the rebuff of unselfish desire, perchance the scorn of kindly endeavor, he must love all actively and only.—ANON.

Notice.

The next admission of candidates to membership in The Mother Church will be June 6, 1905. Applications must be in the hands of the Clerk on or before May 15, 1905.

An application sent to the Clerk of the Church does not constitute the applicant a member; he must be elected to membership by the Christian Science Board of Directors, at which time notice of election will be sent.

Notice to Branch Churches.

Each branch Church of Christ, Scientist, is requested to send, on or before May 1, a report of its total membership (not a list of its members) as of record April 1, 1905, to William B. Johnson, C.S.D., Clerk of The Mother Church, 239 Huntington Avenue, Boston, Mass.

Testimonies of Healing.

"For unto us a child is born, unto us a son is given: . . . and his name shall be called Wonderful. . . . Of the increase of his government and peace there shall be no end."

It is this sense of wonder and peace that appeals first to the Christian Scientist, and so it has been with me. After suffering for years from the demon of intemperance, years that have dragged wearily on, each to a more desolate conclusion than the preceding, years of sorrow, sadness, and seemingly hopeless struggle, the Christ-truth revealed in Christian Science has dispelled the clouds of earth-sense and "I know that my redeemer liveth."

For sixteen years I had been the slave of an appetite for strong drink. With this had come all the attendant evils of morbid sensitiveness, sin, selfishness, and worldly pride. I had also been addicted to the use of tobacco in different forms, including cigarettes,—a habit for the mastery of which I had battled for years with no seeming effect. I was what is called a periodical drinker, and scarcely ever drank at all without drinking to a state of complete intoxication. The habit had been growing on me, with increasing hold, until I was forced to seek help. Eight years ago I took one of the best known drink cures, and since that time I have taken three other alleged cures, besides private treatment from several regular physicians. I had tried different systems of dieting, physical culture, Turkish and other baths, without relief. I had gone away and lived alone in the mountains, chopping a notch on a tree for every day that I had kept my pledge. In addition to this I was peevish, irritable, and over-sensitive to either the slightest criticism or praise. My life was an incoherent and inconsistent muddle. I was up in the clouds one day and in the depths the next. Brilliant plans for future good and suggestions for the fulfilment of the highest ideals would come to me, but I lacked the scientific understanding to make them practical facts in my daily life. I was always given credit for the honest efforts I made toward reform, but the realization of actual success seemed to be getting farther away.

Finally, one night, when in an intoxicated condition, I wandered into a temperance meeting, and became interested in the thought presented, that God could help me out of all my troubles. I had been brought up in an orthodox church, but had drifted away from all ideas of religion since early manhood. The result of this meeting was that I signed the pledge, put on the "blue ribbon," and for a few months was one of the most earnest co-workers. But the fear of the old conditions was still upon me, and in an evil day the hypnotic suggestion again overpowered me and I fell. Then, in deep humiliation, I set to work earnestly, and if ever a man prayed diligently for deliverance I did. But I still continued to fall, and gradually this hope, too, failed me. I had managed to retain my position, my employers having knowledge of my efforts to overcome the habit, but they finally said that the only thing that would keep me from drinking would be to put me on an island in the Pacific Ocean where I could not get the drink. I had by this time come to be in worse condition than ever before in my life, and at times it became necessary for my friends to take me to the hospital, and there I was frequently strapped to a cot or put under the influence of opiates until the symptoms wore away.

This was my condition when, a year and a half ago, it became necessary for me to visit Old Mexico, and that visit proved to me that divine Love was leading me. In the City of Mexico my business brought me into touch with a Christian Scientist, and it was there, in that far country, amid the depths of despair, my soul still crying out for help, that the dear light of Truth came into my life. Tenderly and lovingly it came,—"fairer than daylight dawning"—and as of old the Voice said, make straight the way of the Lord, so in my poor life I beheld "the Lamb of God that taketh away the sin of the world."

It is true that my stubborn human will rebelled. It is true that I ridiculed the very dear friend who was trying so lovingly and patiently to teach me. How well I remember asking him, "If I put my finger in the fire, it will burn, won't it?" and "If I cut myself, it will smart and bleed, won't it?" But with infinite patience and tenderness he still insisted that God has no consciousness of evil, that the real man had never become offensive in the sight of the Father; that I had been cheated out of all that was best and noblest in life by a false belief; that the kingdom of heaven was not a long way off, up in the sky, that it was within me, if I would only look and see it; that God was not like an high priest, far off, somewhere, who, if I prayed long and earnestly enough, would finally yield and grant me the pardon for which I sought. Gradually the scales fell from my eyes, the light came flooding in, and all the dreary darkness vanished.

When it was known to some of my orthodox friends that I was becoming interested in Christian Science, they hastened to assure me that there was nothing in Christian Science that was not to be found in the Bible, that the religion of my father and mother should be good enough for me, that Mrs. Eddy had added nothing to the gospel words taught by Jesus, and finally that it was not needed in my case. They added that all I had to do was to cling to the dear old family Bible. Right here let me say this,—the difference between my old faith in, and my new understanding of that same Bible measures just the difference between heaven and hell, between success and failure. When I lost the fear of falling I lost the danger of falling, and I can now listen to the reading of the twenty-fourth verse of Jude and know what it means. "Now unto him that is able to keep you from falling, and to present you faultless before the presence of his glory with exceeding joy." I can say in all truth that the last vestige of desire for intoxicating drink is gone, and with David of old I can sing, "Thou hast enlarged my steps under me, that my feet did not slip." I have as much desire to drink out of a bottle of ink as out of a bottle of whiskey. I am also absolutely free from the desire to use tobacco in any form. I have gained thirty pounds in weight, and look and act and feel like a new man. In fact I am a new man, having "put off the old man with his deeds."

Our home is now a heaven of peace and rest. My wife and I have become members of Second Church of Christ, Scientist, and our little daughter is a member of that Sunday School. Great as has been the victory with me in the matter of strong drink, yet I consider that as merely incidental in the vastly greater process of spiritual regeneration that has taken place. The method of my healing is beautifully set forth in Science and Health, page 327, where Mrs. Eddy explains the true sense of reform. This covers it all more perfectly than I could explain it. Thus, in a life that was seemingly shorn of all the beauty and grace that are man's by inherent right, has been demonstrated with marvelous accuracy the certain, scientific workings of this God-given truth, and for all the rich and priceless blessings that have come into my life I am deeply grateful.

We sometimes hear of those who become lost in a forest and wander about until their strength is exhausted. Suppose, for a moment, that you were in that condition and, as all human hope seemed denied you and you were about to give up in despair, some kind friend came and said, "Do not faint, I have found the way out; follow me, and I will show you how to go." Suppose that that friend had clambered up the difficult way alone, amid the thorns and cruel rocks, for the sole purpose of bringing to you this message, and you had proven by actual demonstration that this was the true and the living way back to health, happiness, and holiness; you would be grateful, would you not? So in like manner am I grateful, and I am proud to say to the world, Thank God for Mrs. Eddy and the Christ-truth that has been given to a fainting world through her life-ministry.—W. T. SELLECK, Los Angeles, Cal.

How can I let the months pass by while my life is so filled with the blessings that have come to me through Christian Science, and not make some acknowledgment of it? The time has now come when I am so possessed with the consciousness of what God has done for me, that I must say something. Some years ago, when I stood alone in the world, when everything in life that I held dear was snatched away from me in a few hours, I was told by my dear old minister, "You must submit to the hand of God, it is all His doing and He knows best." I, however, rebelled, and continued in rebellion until I was so miserable that I turned to my Bible once more, but there seemed to be no comfort. I could not find comfort in a God who would send me so much misery, and I gave it all up.

The perplexities of my life absorbed me, and I was growing harder and more bitter every day. I was conscious of this, and in a blind sort of way prayed to be delivered from such intense bitterness. Finally, through a friend, I heard of Christian Science. His persistence in constantly talking Christian Science worried me, so to quiet him I promised to attend a Christian Science lecture. Judge Ewing was the lecturer and I shall never forget his message of love. It came right home to my hungry heart. I knew he had something I did not have, something which I wanted, and right there I determined to have it.

It is four years since my eyes were opened to the truth, and now I have no words to express my gratitude to God for His love, and to Mrs. Eddy, because it is through her I know that God is Love, but I can prove my gratitude by my life. Through the light that Science and Health has thrown upon the Bible, I now find in it comfort, love, guidance for every condition, every phase of life. I cannot close without a word of thankfulness for the *Sentinel*. After reading it I have often gained new courage, a firmer trust, a nearer consciousness of the Father-Mother love.

NETTIE R. CRADDOCK, Baltimore, Md.

I feel it my bounden duty to add my testimony to help others hungering for the truth. There may be some one having the bitter experience that I had with the depressing disease, chronic diarrhoea. Through the ever-ready power of Truth and Love this disease was overcome in two years. I had suffered from it for five years, and had used all the material means that could be thought of, but they were of no avail. Another ailment was a crushed kneecap. When one aggravated part about the knee was healed another sore would appear. It took a month's faithful work in Christian Science to heal me, and it seemed a very slow demonstration to me, but during the trying ordeal I was being purged from the dross of materiality, and was putting on a new garment, even the robe of righteousness. Our Leader's prayer for "The Big Children" (Miscellaneous Writings, p. 400) came to me with great comfort, also the first chapter of James, which enabled me to "let patience have her perfect work."

MRS. H. E. BELL, San Jose, Cal.

Christian Science has done so much for me, both spiritually and physically, that life wears a totally different aspect, and my heartfelt thanks are due to God for revealing His truth to Mrs. Eddy, and for her loving unselfishness that enables us to benefit by it. For years I suffered with my eyes, and was even threatened with blindness; in fact the doctor forbade me to use my eyes. One doctor kept me in a dark room for a month, and only those who have experienced it know what that means. For a year I was quite unable to read, write, sew, or do anything that required looking at, though I could see to go about with dark glasses on. I obtained great relief from the medical treatment I then received, but it was Christian Science that cured me. The pain at times was excruciating, both in my eyes and head, but the doctor gave me glasses which I had to wear always, and which enabled me to see fairly

well for a long time. Later on, however, the old trouble returned, and I felt I must get further advice.

Fortunately for me, an old friend, who had herself been very greatly helped, told me of Christian Science. Half doubtfully I resolved to try it. The second day I left off the glasses, and could see to read without them, except at night, and I have no doubt that ere long I will be able to do without them altogether. The pain and headaches have quite gone. An ailment from which I had suffered so long as I can remember was also cured, though not so speedily, and I mention this fact to encourage any who are doubtful of success, if the healing seems retarded. Do not despair, all will come right if you only keep on. I have found it best to try to discover where lies the fault in oneself, which calls for patient work to uncover and destroy. I also had great trouble with my heart. I had been warned not to run or hurry; if I did so, I had to hold on to whatever was nearest and gasp for breath. All this has gone. The worst thing of all, a terrible mental depression which made me dread to go among people, has also quite disappeared, and instead has come a buoyancy and lightness of heart which increases as I realize, through Christian Science, that "Perfect love casteth out fear;" and I have come to feel the "peace of God, which passeth all understanding." I have always received the greatest kindness from my doctors, but it was not the loving-kindness of the Christian Science practitioner, who reflects so much of divine Love, and to whom my heartfelt thanks are due for guiding me in the right way.

There is so much to learn, and to unlearn, that one is often tempted to be discouraged; but, if the way seems dark, we are sure comfort is not far off, if we press on, remembering we are God's children and must reflect divine Love, and that He is ever ready to help us. Instead of suffering from a sense of responsibility, Christian Science has shown me that Love is the source of all supply, and I am learning to trust Love for all. My husband and daughter are interested in Christian Science, and have also received many benefits from it.

ADA S. COLQUHOUN, Sydney, Australia.

During the year and a half in which I have been interested in Christian Science, I have had many proofs in myself of the physical healing, and not alone in the physical, but harmony has been expressed in my daily life. Where I used to see only faults in others I now look for good, and the love I give others is returned to me. It is with a heart full of gratitude that I try to tell what good I have found through Christian Science treatment, after having been in poor health for fifteen years. I was healed of nervous prostration, besides a disease of the bowels for which I had undergone an operation, and many lesser ills. Notwithstanding that my physician had told me I never would be able to work again, I have, with the help of Christian Science, been able to do more work than ever before, and with more ease. After reading Science and Health I understand the Bible better than ever before, and receive much help through the study of the Quarterly Bible Lesson every week. I also have been able to prove the truth of the statement in Science and Health, page 304, line 11, in the overcoming of sorrow.

I have had many evidences of God's protecting care, for which I am very thankful. Words cannot express my gratitude for the unmeasured patience and kindness which have guided me in this pleasant way. I want to try daily to be worthy of the blessings Christian Science has brought me.

MRS. R. E. MANLEY, Toledo, O.

"This is life eternal, that they might know thee the only true God." I have had such a glorious proof of the truth of these words, and of God's care and protection in what, to mortal sense, seemed a miraculous escape from death, that my heart goes out in deep gratitude to Him whom we

call Father. On the morning of January 15, 1902, I was run over by a runaway horse. I was directly in front of a plate glass window and the horse dashed through the window, making an opening for me and thus preventing my being crushed against the brick block. I received two cuts on the head from the glass, one of them being laid open to the bone. I extricated myself as best I could, before any one could get to my rescue. The crowd that gathered were amazed to see me emerge alive and walk across the street into a store. A physician who arrived at this time said he had better sew the wounds up. I submitted to the sewing of one, while at the same time realizing the truth for myself. I experienced no pain or suffering whatever during the sewing up of the wound, which seemed to astonish the physician as well as those who witnessed it. The cut was directly over the right eye, and through the eyebrow, but it did not injure the eye.

In a few days I was about my work as usual. Surely Christian Science has taught us how to know and serve the living God. Through it we find a God who is nearer and clearer than all else. Love is our watchword and our guide, wherever we are and under whatever circumstances.

LIZZIE MAY WIGGIN, Haverhill, Mass.

My father was a minister, and the home of my childhood was full of love. I felt that no one could live closer to God than I did, but when I married, and the cares and disappointments of life came to me, I wondered why God did not hear my cry for help. For years I struggled and prayed to be delivered from the burden of sorrow and sickness. Four years ago Christian Science found me almost a wreck, mentally and physically. The doctors had told me that there was no hope of my ever being well, as they had done all they could for me. After reading Science and Health for a while I was able to help myself over many difficulties, but two years ago there came a great trouble, and for a while I felt that I would lose my reason. I asked for and received treatment from a student, and to-day I am rejoicing in health and happiness. My heart overflows with gratitude and love for the dear practitioner who so patiently led me, step by step, out of the mists of error into the sunshine of God's great love, where fetters fall and Truth makes free. I hope to be able to follow in the path which our dear Leader has marked out for us, through patience, perseverance, and love. Each day I ask that divine Love will guide and direct every one who has so lovingly helped me over the rugged way.—MRS. OLLIE VAUGHN, Schuyler, Neb.

I desire to give my grateful testimony to the healing and saving power of Christian Science. It is now a little more than a year since I first heard of it. Prior to that time I thought I was a Christian, but what a different insight Christian Science has given me of the truth that makes us free. I found great difficulty in understanding Science and Health, until I tried to practise its teachings; then I realized that God is working in us to will and to do, of His good pleasure. I cannot say that I have been healed of any severe sickness, but a new happiness has come into my life through the small understanding that I have, and my one great desire is to know more of this grand and practical religion. From a child I had spells of great depression, feeling that the world was a very hard and unkind place to live in, and looking forward to death as a friend that was to set me at liberty. Now I know that liberty is a present fact, for divine Love is ever-present and is all powerful. I should like to mention an experience that came to me when I had only read a very little in Science and Health. It was one evening last summer; I was lighting a lamp that was placed in a bracket on the wall. Being hurried, I jumped on a chair to reach the lamp, and struck my head a sharp blow on a projection of the bracket. The force of the blow made a cut which bled a good deal. I

was alone at the time and began to feel rather faint when the blood ran over my face, but I thought that this was an opportunity to prove the truth of what I had been reading. The words of Scripture, "I am the Lord that healeth thee," came to me with all the impressiveness of an audible voice. I then remembered that I had been reading in Science and Health, and I argued that this was only a false material sense and had nothing to do with God. All the throbbing and pain stopped instantly, and a beautiful uplifted feeling took possession of me. I continued my work, and never had any more trouble from the cut. I have had many other proofs since then that Christian Science is a message from God, and that a patient seeking for Truth does set us free from the fear of poverty and sickness, and more than all, it is uncovering and destroying sin. I am full of gratitude to God, who has given us all good things, and my thoughts go out in love to all the world, especially to all faithful Christian Scientists who, in seeking "first the kingdom of God, and His righteousness," bring blessing to themselves and all around them. That I love Mrs. Eddy, goes without saying.

EDITH E. MARTIN, London, England.

I have often desired to place upon record my gratitude for God's wonderful love bestowed upon me through Christian Science. I had long been looking for something, I knew not what, until Christian Science was first explained to me, then the light came to me. It was what I wanted, what I needed, what I had been looking for, and my whole being responded to it. I have seen many demonstrations,—grand and beautiful,—but greatest of all was that which came to myself. I felt the rod, and through divine Love, reached forth my hand, received Love's staff, passed under the rod into health and understanding.

I had suffered for years with that dreadful disease cancer,—having endured the surgeon's knife twice without help. I went to Kansas City a little over a year ago, and there found a practitioner (one of God's children, indeed), and in five weeks was perfectly healed. I can find no words to express my love (for this is greater than gratitude) to God, to Mrs. Eddy, and to the practitioner, not only for the healing, but for the understanding of the allness of God and for the spiritual light that comes with each day's study of our text-book, "Science and Health with Key to the Scriptures."

I am more than happy to tell of the power of divine Love, in the hope that some one may be induced to come to this living fountain and freely drink.

MRS. D. A. MIMS, Los Angeles, Cal.

Unity.

Forgive, O Lord, our severing ways,
The separate altars that we raise,
The varying tongues that speak Thy praise!

Suffice it now. In time to be
Shall one great temple rise to Thee,
Thy church our broad humanity.

White flowers of love its walls shall climb,
Sweet bells of peace shall ring its chime,
Its days shall all be holy time.

The hymn, long sought, shall then be heard,
The music of the world's accord,
Confessing Christ, the inward word!

That song shall swell from shore to shore,
One faith, one love, one hope restore
The seamless garb that Jesus wore!

JOHN GREENLEAF WHITTIER.

From our Exchanges.

Spiritual authority of the Christian ministry was the theme upon which Dr. Lyman Abbott spoke to the Congregationalist ministers of Boston recently. He said, "If we are to do our work as it should be done, we must speak with authority; but of late there has been a sense of dread lest we assume this prerogative to too extreme a point. The result has been that we have gone to quite the other extreme. We have had to meet so many of those changing conditions of life which are sweeping men away from the Church, that it is high time we possessed some secret so that we may speak with authority. When the prophets came to speak they did not play with their subject; they spoke with authority; and so did Jesus, and Paul no less so. Where, then, did they get this authority? Not from the Bible, for that book was not then written; not from the Church, for that did not exist—at least, when Moses spoke. Christ did not get it from the Church, for the Church excommunicated him, and the Jewish Church turned out Paul. Neither did this authority come from reason, for there is nothing of the argumentative in the Old Testament. It was not derived from miracles, for there are those in the New Testament who did not perform miracles. Neither did it rest on fulfilled prophecy." But Dr. Abbott finds the authority in spiritual experience, which is primary in the individual; it cannot be borrowed, but it can be reinforced. We are not more impressed by his sources of authority than by the practical necessity of it. No one can thoughtfully observe the religious conditions of to-day and not be made to pause by the wondrous power even of assumed authority. Multitudes are following unworthy leadership because of the authority of the voice speaking; multitudes are deserting worthy leaders because they have lost the note of authority. The ministry that comes before the world with a positive, an assertive, a confident message shall not want for a following.—*The Universalist Leader*.

Henry S. Pritchett, President of Massachusetts Institute of Technology, at the recent Religious Education Association in Boston said,—

The education of the conscience of mankind is not a matter of ethics, but of religion; not a matter of moral distinctions and of rules of life, but a matter of spiritual development in a new environment; not a matter of high ethical appreciation, but a matter of the divine life in the individual human soul. If men are to be led through the wilderness of freedom into the promised land of a higher religious conscience and a deeper service, it will come only through religious leadership, through one capable of dealing with the conditions of the day and of the age—the age of reason and freedom.

If our theology has not truth in it which takes hold of the lives of men and reshapes them in the image of Christ, it is not a true theology, whether it is old or new. If that kind of truth is in it, let us tell that and nothing else. Let us stop preaching about the gospel, and begin to preach the gospel. We have been filing and burnishing the tool long enough; now let us see what kind of work we can do with it.

WASHINGTON GLADDEN.
The Congregationalist.

The great end and rich blessing of the Christian revelation is the perfect union and communion of the soul with God. There is obtained a possession of the divine Presence and a clear consciousness of the nearness of God. This is a fulfilment of the declaration, "If a man love me, he will keep my words: and my Father will love him, and we will come unto him, and make our abode with him."

The Watchman.

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, \$5. Twelve or more to one address, \$4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, \$1 per copy; \$5 per half dozen; \$9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, Treasurer.
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, \$2.40 per annum; \$1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, \$1.00 in advance; all other countries, \$1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH of Rochester, N. Y.

CHRISTIAN SCIENCE. Its Promises and their Fulfilment. By EDWARD A. KIMBALL of Chicago, Ill.

CHRISTIAN SCIENCE. Is it Christian? By Mrs. SUE HARPER MIMS of Atlanta, Ga.

CHRISTIAN SCIENCE. Its Work and Scope. By CAROL NORTON of New York City.

CHRISTIAN SCIENCE. The True Idealism. By ANNIE M. KNOTT.

Price. Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, 75 cents; five hundred copies, \$3.25; one thousand copies, \$6.00. Orders for supplements may be assorted as desired.

German Supplements

CHRISTIAN SCIENCE. Its Promises and their Fulfilment. By EDWARD A. KIMBALL of Chicago, Ill.

CHRISTIAN SCIENCE. The Christianity of Christ. By Rev. IRVING G. TOMLINSON.

Works on Christian Science

Written by Rev. MARY BAKER G. EDDY

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid \$3 18

Two to twelve books (cloth only) to one address,
each, prepaid 3 00
Twelve or more books to one address, each, prepaid 2 75

Full leather, stiff beveled boards, gilt edges, same paper
as in cloth binding, each, prepaid 4 00
Twelve or more to one address, each, prepaid 3 75

Morocco, limp, round corners, gilt edges, Oxford India
Bible paper, convenient for pocket, each, prepaid 5 00
Twelve or more to one address, each, prepaid 4 75

Levant, divinity circuit, leather-lined, round corners, gilt
edges, silk-sewed, heavy Oxford India Bible Paper,
wide margins, each, prepaid 6 00
Twelve or more to one address, each, prepaid 5 75

Orders for Science and Health, in lots of twelve or more to one
address, may include any or all the different styles of binding.

A COMPLETE CONCORDANCE to Science and Health
with Key to the Scriptures, 595 pp., 10 x 7. Bound in
cloth, marbled edges. Price, single copy, prepaid . . . \$5 00
Twelve or more copies to one address, each 4 50

MISCELLANEOUS WRITINGS. A book of 471 pages,
containing articles published in THE CHRISTIAN SCIENCE
JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid 2 25
Twelve or more books to one address, each, prepaid 2 00

Morocco, limp, round corners, gilt edges, convenient for
pocket, each, prepaid 4 00
Twelve or more to one address, each, prepaid 3 75

Levant, divinity circuit, leather-lined to edge, round cor-
ners, gilt edges, silk-sewed, each, prepaid 5 00
Twelve or more to one address, each, prepaid 4 75

Orders for Miscellaneous Writings in lots of twelve or more to
one address may include any or all the different styles of
binding.

No discount will be allowed on orders for twelve books which in-
clude both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid \$3 00
Twelve or more books to one address, each, prepaid 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valu-
able book, containing a brief and concise statement of Divine
Science, *alias* Christian Science, in the form of questions and
answers. It is a very succinct statement of Christian Science.
35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents;
\$3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidat-
ing and enforcing practical Christian Science, thus affording
invaluable directions for all true Scientists. The following
are some of the topics treated: SEEDTIME AND HARVEST,
DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION,
SUFFERING FROM OTHERS' THOUGHTS, CRIMES, MATTER, SOUL.
80 pages, cloth covers. Prices, prepaid, 55 cents; \$2.50 half
dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each;
\$5.00 half dozen; \$9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical
sketch of the author. The way she was led to the discovery
of Christian Science; its growth and fundamental idea; 120
pages, cloth covers, gilt edges. Prices, prepaid, \$1.00; \$5.00
half dozen; \$9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the
history and to the readers of Christian Science; containing
Dedicatory Sermon delivered at the Mother Church, and
scintillations from the press on that occasion; 132 pages.
Prices, prepaid, \$1.00; \$5.00 half dozen; \$9.00 per dozen.

NO AND YES. A brief statement of very important points in
Christian Science. 56 pages. Pebbled cloth covers. Prices,
prepaid, 27 cents; per dozen, \$2.50.

CHRISTIAN SCIENCE versus PANTHEISM. The Pastor
Emeritus' Message delivered at the Communion Season in the
Mother Church in Boston, June, 1898. A clear and strong
refutation of the charge that Christian Scientists are Pan-
theists. Leatherette covers, 21 pages. Prices, prepaid, 26
cents; per dozen, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Mes-
sage of the Rev. Mary Baker G. Eddy to the Mother Church
on Communion Sunday, June, 1900. Deckle-edged. Prices,
prepaid, 26 cents; per dozen, \$2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev.
Mary Baker G. Eddy to the Mother Church on Communion
Sunday, June, 1901. Deckled edges; 50 pages. Prices, pre-
paid, 50 cents; per dozen, \$4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to
the Mother Church on Communion Sunday, June 15, 1902, by
the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled
edges. Prices, prepaid, 50 cents per copy; \$4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother
Church. Prices, prepaid, one copy, \$1.00; six copies to one
address, \$5.00; twelve copies to one address, \$9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17
pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per
dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14
pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per
dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music
by Lyman F. Brackett. Prices, prepaid, 50 cents per copy;
\$5.00 per dozen.

Direct all orders for above works, and make remittances payable to

cents; fifty copies, \$1.40; one hundred
copies, \$2.65.

*Entered at the Boston, Mass., post-office as
second-class mail matter.*

Items of Interest.

National.

Professor Robert Francis Harper of the University of Chicago, who is director of the expedition of the Oriental Exploration Fund, now in Assyria, has received a telegram announcing that the work of excavating the ruins of Bismya, which was suspended last autumn, is to be resumed by permission of the Turkish Government. Bismya, which has been identified as the Adab of ancient inscriptions, is one of the most ancient of Babylonian cities and flourished possibly as early as 4000 or 5000 B. C. No history of the place has ever been discovered and tradition does not record the name of the ruling dynasty. The site is between the Tigris and Euphrates rivers, ninety miles southeast of Bagdad.

A despatch from Minister Bowen at Caracas confirms the report as to the proceedings against the French Cable Company by the Venezuelan Government. Mr. Bowen says: "A suit has been begun by the Venezuelan Government against the French Cable Company to annul its concession and seize its property." It is assumed that the action is similar to that in the case of the Bermudez Asphalt Company, where the Venezuelan Government declared that the company had forfeited its concession by failing to live up to its undertaking to exploit other resources of the country besides asphalt and to open certain rivers to navigation. The French minister at Caracas has been instructed to inform the Venezuelan authorities that the proceedings must close. Two warships have been ordered to the scene.

Dr. Perrine, of the Lick Observatory, has discovered a seventh satellite of Jupiter. The discovery of the seventh moon was made on January 6, the day following the announcement of the discovery of the sixth satellite. Whether these new satellites are revolving around Jupiter in the same direction as the five inner satellites, or in an opposite direction, is not known. The planes of their orbits make a considerable angle with each other and large angles with the plane of Jupiter's equator. The distances of the two satellites from Jupiter are

probably between six and eight million miles.

Announcement has been made that the Boston, Cape Cod & New York Canal Company has been financed. The company is empowered to build a canal for the seven and one-half miles from the shore line of Buzzard's Bay to the shore line of Massachusetts Bay, together with four and one-half miles of approaches. Three years' time and \$12,000,000 will be required to complete the work.

The San Domingo treaty, which was submitted for ratification to the special session of the Senate, has been dropped for the present, as it could not, even in its amended form, command sufficient votes to secure its passage.

Foreign.

According to a bulletin of the American Chamber of Commerce in Paris, the number of strikes in France last year was 567, entailing a loss of about 2,500,000 days' work. There was about the same number of strikes in the previous year, with a similar loss of working time. In appealing to the law the initiative was taken eighty-nine times by workmen, three times by masters, and twice by the masters and men conjointly. In fifty-eight cases justices of the peace used their authority, and attempts at conciliation were found unavailing in about one-tenth of the whole number of strikes. In 122 of them the men were successful; in 223 a settlement was reached by compromise, and the number which failed was 233.

Japan has discovered a gold mine in the Kezen district of Rikuzen, Iwate Province, on Government property, which is expected to produce ten or fifteen million dollars yearly and to possess workable ore all told amounting to \$500,000,000—enough, if expectations are realized, to pay the war debt twice over.

Foreign Minister Villa Urrutia of Spain announces that King Alfonso will visit London after leaving Paris.

The famous hospice of St. Gothard has been destroyed by fire.

Industrial and Commercial.

So many improvements have been made in the machinery for manufacturing concrete building blocks as a substitute for building stone, and so generally have these blocks been accepted by the public, says the *Scientific American*, that it is only natural that the inventor should devote his attention to the material itself. Hitherto, concrete blocks, while vastly cheaper than stone and just as efficient in every way for the purposes they are used for, have been practically of a uniform color, which detracted, in the eyes of some prospective purchasers, from their value as a material for making houses. In an attempt to introduce the coloring matter into these building blocks, it was found in most cases that the strength of the block itself was lost to a great extent. Lately, however, a new material has been found which, when mixed with the concrete, will produce an almost perfect imitation of the stone that is used as a sample. Granite, with all its specks and black dots, can be imitated so that an expert will find it hard to differentiate. Indiana limestone can be made to look so nearly like the object of nature that, at a few inches' distance even, the imitation cannot be detected from the original. At a recent experiment, and using an automatic Hayden machine, twenty blocks per minute were turned out with ease, and the result was so strikingly like the original stone which was used as a model, that there was no doubt whatever that the time has come when persons of moderate means will be able to build imposing houses at less than one-sixth the cost of building them of real stone.

A solid train load of thirty cars of peanuts recently left Richmond, Va., over the Chesapeake & Ohio Railroad, bound for points in

the West and far Northwest. The shipment was made by the Columbia Peanut Company of Norfolk, the nuts coming from its three plants at Suffolk, Smithfield, and Petersburg, and all grown in Virginia or North Carolina. The quantity in bushels was about thirty thousand. The value of the shipment at the original price is about \$50,000 or \$60,000.

The tin mines of Cornwall are among the oldest in the world. The Phoenicians as early as 500 B. C. had discovered tin deposits there. The annual output of the world at present is 75,000 tons, of which 5,000 tons comes from Cornwall. Prior to 1875 the number of tons mined yearly at Cornwall was about ten thousand and formed about one-fourth of the world's output at that period.

China's resources of coal and iron are said to be among the largest and most favorably situated in the world. The extent of the great coal fields has been put at 400,000 square miles—twice the area of France and more than seventy times the aggregate extent of all the coal fields of Britain. Both the anthracite and bituminous varieties are said to be equal to the best product in Europe.

The Allan Line's turbine steamer *Victorian* was given a trial on the Clyde last week and made a speed of 194 knots an hour. She sailed on March 23 from Liverpool for Montreal. At a luncheon after her trial the chairman of the Allan Company said that all doubts as to the efficiency of turbine steamers had now been removed.

Vast fields of the highest grade of petroleum are reported to have been discovered north of the international boundary line in Alberta and Athabasca. The territory thus far prospected shows an area of two hundred square miles.

The world's coal production in 1903 reached the total of 864,000,000 long tons, of which the United States produced 319,000,000 tons, as against 230,000,000 by Great Britain, 160,000,000 by Germany, 39,000,000 by Austria-Hungary, and 35,000,000 by France.

The total deposits of all the people in the world in all the savings banks is said to amount to \$10,500,000,000. The United States accounts for over \$3,000,000,000 of this.

Nearly three million barrels of apples were put in cold storage last year. It is found that if properly packed and handled the fruit does not sensibly deteriorate.

General.

There are many surprises in the geography of Africa, says an article in the *Review of Reviews*. One of the greatest of these, perhaps, is the truth about the Desert of Sahara, which has for so long been supposed to consist exclusively of bleak, vast, uninhabitable wastes of sand. The truth seems to be that within the limits of the so-called desert there are vast stretches of land potentially fertile, awaiting only the touch of irrigation to make them blossom like the rose. In the south and central portions the Sahara is comparatively free from sand dunes and the oases are frequent and fertile. The climate generally is healthful, and the heat is not excessive. The temperature throughout the southern and eastern portions is moderate.

The severity of the winter season drawing to a close is evidenced by the fact that the Navy Department is confronted with the necessity of seeking and destroying no less than twenty-seven ocean derelicts which are lying in the great ocean lanes from Santiago to Newfoundland, and endangering shipping entering and leaving the Atlantic ports. The last Congress provided that one vessel should be set apart for this special service, and it is probable that the *Lebanon*, a 3000-ton collier, will be fitted out for this work at the Portsmouth (N. H.) Navy Yard.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

A Period of Overturning.

SAMUEL GREENWOOD.

I will overturn, overturn, overturn, . . . until he come whose right it is.—EZEKIEL.

It is an interesting and significant fact in connection with Mrs. Eddy's discovery of Christian Science in 1866, and her publication of its text-book, "Science and Health with Key to the Scriptures," in 1875, together with the remarkable growth of the movement since that time, that in the last forty years human thought has done more revising, correcting, and even discarding of its beliefs, theories, and practices than for centuries previous. The verity and reliability of some of these had been unquestioned hitherto, and they could only have passed out before the incoming of a truer understanding of being than brain knowledge could produce. Many, not understanding the nature and purpose of Christian Science, may see nothing more than a coincidence in this; but those who have discerned somewhat of the truth of this divine Science, and experienced its regenerative influence, recognize in these changes the signs of the dawning of a new epoch for the race, an epoch the most remarkable and blessed since the first advent of Christianity. These are surely times for earnest thinking, for the problem of the world's salvation is being solved on a higher plane and by a more potent rule than any to which mortal wisdom has aspired.

The passing of established material or religious beliefs is incidental to increased enlightenment. Human advancement has always been towards Truth; and whatever has been discarded and left behind has been some form of error, something that had been believed in through mistake or ignorance. This progress is not the evolution of truth latent in mortal thought, but is because a little more light has found room to enter, and so a little more darkness has disappeared before it. The Truth of being is not within but without materiality, and the degree of its discernment is the measure of removal from the material to the spiritual concept of being. As humanity takes a fresh step nearer this divine ideal, it abandons so much of its material belief, and recognizes the falsity of that which had been regarded a part of its truth.

Mortals are not now living in the true or real sense of being, else there were no discord in it. Their experience up through the past has made it a truism for to-day that material conditions are constantly liable to change, and therefore matter is not the basis of any permanent or scientific fact regarding life or man. This has become so apparent in recent years that the most eminent physical scientists are beginning to admit that there is probably no matter after all; or rather that what is known as matter is only a mental phenomenon, a concept that is within and not without the human thought. These changing conclusions regarding matter and mind are veritable indications of the passing away of the age-long, tyrannical reign of material law, to make way for the coming dominion of spiritual law. That this is the result of the change of thought inaugurated by Christian Science is evident when we gain an insight into its spiritual teachings, and consider that

there is nothing in human thought itself able to lift it above its own material plane. The concept of creation as material has enveloped the human problem in darkness, and only the light of divine Truth can illumine it. The material sense of being is itself darkness, and darkness cannot illumine itself. That which spiritualizes thought comes from above and beyond itself, and its coming is a revelation or discovery to mortals. This dawning on the human consciousness of the spiritual reality of things means the overturning of the false ideals that have usurped the divine fact in human consciousness.

If matter is the basic fact or origin of man, self-existent and self-expressed, it would be eternally established from the beginning. It would be the source of all intelligence, harmony, and immortality. It would be God. But no one can claim for matter any divine attribute or characteristic. Its supposed existence bases and includes all evil, all disease, crime, misery, and death. It is thus its own proof that it is the lie and not the truth concerning God and man. Hence it, and all pertaining to it in mortal belief, must sometime be overturned or superseded at the coming into human consciousness of the Truth of being, the Science that understands and declares man's unchanging reality as the idea or reflection of Spirit.—God. However much mortals may cling to their material sense of existence, because of their ignorance of spirituality, they have not concealed their dissatisfaction with the best that this sense has to offer them. This sense, then, cannot be the true one, and must eventually give place to that which is true, and which has no pain in it.

A mistake has no right to exist, and can exist no longer than the ignorance which holds it. No error can last forever, for it is in its very nature a deceit, an attempted usurpation of truth, and sooner or later must meet the fate of usurpers. The false claim of matter to occupy the place of Spirit, and to give life and happiness to man, is exposed by Christian Science and seen to be without any actual foundation in fact. This Science has revealed to mortals the truth of spiritual being, and this truth in its progressive demonstrations will "overturn, overturn, overturn" whatever stands in the way of man's emancipation from the flesh and evil, so that He "whose right it is" may reign supreme. This overturning has begun, and is awakening human thought into some recognition of its errors. Some of the accepted beliefs concerning matter, that were supposed to be as fixed as the sun, have already passed beyond recall, and others are preparing to follow. Dogmatic and repulsive beliefs about God, that at one time it was heresy to doubt, have already become as pagan barbarisms. More loving and kindly thoughts of God have forced these out. Differing religions are becoming more tolerant of each other, more brotherly, more united, while the general thought is more humane and merciful, less sordid and less hateful.

There must have been some overturning to make place for these newer and better conditions, and the reforming power has been the true idea of God which has been presented in Christian Science, the demonstration of which is daily brightening and purifying the mental atmosphere of mortals, though they may not be able to tell "from whence it cometh." These are but the beginnings of the new

order of things, foretold by Jesus, of that time when the Comforter should come and lead men "into all truth." Nineteen centuries since its utterance is not too soon for his prophecy to be fulfilled, and those who are expecting its fulfilment will be ready to see the signs thereof.

Jesus, when once speaking of the material temple as typical of mortal material concepts, said that not one stone of it should be left standing upon another that should not be thrown down. So also the Scriptures in many places refer to a time when the false and sinful conditions of the flesh shall pass away before the coming of God's kingdom, which kingdom is at hand. Never before since the early days of Christianity has there been such abundant evidence of God's presence with men, literally opening the blind eyes, and causing many that were lame and helpless to walk and praise God. Never before have material scientists come so near, in their investigations, to the stepping-off point where matter must be left behind. Never before have religious thinkers turned with such expectancy to the coming of a new and higher system of religion than has yet, by them, been known. Never before did the white dove of peace sit so serenely and securely above the clash and conflict of selfish interests. The errors that have held sway too long over mortals are surely passing away before the divine incoming to human consciousness of Christian Science, the Science of perfect God and of His perfect man.

Individual Work.

LAURA C. LYMAN.

THERE are many sentences in the Bible which seem so clear in their statements, so unmistakable in their meaning, and which are so illustrated in our familiar experiences, that there can be but one thought as to the lesson we are to learn from them, and such a sentence is this from Galatians, "Whatsoever a man soweth, that shall he also reap."

As we repeat it, the picture comes vividly to our minds, of the autumn fields, so wonderful and beautiful in their variety, but all governed by a single unvarying law,—the seed sown, springing forth into leaf, bud, and blossom, and producing in its time a seed precisely like that from which it sprang. The plant, separate in its identity, fills its place, great or small, grows, blooms, and sends forth its fragrance and beauty. "To every seed his own body."

As with the flowers in the fields of earth, so with the stars in the spaces of heaven. The light of one star never mingles with the light of another, but its rays travel in a straight line direct from their radiant source and with inconceivable rapidity, for "There is one glory of the sun, and another glory of the moon, and another glory of the stars: for one star differeth from another star in glory."

"So also is the resurrection of the dead,"—that awakening of the consciousness to the understanding that Life is God, eternal, omnipotent, omniscient, and man the forever expression of the presence of the most High, the expression of the divine Principle, Life, Truth, and Love, the silent, invisible, eternal force whose manifestation is the universe, including man, perfect in unity as each member accomplishes his appointed work.

We cannot see God, Truth, nor begin to understand the teaching of our Leader, given in aid of the redemption of the world, while we evade our individual responsibility, and we all need to watch and pray, in humility and love, that the universal work to be accomplished be not marred by our own lack of doing all that we should do.

The fault is in ourselves and in our own lack of spiritual perception, if we fail to know and declare the divine idea, the true and perfect man. However unlovely and unloving, perchance, the person seems to be, when the spiritual vision is made keen through Love, the false, limited beliefs fall from our sense of man as a garment. The veil of personality may temporarily hide, and only those who have love enough to penetrate its misty folds can enter into that

place "the Holiest of all," and stand face to face with God's image and likeness. Then shall we see, and not until then, that the glory of the whole is in the perfection of its every part, and the unfolding of this perfection marks the development, the spiritual growth, of the individual.

As our minds dwell upon the progress of human thought, both sacred and secular, the greater steps forward always present themselves in association with the name of the one through whom the law of advancement was manifested. Who can think of the great multitude of the children of Israel and the forty years of wandering and discipline, without immediately seeing the wise and majestic figure of Moses? Who can think of the dedication of the first Temple at Jerusalem without the kingly figure of Solomon standing at the altar?

St. Paul in his Epistle to the Hebrews fully recognized the essential work of the individual. He says, "And what shall I more say? for the time would fail me to tell of Gedeon, and of Barak, and of Samson, and of Jephthae; of David also, and Samuel, and of the prophets: who through faith subdued kingdoms, wrought righteousness, obtained promises, stopped the mouths of lions, quenched the violence of fire, escaped the edge of the sword, out of weakness were made strong, waxed valiant in fight, turned to flight the armies of the aliens."

In secular history, was it not Galileo who said, in opposition to the accepted thought of his time, "The world does move"? Do we not say Kepler's laws, Homer's "Iliad," the paintings of Raphael, the works of Shakespeare, etc., including the long, long list of both great and small, the sum total of whose work has made human history?

But above all, the work of Jesus the Master stands before the world, so separate and distinct, so mighty in its meekness, that down through the ages have echoed the tributes of those who said, "Never man spake like this man," and, "With authority commandeth he even the unclean spirits."

The great work of our dear Leader, Mrs. Eddy, is being more fully recognized to-day, and through the ages to come her words will give indisputable evidence of her loyalty to the teachings of the Word of God, while her grateful followers through love and gratitude will ever give her honor. Looking beyond the veil of the flesh they bow in reverence before the divine idea she has revealed,—the "daysman" in these latter times betwixt human need and infinite Love.

And we, as we follow in the "unity of the faith, and of the knowledge of the Son of God," may do the works our Master commanded us to do, meeting the demands of our Leader, and of our responsibility to manifest each for himself the divine idea.

"Even Athena grew."

ANNIE JESSEN.

THE old proverbs and bits of wisdom, as well as the stories of ancient mythology which have stayed with us from our school days, often come back with renewed force as we see them in the added light which Christian Science throws upon things. The proverb quoted above, which has come down to us from the Greeks, was familiar to the students of the classics in a certain university where, as a motto, it adorned the wall of the class room. I remember once seeing a series of pictures representing Athena in different periods of Grecian history, showing that, as the Greeks advanced in learning and civilization, their conception of the goddess of knowledge advanced, until we have the beautiful figure of the modern Greek Athena and the parallel conception of the Romans in Minerva.

In this way the lesson was taught that even the highest mental attainments are the result of growth, and that they are not reached at a bound. A careful study of the life and works of the Master shows progression and growth in understanding and power. From the simpler manifestations of awakening spiritual consciousness he progressed to

the crowning demonstration in his own resurrection and ascension.

It is only by constant growth, a continual rising by the things we put under our feet, that we can ever attain our eternal birthright, spiritual perfection. This growth comes through patient, persistent, and constant watchfulness, by striving for a more perfect realization of the ideal which has been set for us by the life and teaching of Christ Jesus, reaffirmed in the writings and the daily example of our Leader, Mrs. Eddy, who with such wonderful patience and wisdom has given the world our text-book, *Science and Health*, to guide us every step of the way up to the high goal which all can and must reach, for "with God nothing shall be impossible."

Consecrated Oil.

EMMA LUTZ.

IN the tenth chapter of John, we are told that Jesus was at Jerusalem at the "feast of the dedication," which some historians designate the "Dedication of the Altar," and others the "Lights," one of the observances being the illumination of the temple for eight days. A tradition says that when the temple-services were restored by Judas Maccabeus, when the Temple at Jerusalem was once more purified and re-dedicated to the service of God, the consecrated oil used for the illumination of the altar was found to have been desecrated. Only one flagon of that which was pure was found, sealed with the signet of the High Priest. This supply was thought to be only sufficient to feed for one day the sacred candlestick, but by a seeming miracle the flagon was continually replenished during eight days, till a fresh supply could be brought from Tekoah. Part of the observance was the lighting of eight candles on the first day and the extinguishing of one each day, till, on the eighth day, there was but one burning, when the eight were relighted. Was not this a prophecy of the revelation of the New Jerusalem and the true Temple-worship? The desecrated oil seems to represent the human sense which had become darkened, so that when the true temple-worship was to be restored, there was no "oil" pure enough to use in the sacred candlestick. Jesus represented the one flagon that was pure, sealed with the signet of the most High. Although his teachings were thought to be available only for his day, the light he kindled was kept burning, even though dimly in the latter days, until a fresh supply of oil came through Christian Science. The Tekoites from whom the fresh supply of oil was obtained were renowned for their activity in repairing the walls of Jerusalem, and those who keep the light of Divine Science burning should be no less active in strengthening the walls of the "New Jerusalem," and thus shall they be found worthy to furnish the "consecrated oil."

Lessons from a Homely Experience.

M. FANNIE WHITNEY.

SOME years ago my parents lived on a farm, and while spending a summer vacation there I thought to improve the condition of the homestead somewhat. We had an old-fashioned hardwood table with a heavy base, whose polish had worn off and which looked unsightly. In my ignorance of its value, I put a coat of paint upon the old table and then varnished it. I did this without my father's knowledge, but without the slightest apprehension that it would displease him. After it was done he said very quietly, "That table ought not to have been painted, it should have been sand-papered and polished again." His gentle remark made very little impression upon me at the time, as I felt justified in what I had done and thought the table greatly improved.

It was not until a year ago last spring that I fully realized what a mistake I had made, and then came a great desire to correct it. The table was moved into the shed and I commenced work, scraping off the paint inch by inch. It was very hard work, and so slow that it looked like an endless undertaking. I kept at work, however, doing a little at a time, and finally the paint was all removed. Then the surface was treated in the proper way, and all went well until my ignorance was again manifested and the polish was uneven. As if to further test my patience, perseverance, and endurance, it all had to be rubbed off and put on again. It often seemed like a foolish waste of time, and the temptation to give it up came to me a great many times, but the thought that it would please my father, more than anything else, inspired me to continue. When the result was finally accomplished I felt well paid for my work and thankful that I had continued my efforts to the end.

The lessons learned in this experience were many and valuable. I saw how patiently our heavenly Father, divine Love, waits for all to see their mistakes and then to repent and correct them. It may be a long time before we discover an error, and we may justify ourselves in what we have done, but sooner or later we are either led or forced to say, "I did wrong, and now I know it." The process of correcting some errors may be long and hard, and the temptation may often come to give up, but the thought that it will please the Father should inspire us with zeal to continue until the final victory is gained. The Master said, "There is joy in the presence of the angels of God over one sinner that repenteth." Thus the process of redemption goes on in each individual consciousness, and it will continue until all are redeemed. The "well done" will come when we learn to work for God alone, satisfied only when we "do those things that are pleasing in his sight."

"A Shut-in."

EDITH E. BROWN.

WHEN I was a child a periodical came to our home, one page of which was devoted to "The Shut-ins." I remember yet how the word used to stir in my child heart a sense of profound pity for those who, through sickness or infirmity of some sort, were debarred from the glorious sunshine and the beautiful world without. To-night, in my realization of truth, this memory came back to me, but how sweetly separated from all its sad associations! I realized what it means to be shut in with God, and error shut out so that it cannot find entrance. In my prayer there came to me a blessed glimpse of what this really means. I saw divine Love, and man,—Love's perfect idea,—dwelling together in unity, and that nothing can come into their dwelling-place "that defileth, . . . or maketh a lie." We need have no fear nor doubt, for God is here, and we may leave our affairs without reserve, without anxious thought, to His loving guidance. Our refuge is impervious to attack, and though error may long continue the siege, it must be in vain. "There shall no evil befall thee."

I desire to let no day pass without a prayer of gratitude to God for His wonderful goodness and for His "messenger" who has brought us these "good tidings of great joy."

[Written for the *Sentinel*.]

Justice.

W. D. MCCrackan.

KEEP step, my brothers, hail the glorious fray!
Together march to purify to-day!
All for each, and each for all,
And Love decrees that none shall fall.

Selected Articles.

To object to Christian Science because it denies the testimony of the physical senses, betrays a serious ignorance of even natural science, for the explanation of all phenomena, including the fundamental ones of form, color, and mass, rests on theories contrary to what the senses behold. In chemistry recent discoveries have upset theories considered final a few years ago.

It is hard to believe that men died the death of martyrs for advancing the astronomical theory now believed by every schoolboy, that the earth moves around the sun, and that it is spherical and not flat; but such is the fact. Christian Science goes one step farther, perhaps, when it declares the falsity of sense-testimony in regard to disease; but this was fully established by Christ Jesus two thousand years ago, when the lame walked and the blind saw. What are called his miracles were really the result of his knowledge of spiritual law, the truly natural law. Everything he did proved the subjugation of the material to the spiritual. His example is available in its entirety, for he said, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." The child who is learning the multiplication table is not expected to work the problems of calculus, although the latter is available to him when he has advanced far enough in the knowledge of mathematics. So no Christian Scientist claims at present to be able to do all that Jesus did; but we understand that his example is available for us when we are sufficiently advanced in Christian knowledge. Otherwise his own words would not be true. Christian Scientists believe thoroughly in the divinity of the life of Christ Jesus from his birth to his ascension, and they adore him for what he has done for man. It is no new gospel that we teach, but the one which all Christians profess. If we use our text-book to help us to understand that gospel and to make it more practical, are we to be condemned for it? If so, a Christian is under condemnation every time he uses a Bible help, a commentary, or even listens to a sermon. We rejoice that even our present knowledge of God is sufficient to meet our needs in sickness and in health more fully than other means have done.

We account for evil as Jesus did when he said that it was "a liar, and the father of it." We also believe that we can escape its wiles only in the way he proposes—"Ye shall know the truth, and the truth shall make you free." The mistake of the ages has been to assume the reality and truth of evil or a lie, and then to try to get rid of it. To know that it is a lie, and to know the truth which will destroy it, is effectual.

C. F. HACKETT.

Utica (N. Y.) *Herald*.

Ever since the allegorical talking serpent in the Garden of Eden attempted to pattern after the Creator by making gods of men, the human mind has been busy in its attempts to simulate divine activity. In the time of Moses, the magicians and sorcerers attempted to perform all the wonders wrought by Aaron, until their implements were destroyed by divine power. And until the coming of the Christ, the Israelites were continually beguiled. When Jesus healed the sick and cast out satanic thoughts by the power of God, even then the learned cried out, "He casteth out devils through the prince of the devils." Paul and Peter had their experiences with these counterfeiters of spiritual power. It is not surprising, therefore, that since the Christ-healing is again preached and practised, we should find it stated that the mighty works done through Christian Science can be duplicated by suggestive therapeutics.

The methods of a Christian Scientist and of one who practises suggestive therapeutics are diametrically opposite, and so are the results obtained by them, as may be observed

by any sincere investigator. The Christian Scientist discards the human will in practice and relies wholly upon the Mind that was in Christ Jesus. Christian Science has nothing in common with hypnotism, mesmerism, auto-suggestion, mental science, or suggestive therapeutics.

NORMAN E. JOHN.

Wilmington (Del.) *Star*.

A Christian Scientist could accomplish but little by simply asserting that there is no such thing as disease or discord, he must prove their insubstantiality by grappling with and overcoming them. To the man or woman who has regained a normal, natural sense of health and harmony, the aches and pains of preceding years; if not entirely obliterated from consciousness, have at least lost claim as an abiding reality, and therefore, in proportion to man's becoming healthy and happy he naturally ceases to manifest or believe himself to be sick or discordant. The plea of Christian Science, then, is to have more faith in the reality and permanency of good than evil, in health than sickness, in harmony than discord, and to prove this "faith" by "works." Christian Scientists "do not despise the day of small beginnings," but are encouraged to persevere in their efforts to overcome sin and sickness through Christian Science, as they have daily and unmistakable proof that this striving to live better and purer lives brings improved physical, moral, and spiritual conditions as a natural sequence. While ages may elapse before complete regeneration is attained, Christian Scientists have faith to believe that if they thus continue to "strive, watch, and pray" there will come a time when Scriptural prophecy will be fulfilled, when "There shall be no more death, neither sorrow, nor crying, neither shall there be any more pain: for the former things are passed away."

CALEB H. CUSHING.

Portland (Me.) *Express*.

Only to the sinner who has in some measure found that there is no permanent peace, pleasure, or profit in evil thinking or doing, can the gospel of Christ give out its saving and redeeming power. What would be thought of the infidel who should point the Christian minister to some particular and hardened sinner and offer to believe in Christianity only when this special sinner was converted? Why shall one test be applied to one class of healers and a different one to another?

JOHN CARVETH.

Ypsilanti (Mich.) *Free Press*.

Try to follow Jesus Christ, not because you believe exactly as your father believed, but because you want to live a good life according to your lights. The only way a man can get any truth at all is to stand up for the truth he has got. I cannot wear my father's clothes or walk in my father's shoes. Why, then, should I expect to preach my father's religion.

DR. WILLIAM S. RAINSFORD.

Boston *Herald*.

If I had any idea that the general government was so administered that the liberty of conscience was endangered, I pray you be assured that no man would be more willing than myself to revise and alter that part of it, so as to avoid all religious persecutions. You can, without doubt, remember that I often expressed my opinion, that every man who conducts himself as a good citizen is accountable to God *alone* for his religious faith, and should be protected in worshipping God according to the dictates of his own conscience.

GEORGE WASHINGTON, in reply to a question as to the design of the Constitution.

The Lectures.

Grand Rapids, Mich.

The initial services of the local branch church were held in its beautiful and classic new church edifice Sunday morning, February 12. On Thursday and Friday nights, February 23 and 24, Bicknell Young delivered strong lectures, each evening to the capacity of the large auditorium of our model building. The audiences were widely representative, and quite a number of persons came from other cities and towns in Michigan.

The lecturer was introduced Thursday evening by Judge Alfred Wolcott, Circuit Court Judge of this city, an able jurist and a much respected man, and on Friday evening by our Second Reader, Mr. Jay D. Utley. Judge Wolcott spoke in part as follows:—

Although not a member of this organization, I am pleased to comply with the request to introduce the lecturer, not only because of my personal regard for him, but also because I believe that the faith of which he is an able and accredited exponent is one whose ministry in the world has been altogether for good.

The history of the Christian Science movement in this city has been that of its history elsewhere. At first a few earnest men and women, who believed from personal experience that they had found in Christian Science something which threw a new light on the old faiths, something, the understanding of which was able to bring into the every-day life of men and women the promised help of the Divine for every human need.

It first met with opposition, ridicule, and hostile criticism, not, as might have been expected, from the irreligious, but from those who read the same Bible and worshiped the same God, and believed they were followers of the same teachings of the Nazarene. However, a broader spirit of tolerance, the quiet, unobtrusive, and helpful work of its followers, and the rapid growth of the new faith, soon abated in large measure the feeling of hostility to it, and won for Christian Science a recognition as one of the great agencies of the world for good.

The organization in this city has grown and prospered until it has built this beautiful new church. It is a model of the builder's art. Its quiet and unobtrusive architecture is typical of the simple and unostentatious worship which will here be held. With its graceful and classic outlines, it is a notable addition to the architecture of our city; and no one, whether he accepts it or not, need fear the faith which will here be taught. This church will stand here as an enduring memorial of the faith which built it. I believe it will do more. Besides the help which it will bring to individuals, it will do its full part in helping to solve the problems of our municipal life; for we have come to know that the cities are the danger-spot in our American civilization, especially when we realize that, if the present rate of growth of our cities continues, and also the same ratio of transition from country to urban life, for fifteen years longer, there will then be more than fifty per cent of our population dwelling in our cities. It is in these congested centres, where poverty and wealth, where virtue and vice present the widest contrasts and the greatest extremes, that there is need for every agency which, in the name of the Master, seeks to help men to a better understanding, to nobler living, and to higher thinking. This, in part at least, is the mission and the ministry of this church.

Correspondence.

Dallas, Tex.

Mrs. Sue Harper Mims of Atlanta, Ga., lectured on Christian Science at Carnegie Hall, Friday evening, February 24. She was introduced by Mr. Sam P. Cochran, who said in part,—

Ever since that memorable day when Pilate, aroused by the warning words of his wife and moved from his stolid indifference and Roman stoicism by the sublime courage and patience of the unresisting prisoner before him, asked that momentous question, "What is truth?" the world has been asking the same question, and earnest men and women have been diligently seeking for the answer. In the apocryphal book of Nicodemus, it is related that Jesus replied to this question of Pilate by saying, "Truth is from heaven."

The spiritual understanding of Life, Love, and Truth, demonstrated by Jesus and fraught with such momentous and beneficent results to mankind, has been re-discovered and brought to light through the spiritual discernment and self-abnegation of a devoted Christian woman, the Rev. Mary Baker G. Eddy, who for nearly forty years has braved the scorn, skepticism, and ridicule of the world, in a determination to give the blessings of this knowledge, which she terms Christian Science, to her suffering fellow-men. Her spiritual intuition and discernment enabled her to discover and bring to light the law of Life and Love, as taught and practised by Jesus Christ, and to make it comprehensible to men. We of this generation owe her a debt of love for the self-sacrifice which has given us the means of deliverance from the bondage of sickness and of sin.—*Correspondence.*

Brooklyn, N. Y.

A lecture on Christian Science was delivered by Frank H. Leonard, at the Orpheum Theatre, Sunday afternoon, February 26. The lecture was given under the auspices of First Church of Brooklyn. The speaker of the afternoon was introduced by ex-Senator Stephen M. Griswold, President of Banker's Association of New York State, and President of the Union Bank of Brooklyn. By way of introduction, he said in part,—

As I have never been identified in any form with the Church of Christian Science, I was somewhat surprised to receive the invitation to preside over this great meeting. I appreciate the compliment, and accept it without any fear of compromising any of my religious beliefs.

Among the things which you teach and practise which are in harmony with the true spirit of Christianity, there are three which stand out prominently—sincerity, cheerfulness, and charity towards all.

If I understand the teachings of Christian Science it means cheerfulness and sunshine. It is the cheerful man who succeeds; the optimist who makes his own heaven; the pessimist creates largely his own troubles in this world. The Lord loveth the cheerful giver; everybody likes the cheerful man. I always teach young men as an element of success in business to be cheerful.

Charity towards all—this represents the highest form of Christianity. Any religious organization that teaches and practises "On earth peace, good will toward men," exemplifies Christ's teaching.—*Correspondence.*

Correction.

The notice of "church dedication" in Indianapolis, Ind., which appeared in the *Sentinel* of March 11, should have read "church opening."

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

"These signs shall follow them that believe."

THE following interesting item is clipped from the *Cleveland Leader* of March 14:—

"An organized effort to resist the encroachments of various healing cults is to be made by the Church of England, according to information obtained yesterday from Mr. Henry Holden Colpus of Philadelphia, who is in this city in the interest of the movement.

"The healing of the sick through the instruction of their minds and by means of spiritual ministrations, is believed to be possible and practicable by many eminent divines. Mr. Colpus said that it was the intention to organize guilds of health throughout the British Empire and also to extend the movement so as to include the parishes of the Protestant Episcopal Church in the United States.

"Simultaneously in London, Eng., and in Denver, Col., Mr. Colpus said, the necessity for some radical movement to counteract the tendency of church members to sever their church relations for enlistment in the ranks of various healing cults, was recognized.

"The Guild of Health was the suggestion of Rev. Dr. Conrad Noel, vicar of St. Mary's Church, Paddington Green, London, Mr. Colpus said, and this clergyman, with the assistance of Canon Scott Holland, vicar of St. Paul's Cathedral, started the movement in London.

"The object of the movement to establish the guilds, Mr. Colpus explained, was to arouse a dormant interest in spiritual religion and to strengthen faith in the power of God to cure men of their infirmities. Religious instruction, in purifying the mind and soul from disease, Mr. Colpus believes, will make it possible to promote the physical as well as the spiritual well-being of all who have faith. Sympathy for the movement, Mr. Colpus said, had been expressed by Queen Alexandra of England. Mr. Colpus said that he looked for a great spiritual revival throughout the church.

"In Denver, Col., to which Mr. Colpus said that he was directing his steps, Rev. John H. Houghton, M.A., rector of St. Mark's Protestant Episcopal Church, had begun work along the same line as that undertaken in London.

"His presence in Cleveland, Mr. Colpus explained by saying that his mission was to arouse interest in this new movement, which is yet in its infancy. He said that he had not yet conferred with any of the Episcopal clergy here, but that it was his intention to do so."

Since 1875, when Mrs. Eddy first published *Science and Health*, there has been a constantly increasing recognition of the fact that inasmuch as the churches have not healed the sick they have not practised and preached the complete gospel of Christ. This news item indicates that at least one of the older religious denominations has finally been compelled to acknowledge, in a semi-official way, its remissness in this regard. How long it will be before other denominations undertake the healing of the sick as a part of their Christian duty, is a question not easily answered, but we believe the day is not far distant, notwithstanding the violent opposition to Christian Science which has been manifested by so many clergymen of the so-called orthodox churches.

The space which the account of Jesus' healing works occupies in the New Testament certainly indicates the importance of these works in the establishment of Christianity. That our Master considered them an inevitable accompaniment of his gospel is proved by his words in the last chapter of St. Mark. ARCHIBALD McLELLAN.

Intelligent Obedience.

As new rules are given by our Leader, from time to time, it is important that we clearly comprehend their intent. It is certain that every new rule demands a forward step and added understanding, without which no true advance can be made. A simple, but far-reaching rule of conduct was given by Christ Jesus, when he said, "If any man will do his will, he shall know of the doctrine, whether it be of God;" and when this is applied in humility and sincerity it brings wonderful illumination. When the paramount desire is to be better and to do better, we are shown *how*, by divine intelligence which is never mistaken.

In the work of the Sunday School this divine guidance is especially needed, for no phase of human endeavor is more beset with varying and contradictory opinions than is that which embraces the education of the young. There are few who deny that a religious education is good, if it be of the right sort, and nearly all are ready to admit that childhood and youth would be greatly blessed if the Christ teachings in their purity could be early imparted, and made the basis of character. That this result is not generally attained, however, is shown in the present worldliness of the many, or their admitted indifference to spiritual things, and also in the prevailing ignorance of Christ's teachings, so far as their demonstration is concerned. Now the rule which defines the teaching in the Christian Science Sunday School undoubtedly aims to exclude personal opinion, so far as possible, and in substitution therefor it points both teacher and scholar to divine Principle as the true interpreter of the Lessons. In many instances even little children will be found expressing a sense of Deity which is wholly inconsistent with Christian Science, as in the case of a little girl who asked if it would not be right to tell a lie in order to save some one's life, and if God would not forgive this lie. The child had only begun to know about Christian Science, and it was easy to show her, from the Lesson, that God is not limited in His power to deliver, but has numberless ways whereby to save all who seek His aid, and that these ways are always good and true. The teacher needs to guard his own thought against "the old heaven" which may linger, all unsuspectedly, in consciousness, and which would attribute to God human qualities that do not express infinite goodness.

It is the unspeakable privilege of the Christian Science teacher to bring the child up to the temple of Truth, even as Hannah brought the little Samuel, with prayer and thanksgiving, to leave him there alone with God. When the human sense of personality is withdrawn, the Divine voice will be heard; the children thus taught will minister in purity and power, and like Samuel and Jesus, they will grow "in favor with God and man." In order to secure obedience from the children, the teachers also must obey intelligently and undeviatingly the rules laid down for their guidance; neither adding to the requirements nor taking therefrom; and if they expect studiousness on the part of the children, they themselves must cheerfully devote time and attention to the sacred task of studying the Lessons.

Among our Leader's valued writings new and wonderful discoveries will be made by the faithful student, some peculiarly helpful lessons for the Sunday School teacher being found in the article entitled, "Science and Philosophy," in "Miscellaneous Writings." The opening sentences of this article may well be pondered long and deeply by every teacher; also the statement on page 366 (of the same article), which urges the profound study of

the Bible and Science and Health. It is not intended that this article should be introduced in the Sunday School work, but its careful study by the teacher will bring clarity of thought, and forestall the intrusion of personal opinion in this sacred office.

If we love the truth sufficiently to obey all its requirements, we will remember the warning of the prophet Isaiah, "not doing thine own ways, nor finding thine own pleasure, nor speaking thine own words;" and we shall thus be better prepared to understand and obey the Master's words, "Suffer the little children to come unto me,"—unto Christ, Truth.

ANNIE M. KNOTT.

A Passing Anomaly.

It is doubtful if the present age presents a more surprising and incongruous spectacle than that of the pronounced opposition of many Christian ministers to the asserted possibility and experience of spiritual healing. The great body of evangelical clergymen accept the New Testament narrative of this healing as historically true, and, if questioned, they would probably say that all things are possible to him that believeth; nevertheless, both in their manifest removal from any thought of trying to profit by the privilege themselves, as well as in their oftentimes outspoken condemnation of those who are conscientiously endeavoring to fulfil our Lord's commands to heal the sick, they give unmistakable evidence of the entire absence, not only of faith, but of inquiring interest in the subject.

The effort to make this anomalous attitude appear justifiable to themselves and reasonable to others, is recorded to-day in what might be termed The Apologetics of Unfaith, chapters of which appear, every now and then, in current religious periodicals. Questioning the adequacy, or availability of the means which Jesus and his disciples used for the cure of sickness, they seek to justify the propriety of their dependence upon drugs by processes of thought which for specious plausibility would take rank with the casuistry of the Middle Ages. For instance, despite the fact that the number of those who deny that Jesus and his disciples healed the sick without the use of material means, is a negligible quantity, it is frequently affirmed that drugs sustain the same relation to the body as does food, and hence that all the reasons adduced by Christian Scientists for the abandonment of the one, would apply with equal force to the giving up of the other. Said a good brother recently, "If Christian Scientists would but stop eating, and thus adjust their habits to their philosophy, they would be helped by their hunger to the attainment of saner ideas!" This type of mild raillery often furnishes critics a very relishable bit of amusement, while supplying Christian Scientists with opportunity to explain why in this, as in all other matters, they are seeking to follow the example of the Master.

It would be conceded by all, that the task set before every mortal, of working out his own salvation, is a very serious proposition. To so apprehend and apply spiritual truth as to overcome all evil,—bring every instinct and impulse, the sentiments, the affections, and the will, into subjection to Christ,—is, to human sense, a supreme undertaking, and in this "fight of faith" the average man does well to give himself the benefit of the most favorable conditions. Moreover, since the passing of the ascetic idea, people generally have not looked upon any distressing physical state, such as hunger, as an aid to one's spiritual advance. Jesus was constantly helping those about him into circumstances which were more conducive to their helping themselves. In feeding those that were hungry, as well as in healing those that were sick, he was "lending a hand," and always with a view to their attainment of a higher spiritual end. It is impossible, therefore, to escape the conclusion that he looked upon normal conditions of health and comfort as the more favorable to spiritual progress.

It is to be noted, furthermore, that while our Lord might

have removed the sense of hunger, even as he removed the sense of pain, by the spoken word, he did not do so, but supplied the bread and fish which were longed-for. He thus anticipated and made clear the fallacy of the argument of those who seek to excuse their non-reliance upon the healing power of truth by declaring that drugs have the same relation as food, to our sense of physical health.

Respecting this great enterprise of working out our individual salvation, it must also be said that the history of all human endeavor confirms the wisdom of addressing ourselves to the solution of the simpler problems first. It is only when experience and technical mastery have been gained in the application of the basic law or rules involved, that the more difficult problems may be undertaken with assurance of success. All know that a teacher who reversed this course of procedure, and set his pupils to the hopeless task of trying to work out the most difficult example first, would be pronounced foolish and unreasonable, if not insane; and yet this is precisely the requirement which some would impose upon those who have gained only a rudimentary knowledge of the Science of Being. Paul declared that death is "the LAST enemy that shall be destroyed," and yet our critics, without any apparent sense of the unreasonableness of their position, would have us at once precipitate conditions that would immediately make the greatest possible demand upon spiritual apprehension and authority!

While the use of drugs is never associated with health, the use of food, at present, always is, and since nothing better than wholesome food is offered us for the support of our present belief of human life, the possibility of doing without it will be reached only when we have overcome all that sense of materiality which is dependent upon it. Until this exalted spiritual consciousness is attained, both Christian Science and what the world names common sense would counsel us to maintain those conditions which offer the least impediment to the unfoldment and dominion of the Christ ideal. Happily, something better than drugs is supplied us, in the teaching and example of the Master, for the overcoming of evil and the healing of the sickness and suffering it has entailed. We therefore have divine authority, as well as the warrant of experience, for giving up *materia medica* at once, and for looking, in all our sicknesses, to Him who, as we are assured, and as Christian Scientists are daily proving, forgiveth all our iniquities, and healeth all our diseases.

JOHN B. WILLIS.

A Letter to Mrs. Eddy.

Chicago, Ill., February 9, 1905.

Beloved Leader:—It may not be amiss for me to tell you a little of that which has come into my life through your unique and inspired work. I was an allopathic physician, of Quaker lineage and education, prior to reading Science and Health ten years ago. I had heard of Christian Science, but could get no definite idea as to how diseases were healed by it, and my time for reading outside of my profession was limited.

In May, 1894, I bought a copy of Science and Health, thinking I could crowd in the reading of it at odd moments, but no such opportunity occurred until the following December, when at Christmas I had a week's vacation. The book had been forgotten for months, until I stumbled upon it just as my vacation arrived. My secretary had informed me that I could not trespass beyond my week of leisure, as she had made "dates" for work to begin immediately after the week expired. I concluded that at any rate I would look over the book, and began early in the morning. My interest was first aroused by the felicitous sentence, "To those leaning upon the sustaining infinite, to-day is big with blessings" (Pref. p. vii.), which sentence reverberated through the halls of my memory for years after. I could scarcely stop to eat or sleep, for the interest deepened as the

hours went by; until I reached the "Science of Being," which seemed to me a climax. I saw afterward, I had written along the margins of the leaves, "It is organ-toned." I seemed to be listening to a mighty organ, as I was being swept along into a new world! The majestic thoughts were laden with some afflatus that hitherto had been, to me, unknown.

As the days of my week went, one by one, I knew the spell must break. The fifth day found me at the end of the book. I packed my trunk for my journey, and not until I had reached my field of labor did I discover what had happened to me; viz., that this book, Science and Health, had ruined my trust in materiality. I did not see this at once, but I did see that I had lost my enthusiasm and love for that which I formerly believed to be true. Before this, I delighted in my work of relieving the sick. Now, sick women and sick children palled upon me. I never worked harder nor more worthlessly than during the week subsequent to my reading of Science and Health, and I promised myself I would some time get out of medicine into Christian Science. I could not give up a twenty-five years' professional life and its obligations instantly (so I thought), but the tedium of the coming months, the irksomeness, seemed well-nigh intolerable.

Less than a year after that, I heard the first testimony in a Christian Science meeting. Again a sense of the nothingness of all mundane things came over me. The case described was somewhat incredible to the materialist; but already I saw the possibilities of Spirit, and no doubt of the credibility of the testimony touched me. Soon afterward I said to an accomplished surgeon, "Is there anything in the pharmacopeia that can stanch blood instantly?" He answered, "Nothing but the actual cautery." I replied simply, "Christian Science can do it."

Not many days after that, I concluded to throw medicine overboard, irrespective of consequences. I did so, and a little later I received Christian Science class instruction. Three days after entering the class, a woman applied to me for medical treatment for the relief of sciatic rheumatism. I knew nothing of the letter of Christian Science, save what I had read in those five memorable days, and what I had heard in the three days of class instruction, but so sure was I of the truth in Christian Science, that I said earnestly to the sciatic-rheumatic woman, "There is no need of your having sciatic rheumatism," and, to my amazement, she was instantaneously healed. The class instruction had proceeded four days, when a message came to me from a former medical patient, in another State, to the effect that for three months she had had dangerous attacks of hemorrhage (uterine), which the local doctors could not control. She asked me not to wait to communicate with her, but to send her a remedy at once. I quickly made it known to her that I did not use drugs now, but Christian Science. She responded that she did not care what I used. With my moiety of knowledge of Christian Science, I breathed a plea of truth. A few hours later a report came that the hemorrhage had ceased, and it never returned.

Before I knew of Christian Science I personally had several enlarged glands which promised to become obstinate. I had never met such a case in my practice, had never seen such a case recorded in any medical work, nor had I ever consulted a doctor or surgeon as to my case. Soon after receiving Christian Science class instruction, I suddenly observed that the glandular growths had vanished, and they have never returned. I have, in my own experience, practice, and observation, seen diseases that were utterly incurable by medicine or surgery, pass away, under Christian Science treatment, as dew before the sun. Like the Queen of Sheba, I can say, "the half has not been told," as to the power of Christian Science, when rightly applied, to break the chains of sin and sickness.

My first thought, after I awoke to the wonders of Christian Science, was that the healing of the sick and the

sinful must be the main factor in this moral and spiritual cataclysm which is so powerfully portrayed throughout Science and Health. This factor will sooner or later arouse the world, when the "new heaven and new earth" will come apace. Nothing has been brought to the human race since the coming of the Christ-man of Galilee, that can so uplift, so purify, so reconstruct, so reanimate mankind, as does Christian Science. The more this statement is challenged and tested by honest investigators, physicians or others, the truer it will be found.

I would like to add that I have never regretted the sacrifice of fees which I made in leaving *materia medica*, for my satisfaction and joy have increased an hundred-fold as I have come to realize the supreme worth "to the sons of men" of your discovery, as set forth in "Science and Health with Key to the Scriptures."

Sincerely yours,

SUSAN A. EVERETT, M.D., C.S.

The Right Retort.

Mrs. Mary Baker G. Eddy, the head of the Christian Science movement, is noted throughout New England for her cleanliness.

Mrs. Eddy lived in her youth in Lynn, Mass., and the other day a Lynn woman said of her,—

"Mrs. Eddy was charitable when she lived here. No one was ever turned from her door. Only, always, she insisted that her petitioners be neat and clean. A tramp, dirty and lazy, stood small chance of enlisting her sympathy till he had cleaned himself up.

"One day a very dirty tramp came to her house. She admitted him. She regarded him closely. She asked him what he wanted.

"'Lady,' the tramp whined, 'I'm tryin' to get back to me poor old mother. She ain't seen me face for ten years.'

"Mrs. Eddy smiled grimly.

"'I guess that's true,' she said. 'Why don't you wash it?'"—*The Bulletin*, Philadelphia, Pa.

Next best to natural spontaneous cheeriness, is deliberate, intended, and persistent cheeriness which we can create, can cultivate, can so foster and cherish that after a few years the world will never suspect that it was not a hereditary gift.—HELEN HUNT JACKSON.

A Pamphlet in German.

Mr. Alfred Farlow's article, "A Critic Answered," which appeared in the June *Journal*, and which has since had a wide circulation as a pamphlet, is now published in pamphlet form in German. It will thus reach a larger number, and be helpful to them through the removal of many of the current misconceptions of Christian Science. Price, 6 cents each; 60 cents per dozen; \$1.15 for twenty-five copies; \$2.25 for fifty. Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

Notice.

The next admission of candidates to membership in The Mother Church will be June 6, 1905. Applications must be in the hands of the Clerk on or before May 15, 1905.

An application sent to the Clerk of the Church does not constitute the applicant a member; he must be elected to membership by the Christian Science Board of Directors, at which time notice of election will be sent.

Notice to Branch Churches.

Each branch Church of Christ, Scientist, is requested to send, on or before May 1, a report of its total membership (not a list of its members), as of record April 1, 1905, to William B. Johnson, C.S.D., Clerk of The Mother Church, 239 Huntington Avenue, Boston, Mass.

Testimonies of Healing.

It is with deep gratitude and love that I publicly acknowledge the many benefits derived from my two short years' study of Christian Science and daily striving to put into practice this healing truth. The physical benefits received have been many. I might state that through the kind and loving help of a practitioner here, I have been healed of chronic dyspepsia and constipation which had previously been the source of great misery. I had been treated by many physicians, several of whom I knew to be good, conscientious men who had great sympathy for me, but they acknowledged that my case was beyond their skill, and the only thing each one would recommend was a complete change. For two years my only solid food consisted of soda biscuits, two only at a time being the limit of my poor digestion. I was then using the stomach pump, which for six long months was a daily, offensive task. At the same time I was dreadfully melancholy, and God seemed very remote and distant. I was full of distrust and very unhappy, and often had a great desire to die, which I then thought would end my misery. But, thanks be to God, and to our beloved Leader, the dark past is no more, for the healing presence of divine Love has been felt, bringing to my consciousness the sweet assurance that the great and only Physician is still in our midst. I have also been perfectly healed of appendicitis. This was a very painful illness, and presented itself soon after I took up the study of Christian Science. My understanding of this truth was then very small, but it was sufficient to destroy any lingering faith I may have had in drugs, and I turned entirely to divine Love for help, and again with the patient help of the practitioner the trouble was met. Several other physical discomforts have disappeared while I have been absorbed in the study of Science and Health and the weekly Lessons, for which all Christian Scientists are very grateful. They are a constant help, illumining the Scriptures and making the Bible a precious book indeed.

What a grand outlook life presents to me now! If these are the firstfruits of Christian Science, what will the harvest be?

I formerly went to church from a sense of duty, in which way I also read my Bible. It was in this condition that Christian Science found me, and it awakened me from this dormant state. Since becoming a member of the Christian Science church, how changed is everything! I love the dear old Bible, for I am ever gaining something from it that sustains and helps me every day. I now consider it not only a duty to go to church, but the greatest privilege, for it is the love of the beautiful and true that draws me. The darkness and distrust of the past are giving place to the glorious light and sweet assurance of the present and the future, and I am now learning how to live, not how to die. It is my daily desire to prove myself a Christian Scientist in my every word and deed, and thus show forth my deep gratitude to God and to our beloved Leader, who is proving so faithful to her great trust.

MINNIE SOUTHON, Vancouver, B. C.

I wish gratefully to send our testimony to the *Sentinel*. We were impelled by circumstances to adopt a little foundling, said to have been born blind. There seemed no other way of reaching her for treatment. Although we were struggling hard to make our financial demonstration at the time, we applied for her, and after some delay were successful in getting the child. At times the demonstration of her healing seemed slow to sense, still the work was of great use to us in helping us to realize God's all-power and the nothingness of error. Very gradually the sight cleared and to-day we rejoice in our little one seeing and being healed. There were other troubles to be met, but Truth

overcame them all. I would say to any mother who feels discouraged over her little ones, Hold fast to God, for He never fails us. The child has had a year's treatment and was just about a year old when first treated. The financial demonstration was a seemingly hard one, but God never let us lack and we have learned to trust Him with all our needs. We have gained for ourselves a little home, and work, all is due to Christian Science. We would not part with our small understanding of the truth for anything in the world. Science and Health has become very dear to us, and we are deeply grateful to Mrs. Eddy for it and all her other works, which have led us into the right understanding of God.

MRS. LORINA J. NILSON, Staten Island, N. Y.

In August, 1903, I went to board in a home where the lady of the house was a Christian Scientist, and she induced me to read Science and Health. When I went to this home I was in bondage to several bad habits, among them were the chewing and smoking of tobacco in very large quantities, and the use of profane language. I also suffered from biliousness. Prior to this time I had been studying so-called mental science, spiritualism, and well-nigh every *ism* that came to my notice. About three weeks after I started to read Science and Health, I noticed the statement on page 454 that Christian Scientists should not be addicted to the use of tobacco and intoxicating drinks, and through the thought awakened I was enabled to quit their use very soon after. One after another all my ailments have been disappearing, and I am only too glad to give Truth the glory for healing me.

A few weeks before I became interested in Christian Science I had one of the bones in my right hand broken. I never had it set, but it was completely healed in October, and has not troubled me since.

One evening last winter, when I was getting my supper, I opened a can of beans. I did not then notice anything wrong with their color but they had a slightly metallic taste. I ate a saucerful of them about 6 P.M. and thought nothing more of it at the time. About half-past seven I was taken with a violent pain in the stomach, and immediately the thought of ptomaine poisoning came to me. With it came these words of the Master, "These signs shall follow them that believe; . . . they shall take up serpents; and if they drink any deadly thing, it shall not hurt them." This was all I could remember, but I clung steadfastly to that one statement; the pain left me very soon, and I lay down and fell asleep. Later I was awakened by a terrible dream, and when I awoke I found myself in very great pain. I again declared the truth and the pain left me. I then went to bed and slept for some time, when I was again awakened by the most terrible pain, and I seemed very weak. The next day being Sunday I went to church, but I was not entirely free from the effects of the poison until Wednesday evening, when I gave this testimony and all the soreness left me.

I am very grateful to Mrs. Eddy for our text-book, "Science and Health with Key to the Scriptures," and also to the many friends who have helped me to understand a little of this blessed truth.—WM. R. EDWARDS, Cleveland, O.

While reading the testimonies of healing in the *Sentinel*, I remarked to my wife that the most of them were from women, and she said, "Why don't you give your testimony?" This set me to wondering why I did not, and I soon concluded to give my experience, in the hope that some of my fellow-craftsmen may see it and be led to the truth. I am a telegrapher by profession, and two winters' work in such railroad stations as were then in use left me with a most distressing cough, which never left me entirely during the summer, and when winter approached life became a burden. This being my condition in Novem-

ber, 1898, after having listened to the advice of my friends and of a physician, I decided to go to California, in the hope that the climate would relieve me of my cough. One of my uncles had passed on a short time before, with what the doctors pronounced catarrhal consumption, and the fear of this dread disease hastened me in deciding to go. After having been at Riverside, Cal., for some time, and the climate having failed to effect a cure, my aunt with whom I was staying persuaded me to try Christian Science. I attended services, read Science and Health, and my aunt and grandfather, who were both Scientists, helped me in my quest for Truth until they deemed me far enough advanced to take class instruction. In looking back over my experience, I do not see any sudden demonstration of healing, but it has seemed to me as when the sun rises and gradually dispels the fogs of night, for just so have my old beliefs and fears left me. The doctor who advised me to go west told me that besides the cough I had a valvular lesion of the heart, and one limb was so deformed that I had to wear a thick cork sole on my shoe. Now my cough is entirely gone, my heart is normal, I wear a common shoe, and the slight limp in my walk will doubtless disappear in time.

My physical gain is, however, as nothing to the joy and peace of mind which have come to me, for my studies at school had made me believe that this was a godless world evolved from chaos through atomic evolution, that man was but an animal, and that when death overtook him he went out of existence forever; but now when one asks me, "If a man die, shall he live again?" I can say with absolute assurance, "I know that my redeemer liveth," and He is not the God of the dead, but of the living; "in Him we live, and move, and have our being." I know He is omnipotent, eternal Life, whom nothing can overwhelm.

H. L. JOHNSON, Portage, Wis.

About three years ago I came to Christian Science, seeking help for a shattered nervous system. My eyes, which had always been weak, were now fast losing their little strength, and glasses which had been fitted six months before were now useless. I consulted a specialist on such diseases, who told me that I was a hopeless case. Resistance to Christian Science was at last overcome and I asked for treatment. I was an unbeliever, but after three weeks' treatment I was healed of nervous trouble and I saw without glasses for the first time in fourteen years, faintly at first, but as my understanding of man's dominion increased, my sight grew stronger. I am a marine engineer and my sight is all-important to me. I also find Christian Science of great importance to me in my business. I was a slave to tobacco for fourteen years, and shortly after being healed of the nervous trouble I went to sea. On the voyage I read Science and Health, and before the trip was half over I had lost all desire for tobacco or a social glass, and the desire has never returned. A year ago I had my hand caught in the moving machinery. The forefinger was crushed through the lower part of the nail and bone; the second finger-nail was torn off completely. One who saw the accident said that I had lost my fingers, but I declared steadfastly and knowingly that God was my Life. I closed my hand and declared for truth, and after I had overcome a sense of fear, my success was complete. I had not the least sense of pain. The fingers were tied up without drugs, and I went on with my work as usual, much to the surprise of every one. The bruises were healed in seven days and my forefinger is just as sensitive as it ever was.

Words cannot express my gratitude to our beloved Leader for her wonderful book, Science and Health. I am indeed thankful to have found a religion that can fill my life so completely, and also to know that we do not have to die to find heaven. We can taste of the joys of Soul here and now.—DAVID L. RAINEY, Seattle, Wash.

I want to manifest my gratitude by witnessing to my physical and moral healing, and the spiritual uplifting which has come to me through the healing truth revealed in Christian Science.

After trying every known remedy in *materia medica*, also massage, electricity, etc., and finding no relief for organic internal troubles, I was glad indeed to give Christian Science a trial, not knowing what it was and having no faith in it, except as I thought to ease my mind, for I had finally decided to go to the hospital for two very serious operations, and by the advice of three of Boston's best specialists for these troubles. I will not go into the details of my sufferings, but they were many and severe. I prayed with my best understanding of prayer, for I was brought up to be religious, but no answer came, and it seemed as if I should lose my mind on account of insomnia, one of the symptoms of the organic trouble. I finally found myself unable to pray, my mind would seem to wander so far away. In this condition I began the treatment in Christian Science. My healing was slow, but it resulted in my spiritual awakening, for which I now thank God. There were many different phases of the bodily suffering, one especially being destroyed through my own realization of the spiritual interpretation of the Lord's Prayer, which seemed wonderful to me. This was severe headache, which left me one night instantly and has never returned.

It is now a little over ten years since I turned to the Comforter in Christian Science, and I have never taken a drop of medicine since I first sought help from the God whom this truth reveals.

My gratitude to God and to our beloved Leader for our text-book, Science and Health, is not to be expressed in words, for words fail me, but my sincere desire is to be more awake to her loving counsel and to be lovingly obedient to her words of wisdom. I am grateful for the beautiful teaching I received through one of Mrs. Eddy's faithful students, and for encouraging words and loving thoughts from many dear Scientists. The way has seemed dark many times, but the Comforter revealed through Science has cheered my lonely hours while passing through the wilderness of mortal doubts and fears. I now know Christian Science is true, having proven it to be so many times.—EMELINE SNELL, Boston, Mass.

It is with sincere gratitude for the many blessings which Christian Science has brought me that I give this testimony. For years I had been seeking for a better understanding of God. I wanted to live closer to Him. It is over two years and a half ago that I made up my mind to try Christian Science for the grip, from which I had suffered for eleven winters. We sent for a practitioner and I was helped at the first treatment and finally healed. She told me to read Science and Health by Mrs. Eddy. This seemed very foolish at first but I thought if I had a doctor I would have to take his medicine; so I took my Science medicine and have been taking it ever since. The more I take the more I want, and the better I feel. It is impracticable for me to tell all that Christian Science has done for me. Rheumatism was overcome after I had suffered twelve years and had tried every remedy that I heard of and was able to get, but drugs had brought no permanent relief.

There are many battles to fight, but victory comes through the understanding of God which Mrs. Eddy has brought to us, and for which I am deeply grateful.

SUSANNAH HOFFHIENS, Toledo, O.

Christian Science found me ready to bury my dearest earthly hope. Five years ago a little tract was sent me, entitled, "Is Your Prayer Answered?" After reading it, a Scientist loaned me Science and Health. The only conscious truth which I grasped upon its first perusal, was the author's statement that its full meaning is not to be gained by a

simple perusal of the book, and that it needs to be studied. After reading it through the second time I knew that Science and Health contained the truth which sets free. This true idea of Life instantaneously healed me of weak eyes, spinal trouble, constipation, and other diseases. After I was healed, some of the old complaints again threatened me, but in holding steadfastly to Truth these diseased conditions have been eliminated from my consciousness as no part of my true being, and as having no real entity or origin because they are not of God.

The understanding that God is too pure to behold iniquity, was a sweet revelation to me. It brought a holy, secret joy, and has enabled me to overcome many forms of selfishness, hatred, and vanity, and has conferred upon me many blessings. For this corrected sense of Life I owe deep gratitude to God, and to our Leader, Mrs. Eddy. This manifestation of Truth has caused many persons to investigate Christian Science, and I hopefully press onward, ever conscious of the Divine guidance.

EDITH FOX, Winchester, Ky.

In gratitude to our dear Leader, and for the good of humanity, I wish to add my testimony to many which I have read in the *Christian Science Sentinel* and *Journal*. I had been an invalid for twenty-two years, when I heard of Christian Science. I was drawn to the services in Canyon City by what I had heard. I was then unable to take any solid food, as this had been followed by intense suffering and many other troubles all these years. I had expended all my means, except my home, on travel and material remedies, and I felt that my days were numbered. I was practically healed by one treatment, but the practitioner treated me several days to establish this fact to me, as my fear had been so great. My hearing also was defective, but now I can sit back in the congregation and hear the Lesson-Sermons read. The most beautiful demonstration was over what the doctors had pronounced cancerous growths, one on each side of my face. I told the practitioner about it at the Wednesday evening service, and on Sunday one of these growths was gone and I made an acknowledgment of the same to the practitioner. Before the following Wednesday evening service the other was removed. For these and many other blessings in our home I am very thankful, and glorify God for this new understanding, as taught by Science and Health.

I am eighty years old, and was a soldier in the Mexican War. I can now walk quite a distance without fatigue, and I work daily in my garden and am a new creature in Christ Jesus. Praise God for Christian Science.

JOHN J. COX, Canyon City, Tex.

For seven years I have received the blessings of Christian Science. Up to that time I had struggled to know the true way, but like Paul, the things I would not, those were the things I did; until, in deepest sorrow and despair, I prayed tearfully daily to God to show me how to live a better life, and to help me bear my burden.

At that time I was unable to do much, and the doctor could give but little hopes of my recovery. With the thought of having to leave my two small children I was ready to do anything that would help me to gain health; and having a friend who had talked to me of Christian Science at different times, I went to her and inquired more about it. I began reading Science and Health in March, and before the summer was gone I was able to do most of the work for a family of five. We have had many beautiful demonstrations, proving that God is omnipotent.

I thank our dear Leader for the literature she has given us, and I pray God I may follow in her footsteps as she has followed in the footsteps of our blessed Master. I wish also to thank the Field for the beautiful and helpful articles sent to our periodicals, from which I have received great benefit.—MARY L. PARCE, Batavia, Ill.

After reading a testimony of mental surgery in a recent *Sentinel*, I feel impelled to give an experience of a similar nature. As I was about to descend from quite a high carriage, my right foot, which was on the step, suddenly turned, and I fell between the wheels with the ankle completely turned under me. In an instant the agony seemed to affect every part of my body, and I was unable to move; but I immediately declared the Truth of being, and, in spite of the intense pain, the spiritual fact stood out as the only reality. The man who cares for the horse ran to my assistance. After a few moments I grasped his hands and drew myself up; immediately my ankle bone received strength, and for half an hour I stood and walked about my garden, experiencing only slight twinges of pain. At night, on removing the low shoe and the stocking, I found the ankle much swollen, but there was no discoloration. The following morning there was a little stiffness on walking down-stairs, which was quickly overcome. On the second day I took quite a walk, used the sewing-machine as usual, with my right foot only, and at night, with the exception of a slight swelling, there was no indication of the sprain, which in former years would probably have confined me many days to a chair.

For the Christ-truth that has made such a demonstration possible, I am profoundly thankful to God, also to Mrs. Eddy, whose love and untiring devotion has taught us how to work out our own salvation.

MRS. LILIAN HARDING, Biltmore, N. C.

The teachings of Christian Science are simple yet mighty. Through the healing of sickness my eyes were opened to their meaning, which before I had been unable to understand. I am very grateful to God for my healing and for the benefits I have received from Christian Science. I was cured of jaundice and stomach trouble. For weeks I had doctors, and they finally said they knew of nothing but the knife that would cure me. It was then I turned to Christian Science for help, and found that divine Love is ever ready to meet our need.—MRS. S. R. PRUYN, Chicago, Ill.

[Written for the *Sentinel*.]

So Shall the Sun of Righteousness Arise.

FLORENCE VILLIERS BROWN.

A TENDER flush on eastern sky,
A breeze soft as a light-drawn sigh,
A bird's low note,—the mate's reply
And day drifts slowly in.

The dawn's dim light, faint filtering through
The dusk, pale blossoms drenched with dew,
Stars fading from their fields of blue
That deepest black have been.

Not with a glare of dazzling light
To stun the senses, blind the sight,
But gently, softly, slow, the night
Emerges into day.

But when the sun's brave light appears,
The night's grim shadows, fancies, fears
Dark dreams of discord, troubles, tears
Fade silently away.

So o'er this night of error dawn
Those "first faint beams" of coming morn;
Then Light shines forth, and Day is born,
Which is Eternity!

Thus on our slumbering senses shine,
O Thou, who art that Light divine!
Waking, I'll find my likeness Thine,
And satisfied shall be.

From our Exchanges.

Dr. Campbell Morgan, in the *London Daily Chronicle*, gives his impressions of the way the American people understand and practise religion. He found in his experience in this country a widespread indifference in the matter of personal religion, which he attributed in part to the want of positive leadership. While ministers have been speculative and uncertain the people have become indifferent, but Dr. Morgan has seen signs everywhere of an awakening to the importance of direct evangelistic work, and he believes that "if the Church does but know her day and opportunity, America is on the eve of a great religious revival. In the broadest sense of the word, I do not hesitate to affirm that the American people are in their deepest life a religious people. Deep down in the national soul, beneath all the indifference and speculation, is a profound sense of God and man's obligation to Him. It is the continuity until this hour of the Puritan strain."—*The Congregationalist*.

If we keep in mind a regal throne, like that of an earthly monarch, only more magnificent, as befits the Deity—a celestial palace, a train of angelic courtiers—and then place Christ on a far-away throne at the right hand of such a God, sitting in regal majesty, we not only remove him from us in distance and in sympathy and communion, but we externalize and materialize the entire character and functions both of him and his Father. But if we think of the Omnipresent God, everywhere revealing Himself—the Immanent Deity, resident as the Holy Spirit in His worlds and in the hearts of His creatures; and if we think of His throne as being the center of His manifestations to whomsoever beholds Him, we shall be saved from many an erroneous view which separates us from Him and His Son.

Western Christian Advocate.

The Christian discovers that Jesus expended all the resources of his gracious being in order to show us what God's nature is. This involved facing man's death and expressing God's sacrificial altruism. He that hath seen Christ hath seen the Father. By this vision men have made felicitous for them what would otherwise be intolerable. Here they rest their souls and find peace and strength. The mystical union involves Calvary. Without this supreme event the Father would not have been unveiled and the ultimate meaning of the life of man on earth would not have been disclosed.

REV. OZORA S. DAVIS.

Hartford Seminary Record.

And yet, when one feels the stirring of a desire to become better than he is, to leave off old ways of thought and purpose and conduct that are unsatisfying, and to enter upon those that are better—when the currents of thought and feeling and aspiration set toward high, pure, and ennobling things—when the mind ceases to be absorbed with that which concerns self alone and to plan for others' welfare—when the heart kindles with that love toward others which prompts to acts of helpfulness, and is filled with gratitude to the Father for life and its opportunities—the one so thinking and feeling and doing has entered upon the Christian life.—*The Universalist Leader*.

There is nothing that so adds to power as to direct it with singleness of purpose toward a definite object; and when the aim is a noble one, and the desire leading to it is pure, there is nothing that so clarifies the vision and uplifts a man's nature. The greatness of a noble purpose, heroically pursued, enters into the life and character and so expands them that they burst the inclosing shell of past things and, discarding that which hitherto has satisfied, the new-found wings are directed toward the lofty height.—*Our Homes*.

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of *SCIENCE AND HEALTH*, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in *SCIENCE AND HEALTH*. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, \$5. Twelve or more to one address, \$4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, \$1 per copy; \$5 per half dozen; \$9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.

Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, Treasurer.

Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, \$2.40 per annum; \$1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Christian Science Herold

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, \$1.00 in advance; all other countries, \$1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH of Rochester, N. Y.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid \$3 00
Twelve or more books to one address, each, prepaid 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; \$3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, \$1.06; \$5.00 half dozen; \$9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, \$1.06; \$5.00 half dozen; \$9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, \$2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, \$2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, \$4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; \$4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, \$1.00; six copies to one address, \$5.00; twelve copies to one address, \$9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; \$5.00 per dozen.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

Minister Bowen at Caracas, acting under instructions, inquired of Venezuela whether she was willing to submit to arbitration the New York and Bermudez and Critchfield asphalt cases, the case of the expulsion of Editor Jauretti, and the revision of the award made in 1903 to the Orinoco Steamship Company. Her reply is that she is unwilling, claiming that there is nothing to be arbitrated. The cases will now continue to be handled along the usual diplomatic channels.

The work of remarking the forty-ninth parallel as the boundary line between the United States and Canada will be carried forward the coming summer, the American commissioners for that purpose being now in Ottawa for the purpose of arranging the work. This work of restoring boundary-line monuments and remarking the line will complete the settlement of boundary questions between the two countries, the greatest of which was the Alaskan dispute.

The United States Circuit Court of Appeals has handed down a decision which, if finally sustained, will mean the refunding by the United States Government of the sum of \$5,000,000 to the American Sugar Refining Company for duties paid on raw sugars imported from Cuba in 1903, and upon which the company contended a reduction of twenty per cent should have been allowed under the then existing treaty.

The number of bills and resolutions introduced in the last Congress aggregated 20,074. The various House committees reported on a total of 4,904 measures, including Senate acts and resolutions. The House passed 1,556 of its own bills and resolutions during the second session, and 551 of the 620 Senate acts and resolutions that had been reported from committees.

The astronomical expedition sent out from Lick Observatory, California, by D. O. Mills of New York, to Santiago, Chili, for the sole purpose of searching for new stars, is meeting with success. Already twenty double stars have been found.

The steamship with which Commander Robert E. Peary will make another dash to the North Pole, was successfully launched at Bucksport, Me., last week. She was christened "Roosevelt" by Mrs. Peary.

Foreign.

In pursuance of the arrangement arrived at last December between Great Britain and Italy, to offer to the "Mad" Mullah an assignment of a settled sphere in Somaliland, together with grazers' rights in certain parts of British and Italian territory, an agreement has just been concluded between the Mullah and the Italian Diplomatic Agent, whereby the Mullah undertakes to observe peace toward both Great Britain and Italy. The arrangement puts an end to the difficult and costly British expeditions against the Mullah and delivers the Protectorate tribes from his continual devastating raids.

An agreement between the Venezuelan Government and the British and German bondholders, adjusting and consolidating the exterior debt (about \$28,500,000), has been signed, the details having been concluded to the satisfaction of both parties. The guarantees comprise considerably more than fifty per cent of the custom duties of all ports except La Guayra and Puerto Cabello.

The Russian Commission appointed by M. Bouligan began sessions last week at St. Petersburg, to consider schemes presented by the provincial nobility, the zemstvos, and municipal and other assemblies. Considerable impatience at the delay in realizing projected reforms is being expressed.

A proclamation has been issued that all Syrians must leave Hayti April 1. These Syrians are extremely obnoxious to the natives, as they have managed to obtain control of most of the retail business of the country.

Count De Segonzac, who was sent by the Moroccan Commission to investigate the commercial conditions of Morocco, has been captured by Arabs. The case resembles the Perdicaris affair.

The German Emperor is visiting Morocco. Although the Sultan's Empire is somewhat disturbed, it is affirmed that the visit has no political significance.

Queen Alexandra of Great Britain, with her suite, was most heartily welcomed to Portugal at Lisbon last week.

Venezuela's suit against the French Cable Company has been postponed and a crisis has passed.

Industrial and Commercial.

"We have no useless American acres," says Secretary Wilson, in speaking of the work of the agricultural department in introducing new plants and improving methods of agriculture. "There are no bad acres; we will make them all productive. We have agricultural explorers in every far corner of the world, and they are finding crops which have become so acclimated to dry conditions, similar to our own in the West, that we will in time have plants thriving upon all our so-called desert lands. We will cover this arid area with plants of various sorts which will yield hundreds of millions of tons of additional forage and grain for western flocks and herds. Our farmers will grow this upon land now considered practically worthless."

The Southern Pacific has had delivered to it the much-talked-of locomotive that is expected to work a revolution in the transportation facilities of the country. It is fireless, smokeless, and waterless. It needs no coal, drops no ashes, and throws no sparks nor cinders. Its builders say, provided a clear track could be obtained, it could haul a 2,000-ton train from New York to San Francisco without a single stop. There would be no stops for fuel or water, for it carries fuel enough for a 3,000-mile run and needs no water for steam. The locomotive uses com-

pressed air power, fuel oil power, and electric power.

The Hamburg-American line is building a new steamer at the Vulkan Works at Stettin which will be fitted out with a recent invention consisting of a massive balance-wheel mounted in such a manner as to counteract the shifting of the centre of gravity of the ship. The invention hitherto has only been tested in connection with models, but the officials are convinced of its utility.

A scheme for undermining the Boston wholesale district with a system of tunnels in which to carry on much of the heavy trucking now done to and from the railroad freight terminals by means of wagons, has had a hearing before the State Legislature.

Parties arriving from Alberta, N. W. T., give further details confirming the reports of the marvelous oil wells discovered there.

General.

It is reported that Andrew Carnegie has furnished the financial support for the founding of an Academy of Music in New York city, which will attempt to furnish musical advantages equal to those of the schools in Leipzig and Dresden. Frank Damrosch, president of the New York Choral Society and director of the Oratorio Society of New York, will be the director of the new academy. Franz Kneisel, principal of the Kneisel Quartette, will be the head of the department for violin instruction, in which department two other members of the quartette will be teachers—J. von Theodorowicz, violinist, and Louis Svecenski, who plays the viola. Alwin Schroeder, violoncello player of the quartette, will be the head of the cello department. The piano instruction department will probably be in charge of Harold Bauer. The school proposes to begin instruction in the fall.

Dr. Charcot and the French Antarctic expedition on board the *Francis*, have arrived at Port Madryn, Chubut, Argentina. The expedition sailed in 1903. It was financed by private subscription. Dr. Charcot says: "We passed the winter at the island of Wardel and were enabled to carry out under good conditions all our scientific work. The question of the Belgian Channel has been fixed by exploring journeys, and Alexander Land has been recognized, but we could not get near it because of icebergs. We surveyed and explored several unknown points in Graham Land, though our vessel ran ashore on unknown land, suffering some damage. We continued to survey the shore of the whole of the Palmer archipelago."

As rapidly as the change can be brought about, the management of the Burlington has decided to substitute the telephone for the telegraph in despatching and operating both passenger and freight trains. This announcement is made after comprehensive trials of the telephone on various portions of the company's lines for several years.

The management states that these trials have proved eminently satisfactory, and that under the system in vogue there has not been recorded a single instance of mistake in the transmission and receipt of train orders.

The United States Ship *Albatross*, after four months' exploration and soundings on the South Pacific, returned to San Diego, Cal., on March 11. She crossed between the continent and islands four times, carrying on deep-sea explorations and soundings and gathering specimens of marine life. Reports of the scientific results of the trip will be forwarded to Washington, and will be made public through official sources.

Advices from Japan report that the new silk crop will be a heavy one. The war has not seriously hampered the industry. Italy also has produced a big crop.

The University of Pennsylvania has just conferred upon Emperor William the degree of Doctor of Laws.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

A Word about Honesty.

BLANCHE H. HOGUE.

ONE of the first demands upon the student of Christian Science, is that for absolute honesty. Honest he must be, in his mental attitude toward that divine Mind to which he looks for help, and toward himself in the analysis which uncovers to his own discernment the thoughts and actions which are inconsistent with his highest sense of right. Honesty means much more than a lack of conscious misrepresentation, more than a lack of deceit. It is a positive quality of thought, from which spring all fair and gracious things in human relationships, and to search for it, and cherish it, is the duty placed upon all Christians. If an individual be imbued with honesty of purpose, it will govern his scrutiny of himself in such manner that the wavering, misty impulses of the human mind will be dispersed, and a growing clearness of thought will manifest itself in fairness and candor to all mankind. Upright judgments and just procedures are the outcome of honesty of purpose, and only such pure desire, at the springs of individual thinking, can lead to genuine truthfulness in outward manifestation.

If an individual have not natural honesty of purpose, he cannot know himself, nor make himself clearly known to others. His intention may at all times be honest, and he may consider himself strictly upright in all his dealings, but until uncertainty and confusion of thought are corrected by clearer views of his own desires, impulses, and emotions, he is not working from the mental basis which insures absolute honesty. Daily self-analysis, under the teaching of the Christian Science text-book, brings to light startling inconsistencies in the human disposition, and only that heart which can face unflinchingly the evil nature of all thoughts which are at variance with the Christ-mind, can grow out of the accumulated mental, moral, and physical ills of an ordinary human nature. Only that man who is deeply, purely honest, can endure the action of Christian Science in his life, for the reason that the activity of right thinking exposes mercilessly the weakness and untruth of wrong thinking; and nothing less than a supreme love for righteousness can stand the daily sifting, weighing, and testing of thought, motive, and speech involved in establishing individual scientific Christianity.

Every student of Christian Science may well ask himself, "Am I honest? Do I clearly desire the supremacy of truth above all else?" And in searching for a fair answer he may often clear away much that has been obstructing or oppressing him. To see clearly one's own desire and motive, is a fit preparation for a right beginning. About this matter John Ruskin has said, in "The Crown of Wild Olive,"—

"Everybody in this room has been taught to pray daily, 'Thy kingdom come.' Now, if we hear a man swear in the streets, we think it very wrong, and say he 'takes God's name in vain.' But there's a twenty times worse way of taking His name in vain, than that. It is to ask God for

what we don't want. He doesn't like that sort of prayer. If you don't want a thing, don't ask for it; such asking is the worst mockery of your King you can mock him with; the soldiers striking him on the head with the reed was nothing to that. If you do not wish for his kingdom, don't pray for it. But if you do, you must do more than pray for it; you must work for it. And to work for it, you must know what it is; we have all prayed for it many a day without thinking."

As the individual grows to understand more clearly the basic nature of honesty, and the demand follows that this love for honesty shall pierce every condition of thought which would evade the exalted scrutiny of the Christ-ideal, it becomes profitable to analyze some of the phases of human thought and habit which are commonly called honest. Until an individual has awakened to understand actual honesty of purpose, based upon, and included within, divine Principle, he is subject more or less to confusion in his sense of what constitutes honesty in personal relationships. But so soon as he discovers, through Christian Science, the direct truth concerning man's relation to God, and man's obligations to man, he enters upon a new field of action, and begins to build upon a broader and deeper sense of honesty in all his ways.

It goes without saying that the man who desires to be honest, who says what he thinks, is far nearer the kingdom, and of much more benefit to his fellow-men, than the mortal who purposely or carelessly hides what he thinks under any guise of diplomacy or deceit. Yet that honest man has much to learn concerning the varying phases of thought which would seek to use his native honesty, that they might find unbridled expression. Any hastily formed judgment, any criticism, any false report, in fact, any passing thought, may be honest in its nature, but wherein lies any profit in its expression, if it be but a passing human mood, and not a truth? A quarrel may claim to be honest; the betrayal of a sacred trust may claim an honest motive; anger and greed and malice may make honest exhibitions of themselves; in fact, ignorance always calls itself honest, and any evil or mistaken belief of the human mind, while it holds sway, can "honestly" express itself, if the meaning of honesty be thus limited to frankness of speech. Since good is honestly manifested in goodness, and the sense of truth is honestly manifested in truthfulness, so evil poses as "honesty" even while manifested in evil thoughts and evil deeds. And it is this misuse of honest tendencies against which the truth cries out in loving protest.

The dictionaries set forth honesty and honor as being synonyms, and both words are commonly used as defining, in a general way, very similar qualities of thought. There is found an exalted impersonal meaning attached to each word, which reveals the popular and common use of them to be often limited, careless, or perverted. There is, however, a distinction; honesty being, perhaps, an abstract loyalty to truth, or right; and honor, a more individual sense of what is right. Webster gives to honor this distinguishing individual quality when he defines it as being "A nice sense of what is right, just, and true, with course of life correspondent thereto."

The Century Dictionary makes the distinction, "Honesty

belongs to the absolute principle of right; honor, on the other hand, belongs to accepted standards of what is due to others and to one's self.

In the book "Synonyms and Antonyms" by James C. Fernald, it is stated, "Honor is a lofty honesty that scorns fraud or wrong as base and unworthy of itself. Honor rises far above thought of the motto that 'honesty is the best policy.'"

The Century Dictionary also gives one meaning of the word honest to be, "Open; undisguised; boldly or frankly showing purpose, character, or quality, whether good or bad."

True honesty is always morally sensitive to the rights, the needs, the feelings of others. Superficial honesty is sometimes heedless and headlong in its expressions. True honesty knows the right thing to say and do, in all clear and honest ways of healing and peace, while the bluntness and impertinence which often masquerade as honesty, may blunder helplessly. True honesty, like charity, seeks "not her own;" it stands clothed in such fineness of feeling that it moves, a heavenly surgeon, among the children of men, binding up the wounds which poor human nature ignorantly inflicts upon itself; while so-called honesty may be selfish in its nature, mangling others in its attempt to gratify its own desire for freedom of speech. A "lofty honesty" scourges from the temple all such qualities as policy, diplomacy, and cowardice, and yet in its divine wisdom and compassion it may oftentimes withhold the so-called "honest" expression of that which is unworthy, unnecessary, or unkind. Honesty possesses the merit of not concealing, within one's own nature, errors which should be corrected, yet it may accomplish such correction quietly, and alone, before the divine Mercy-seat, in such ways as will not disturb the neighbor's peace. Honesty, confined to the narrow sense of speaking what one thinks at the moment, may be made a vehicle for all the ill-nature of the human disposition, while truth, stately in its honesty, never lends its dignity and beauty to anything less than the purposes of God. In fine, true honesty makes no mistakes, for it is the grace of God springing in the human heart; while the mere impulse of honesty is so easily handled by the suggestions of self, that truth must needs guide and temper honesty, to make it a trustworthy servant for Christliness.

As the lower standards of honesty are discarded, and thought reaches to the sunlit heights of Christ-like candor and truth, much of the false politeness and propriety characterizing society life is seen to be unnecessary, unwholesome, and untrue; it involves selfishness and insincerity. Business relations, also, are hampered by subterfuge and intrigue, and are sorely in need of cleansing. But, while Christian Science is exposing this false fabric, the Christian Scientist must not forget that back of this "refuge of lies" there stands the truth of Christian courtesy and unselfish fellowship. In abandoning the false and superficial methods and mannerisms, one must seek to put in their place the charity, the gentleness, the "sweetness and light" of divine Love, else one has no cup of cold water to offer his fainting fellow-man. The spirit of Emerson's statement, "The highest compact we can make with our fellow is, Let there be truth between us two forevermore," is not necessarily limited to a severe and brutal frankness, but rather, holds within its ideals such honor, such genuineness, and such tenderness, that it enfolds all helpfulness and service. To call attention to another's faults may be honest, but it is not the whole of honesty. A higher sense of truth will uphold the brother's virtues, and all his possibilities for good as well, and thus fling wide the gates of thought, that the spirit of encouragement, and peace, and healing, may enter and abide.

Christian Science sets its face against all manifestations of evil. Consistency is the better part of any profession, and that student who is learning to restrain the passing expression of his moods and opinions, until careful analysis proves whether they be in accord with honor and truth, is

also learning to restrain, in the same way, the passing expression of pain and disease. It may seem honest to describe in detail the physical symptoms of disease, but the Christian Science text-book is teaching the world why it is neither wise nor profitable. Fear may seek honest expression, yet any well-poised man will endeavor to control it, that others may not become alarmed. It may seem honest to betray the presence of physical irritation by the symptom of coughing, yet the Christian Scientist will try to restrain such evidence, not only that the human will which thus asserts itself may be silenced by the "Peace, be still" of the Divine will, but because of an honorable regard for the rights of others; for it is well understood that the clamor of a careless cough, in a public assembly, may become an unhappy intrusion upon others, while the unselfish effort to subdue the personal temptation to such indulgence, makes for the general comfort and peace. Many are the instances in daily experience where fidelity to Principle restrains the natural impulses of mortal mind, yet no incident can stand out with more simplicity and grandeur than that given in sacred history of the Shunammite woman who rode to meet Elisha. To human evidence her child lay dead, but her hope was fixed upon the man of God, and as she journeyed to meet him, no fear, no doubt, no sorrow, found utterance. True to her hope, her steadfast purpose answered to all inquiries, "It is well." Thus the Christian to-day should be able always to say, "It is well," for he trusts in God who is omnipotent and omnipresent, and the highest honesty demands allegiance to God, in contradiction to material evidences. The Shunammite woman honored her God, and while a lower sense of honor might have deemed it necessary to tell of death, and fear, and grief, her loyalty to spiritual sense forbade it. This standard enables one to find, in every hour of the day, opportunity to watch and weigh one's frankness in both voluntary and involuntary expressions, that it may serve the purposes of God and not be misused by selfishness or ignorance. And it may reasonably be concluded that the man who is thus faithful to his God, will be found upright and just to his fellow-man, ready always to meet him in all courage and candor. Such a man is finding his relationship to God so securely, that his brightening sense of honesty permeates all his motives, reasons, and conclusions.

This growing fineness of feeling contains no element of weakness, of compromise, of instability, nor even of diplomacy, although its tenderness toward others may, at first glance, be thus misunderstood. Gentle and refined, seeking to heal and to save, detecting swiftly all that is unlike Christ, yet in mighty compassion sweeping away the tissue of lies, this beautiful spirit is described in St. Paul's exquisite tribute to charity in his letter to the Corinthians. It "suffereth long, and is kind; . . . envieth not; . . . vaunteth not itself, is not puffed up, doth not behave itself unseemly, seeketh not her own, is not easily provoked, thinketh no evil; rejoiceth not in iniquity, but rejoiceth in the truth."

May we all who name the name of Christ be found abiding in that lofty sense of honesty and honor which knows no compromise with self, yet can stoop to the by-ways and hedges to find the bruised and blinded children of men, that it may lead them into the ways of peace.

Judge Not.

JUDGE JOHN D. WORKS.

THE tendency and disposition of mortal man to judge and criticise others is one of the worst and most active evils of the times. To many it seems to be an irresistible evil as well, and there are few of the evil tendencies of mortal mind that bring into human existence more of discord, injustice, and bitterness of feeling. We are so prone to misconstrue the acts and motives of others, and deny to them the sincerity we claim for ourselves. It is

this disposition, more than any other, perhaps, that divides mankind into differing beliefs, makes many religious denominations where there should be but one church, worshipping one God, and prevents that mutual understanding, and trust in the good intentions and purposes of others, that would remove discord and contention, and bring about harmony and peaceful relations between the churches and those who differ in their religious beliefs. The same is equally true of the private relations of life. Friends are estranged and families disrupted by this tendency to judge and question and misconstrue the acts and motives of others. The great, and seemingly growing, evil of divorce is fostered and perpetuated by it, and husbands and wives who do not resort to the divorce courts, are made miserable and discontented with their lot by this same evil tendency on the part of one or both of them. And are we Christian Scientists altogether free from it, in our personal and church relations?

Surely no more imperative or important duty rests upon Christian Scientists to-day, than that of striving to live up to the injunction, "Judge not." Charity of thought towards others is the panacea for many of the evils and ills of this life. We cannot all see alike, but we may all be sincere, and may differ, honestly, and with respect for the differing views and beliefs of others. And if our own lives attest our sincerity, and our works bring forth "good fruit," this demonstration, not only of our sincerity, but of the truth of what we believe, will convince and draw others to us, when discussion and the questioning of beliefs not only fail to convince, but rather confirm many in their disbelief in our views. Above all things, the utmost harmony and good feeling should prevail between those whose duty it is to demonstrate, to prove the truth of our religious teaching. This is but another way of saying that we should daily strive and pray for that Mind which is in Christ, and which must exclude all unjust or unkindly criticism of the opinions, beliefs, or acts of others. The world is generally unjust. We should strive daily to make it less so. Evil should be uncovered and stamped out, in whatever guise it may appear; but one of the greatest of evils is to *assume* that evil exists in others when their intentions are as sincere and honorable as our own, for no better reason than that they do not see things as we see them. What a revolution would result if men would only lay aside forever this baleful tendency and disposition to look upon the thoughts and acts of others with distrust, suspicion, and envy. No greater reform in human thought could be brought about, none that would do more to make mankind happy, remove discord and contention, and restore harmony in all the relations of life; none that would do more to make men honest and sincere, and create that trust and confidence one in another that we so much need.

There is no other religion that teaches this reform so earnestly and convincingly as does Christian Science. If we live it, the reform will come, and come through the beneficent teaching and practice of this truth. It is being practised now, as never before since the time of the Master, and may it grow and spread until this evil, mortal-mind tendency to judge, misjudge, and criticise without reason, is uprooted and finally destroyed. This should be our daily prayer and endeavor.

The Christian Scientist in Business.

H. B. H.

THE statement that a Christian Scientist's religion is applicable to the every-day affairs of the business man, usually arouses, in the minds of those not possessing an understanding of this Science, opposition varying from incredulity to downright condemnation of such a course as being a sacrilegious desecration of sacred things for money-getting. Perhaps this opposition is explainable on the ground that the usual concept of God, as the ruler of

the universe, is that of a monarch with enlarged powers, from whom it would be presumption to expect attention to the details of existence. But with the understanding of God as ever-present, ever-operative Principle, what is there remarkable or objectionable in relying upon that Principle always and everywhere. It will be admitted that the true religious element in man—honesty, with faith in God and in his fellow-man—governs the basic laws of economics; why, then, should not that same element, properly directed, be equally applicable to the minutiae of business?

The Scientist, understanding that every thing and every condition, stripped of the material beliefs hiding its reality, is a manifestation of Truth, looks for and declares for this spiritual fact under all circumstances; and since Truth is the real and its opposite, error, the unreal, little by little, in proportion as he knows this to be so, will he bring Truth into manifestation, and be guided by it in all his transactions.

Let it be understood that in thus proving the power of Truth, the true Scientist must be actuated by brotherly love, well knowing that only so far as he respects the rights of his fellow-man, doing unto others absolutely as he would have others do unto him, will his demonstration be successful. No grasping greed can be present in his consciousness, no least desire to get the better of his neighbor, if he would know the reward of work well and scientifically done. His aim must be to see justice prevail because divine Love, knowing no evil, is justice, and in Love there is no lack, no discord, but absolute harmony, for Love reveals the kingdom of heaven within. This is the meaning of "Seek ye first the kingdom of God . . . and all these things shall be added unto you."

[Written for the *Sentinel*.]

Radiance.

MARY J. ELMENDORF.

He will swallow up death in victory; and the Lord God will wipe away tears from off all faces.—ISAIAH, 25: 8.

My star is shining, shining, shining!
The sweet, white joy that smiled on me
Through many a brent and thorny path,
An arc of braver minstrelsy,
And wider wings of radiance, hath.

My star is singing, singing, singing!
Ah, me! that once beneath the sod
I deemed immortal beauty lay—
As if a lustrous thought of God
Could quench its fire in deeps of clay!

My star is leading, leading, leading!
On progress vision waits, and grace;
And I must climb who fain would see
And hail my calm star face to face,
In purple skies of harmony.

My star is calling, calling, calling!
Dark dreams of Armageddon fleet;
Thunders are spent; and night is done:
Sandaed and staffed with truth, I greet
Athwart the hills the conquering Sun.

My star is singing, singing, singing!
With Love there is nor grief nor loss;
With light, no shadow of a frown:
Faith, patient, kneels before the cross,
While understanding wears the crown.

My star is shining, shining, shining!
Up, strong heart, haste to meet the day!
Fear not; around thee lilies blow,
And with thee, guiding all the way,
Archangels of His kingdom go.

Selected Articles.

Christian Science: a Professional Opinion.

Lady Victoria Murray, First Reader of the newly erected church in Victoria Park, Manchester, forwards us the following letter, which is sufficiently lucid to speak for itself:—

To the Editor of *The Umpire*.

Dear Sir:—Your Special Commissioner's article on the above subject will doubtless cause many persons to ask, "What is Christian Science?" and for their sakes you may be glad, perhaps, to have some more definite expression about some of the facts upon which your Commissioner invites information.

He tells us that he takes his stand upon human, and not upon theological grounds. From this I conclude that he eliminates the spiritual facts, and consequently he is attempting the impossible by trying to explain "things spiritual" from a material standpoint. Jesus said, "When he, the Spirit of truth, is come, he will guide you into all truth." Nothing less than science can impart knowledge, and Christian Scientists therefore conclude that Jesus meant, When a spiritual understanding concerning the truth (in contradiction to a materialistic sense thereof) comes, you will be guided into all Truth.

The theology of Christian Science includes healing the sick, binding up the broken-hearted, and feeding the poor and the hungry. Therefore your critic failed to discern any of the poor, or distressed, or broken-hearted at the service he attended. In his own words, "they were absent apparently, and unthought of." Christian Science had already brought to their consciousness a practical understanding of a God who supplies all their needs, thus those he saw were living witnesses to the truth of Jesus' promise, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you."

Christian Science is thoroughly Biblical, teaching its adherents to live meekly, and follow in the footsteps of Jesus Christ, to obey his commands, and to heal the sick in the same way as he and his early followers did.

It teaches us to trust absolutely in God, the Father of all, and it is being proved daily by thousands of intelligent men and women that this understanding of the Principle of life, which Jesus taught and demonstrated, brings to them a health, happiness, and peace far beyond anything which the world can bestow.

The church in Victoria Park has been built by those people in Manchester and other parts of the North of England who have been benefited by the teaching of Christian Science. It is the outcome of their thankfulness—a standing monument of their gratitude to God. Can you wonder at it, some of the donors having been completely healed of so-called incurable diseases such as your critic doubts—strangulated hernia, phthisis, paralysis, chronic rheumatism, etc.?

Lady Victoria Murray and Miss Coutts Fowlie brought this message of love and freedom to Manchester four years ago, and proved the truth of Christian Science by their works, healing the cases above referred to, besides many others. The fruit of their teaching is seen in the erection of the new church in Victoria Park.

Christian Science is not "auto-suggestion;" it is prayer with faith—not a blind faith, but a faith based upon understanding. It is so simple that a child can understand and apply it. It is not a doctrine, creed, theory, or belief. It is demonstration of the Truth which sets free. Christian Scientists understand it is their duty as well as privilege to follow Jesus' example in works as well as in words; and it is only in so far as they recognize the allness of God that they are able to demonstrate health and harmony.

C. E. BOWLAND.

The Umpire, an English publication.

Mrs. Paddock says she Owe her Life to Science.

Since the McMullen bill to prohibit Christian Science healing in Nebraska has been pending in the Senate, having first passed the House, there have been many protests received against its favorable consideration. These protests declare it to be unconstitutional, in that it assails the constitutional guaranty of religious liberty. The protests are signed by hundreds, not all of whom are followers of Christian Science healing. Most of the communications are identical, having evidently been circulated by Christian Scientists for signatures, but this morning Senator Fries submitted one that was out of the usual order. It came from Mrs. Algernon Sidney Paddock, and read as follows:

"To the Honorable Members of the Senate of the State of Nebraska:—I have been a resident of Nebraska for over forty years, and have the interests of the State much at heart. For twenty years, at certain intervals, I was a great sufferer. I consulted the best doctors and surgeons in New York, Washington, and in other places. With one accord they pronounced the disease to be sciatica in the worst form.

"During these attacks for months I would be confined to my bed, suffering intense pain. My last attack was while I was in Washington. When my physician thought it safe for me to be removed, I was taken, with the aid of crutches, to Excelsior Springs. For four months I lay upon my back, suffering intensely. Finally the physician attending me said there was no hope for my recovery and sentenced me to a short time to live. Completely discouraged, and as a last resort, I turned to Christian Science, and during my first treatment I was instantaneously healed, walking at once without my crutches and without pain. I am happy to state that I never had a return of this trouble. I was also healed of chronic liver, stomach, and kidney trouble. I have never resorted to medicine in any form since my healing, and I am thankful to say that through my understanding of Christian Science that I can and do realize daily that God is my health, my strength, my life, my all.

"Respectfully yours,

"MRS. A. S. PADDOCK,

"(Widow of the late United States Senator Paddock.)"

The Lincoln (Neb.) Evening News.

Church Fraternity.

At the meeting of the Congregational ministers in this city yesterday morning, Christian Science and the Christian Scientists were discussed. The discussion was thorough, yet entirely friendly, and what was said in criticism was offset by what was said in praise. Altogether the sentiment, as expressed by such well-known divines as Rev. Dr. Ruen Thomas, was "to live and let live." What a contrast this situation presents with the situation of a few years ago, when the Christian Scientists were in a sense ostracized and their creed contemned. The followers of Mrs. Eddy have literally forced themselves into public favor by their quiet Christian life, by their practice of Christian charity, by their fraternal spirit even towards their harshest critics. Our orthodox, evangelical, and liberal brotherhoods have taken a step forward in recognizing the Scientists as being of, not necessarily apart from them.—*Boston Daily Advertiser*.

In asking that they be given control of the issuance, or refusal to issue, of Christian Science certificates to heal, the medical doctors have not professed to know much about prayer. There is reason to believe that the Scientists are about as well posted in *materia medica* as the doctors are in bombarding the throne of grace. Why not treat all alike, and while making Christian Scientists get certificates from the doctors, also make the doctors get certificates from the Scientists. There's nothing too good for the dear people.—*The Examiner*, Omaha, Neb.

Among the Churches.

Marysville, Mo.

Our little society of Christian Scientists is now well located in a nice room on the ground floor in the new Empire Theatre. Our attendance has increased, and we feel very much encouraged. The room is also used for a reading room, and one of the ladies is in attendance each day.

C. Q. SMITH, *Clerk*.

Church Union.

It is with gratitude that we report the union of First and Second Churches of Christ, Scientist, of Fort Wayne, Ind. The first union service was held Sunday, November 13, at the former Second Church edifice; all having united under the charter of former First Church. We look forward with grateful hearts to steady progress under the divine guidance of the one Mind.—O. A. REED, *Clerk*.

Topeka, Kan.

As the main trunk of the parent vine is properly nourished and cared for, its branches must put forth a vigorous and healthful growth.

Knowing this, the members of First Church of Christ, Scientist, of Topeka, at its annual business meeting held November 4, made provisions for a monthly collection for The Mother Church Building Fund, until the church is completed or it be officially announced that sufficient funds are in the hands of its treasurer.—*Correspondence*.

A Few Words from Havana, Cuba.

On Sunday, August 7 last, public Christian Science services were held for the first time in this city.

About four years ago a Christian Scientist from New York came to Havana to establish a business, and so far as is known, this was the first time a Christian Scientist had permanently located in Cuba.

At first he was obliged to go over the lessons alone, but gradually a few became interested, and at the time of the evacuation of the American government there were about ten attending the reading of the lessons in a private residence. Changes of residence to a more distant part of the city, and the leaving for home of some attending persons, broke up the meetings for nearly a year. Some good healing work was done about this time, however, and meetings were again started in the residence of one of the patients.

These meetings were continued in an informal way until August 1, when it was realized that the number attending made it necessary to procure more central quarters, and make the meetings entirely open to the public generally.

A comfortable, well-lighted, and well-ventilated hall was found available at No. 117 Prado, in the most pleasant and accessible part of the city, capable of comfortably seating one hundred and fifty people. This was rented and fitted up in a modest way for immediate use, and a society formed, until the proper steps could be taken for the organization of a branch church in due order. The legal proceedings for this organization are now under way, and as far as is known, First Church of Christ, Scientist, in Havana, Cuba, will be the first legal religious organization under the Cuban Constitution.

While our progress has been slow, and attended with many seeming difficulties and trials, the seed has been sown and the harvest is beginning to appear, and with the advent of one or two other Scientists we are beginning our new experience with much joy and gratitude.

A. F. BLUNDELL.

The Lectures.

Quincy, Ill.

The Ninth Street Temple was filled yesterday afternoon, and those present listened to an eloquent and scholarly statement of the great and advancing cause of Christian Science.

The orator was Hon. Clarence A. Buskirk of Princeton, Indiana, and he is recognized as one of the foremost exemplars of the new faith. The Buskirk family has for several generations been very prominent in the affairs of Indiana. Several state offices have been filled by them, and the speaker of yesterday was from 1874 to 1878 the attorney-general of the state. He is a man still in active and healthy life—a man of fine voice and presence—and his address yesterday was a jewel in its way. He arrived direct from Princeton Saturday evening and was the guest until to-day noon of Capt. William Somerville, commandant of the Soldiers' Home. He returned to Princeton this afternoon and goes thence to Harrisburg, Penn.

The speaker was introduced by Captain Somerville, and he chained the attention of his auditors for an hour and a half.—*The Quincy Daily Herald*.

Boulder, Col.

"Standing room only" was the rule after eight o'clock last night [February 9] at Temple Theatre, and it was a splendid and representative audience that greeted Bicknell Young of Chicago, the distinguished Christian Science lecturer. The speaker was introduced by William R. Rathvon, First Reader of the Boulder church of this faith, who said in part,—

The Christian Science Church of Boulder has been organized for nearly three years, and it has, on the whole, been kindly regarded; its adherents have been fairly treated; and its purpose generally recognized as a Christianly endeavor to make men better,—physically, mentally, morally, spiritually. Its success is best attested by the glad evidence of the goodly number of home people, who through its benign ministrations have been restored to their rightful heritage of health and happiness.

Christian Science is still greatly misunderstood, but we are happy in the knowledge that the time is forever past when, in the opinion of the public, everything should be labeled Christian Science which undertakes to heal without using medicines. The world is rapidly learning that Christian Science is not merely a novel method of making sick people well without swallowing anything, but that it is a religion which makes for health of mind and body,—for our true estate.

There yet exists in the popular mind many perverted and erroneous ideas, however, about Christian Science,—misconceptions and imaginations that would be ludicrous and grotesque, were they not so pernicious in their consequences. Our lecturer comes to-night to correct these wrong views, and to present the fundamental teaching of Christian Science, authoritatively, lucidly, and as concisely as so broad a theme can be handled in so short a time.—*Boulder Camera*.

Lecture of The Mother Church.

A lecture on Christian Science, under the auspices of The Mother Church, will be delivered by Mrs. Sue Harper Mims, C.S.D., a member of the Christian Science Board of Lectureship of The First Church of Christ, Scientist, in Boston, Mass., in Symphony Hall, corner Huntington and Massachusetts Avenues, Thursday evening, April 13, 1905, at eight o'clock. The lecture is free and the public will be cordially welcomed.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

"God is the giver."

Columbus, O., March 17, 1905.

The Rev. Mary Baker G. Eddy, Leader in Christian Science.

Dear Mrs. Eddy:—On the 28th day of February, the Supreme Court of Ohio handed down a decision in the so-called Marble case, of which decision the syllabus is as follows:—

1. The giving of Christian Science treatment, for a fee, for the cure of disease is practising medicine within the meaning of the statute regulating such practice in this state.
2. The statute making it a misdemeanor to give such treatment for a fee is not an interference with the rights of conscience and of worship, conserved by section 7 of the bill of rights, and is not, on that ground, unconstitutional.
3. Legislation prohibiting any one from treating a disease for a fee, excepting such persons as have qualifications, is a valid exercise of the police power of the state, and is constitutional.
4. The act regulating the practice of medicine in this state exacts reasonable qualifications and excludes no one possessing them, and is not void as discriminating against Christian Scientists in that it prescribes that any one possessing certain qualifications may practise osteopathy and does not make especial provision for those who wish to practise Christian Science.

The law under which this decision was reached is as follows; and was passed in its present form in 1902, the only one of three bills inimical to Christian Science which got through the general assembly:—

Section 4403f. "Any person shall be regarded as practising medicine or surgery or midwifery within the meaning of this act who shall . . . prescribe, or who shall recommend for a fee for like use any drug or medicine, appliance, application, operation, or treatment, of whatever nature, for the cure or relief of any wound, fracture or bodily injury, infirmity, or disease. . . ."

In the above act the words of the former law "or for a fee prescribe, direct, or recommend for the use of any person, any drug or medicine or other agency" were omitted and the stronger words "treatment of whatever nature" were inserted. Under the former law it had been held by one of the lower courts in Ohio that Christian Science practice was not an "agency;" under this law it is held that Christian Science practice is a "treatment," and Science and Health is quoted (p. 411), beginning with the words, "Always begin your treatment by allaying the fear of patients." The court evidently used the words from an old edition of Science and Health, closing with the words, "Then realize the presence of health and the corporeal senses will respond, 'so be it.'" The learned judge adds, "If its followers call it treatment they ought not to be heard to say it is not." He therefore concludes that the defendant gave a treatment for a fee and thereby violated the law of the State. I came into possession last evening of the first official copy of the opin-

ion that has been given out, and have examined it with care, as it deserves. My first impression, that the only violation of law consisted in the giving of the treatment for a fee or for a fixed compensation, and that Christian Scientists are perfectly free in Ohio so far as the private and personal practice of Christian Science is concerned, is confirmed by reading the text of the opinion in full. In the course of the opinion the Judge says, "It is to be observed that the statute does not prohibit the prescribing or recommending the treatment except for a fee, and we are not advised that it is a part of defendant's religion to exact a fee as well as to pray."

And again he says, "But it is said the offering of prayer to God for the recovery of the sick is not against public health or public morals or public safety or public welfare. Admitted."

But, on the other hand, he also says, "If the defendant prayed for the recovery of Hehl that was the treatment he gave him for the cure of his rheumatism and for which Hehl paid him. He was practising healing or curing disease."

Also, referring to the police power of the State, he says, "The subject of legislation is not medicine or surgery. It is public health or the practice of healing. The State might make it an offence, as has been done in New York (*People v. Pearson*, 176 N. Y. 201), for any one to omit to furnish medical attendance to those dependent upon him. . . ."

My object in calling this matter to your personal attention, dear Leader, is because of the effect this decision of the Supreme Court of Ohio must inevitably have on the professional practitioners in Ohio at the present time. In the emergency, because of my personal relations with the department of Justice, and because of my official relations with the Columbus church, I am called upon to express whatever thought comes to me as the wisest course for Christian Scientists in Ohio to pursue. Mrs. Harriet W. Jones, C.S.D., formerly of Somerville, Mass., is the only teacher at present in the city, Mrs. Spaulding being in the West. Mrs. Jones called a meeting of students for last Sunday afternoon in the church edifice, and it was there resolved that in this Field, for the present, and until the way seemed clearer, practitioners would charge no fees, would not name any price on their efforts to heal, but in the fullest reliance upon divine Love, would go forth with stouter hearts than ever, doing whatever the hands should find to do in the vineyard, knowing full well that God will provide the increase. The labors of love shall be more abundant than ever before, and better healing will result because of this fruitless endeavor of the adversary to hinder and oppose the truth of God. I trust this decision of our little flock to abide by the law of man, so far as we can without infringing upon the law of God, awaiting in patience until we can see "what the Lord hath wrought," will meet your sincere approval. It is undertaken in love, and because it is in love, it is the exact opposite of what mortal mind would have us do.

The general assembly in Ohio does not meet until January, 1906, and until that time is it not well to be as loving as doves and as obedient as Jesus was when he said, "Render unto Cæsar the things which are Cæsar's, and unto God the things which are God's"? Cæsar says there shall be no fee exacted; Cæsar cannot say there shall be no healing. Cæsar is only lord of the material world for the present hour. God is omnipotent.

Immediately after this decision was announced, I saw an effort on the part of the newspaper men (with their usual enterprise in the matter of news) to ascertain how Christian Scientists felt about the decision, how the church would accept the dicta of the court, and what could be prophesied of the future. At the earliest possible moment I sent to Mr. Merritt (Publication Committee for Ohio), and to the editors of The Christian Science Publishing Society in Boston, copies of the syllabus in this case, and to the latter a copy of the salient points in the law covered

by the decision. I have been urged to do this by a sincere appreciation of the need for silence and meditation, instead of for agitation and unwise criticism of court or legislature. Love rules.

After seven days of contemplation of this decision the thought is present with me that perhaps in thus abolishing the fixed and professional fee for Christian Science practice, a greater voice, a deeper power, than that of court or legislature may be speaking to us as a religious body worshipping God. It may be that after thirty years of heroic effort on your part, the world is ripe for such a demonstration of Love that receptive patients will willingly divide, without fee or price or persuasion, their substance with the church and its healing ministry, while unreceptive patients will be less in evidence than now, to take up precious time of which no worker in the cause of Christian Science has to spare.

I trust the "Ohio Decision" will not be a stumbling-block to any earnest student, to any earnest and loyal teacher, or to our Leader and her corps of true and unselfish workers in Concord and at Boston. Give us your approval and your wise counsel, and help each of us ever to remember that

Love is my shepherd; I shall not want.

Yours very respectfully and truly,
E. HOWARD GILKEY, *First Reader and Clerk.*
First Church of Christ, Scientist.

MRS. EDDY'S REPLY.

Pleasant View, Concord, N. H., March 25, 1905.
First Church of Christ, Scientist, Columbus, O.

Beloved Brethren:—I congratulate you tenderly on the decision you have made as to the present practice of Christian Science in your State, and thoroughly recommend it under the circumstances. I practised gratuitously when starting this great Cause that was then the scoff of the age.

The too long treatment of a disease,—the charging of the sick whom you have not healed, a full fee for treatment,—the suing for payment,—hypnotism, and resenting injuries are not the fruits of Christian Science, while returning good for evil, loving your enemies, and overcoming evil with good,—these are its fruits, and its therapeutics, as aforetime, based on this divine Principle, heals all disease.

We read in the Scriptures, "There is therefore now no condemnation to them which are in Christ Jesus, who walk not after the flesh, but after the Spirit." "Stand fast therefore in the liberty wherewith Christ hath made us free." "Be ye therefore wise as serpents, and harmless as doves."

Wisdom is won through faith, prayer, experience,—and God is the giver.

God moves in a mysterious way,
His wonders to perform;
He plants his footsteps in the sea
And rides upon the storm.

Lovingly yours,

MARY BAKER G. EDDY.

THE above correspondence indicates the acceptance by Christian Scientists of what is declared to be the law of Ohio, by the highest judicial tribunal in the State, and it also expresses their intention to be governed by this law. The acceptance of the law as it is construed by the Supreme Court is the only course open to our people as good citizens, and as consistent followers of our Master, who said, "Render therefore unto Cæsar the things which are Cæsar's; and unto God the things that are God's."

The question of fees has not cut a large figure in Christian Science practice, and this interpretation of the Ohio statutes will not interfere in any manner with the progress of our Cause in that State or elsewhere. Under present conditions Christian Science practitioners need—as do all others—to be clothed and fed, but they are learning with greater certainty, through experience, that He who clothes the lilies of the field and cares for the sparrow is not unmindful of the needs of those who do His will and minister to His little ones.

If it was the intention of those who framed this Ohio law to interdict the practice of Christian Science, they have signally failed, and the determination of Christian Scientists to proceed with their work regardless of fees will demonstrate to the world their disinterested desire to spread the complete gospel of Christianity. Incidentally, the persons who succeeded in having this law passed are left in the somewhat anomalous position of consenting to a practice which they maintain is dangerous to the community. Do they believe that the "danger" is eliminated when no fee is charged? If the trouble is with the fee, why not abolish fees for medical treatment? Certainly the "danger" to the patient was not in the fee received by Mr. Marble in the case just decided. Mr. Hehl, the patient, was healed at an expense of five dollars after he had suffered for fourteen years under medical treatment.

The membership of the Christian Science Church has been recruited from every walk of life, and it comprises all sorts and conditions of men, but all are inspired by one grand motive—the salvation of the race. Christian Scientists are sure that all who "seek first the kingdom of God, and his righteousness," shall have all other things added unto them. Although Mrs. Eddy was compelled in the early days of her work to labor gratuitously, the healing has never ceased and her work has continued to bear fruit. Jesus said, "Lift up your eyes, and look on the fields; for they are white already to harvest. And he that reapeth receiveth wages, and gathereth fruit unto life eternal."

ARCHIBALD McLELLAN.

Letters to our Leader.

Cleveland, O., March 7, 1905.

Beloved Teacher and Leader:—The enclosed clipping states the decision of the Supreme Court of Ohio against receiving a fee for Christian Science healing. As the law now stands in Ohio, we can practise, but cannot receive a fee unless we have passed an examination of the medical examiners. In other words, one can receive remuneration for preaching the gospel, but not for practising it. The ministers are not touched by this decision.

The case mentioned in the clipping was that of a Christian Scientist in Sandusky, O., Mr. O. W. Marble, who healed a case of rheumatism of fourteen years' standing and received five dollars for the same. One of the city officials had Mr. M. arrested for receiving the fee. In the first court he was convicted, in the second court the law was decided to be unconstitutional and he was discharged. The case was then carried to the Supreme Court; the judges waited forty days (three on a side) before reaching a decision; finally there were four to two against Christian Science. I have not heard of any one, even among opponents, so-called, who thinks the decision a just one. Steps are now being taken to ask for a rehearing. In the mean time the healing is going on without the fee.

I saw by the *New York Herald* that once more you have proved to the world you are alive and in your usual good health. When will the world know what you are to this generation? I often think of the efforts made by the disciples to have it understood what their Master was. History is repeating itself.

With very much love and gratitude for all you have done for me,

Your loving student,

LIDA W. FITZPATRICK.

Brookline, Mass., February 27, 1905.

Dear Mrs. Eddy:—I have long felt that I should tell you of my healing through the reading of your wondrous book Science and Health. For years I had suffered from many diseases said to be peculiar to women, and my physician said he could do no more for me unless I submitted to a surgical operation, but fear lest I should die under the ether prevented my taking this chance. Very soon after this I was asked to try Christian Science. I live within two or

three miles of The Mother Church, but had never met a Christian Scientist, and knew nothing of the teaching. I asked if there was any literature printed on the subject, as I wished to look into it ere taking treatment. Of course I was given your dear book, and I never left it until the last page was read. I did not at once discover that I was healed, but began doing work which had been neglected for months. After several months I went to a practitioner, took one week's treatment, and during those treatments discovered that I had been healed long before. One old enemy, however, lingered,—just to show me, I think, that I needed God. During that week I learned that I must study my book, and I got a glimpse of how to do it. I have since had class instruction and have had some glorious proofs of the truth of your teaching.

My healing occurred in August, 1901, and I have rejoiced at every step of the way since, and only my work in future will prove my gratitude to you. God bless you, is the prayer of one grateful heart.

MRS. A. L. STEVENS.

St. Joseph, Mo., February 14, 1905.

Rev. Mary B. G. Eddy, Concord, N. H.

Beloved Teacher:—In a former letter to you I spoke of the situation here in regard to the building of our church edifice,—that in order to preserve what has been done it seemed absolutely necessary that the work should be resumed and carried on to the enclosing of the building, which ere long will be accomplished. At the same time the church has seen that the work here is of secondary importance, and a meeting of its members was called for February 10, at which the following resolution was adopted:

"Realizing the great importance of the early completion of The Mother Church edifice now being erected in Boston, and desiring to render all possible aid in this work which means so much to our beloved Cause and to mankind,

Be it Resolved, That active work on our own church edifice be suspended, as soon as the contracts now under way shall have been completed, and that we devote our entire effort toward demonstrating for the Building Fund of The Mother Church; and that we express our gratitude and love to our Leader, Mrs. Eddy, who has labored so long and so unselfishly for the establishment and upbuilding of the Cause of Christian Science, and who continues to guide us so wisely and lovingly into "green pastures . . . beside the still waters;" and that we esteem it a great privilege to labor for the completion of the work so dear to her.

EDWIN J. TOWNSEND,

MARY PRICE,

IRA E. SHROYER, *Committee.*

In accordance with the foregoing, a check has been this day forwarded to Mr. Chase, in addition to the pledge made by this church, which has been fulfilled.

Your loving student,

CHARLES M. HOWE.

Notice.

The next admission of candidates to membership in The Mother Church will be June 6, 1905. Applications must be in the hands of the Clerk on or before May 15, 1905.

An application sent to the Clerk of the Church does not constitute the applicant a member; he must be elected to membership by the Christian Science Board of Directors, at which time notice of election will be sent.

Notice to Branch Churches.

Each branch Church of Christ, Scientist, is requested to send, on or before May 1, a report of its total membership, (not a list of its members), as on record April 1, 1905, to William B. Johnson, C.S.D., Clerk of The Mother Church, 239 Huntington Avenue, Boston, Mass.

Testimonies of Healing.

It is a little over a year since I was first brought face to face with Christian Science. I had heard of it before, through some wonderful stories told by an old friend who had heard them at the Wednesday evening testimonial meetings, but I was a professional nurse of twenty-four years' experience, and thought, "What nonsense! It never was cancer or pneumonia, or it could not have been healed!" I was a nurse and knew so much about sickness. I had suffered with the sick, and had been heart-broken when there seemed no help,—when our best medical men would say, "We can do nothing." I used to plead with God and beg Him to show us the way out of all that dreadful, hopeless suffering. I knew Christ's teaching and I believed in it. I trusted God and I believed in His justice and love for His children. He, our Father, could not be at fault, and as for Jesus Christ's promises, why did they not hold good? There was a need which medicine could not meet, even though I believed it to be one of God's means to help and heal the sick.

Years passed, and I saw more and more how little is really known regarding sickness, how much we are in the dark, even the best physicians not being able to tell. I loved my profession, my heart ached for the suffering, and I begged often and with tears for light. St. Paul's eighth chapter to the Romans was the greatest comfort to me, and gave me courage and a hope that some day I should understand,—maybe when I had finished this life. I had always asked God to send me where I was most needed, because I wished to do His work. One day I was sent to the house of Christian Scientists. There I found the answer to my prayer in the little book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. From the first it took possession of me. Was not this Jesus Christ's teaching carried into practice, the very thing I had been longing for, asking for? Here was a remedy for all evil and suffering, the explanation of sin. My heart burned within me when reading this new revelation.

I read every free moment. I was so interested that I did not realize how much there was I did not understand, until the second reading, when the struggle with mortal mind began and many battles had to be fought, but I was in for it. I had found the truth and could no more return to medicine, had I been willing. I had but one desire,—to do the will of the one Mind, divine Love. I have put the teaching of this Science to every practical test, I have had an opportunity of seeing it proved beyond a doubt, and I consider it the only true means of healing.

Can we ever thank God enough for sending us this truth through Mrs. Eddy, and can we ever honor her enough in carrying out her teaching faithfully? It hardly seems possible, so great are the benefits bestowed upon mankind through her labors. I can truly say, "He hath put a new song in my mouth."

ELIZABETH J. VAN ZELLER, Philadelphia, Pa.

My wife and I became interested in Christian Science ten years ago, at first through the healing of our daughter of astigmatism, and this circumstance caused me to investigate personally the teachings of Christian Science. Like a great many other people who have dispassionately investigated these teachings, I soon learned that there is nothing whatever in them to justify the impressions and prejudices which I had previously formed with regard to Christian Science and Christian Scientists. At the time our daughter's eyes were treated by a Christian Scientist, who, by the way, is one of the most prominent business men of our country to-day, my wife was in particularly poor health, and our attending family physician, a man of good repute, considered her ailments at this time as practically incurable from a medical standpoint. He thought it best

that we should remove from Kansas City, Mo., where we then resided, to some locality possessing, in his opinion, a more healthful climate.

Our daughter's eyes were healed on a Sunday afternoon in May, 1895, and my wife and myself took the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and went to our room that we might carefully investigate what that book contained. We put in from four o'clock Sunday afternoon until one o'clock Monday morning, reading and discussing its teachings, and I want to say, as I have said on other occasions, that we found between the covers of this book the grandest conception of God, the most intelligent explanation of Jesus' life, his teachings and his works, and the highest ideal of manhood ever brought to our consideration. For the first time in our lives did we seem to get that spiritual food,—that bread from heaven,—for which we had hungered, although we had always been members of a church. At the time we were reading Science and Health, this Sunday night, I was wearing glasses on account of astigmatism. Monday morning at the breakfast table I discovered that I no longer needed to wear them as my eyes had been healed in reading this book. Neither my daughter nor myself have ever had any occasion to wear glasses from that time to the present, and neither of us has ever suffered from the headaches which are supposed to attend the difficulty mentioned, where one uses the eyes when so afflicted without glasses.

My wife immediately began a systematic study of the Christian Science text-book and the Bible, because it is a peculiar feature of Christian Science, that in order to be a Christian Scientist one must be a very close student of the Bible,—must constantly study it, and from an entirely different view-point than was ours prior to our becoming interested in Christian Science. Through the enlightenment which is gained from the study of Science and Health, we found that a capacity to read and understand the Bible spiritually is acquired, also a clearer concept of the greatness and grandeur and practical benefit of its lessons, such as never came into our experiences before. During the first twelve months that we were interested in the Science, my wife was healed of that which the physicians considered incurable, and I know not only of a great number of cases wherein diseases incident to a family of four persons have been readily and quickly healed in our family, but I also know of a large number of like instances in the families of my friends, some of whom are Christian Scientists and some of whom are not; those who are not Christian Scientists having gone to a Christian Science practitioner whenever they were ill.

We are apt to forget that we are all creatures of our environment. This is something that I have frequently observed in my experiences as an engineer, and I have had a very forceful illustration of it in my experience with Christian Science, in that I very foolishly denied myself a great deal of genuine happiness and peace of mind by allowing my prejudices to keep me for years from investigating its teachings. Since taking up Christian Science my family and myself have known something of the "Peace of God, which passeth all understanding," and we realize daily the meaning of the promise,—“Thou wilt keep him in perfect peace, whose mind is stayed on thee: because he trusteth in thee.”

IRA C. HUBBELL, Chicago, Ill.

For thirteen years I was almost a confirmed invalid, suffering from an injury of the spine caused by a severe jar received when jumping from a carriage, and producing acute inflammation and double curvature of the spine, together with nervous prostration,—announced as such by several physicians, including one specialist. During these thirteen years I was placed under the care of very many prominent physicians. All this time I was without a day free from pain, and was confined to a couch from three

to ten months each year, steadily growing worse, until the sentence had been given that there was no cure, and that it was merely a question of a few months until the end should come.

At this time, after nearly every known remedy had been tried without success, Christian Science was finally brought to my notice and accepted as a drowning man clutches at a straw. After learning that it was through the power of God the healing was performed, my desire was to be cured at once, and also to make Science and Health coincide with my own idea of the Bible. It was a surprise to me that my health was not restored during the first ten treatments, but that instead my condition was seemingly worse, mentally and physically, causing me to think that Christian Science was of no avail. However, man's extremity is God's opportunity.

One of His messengers, in the form of a dear friend, persuaded me to give Christian Science another trial, after I had without success gone back to material remedies. This return to Truth was accompanied by a little more meekness and fairness to Christian Science, as my suffering had brought me to a sufficiently receptive condition of thought, so that a complete healing took place in four weeks. This put me in a position to accomplish things which it had never been possible for me to do before. Since my healing in 1887, there has never been any return of these troubles.

When I have faithfully and honestly relied on Principle, Christian Science has never been found lacking, and it has been my privilege to overcome for myself and others many ills to which the flesh is heir.

My gratitude goes out to our heavenly Father for this wonderful light which He has given to this age through His pure messenger, our beloved Leader, whose faithful and unselfish life has been the means of setting so many captives free and revealing the kingdom of heaven.

MISS CORA E. CURTIS, Berkeley, Cal.

I feel called upon to give a brief testimony to the wonderful healing power of Christian Science. I had enjoyed almost perfect health for over twenty years, when suddenly, without warning, I was stricken with pneumonia, followed by a complication of jaundice and measles. A physician, who was called much against my wishes, pronounced my case hopeless. Then came a Christian Science practitioner, who said that God was my physician, and that all things are possible with Him. After a few days the result proved the truth of her words, as my speedy recovery was almost marvelous.

My heart is filled with gratitude and love to Him who forgiveth all our sins and healeth all our infirmities, to our beloved Leader, and to her noble army of Christian Science practitioners.—MRS. FRANCES COOPER, Kansas City, Mo.

I was called to see Mrs. Cooper, a lady between sixty-five and seventy years of age, on or about the 1st of April, 1902, and found her suffering from a severe attack of pneumonia and jaundice. Her condition, as presented to me at the time, was so grave that any possibility of recovery seemed beyond all question from any standpoint of *materia medica*. Her breathing was labored from severe congestion of the lungs, and accumulation of mucus, which she could not throw off, owing to her weakened condition. This, together with the jaundiced condition, in one of her age, caused me to view the case as one of extreme gravity. No medicine was given. A Christian Science practitioner was called, to which no objection was raised, as no hopes of her recovery were entertained. To my great surprise and utter astonishment, the patient showed signs of improvement from her first treatment, and in less than one month was entirely well, and has since been in the enjoyment of perfect health.

I have been a practising physician and surgeon for thirty-

five years, and gladly make this statement with the hope that some sufferer may be benefited thereby.

THOMAS C. BAIRD, M.D., Kansas City, Mo.

[Dr. Baird's letter relates to the foregoing testimony.—Ed.]

For some ten or twelve years I had on the back of my neck a large lump, which my physician said was a cyst or small tumor, not dangerous, and removable by the knife or electric needle. As it gave me no pain I had nothing done for it, and rarely gave it a thought unless some one happened to question me concerning it. One day, after I had been in Christian Science for some time, a person whom I had not seen for about seven years, met me, and in the course of our conversation commented upon the fact of my still possessing this disfiguring mark. This set me to thinking, and I determined to get rid of it if possible, realizing that if Truth is sharper than a two-edged sword, its operation could remove this so-called cyst more effectually than any surgeon's knife or needle. At the same time I mentally probed my consciousness for the error which this material manifestation typified. After about two days of this kind of work, I found that the lump was swelling, and it had become so inflamed and sensitive to the touch that I was obliged to lay off my collar and wear a soft handkerchief around my neck. The following night it broke and discharged its contents, leaving an angry-looking sore, but in a few days it had entirely healed, leaving no trace save a pinkish hue where the new skin had formed.

This seems only a small demonstration, but it is significant in that it points to what may be done along the lines of mental surgery when our understanding of the Principle revealed in Christian Science becomes sufficiently advanced.—CHAS. S. KLAUTSHECK, New York, N. Y.

It is with pleasure that I tell what Christian Science has done for me. For years I had been afflicted in many ways. The physicians said I had heart trouble and was liable to die at any time. About three years ago I received an injury which caused *prolapsus uteri* in a very aggravated form. We employed different physicians who recommended a supporter, as they could do nothing else for me but perform an operation which they said was the only known remedy, and that it might result fatally. My husband and family would not consent to an operation, nor could I summon courage for the terrible ordeal, so I suffered on until late last autumn. One day my son and his wife came to see me, and they asked why I did not go to a Christian Science practitioner. I told them I did not feel able to go, but they insisted and I went with them. They had to assist me in ascending the stairway leading to the Christian Science reading room. We procured a copy of "Science and Health with Key to the Scriptures," which I began reading. I also took treatment about four weeks in all.

The results are indeed wonderful, and I feel like praising God continually that I was led to receive the truth. I have not an ache or pain, and am not only thankful that I am free from pain but also for the wonderful spiritual blessing I have received. I am now able to attend our services regularly, and am constantly receiving yet more blessings. I understand my Bible now as never before, and I am determined to learn more of this blessed truth of which I have been so long denied by mistaken belief.

SAMANTHA J. HORTON, Knoxville, Tenn.

I suffered for fifteen years the most intense agony, it seems to me no one could have suffered more. I prayed for death as a relief, and even tried to take my own life. I had treatment by many physicians, but none were able even to alleviate my sufferings. They disagreed in their diagnosis of my disease: one called it cancer of the stomach,

and when Christian Science treatment was suggested to me, I grasped it as my last hope. I was not healed quickly, as some are; in fact, my kind practitioner labored patiently for about two months, but I was healed perfectly, and I am happy and grateful beyond expression in words. I hope this testimony may be the means of leading some other afflicted one into the truth, which to know is to be made free indeed.—MRS. LELIA M. CONNER, Knoxville, Tenn.

In grateful acknowledgment of the many blessings received through Christian Science, I send these words to others who are seeking truth. From girlhood I was considered delicate, having had an accident which affected the spine and which left me unable to do the things I felt I ought to do, or which others did. My road to Christian Science was a hard one. After seeking help some years in other systems, I found I was still at sea, but by praying to be shown the right way, I was led to read Science and Health, which I immediately felt to be what I was seeking. I should like to tell of my experience in painless childbirth. My former experience under *materia medica* was a sad one, and I was told while at a sanatorium that I would not be able to bear children. I was awakened one night out of a sound sleep, and my baby was born three quarters of an hour after I awoke, with perfect comfort, my husband and I being alone. The sweetness and harmony of this experience can only be appreciated by those who have had both kinds of treatment in obstetrics. I want to express my heartfelt gratitude to the practitioner who so patiently led my first efforts in Christian Science, and for the periodicals which come as true friends into my home. I am deeply thankful to God, and to the dear one He has chosen as our Leader.

MRS. ANNE J. SPRAGUE, Wollaston, Mass.

I became interested in Christian Science about eleven years ago, and was healed of neuralgia of the stomach, from which I had suffered from a child. As I grew older, the spells became more frequent and more severe; the only relief physicians could give me was by hypodermic injections of morphine. Finally, after each spell, I would be prostrated for a day or two with the after-effect of the morphine. I was entirely healed of this trouble through the study of Science and Health. I think I never realized what fear meant until I began to try and put into practice my understanding of Christian Science for my children. I have proven, however, many times, that fear can neither help nor hinder in our demonstration of truth. The first time I realized this, was in the overcoming of a severe case of croup for my little boy. I was awakened one night by the sound that seems to bring terror to every mother's heart, and found the little fellow sitting up in bed, gasping for breath. I got up, took him in my arms, and went into the next room. My first thought was, "O if only there was another Christian Scientist in town!" But there was not, and the work must be done and done quickly. I tried to treat him, but was so frightened I could not think, so I picked up Science and Health, which lay on the table beside me, and began reading aloud. I had read but a few lines when these words came to me as though a voice spoke, "The word of God is quick, and powerful, and sharper than any twoedged sword." Almost immediately after, the little one said, "Mamma, sing 'Shepherd.'"—our Leader's hymn, that both the big and little children love. I began singing, and commencing with the second line, the little voice joined with me. I shall never forget the feeling of joy and peace that came over me, when I realized how quickly God's word, through Science and Health and the beautiful hymn, had accomplished the healing work. This is only one of many instances in which the power of God's word to heal has been demonstrated in our home.

ALICE J. GIFFORD, Riverside, Cal.

It was in 1889 that I first heard of Christian Science, and that it healed without the aid of *materia medica*; also that it was the Christ-healing,—the same that Jesus wrought and taught his disciples. This thought touched my consciousness as being what I had long desired. Often, when on my couch in weakness and suffering, I had wondered why it was that we could not be healed in this present day as Jesus healed. This thought would keep revolving in my mind. Later, when I heard of Christian Science, I determined to find out what it was; so I went in search, and prayed almost without ceasing that I might not be led astray and thus go into deeper darkness.

God did hear and answer my prayer; and from the first taste of the truth I did not doubt. It has been most satisfying. The surety of the ever-presence of God, good, gave me a feeling of safety and comfort, with increasing assurance and confidence such as I had never before known. I have been healed of many physical ailments, also of sorrow and heartaches caused by the loss of loved ones. Now I can thank God that these seeming vacancies are filled with divine Love. I wish to speak of one demonstration in particular, for each day it fills me with gratitude. I had worn glasses for fifteen years or more. To sense I was so blind I could not read without them even the headlines of articles in the newspapers, or the signs on the business blocks across the street. Often I did not recognize my most intimate friends until they spoke to me. On purchasing Science and Health I began at once to reason within myself: "If this is the Christ-healing it will heal my sight, for Christ Jesus healed the blind as well as the lame and the sick." I have not used glasses since I purchased Science and Health. The improvement was gradual, what we call a slow healing, but I never became discouraged, for I had all the way the assurance that the healing was going on, and through patience and perseverance in the study of the Bible and Science and Health, came the victory. At present, and for some time past, I read, write, sew, and do whatever comes to me to do without the least inconvenience. The Bible is a new book to me. Now I know that its precious promises are sure when demonstrated.

For many months I have desired to return and give thanks for both the physical and spiritual healing which have been made manifest within my consciousness. My heart goes out in thankfulness for Christian Science. I am daily experiencing a deeper sense of gratitude to God, and to dear Mrs. Eddy, who is so patiently leading us onward and upward, in obedience to the one Mind.

MRS. MARY PATTON STEWART, Greensburg, Ind.

"What shall I render unto the Lord for all his benefits toward me?" This thought has impelled me to write of a demonstration which occurred just one week ago. While preparing our evening meal I had occasion to use the oven, which I lighted as usual, but noticed shortly after that the gas was not burning. I immediately closed the valve and waited a few moments before relighting. As a further precaution I opened the oven door, never thinking of any possibility of ignition from gas burning on the top of the stove. Instantly the flame shot out into my face, singeing eyebrows and lashes. I threw my apron over my head and extinguished the flame at once, but my entire face was burned, and the hair all around the front of my head, as I afterward combed out a handful. For a few moments the pain was intense, but it was overcome very quickly through the application of the knowledge of Truth as taught in Christian Science.

In not over ten minutes, I took my place at the table and ate my dinner, almost entirely free from any sense of suffering. My face has all peeled off, new skin having quickly taken the place of that which was burned, and with the exception of some traces about the eyebrows and lashes, which I know will also be restored, there is little to suggest what might have been a most serious affair. I am con-

fident that nothing but Christian Science could have brought such speedy relief and left me without a scar. I am deeply grateful for the physical help, but oh, the peace and comfort that comes to us from such moments of realization of the nearness and availability of our God, as revealed to us in Christian Science, wherein the Word of Truth does not return unto us void but does accomplish that whereto it is sent.

My earnest desire is so to live that my life may be a constant proof of my sincerity, for this alone can express my love and gratitude to God, and to our faithful Leader.

MRS. FANNIE MITCHELL, Chicago, Ill.

Truth dawned on my consciousness in my darkest hours. I was tired of what life seemed to be, with very little confidence in humanity, numerous physical ailments, and an intense longing for a real proof of true Christianity, which I had not been able to find, although an earnest member of an orthodox church for a number of years. I took great interest in reading the Bible, and wondered many times why the beautiful promises were not for us here and now. Now, in exchange for sickness and a discontented, hopeless, aimless existence, the understanding I have gained in Christian Science has given me health, happiness, contentment, and a peace that to mortal sense truly passeth understanding. My thankfulness to God and my appreciation of Christian Science are too deep for utterance, and can only be indicated by striving constantly, earnestly, and prayerfully to show forth in thought, word, and deed the understanding and application of this blessed truth.

My heart is full of love for our dear Leader, who by her unselfish toil has brought this blessed teaching to a waiting world. I am also deeply grateful to my teacher for his patient labor. In meekness and sincerity my prayer shall ever be that I may remain loyal and obedient, striving constantly to be worthy of the sacred name, A Christian Scientist. God be praised for the proof of a true Christianity which has indeed been found.

MISS MATTIE REAMS, Marble Falls, Tex.

[Written for the *Sentinel*.]

Springtide in the Heart.

ELIZABETH EARL JONES.

In silence tender, magic, deft,
The hand of Love transforms the earth,
'Till not a barren twig is left
To mar the joys of life's new birth.

Upturned is every earthy clod,
And rising from beneath are seen
Bright flowers rare, sweet thoughts of God;
And hills and fields are clothed in green.

From forest depths that silent were,
The robin pipes, the cardinal trills;
The woods with music seem astir,
And echoes answer from the hills.

Abundance, peace, and treasures true,
On every side God's child can see;
And overhead the changeless blue,
Calm, clear, bespeaks eternity.

No human efforts e'er delay,
Or haste the change the seasons bring;
And no vain words that men may say,
Can stay the charms of budding spring.

For Love its certain law fulfils,
As sure as comes each joyous spring:
Then cease from doubts, and human wills,
And rest beneath His sheltering wing.

From our Exchanges.

The one important reason for a genuine unity of Christians is expressed by Christ himself when he prayed for his disciples, "that they may be perfected into one; that the world may know that thou didst send me, and lovedst them, even as thou lovedst me." (John, 17 : 23, Am. Rev.)

From these words two conclusions inevitably follow and should be recognized as the imperative reasons for seeking that union of all Christians for which Jesus prayed. The first conclusion is, that Jesus did not expect that the world would be convinced of his divine character unless his followers should be united; and the second conclusion is that he did not expect that the world would believe in God's love for men unless they could see that his disciples loved each other. In other words, the true and substantial unity of Christians is the basis on which alone can be founded any expectation of the general reception by the people of this world of Jesus as divine and of the Father as a God of love. In the presence of this stupendous argument for Christian union all other considerations, however true they may be, sink into relative insignificance.

The Watchman.

The message which this age needs is one which shall interpret righteousness, and so put to shame the false standards which are current in American society. The present is an age of intense human activities and of commercial, not to say materialistic, standards. It is one, therefore, which requires a human gospel and an uncommercial standard. Both are furnished by the life of Jesus Christ. That life was pre-eminently a human life, and it is the human aspects of that life as a model for men, and therefore a judgment on men, that the age pre-eminently needs. That life, truly, simply, effectively presented, will both condemn the false standards which pass current in American society and will inspire with largeness of endeavor and newness of life by the splendor and the practicality of its ideal. What we want for a great awakening in this beginning of the twentieth century is a fearless and a perfectly frank application of the measuring-rod of Christ's teaching and example, not merely to the outward actions, but to the inward motives of our American life.—*The Outlook.*

The piety that looks too closely into others' failures, and does not scrutinize the beam in its own eye, is suspected by the multitude. It is by the life that men and women teach best. Even the poor are sensitive about having the secrets of their lives pried into, much more the secrets of their hearts. The modern pastor knows less about his people than the old-time pastor did, but it was the outward, not the inward life that fussy piety reached. There is less of formal religious talk in our time, but true religion of the deep and abiding kind has gained thereby. If Tartuffe is not an impossible character to-day, he is a comparatively rare one. Religion may still be made a cloak for evil proceedings and questionable lives, but it is not so easy to hide the cloven foot under that particular garb as it once was. Religion is a sphere peculiarly subject to illusion, and the illusion of the intrusive pietist that he is doing some good in the world is not the worst, but may be one of the most disagreeable.—*The Christian Register.*

Christ's way of rousing noble discontent and exciting to a true repentance was not by showing men how bad they are, but by telling them how wonderful are their opportunities and how far short they come of making the most of life. He linked repentance always with privilege and opportunity. The motive was no less than the presence of the kingdom of heaven, in which every man might have his part.—*The Congregationalist.*

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, \$5. Twelve or more to one address, \$4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, \$1 per copy; \$5 per half dozen; \$9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, Treasurer.
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, \$2.40 per annum; \$1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, \$1.00 in advance; all other countries, \$1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem. Single book, prepaid \$3 00
Twelve or more books to one address, each, prepaid 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science, 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; \$3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL, 80 pages, cloth covers. Prices, prepaid, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, \$1.00; \$5.00 half dozen; \$9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, \$1.00; \$5.00 half dozen; \$9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, \$2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, \$2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, \$4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; \$4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, \$1.00; six copies to one address, \$5.00; twelve copies to one address, \$9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; \$5.00 per dozen.

Direct all orders for above works, and make remittances payable to

National.

The President, exercising his prerogative during the interim of the sessions of the Senate, has notified the State Department that the proposition of the Dominican Government to have the United States take control of the finances of that Republic for the payment of its debts, has been accepted. A treaty to the same effect had been laid before the Senate at its special session by the President, but that body adjourned without ratifying the treaty. There is rejoicing in Government circles in the islands, at the American legation, and among foreign and domestic creditors. The President's action is strongly disapproved in many quarters as quite unwarranted.

The six members of the Panama Commission have, by request of the President, handed in their resignations. Impatience at the delay in carrying forward the canal work, and the unwieldy size of the Commission, have contributed to this action. Only one or two of the present Commission will be in the new Commission and Secretary Taft will have supervision of the work. It was hoped that the Senate would take action on the matter, but it adjourned without doing so.

Less than five thousand ounces of silver for the making of subsidiary coins remain at the Philadelphia mint. Through some oversight Congress adjourned without making any provision whatever for the purchase of more silver. It was expected that Congress would authorize the recoinage of the old silver dollars lying in the Treasury, which are represented by paper certificates, several hundred million dollars' worth of which are lying idle.

A new system has been adopted by the Navy Department to display the American flag in South American, African, and European waters. A squadron of four vessels, with an armored cruiser, will leave early in the summer for a cruise to last until next fall. The squadron will touch various ports in Brazil, Uruguay, and Argentine, and its commander will make official calls upon the Presidents of those Republics.

The Hay-Bond treaty, negotiated with Newfoundland and recently amended by the Senate, does not give satisfaction to the Islanders and they are said to be indulging in retaliatory measures in refusing to give fishing rights to Americans.

Immigration to this country, through the port of New York, for the month of March reached unprecedented figures, the arrivals numbering 97,000. Last year for the same month the arrivals were only 47,877.

The first lot of Lewis and Clark Exposition dollars, made out of Oregon gold, have been run off. Altogether the mint will coin 250,000 for the Exposition.

An inquiry into the so-called Beef Trust by the United States Government is in progress before the Federal Grand Jury at Chicago.

Foreign.

It is reported from Caracas that President Arnal, of the highest court, has decided that the French Cable Company has forfeited its contract by failure to fulfil its terms, but he decided against the Government in the action for damages resulting from the company's acts. Five days are allowed the company to appeal for a reconsideration by the entire court, whose decision is final. The chief points upon which the French Cable Company are being prosecuted are said to be: That the company did not construct a submarine cable between Venezuela and the United States, and that communication was frequently interrupted on account of the line passing through Santo Domingo and Puerto Plata, which the contract does not provide for; that the company also wilfully neglected to connect the port of La Guayra, on the coast of Venezuela, with the International Cable lines, as was agreed on; that the company has not established the cable lines along the western coast of Venezuela, as was also stipulated, but only a cable between Porto Cabello and the Dutch island of Curacao, and thence to La Vela, on the Venezuelan coast.

A press despatch says that the movement for severing the traditional bonds between the Russian Church and State and giving to the Holy Orthodox Church independence and self-rule, which will increase its influence among the people of Russia, has found favor with an important group of clergy at the capital; and a noteworthy document setting forth the views of those of this persuasion, which was presented to Metropolitan Antonius of St. Petersburg, has been published in the Church Messenger, the semi-official organ of the diocese of St. Petersburg and one of the most important religious papers in the realm. The document argues that the Church should free itself of obligation to the State, lend all its energies to the prosecution of its own special work and eliminate the suspicion that it is ministering for worldly ends and interests, and demands the summoning of a general council of the Church to consider means of attaining this greater freedom.

A meeting of the nobility of the Government of Moscow and of representatives of the nobility from various sections of Russia, has pronounced against constitutional government of the kind enjoyed by the nations of western Europe, considering such institutions, because of geographical and ethnological reasons, unsuited to the Russian people. The nobles are of the opinion that some degree of popular representation should be introduced, but that there should be no limitation of autocracy but of administrative arbitrariness, and that the ruler and the people should be brought into closer touch.

The portion of the Japanese loan of \$150,000,000 allotted to London, was over-subscribed within an hour of the time of the opening of the banks. It is said that large subscriptions came from Germany. Switzerland applied for \$10,000,000 of the loan. The issuing banks estimate that the loan was over-subscribed at least ten times.

It is claimed that Japan, in case negotiations for peace are begun, would prefer to treat with Russia direct, instead of through an intermediary. Speculation has named M. Delcasse of France, or President Roosevelt as a probable intermediary. It is said that Russia will refuse to treat if indemnity or cession of territory is demanded.

King Victor Emmanuel is assured of the adhesion of most of the Powers to his proposal for an International Institute of Agriculture.

Industrial and Commercial.

Ecuador has decided to build a railroad from Ambato, a point on the projected line of the Guayaquil & Quito Railroad, to the Curarey River, a distance of about one hundred miles. The Curarey River is a branch of the Amazon. The district is rich in rubber, which is now exported by way of the Amazon Valley to the United States and Europe, and so figures as Brazilian rubber. The railroad will save a haul of about three thousand miles. The cost of construction, it is thought, will be in the neighborhood of \$4,000,000.

The final report of the Royal Commission on Coal Supplies, just issued, shows that while British coal travels the world over and is being imported in increasing quantities into certain foreign countries, the trade is being adversely affected in others by German, Belgian, and in a less degree by American, Australian, and even Japanese coal. This is attributed in some cases to coal strikes in Great Britain, which enable foreign competitors to get into the markets, and also to the export duty.

The new Allan Line turbine steamer *Victorian* arrived in Halifax harbor last week on her first voyage across the Atlantic. As this is the first ocean test of a turbine steamer, there was unusual interest in the vessel's behavior, not only among the Allan Line officials, but among steamship men generally. She made an average speed of about sixteen knots. The new turbine steamer *Virginian* on her trial trip last week attained a speed of 19.83 knots.

An organized attempt is being made by the business men's associations of Connecticut to break the telephone monopoly in that State and to secure changes in the State law which now requires new companies to go before the Superior Court and get an order to the effect that public necessity and convenience require the establishment of the proposed service. Owing to lack of competition the rates are considered unduly high.

Owing to the enforcement of the Vermont law requiring maple sugar products to be marked "pure" or "compound," as the case may be, it is said the falling off in the sales of white sugar this spring in Vermont is marked. A much larger sale of the pure article is anticipated.

The Census Bureau has issued a bulletin showing the total of cotton ginned for the season of 1904 to be 13,584,457 bales of five hundred pounds. The 1903 crop was 10,399,558 bales.

General.

The recent sale in New York of seventy-three paintings by the old masters brought a total of \$61,650. The top prices were \$4,500 for "Lord Wharton," by Mytens; \$3,350 for "Professor Thomas Gregory," by Raeburn; \$2,500 for "Madonna Addorato," by Dolci; \$2,850 for "Holy Family at Rest," by Correggio; \$2,600 for "Repentant Magdalen," by Murillo.

A 60,000-candle-power search light, surrounded by several hundred incandescent lamps, will be mounted on the summit of Pike's Peak this summer. Electrical experts say it will be visible for 150 miles over the plains. The light will be installed as a resort attraction and current will be furnished from Manitou.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

Our High Calling.

REV. ARTHUR REEVES VOSBURGH.

THE teaching of Christian Science has altered our entire thought with regard to God's will to meet our wants, and we are now assured that the divine purpose embraces the satisfaction of every human need, and that every evil shall cease; we therefore no longer ask, with timid apprehension, and much uncertainty, as to whether our healing from sickness as well as sin be according to God's will, but we come to God with confidence that we are fulfilling the divine will in so far as we gain the grace that shall banish all discord and disease from our experience.

In our search for relief from the sickness, want, and woe of mortal experience, we find that the healing of all these conditions is not held before us as a privilege, a boon to be obtained; it is pressed upon us as a responsibility. God not only grants us that we shall find and manifest health, harmony, prosperity, and purity; He demands these things of us, and we stand convicted as unfaithful stewards in so far as we fail to realize these conditions of the true life in our own experience. I knew one who seemed to be thrown on his own resources to make his demonstration of physical healing, to find his way out of the perplexities and diseases of the senses, and in the face of obstacles which seemed to be insurmountable, he was encouraged and stimulated by the fact that others had found their way with the aid of the Bible and Science and Health alone. He saw that Mrs. Eddy had reached the truth with no explicit instruction, except the general precepts and promises of the Bible, and he thought, What others have done I can surely do.

Let us suppose that all this truth given in Christian Science depended on our individual demonstration for its perpetuation; that the alternative was presented us of seeing it disappear from human consciousness if we did not rise to the proof of its truth and power; would we succeed, or fail? In the face of such an alternative is there any Christian Scientist who would not feel the noble impulsion of a supreme need, that for Truth's sake, for humanity's sake, he must succeed, he must not fail?

And in truth, just this kind of a responsibility, this sort of an incentive, is given us. "Herein," said Jesus, "is my Father glorified, that ye bear much fruit." We are here to bear witness to the glory of the Christ-life by its manifestation in our own character and career. Whether it be in our own healing from sickness and sin, in escaping from conditions of poverty, discord, and distress of any kind, or in bringing the demonstration of all these things in our work for others, the high calling of God in Christ Jesus for us, puts it upon us as our supreme obligation to God and to a burdened humanity that we be successful in our overcoming. When the disciples failed to heal, the Master's word was a rebuke to a "faithless and perverse generation," and his only explanation of it was their "unbelief."

Herein is manifest "the patience and the faith of the saints." There is given us assurance that "All things are possible to him that believeth," and such believing we know

to be spiritual understanding. If we think that we lack the understanding needed to do our work, the assurance comes to us that "The Spirit of truth" will guide us "into all truth." "If ye then, being evil, know how to give good gifts unto your children: how much more shall your heavenly Father give the Holy Spirit to them that ask him." "If we ask any thing according to his will, he heareth us: and if we know that he hear us, whatsoever we ask, we know that we have the petitions that we desired of him."

Jesus fulfilled his Father's will and manifested the divine glory by doing the works which prove that in good there is power to overcome all evil, and he has left his example and precept that we should thus glorify the Father as we follow in his steps.

She who in our own time, unaided and unguided except by the grace of God, has found and opened the way anew,—she is again urging upon the followers of Christ the necessity of proving what is professed. To follow in the steps of our Leader to-day means that the unmeasured promises of Truth shall not be poised over against "a gaunt want," but that there shall be an "ample and adequate fulfillment." To all truth-seekers there comes from God, and from His messenger, a summons to enter into His rest, into their dominion, that they may "glorify God and enjoy Him forever."

True Rest.

M. ETHEL WHITCOMB.

There remaineth therefore a rest to the people of God.

HEBREWS, 4: 9.

THOUSANDS of weary hearts have repeated this passage of Scripture and have cried out for the promised rest. Common theory says, Wait patiently, tired hearts, death will some day release you; then work will cease and you will enter heaven, the place of rest. Christian Science, reversing this, saith, Come, weary ones, and learn that work is joy, that heaven is present, and all the longed-for rest is here and now.

Before I heard the glad tidings of Christian Science I would collapse every few months and be carried away for rest; seeking, but not then knowing the rest which only the understanding of God can bring. Later, I learned that it is not in stopping work and in going away that man finds abiding rest, but in learning how to do his work in harmony with the divine Principle of life: for work correctly done brings no burden. It is the death of the false and untrue and not the death of man that brings to him rest.

In the early days of my experience in Christian Science, a Scientist said to me, "The vacation which we most need is to cause error to vacate." This statement impressed me deeply. Christian Science teaches us that the way is made hard by the weight of error,—false beliefs, misunderstanding, fear, worry, selfishness, sensitiveness, self-will, self-love, and pride,—and it tenderly removes these wearisome thoughts and replaces them with the restful ones of understanding, joy, trust, benevolence, and unselfishness. Whittier saw that to cease from selfishness, rather than from service, brings rest; and he wrote, "Self-ease is pain, the only rest is labor for a worthy end." What a transformation will come to the weary when they learn that labor for a worthy end is rest. The worthy end for all labor, in busi-

ness, in the home, or in the schoolroom, is the endeavor to help establish the kingdom of Truth, Love, and righteousness on earth. Hence the command of Scripture, "Not slothful in business; fervent in spirit; serving the Lord."

Man has his salvation to work out; in other words, he must go from where he now is mentally, to absolute God-likeness. In proportion as he advances in this work does he know joy and rest. Not in the wilderness is this work done, but wherever duty calls; therefore the Christian Scientist sees that whatever may be the work before him, he should put into it the highest quality of thought, and thus make his life yield richer fruit because of it. The act may be lost sight of, but the spirit in which it was done has helped him heavenward, and it also remains to purify the world. Therefore, "Whatsoever ye do in word or deed, do all in the name of the Lord Jesus." Thus we learn there is no material work. As soldiers, after a long march, become oblivious to weariness and march on with strength, on hearing the drums, so let the man who believes that his work is material, who is tired and joyless, hear the music of a higher hope and learn that his duties are not material, and that they can be done divinely,—in a way that will help him to work out his salvation and uplift the world,—and he will then go forward in new joy and strength.

From beginning to end Jesus taught men spiritual activity. On the night of his betrayal, finding his disciples asleep, he said, "Why sleep ye? rise and pray, lest ye enter into temptation." He sternly rebuked spiritual apathy whenever he found it, knowing that it had no part in rest. When a boy he said to his mother, "Wist ye not that I must be about my Father's business?" Later, "I must work the works of him that sent me," and again, "My Father worketh hitherto, and I work." He tried to lift men to behold the glorious fact of reflected energy. He taught them that God's strength, dominion, power, and glory was theirs as God's reflection. Again and again he told them that of himself he could do nothing. "The Father that dwelleth in me, he doeth the works." Lovingly he said, "Come unto me, all ye that labor and are heavy laden, and I will give you rest. Take my yoke upon you, and learn of me; for I am meek and lowly in heart: and ye shall find rest unto your souls. For my yoke is easy, and my burden is light." It is as if he had said, Come unto me, all ye that are laden with earth-bound, tired thoughts,—not perceiving the glorious purpose of your life,—and I will teach you what brings rest. You will feel its holy calm, when you love the world as I have loved it, when you lay upon God's altar every thought of human will, when self is silenced, and you have no ambition or desire but to purify and bless humanity. My burden is light, because I carry not the belief of selfishness outside of God. I recognize no life, intelligence, action, strength, or joy apart from the infinite Mind who knows no weariness.

The rest which Jesus taught was not the result of self-ease and idleness, but of overcoming, progressing, serving; even the love which lays down its life for others. Forgetfulness of others, self-sympathy, spiritual apathy, will be expressed upon the body in physical weariness. The one who has learned that spiritual activity is the demand of God, is "instant in season" to deny all that is false, is ever alert, and allows no opportunity to overcome self, or to bless others, pass by. This one goes forth each day to his work filled and thrilled with love for God and man, never forgetting for one moment the sacred purpose of his life. He who so lives has found the secret of rest, and enters here into the heavenly joy which divine Love hath made ready for the selfless laborers of Truth.

Rest isn't quitting
The busy career;
Rest is the fitting
Of self to its sphere.

'Tis loving and serving
The highest and best,
'Tis onward unswerving,
And that is true rest.

Religion.

EVELYN SYLVESTER KNOWLES.

THE Apostle James says, "Pure religion and undefiled before God and the Father is this, To visit the fatherless and widows in their affliction, and to keep himself unspotted from the world." This definition of religion is interesting, and includes far more than would at first appear, for while none can deny that these words may be interpreted literally, there is also an inner meaning that might elude a cursory observation.

Who, we may ask, are the "fatherless"? Since there is but one Father, even God, must it not follow that the fatherless are those who are unconscious of their divine sonship and need to be aroused to the fact? Now, to "visit" a person, is to go to him and stay with him for some time. A call is brief, often formal; but a visit presupposes a degree of fellowship which brings the visitor into close touch with the visited, and thus, for better or worse, exert some definite influence upon his life. To "visit the fatherless," then, is deliberately to seek our brother who is still under bondage to material beliefs and fears, acquaint him with his divine heritage, and lend him our tender companionship until he is eased of the "affliction" of believing himself without a Father. "A father of the fatherless, and a judge of the widows, is God in his holy habitation." Of course we should observe the etiquette of spiritual ministry as rigidly as that which pertains to the material, and never be intrusive or presumptuous.

Those laboring under the delusion that the lack of human affection can mar their happiness; those still looking for satisfaction in the joys of the senses, are the "widows," who need to be kindly but firmly awakened to the understanding that "Thy Maker is thine husband." It is not wrong to enjoy the good and beautiful things of this life; the harm lies in being satisfied with them. Is there not a noble discontent—the exact antithesis of unhappiness—that forbids one to rest satisfied this side of absolute perfection? Were it otherwise, would not progress cease, and the effort to grow into a consciousness of the divine reflection be submerged in the slough of self-satisfaction? "I shall be satisfied, when I awake, with thy likeness," says David.

"To keep himself unspotted from the world" is mentioned last, because to mortal sense it seems most difficult of attainment. To open our neighbor's eyes to the fact that he is not getting the best out of life, or that he is not giving the best service, seems much easier than to realize that we occupy a similar position.

In the old thought, to keep unspotted meant chiefly the avoidance of the so-called physical indulgence of appetite and passion; it also conveyed the thought that one should shun evil companions and profane expressions. To the Christian Scientist the text suggests all this and much more. He knows that he must keep his thought pure when seemingly surrounded by impurity; that he must retain his peace in the midst of mortal discord; that he must daily grow away from his belief in the world's evil into a clearer understanding of the allness of God,—and this when the flesh is alluring him earthward,—these things must be accomplished if he would "keep himself unspotted from the world." It means, of course, continual warfare; not discouraging, joyless, but exhilarating, blessed. It is not the necessity of working toward this end, but our failure to recognize this necessity, that sometimes tempts us to become discouraged. Our revered Leader is a living example of the possible results of constant labor.

There is one who has been in the world but not of it, and to him alone has been granted the privilege of saying, "It is finished." But the voice that bids us "go, and do thou likewise," promises a similar conclusion to our labors if we endure "unto the end."

An Appeal to the Members of the Texas Legislature.

UNUSUAL space is given in this issue to matter pertaining to medical legislation, in view of the general educational need, and of the special significance of the subject to Christian Scientists. The following vigorous protest was recently presented to the legislature of Texas, by the Christian Scientists of that State. It is grounded on those constitutional "Rights," to the maintenance of which every free and independent people must ever be alert, since their happiness and well-being can be assured on no other basis. The significance of the issue raised has been clearly seen by a large majority of the legislators and judges who have given the subject judicial consideration, and we are sure that the American people may be trusted with the guardianship of their rights, as soon as they realize that they are endangered. The statistical information appended to the document will prove very serviceable to Christian Scientists everywhere.—[Ed.]

Before casting your vote on the medical bill which will be offered for your consideration, you are asked in the name of justice and humanity kindly to consider this appeal, and the facts therein stated, with care.

We respectfully call your attention to a part of the amendment which it has been stated will be offered through the State Medical Association to Section 13 of the Medical Law now in force, and which reads as follows: "Provided, that those persons treating disease who do not prescribe or give drugs or medicines shall be examined in all the branches provided for in this act except Chemistry, *Materia Medica*, and Therapeutics."

If this amendment is adopted it leaves nearly a dozen other branches of medicine and surgery in which it is designed by a part of the medical profession that "those persons treating disease who do not prescribe or give drugs or medicine" shall be examined, or be subject to criminal prosecution.

Thus schools of medicine whose methods are diametrically opposed to each other unite in demanding that this legislature shall pass a law which will practically prohibit the healing of the sick without the use of drugs; for it should be obvious that those persons not claiming to have any knowledge of, or use for drugs, through whose ministry the healing comes, could not gain the consent of medical boards at entire variance with them, even were they disposed to seek such permission.

In this day of enlightenment every well-informed person knows there are thousands of cases of disease which have been healed without the use of any drug or material means through the efforts of Christian Scientists, after *materia medica* had given them up to die. We, including many thousands of your fellow-citizens, who have thus been the beneficiaries of this method of healing in hours of dire distress, now resort to it exclusively, and most earnestly protest against the passage of any act which will deprive us of the liberty of selecting the sort of help we deem most effective.

We submit the proposition that the enactment of such a law is unnecessary, unconstitutional, and repugnant to the spirit of American citizenship. It is paternalistic, restrictive of personal liberty, and an example of class legislation pure and simple, no matter how well it may be disguised.

It is class legislation because its purpose is to favor a certain class, place the healing of the sick exclusively in their hands, and debar by law others who meet with equal or more success.

It is in violation of the constitution which guarantees to every man the right to "life, liberty, and the pursuit of happiness." We assert that no man can possibly enjoy "liberty and the pursuit of happiness" if he is not freely permitted to choose his own method of attaining and preserving that paramount necessity, health.

It is undemocratic, for it is arbitrary and prejudicial to "equal rights and privileges," and because it does not represent the wish of the people.

It is un-Christian because it is so sweeping in its phraseology and intent that it is designed to even debar us from resorting to prayer to almighty God as an exclusive means of restoring our health. We ask, Are those whose prayers to almighty God bring healing to the sick to be subjected to the inquisitorial examinations of medical boards because it is designed to class them through the wording of this bill among "those persons treating disease who do not prescribe or give drugs or medicines"?

We wish to emphasize the fact that we are not objecting to a regulation of the practice of medicine and surgery, for we agree with all able physicians that these practices ought to be properly regulated, and that persons who administer drugs, manipulate the human body, or use the knife should understand their business. We assert that there is no class of people in this great State who more earnestly desire to safeguard the public health, or who are more ready to lend their undivided support to any measure which will tend to the alleviation of suffering or the elevation of mankind. What we object to is the attempt to bring those persons who never use drugs, never perform a surgical operation, and in fact never come into physical contact with a patient, under the operation of a law which is ostensibly designed to "regulate the practice of medicine and surgery." We object to having our religious liberties thus curtailed by such subtle wording as is presented in this amendment to Section 13 of the existing medical law.

Some members of the medical fraternity have made an effort to pass an amendment similar to the one herein referred to at every session of the legislature for many years. At such times misrepresentations of our methods, results, and beliefs have been freely made at the instigation of those in whose interest these bills were framed, and as we, like other citizens, are not accorded the privilege of being heard in the general assembly, we have had to endure unmerited abuse in silence. We now resort to this method of laying our case before you and wish to correct some erroneous statements which have been made with intent to create prejudice.

We have been accused of looking with disfavor upon the quarantine regulations of our State, and of being opposed to sanitary measures. These assertions are absolutely without foundation and there is not a shred of truth in them. In fact, Christian Scientists are foremost in desiring a proper quarantine system, in enforcing the strictest cleanliness in communities, and in favoring all sanitary measures which are for the public good. They recognize the fact that these things tend to tranquillity and health in all communities.

We are accused of ignoring contagious disease. That this is positively false is shown by the fact that we have already made a law for ourselves, strictly enforced by our church government, that owing to the public sentiment regarding the danger of communicating contagious diseases, we shall respect this sentiment and the fear of the people and not visit such patients. This rule is in force and is strictly observed by all Christian Scientists. It should be added that this rule has not been made because of any inability on the part of Christian Scientists to cope with contagious disease, for the records of the past show an unparalleled success in such cases, but out of deference to public opinion and the apprehensions of others. It has never been shown that Christian Scientists were responsible for the spread of any contagious disease.

It is also said that Christian Scientists refuse to call in a surgeon in cases of broken bones and similar injuries, and persuade others thus to do. Also that they employ no physician or licensed midwife in cases of obstetrics. If persons making such statements would take the trouble to obtain correct information, they would not place them-

selves in the unenviable position of bearing "false witness." It is the rule of practice of all Christian Scientists that such injuries shall have the attention of a physician or surgeon, for it is only a matter of common sense that such patients need the services of those whose hands are skilled in such matters. Likewise in cases of obstetrics, patients are always requested to secure licensed and competent persons to be present at the time when needed. It should be stated, however, that in cases of the kind just mentioned the co-operation of Christian Scientists has brought about such results as have challenged the wonder of the world.

Christian Scientists do not advocate the withholding of drugs or medicines from any person who may desire them, as has been erroneously stated. They believe that every man should be free to follow his own inclination in such matters. They never thrust their services upon any man, never solicit a case, and a large proportion of their labor is given without any remuneration other than the gratitude of those who were led out of the shadow of sin and pain into the light of hope and health. In view of these facts it is indeed strange that we should be accused of doing the very things which the laws we have voluntarily made for ourselves and carefully observed, expressly prohibit.

Occasionally we hear of some case where the rules of our practice as before outlined are violated, and perchance the patient dies. It is then heralded all over the land that this is the dire result of Christian Science practice. In nearly every instance it is found upon careful inquiry that such a practitioner is not recognized by Christian Scientists as belonging to their number. The injustice of laying the blame for the misdeed of every quack, irregular material and mental practitioner, falsely calling himself a Christian Scientist, at the door of Christian Science, is too self-evident to need comment.

Lest we be misunderstood, we wish emphatically to state that we are not making war on reputable physicians. We have the greatest admiration for the humanitarian labors of all noble-minded physicians, even though we may differ from them in our opinions. We are glad to say that great numbers of broad-minded, able, and honorable men among the medical profession assure us they have no part in the attempt to pass such an iniquitous measure as may interfere in any way with the liberties of Christian Scientists.

Christian Science is essentially a religion, and not a system of medicine. Its healing is not accomplished through hypnotism or suggestion, as those who are not qualified to judge, ignorantly assert. We certainly are most competent to tell just how we heal the sick. Healing the sick in Christian Science is merely an incident in its great work of moral reformation, but it is a result which follows its ministration as naturally as darkness is dispelled by the coming of light. Its followers heal the sick through prayer, and any measure which has for its purpose the contravention of the inalienable rights of an American citizen in the slightest degree, in the exercise of conscience in matters of religion, is in direct violation of the constitution of the United States as well as the constitution of our own State. It may be urged that the State has a right to interfere with the practice of any religious faith whenever that practice is shown to be inimical to the welfare of the community. With this we heartily agree, but it has never been shown that Christian Science practice was a menace to the public safety or health, and it never will be. The instances where, through Christian Science, the citizens of this State have been reclaimed from every form of vice, and saved from the inroads of so-called incurable disease, are so numerous and well attested as to make all contradictions mere idle prattle. We are ready to produce any amount of such evidence whenever called on to do so. It may be urged by certain members of the medical profession that the practice of Christian Science is followed by dire results, but is this legislature to accept statements unsupported by evidence, and offered through those for whose interests this

bill is framed? At the session of the last legislature, never supposing that the practice of a God-fearing people would be assailed by contumelious reports, we were not prepared to furnish data based on careful observation. We are now prepared to do so, and give herewith a statement of the result of the Christian Science practice in six of the large cities of this State,—Galveston, Houston, San Antonio, Austin, Dallas, and Fort Worth,—as offering a fair example of what Christian Science is doing for the people of this State with reference to bodily healing alone. These figures are compiled from reports furnished by the officers of the churches in the cities above named, and are authentic. We also invite you carefully to note the appendix hereto, which shows the action of thirty-eight legislatures all over the United States on this same subject, and would call your especial attention to the action of the United States Congress at its last session. A few references to court decisions are also added.

STATISTICS FROM GALVESTON, HOUSTON, SAN ANTONIO, AUSTIN, DALLAS, AND FORT WORTH.

1. Average number daily asking services of Christian Scientists in the above-named cities is seven hundred and seventeen.
2. Of the total number asking for help ninety per cent have acknowledged that they were healed or permanently benefited.
3. Of the total number, as above given, seventy per cent had absolutely failed to receive benefit from the different schools of *materia medica* before applying to Christian Scientists.
4. Of the total number who have applied for help during the past two years thirteen have died, ten adults and three children.
5. Of the thirteen who died in the past two years nine had already been given up as hopelessly incurable by different schools of medicine, and among this number it is noted that two were in the last stages of consumption, two died of cancer, one of typhoid pneumonia, and one of cholera morbus.

The cases of the seven hundred and seventeen daily applying to Christian Scientists, as above noted, include every sort of disease with which mortals are so frequently afflicted, with the exception of such only as it has been previously stated are not accepted.

Your attention is called to the fact that of the ninety per cent who acknowledge being healed or permanently benefited, seventy per cent had already failed to secure any permanent benefit through the different schools of medicine before asking Christian Scientists for help. This showing is thus immensely superior to what it would be if the seventy per cent had never previously tried any other method of healing without avail.

We invite you to compare these results with those obtained by any school of medicine on earth.

Nevertheless, in the face of such splendid testimony to the interposition of divine Providence in the affairs of humanity, showing the blessings which almighty God has bestowed upon a people consecrated to His service, you are asked to stretch out the strong arm of the law that it may interfere in this glorious consummation.

By the terms of this amendment you are asked to say that the people of this State shall not have the right to get well without the consent of those who compose the different medical boards.

You are asked to say that a sick man must take the drugs offered him through some one of the schools of medicine at variance with each other, or die without help.

You are asked to sit in judgment on a large and rapidly growing class of intelligent people, and to tell them that they have not enough common sense to decide what they should do in personal affairs of most vital import to them.

You are asked to drive people by law to the censorship of

medical boards which are at the same time judge, advocate, and jury; and from whose arbitrary decisions there is no appeal.

There comes a time in every man's life when he treads with anxious step beside the bedside of some loved one, gazing with despairing hope upon the pallid brow fast growing cold, and hearing with dull agony the verdict of *materia medica*, "There is no hope." And you are asked to arm certain classes with authority that they may wield the cudgel of the law, and entering this sacred precinct, drag therefrom the one who sits with head bowed in prayer to almighty God for the recovery of this loved one, because, perchance, he may be classed among "those persons treating disease who do not prescribe or give drugs or medicine."

We ask, Would you like to be so treated?

We contend that "in a country whose proudest distinction rests in the claim of being the cradle of personal liberty, the enactment of a measure which tends in the slightest degree to contravene an inherent right, should not even be a possibility."

We therefore ask that you place the following provision in the medical practice act: "Provided, that this act shall not apply to any person who ministers to or heals the sick or suffering by mental or spiritual means without the use of drugs, medicines, or any material means or methods."

We leave this matter for you to ponder, confident that a just God will rightly direct your acts.

THE CHRISTIAN SCIENTISTS OF TEXAS.

By Robert L. Ziller, Austin, Texas.

APPENDIX.

STATES WHERE ATTEMPTS WERE MADE THROUGH THE MEDICAL FRATERNITY TO LEGISLATE AGAINST CHRISTIAN SCIENCE, RESULTING IN THE DEFEAT OF THE BILL OR IN AN AMENDMENT FAVORABLE TO CHRISTIAN SCIENCE.

1898.—Massachusetts, committee unanimous against bill; New York, bill withdrawn. 1899.—Oklahoma, amended in House in manner to exempt Christian Science; Kansas, no action; Rhode Island, defeated; Connecticut, amended favorably; Minnesota, exempts Christian Science; Missouri, tabled in House; Oregon, buried in committee. 1900.—Maryland, defeated. 1901.—Montana, amended favorably; Wisconsin, vetoed by governor; Tennessee, amended favorably; Kansas, amended favorably; Texas, amended favorably; North Dakota, defeated; Utah, defeated; Arkansas, defeated; California, amended favorably; Colorado, vetoed by governor; Oklahoma, defeated; Florida, amended favorably; New York, defeated. 1902.—Maryland, amended favorably. 1903.—New Hampshire, defeated; North Carolina, favorably amended; Texas, amended favorably; North Dakota, indefinitely postponed; South Dakota, amended favorably; Arkansas, amended favorably; California, bill died in committee; Colorado, vetoed by governor; Illinois, amended favorably; Florida, amended favorably. 1904.—Louisiana, defeated; Kentucky, amended favorably; Iowa, killed in committee.

United States Congress in 1904, in bill regulating the practice of medicine in the Indian Territory, specifically exempts Christian Science. This action was taken after investigation, and there was no opposition manifested, except by one person.

COURT DECISIONS IN A NUMBER OF STATES, SHOWING RESULTS WHERE THE MEDICAL FRATERNITY ATTEMPTED TO BRING CHRISTIAN SCIENTISTS UNDER THE OPERATION OF MEDICAL LAWS.

CALIFORNIA.—Charge of wilful neglect to provide medical care. Case entitled, "The People *v.* Merrill Reed and Clara his wife." Trial before a jury, verdict, "Not guilty." Tried in Police Court, Los Angeles, California.

CONNECTICUT.—Clarence and Mary Northrop, arrested

and charged with causing death of their child by neglect. New Haven, Conn. Parents bound over to Superior Court, and case nolleed by the State.

INDIANA.—Mrs. Emma J. Ehret, arrested for practising medicine without a license. Tried by jury, Martin County Circuit Court, with a verdict of "Not guilty," verdict being, "To pray for the sick, with or without compensation therefor, either by a clergyman, friend, or any other person in good faith depending upon God's help, or to indulge in religious meditation by the bed of the sick, or to give religious advice or help, is not practising medicine."

DISTRICT OF COLUMBIA.—Mrs. Bertha H. Sessford, charged with practising medicine without a license in Washington. Tried and dismissed.

COLORADO.—Mrs. Lovina S. Carpenter of Glenwood Springs, charged with practising medicine without a license. Case dismissed before trial by District-Attorney.

VIRGINIA.—Coroner's inquest, Norfolk Va. Charge of neglect as no medical aid was asked. Jury rendered no verdict.

OREGON.—A. W. Hertzka, charged with practising medicine without a license. Circuit Court, case was dismissed.

KANSAS.—Mrs. H. E. Graybill, Atchison, Kan., charged with practising medicine without a license. Tried and acquitted.

MINNESOTA.—Two cases: State *v.* Mary Brookins; State *v.* Albert Myer. Charged with practising medicine without a license. Both cases dismissed.

NORTH DAKOTA.—Ridgeway case at Lakota, N. D. Tried in County Court. Verdict, "Patient died of pneumonia and nobody was to blame."

TENNESSEE.—State *v.* Mrs. L. B. Aikin; charge, murder. Case tried in Criminal Court, and dismissed with verdict of "Not guilty."

WISCONSIN.—Charge: Practising medicine without a license. Adverse decision in Police Court. Decision overruled in Circuit Court, and defendants discharged, as not guilty.

GEORGIA.—Parent arrested for refusing to call a doctor. City Court decided against the parent. Supreme Court of Georgia reversed the decision, saying that "There is a great difference between depriving a child of sustenance, and refusing to permit medicine to be administered."

NEW HAMPSHIRE. Speed *v.* Tomlinson. Suit brought to recover \$6,000 for alleged damages by Christian Science treatment. Supreme Court decided the rights of Christian Scientists to practise and decided all points in their favor.

NEBRASKA.—Ezra M. Buswell, charged with practising medicine without a license. Tried in District Court, with verdict in favor of defendant. "The court instructs the jury that if they believe from the evidence beyond a doubt that the defendant, when at the bedside of the sick, relying upon the power of God, the Ruler of this universe, to heal mortal man of ailments which the flesh is heir to, prayed to that God in sincerity to invoke His divine power and that he made no profession himself to heal the sick, then you are instructed that defendant for such praying would not be liable therefor under the law."

An Appeal for Justice.

THE following appeal was presented, March 6, to the Honorable Senate and House of Representatives of the State of Maine:—

The Christian Scientists of Maine ask you to vote for an exception in their favor in the bill introduced by Mr. Potter of Cumberland for the amendment of Sect. 2, Chapter 119, R. S., defining manslaughter, for the following reasons:—

1. That their constitutional rights may be maintained—that they may have equal rights and privileges with other citizens of the State in using the method for healing their sick which experience teaches them is most efficacious.

2. That the practice of Christian Science in Maine fully warrants them in making this request:—

(a) Carefully compiled statistics show that in eight of the larger cities and towns—Auburn, Bath, Calais, Gardiner, Pittsfield, Portland, Rockland, and Waterville—there has been for the past year a daily average of one hundred and sixty-three persons receiving Christian Science treatment. Of this number ninety per cent affirm that they have been healed or permanently benefited thereby.

(b) That of this number seventy per cent state that they had absolutely failed to receive benefit previously from the various medical schools.

(c) That during the past two years but ten deaths have occurred in the above-named places under Christian Science treatment—and in every instance the patient had been given up as incurable by physicians.

(d) That in this State during the past five years (so far as can be learned) but one child has died under Christian Science treatment. In this instance the disease had been diagnosed by physicians as an abnormal growth on the brain and considered by them incurable.

3. That the future possibilities of this Science—in its power for relieving the physically and mentally afflicted in this State—may not be hampered by restrictive legislation.

CALEB H. CUSHING,

Christian Science Publication Committee for Maine.

A Reply to Senator Potter.

THE following statement by Alfred Farlow, Christian Science Publication Committee for the United States, was addressed, March 10, to the Honorable Senate and House of Representatives of the State of Maine, in reply to a circular letter to Christian Scientists by Senator Potter, in which he said,—

"I shall be obliged if you will inform me specifically what right of the Christian Scientists you think my amendment would take away?"

REPLY.

The amendment provides for the compulsory administration of medicine, and if I understand its force, if the death of a child who is not provided with medicine should occur, the parents or guardians would be liable to a charge of manslaughter. Christian Scientists have demonstrated beyond any reasonable doubt that their children are more safe under the treatment of Christian Science than under the administration of medicine. While this Science is a religion, and its practice involves allegiance to the Supreme Power, yet in following the practice of Christian Science to the exclusion of medicine, Scientists are not fanatically adhering to a mere belief, but simply holding that which by sufficient and convincing experience they have found to be the best remedy. Parents are the natural guardians of their children. It is in accord with this guardianship that they are permitted to choose medicine for their children. They are permitted to discriminate between allopathy and homœopathy, two directly opposing methods, as their names etymologically indicate—one professing to cure by creating another disease (one foreign to that which the patient already has), and the other professing to cure by producing the same disease on the basis that like cures like. Why should they not be permitted to choose Christian Science? Your proposition assumes, that, because the majority decides in favor of medicine as the proper curative means, it is admissible to force the minority to the same opinion. Such would forever shut out the possibility of progress, for every method will at some period of its introduction be accepted only by the minority. Christian Scientists have no desire that the law should be made in their favor; they cheerfully grant to all others the privilege which they claim for themselves; namely, an individual choice of religion and medicine. If medicine had proven itself a sure cure, or even an approximation thereto, it might justly claim the

sole guardianship of the public health, and under such circumstances it would be perfectly safe to assume that to reject medicine for treatment which is not an absolute cure, is neglect. If one assumes that medicine is a necessity, which is really assuming that there is no other remedy, the burden is upon him to consider the efficacy of Christian Science and thereby be prepared to make a just comparison between the efficacy of this new method and that of medicine. A law compelling a Christian Scientist to resort to a remedy which he has proved to be inefficient as compared with Christian Science, and which he has, therefore, abandoned, not only trespasses upon individual rights, it also interferes with progress.

There are thousands of children in this country whose lives have been saved by Christian Science after medicine had failed to cure, and one can readily imagine what may be the dismay of the parents of such children if they are compelled to go back to the old method of depending upon material remedies. The law should at least provide an opportunity for such non-medical remedies as have demonstrated their efficacy.

There is no reason why your bill should not be amended to read, "Medicine or other efficient means;" or you could say, "Medicine or Christian Science;" thus exempting Christian Science specifically.

It is not fair that you should assume Christian Science not to be as worthy of consideration as medicine, on the ground that it does not so appear to you in view of your personal knowledge of the subject, since overwhelming testimony has already been presented from many of the best citizens of your State regarding the efficacy of Christian Science.

You say that in your judgment the bill has absolutely no effect as to the religion or other beliefs of any person. It should be noted in this connection that Christian Science is based upon the premise, "God is Mind," and this is identical with the teaching, "God is Love;" therefore, the ethics and philosophy, the religion and science of Christian Science are identical, and the use of material remedies would be contrary to the religious practice of Christian Scientists; it would be recognizing other powers beside God and, therefore, a violation of the religious teaching of this Science.

Christian Scientists, in deference to public opinion, have already made a law for themselves not to assume the responsibility of contagious cases, either in children or adults. The law and the authorities demand the guardianship of such cases, and Christian Scientists cheerfully concede this, but a law compelling them to resort to medicine is a step beyond the pale of justice and reason. They would feel very unsafe if they knew their children must depend upon medicine in time of sickness, and they see no justice in that which would force them to go back to a remedy which millions of their brethren have found inadequate.

To this statement of Christian Science by Mr. Farlow, the following was added by Mr. Caleb H. Cushing, Christian Science Publication Committee for Maine:—

A parent, whether a believer in allopathy, homœopathy, or Christian Science, naturally has more or less anxiety during the illness of a child. Is it not an abridgment of a natural right for the Christian Science parents to have the added fear of the possibility of transgressing the law when they give their children what liberal experience teaches is the most efficacious remedy?

Christian Scientists are most careful to obey all State and municipal laws relative to sanitary measures, vaccination, and the reporting of contagious diseases to proper health officers, and the best proof of this is, that in over a third of a century there has never been an epidemic or anything like one that could be laid to a case in a Christian Science family. The public should not, therefore, be unduly concerned as to the future possibility of dereliction on the part of Scientists in this relation.

Healing by Christian Science.

THE following article appeared in the *Lewiston (Me.) Journal* in answer to an editorial comment in that paper respecting a hearing before the Judiciary Committee on the "Potter Amendment":—

It is true that members of this faith believe in standing up for their constitutional rights, but so do most other sects for that matter. During many years, however, unjust attacks and misrepresentation from certain (though we are pleased to say very limited) portions of the pulpit and press were unanswered, until forbearance ceased to be a virtue and it was found that many honestly desiring to know the facts were kept therefrom through these published misconceptions and misstatements. It is gratifying to note that at this day and hour most of our editors, particularly those of this State, are manifesting the kindness and toleration characteristic of their class, in their attitude toward the Christian Science denomination. As the editorial above referred to would tend to give people a wrong impression relative to certain evidence brought out at the hearing, I trust you will kindly allow me to review the same.

The case of varicose veins mentioned did not have surgical treatment. While one of our best surgeons diagnosed the case, he did nothing in a medical or surgical way, and the healing was brought about entirely through Christian Science. While under its teachings broken bones are left to the fingers of a surgeon, Christian Science treatment thereafter relieves the patient of pain in the majority of instances and also tends to lessen the term of confinement. In your deductions and hypotheses you have evidently lost sight of the fact that all our claims are based on what has been done by this Science, and that speculative theorizing is practically eliminated from the premises. When ninety per cent of those treated by Christian Science affirm that they are healed or permanently benefited thereby, and when in two thirds of these cases they had failed to secure help through ordinary medical treatment, it must appear to the unprejudiced thinker that the Christian Science system of therapeutics is an unusually efficient one. Furthermore, when but ten deaths occur in eight of our Maine cities during a period of two years (and all these patients had previously been given up by physicians), it would seem to indicate quite conclusively that this practice is an unusually safe one.

At the hearing in Augusta it was remarked by many that the Christian Science delegation was a very healthy looking body of people, and as the majority of them had been invalids prior to being healed through Christian Science, it may be of interest to the *Journal* readers if I briefly describe some of the cases.

1. Healed in 1889 of consumption, hereditary, all the other members of the family succumbed. Three doctors said the case was hopeless.

2. Healed in 1898 of kidney trouble and rheumatism. Had been under usual medical treatment for eight years without being cured.

3. Healed in 1894 of one of the worst forms of spinal trouble. In Maine General Hospital twice, and considered a hopeless case by surgeons.

4. Healed in 1886 of stomach and lung trouble which medicine and doctors had failed to relieve.

5. Healed in 1904 of nervous exhaustion and dyspepsia. Had been unsuccessfully treated by twelve physicians.

6. Healed in 1893 of neuralgia of the head and astigmatism. Six physicians could not relieve.

7. Healed in 1899 of spinal curvature. Two surgeons failed to help.

8. Healed in 1886 of uterine trouble. Several physicians failed to cure.

9. Cured in 1898 of stomach complication. Had previously lived on Mellin's food and water for three years, had seventeen doctors and underwent two surgical operations without experiencing relief.

10. Experience with broken hip. Set by surgeon and had Christian Science treatment. No pain nor swelling.

11. Healed of fistula in 1898. Doctors and medicine failed to cure.

12. Healed in 1900 of floating kidney. Doctor said no hope but surgery.

13. Healed in 1896 of hemorrhage of bladder.

14. Healed of uterine troubles. Had two operations and doctors said must have third.

15. Healed in 1899 of rheumatism.

16. Healed in 1903 of nervous prostration and general debility. Had been failing constantly under medical treatment.

17. Healed of dyspepsia in 1900. Four doctors' prescriptions failed to help.

18. Healed in 1897 of throat and lung trouble and insomnia. Had not yielded to medical treatment.

19. Healed in 1895 of locomotor ataxia. Needles could be put into flesh—no sensation. Doctors and medicine failed to help.

20. Healed in 1897 of appendicitis. Doctor said case was in a critical stage and an operation absolutely necessary.

21. Healed of tobacco and liquor habit.

22. Healed of astigmatism. Oculists and doctors had failed to cure.

23. Healed in 1899 of double pneumonia.

24. Healed in 1887 of gall stones. Physicians said case was hopeless.

25. Healed in 1900 of varicose veins. Surgeon said surgical operation was only remedy.

26. Healed of blood poisoning. Doctors had given up the case.

27. Healed of insanity and morphine habit. Thirty physicians had failed to cure.

28. Healed of insomnia and catarrhal head pains in 1898. Drugs and doctors had failed to cure.

29. Healed in 1899 of dyspepsia and bowel trouble. Was living on morphine and weighed but sixty-five pounds. Tried many doctors in Augusta and Lewiston, also patent medicines without avail, was considered a hopeless case.

30. Healed in 1887 of blood poisoning and chronic liver and catarrhal troubles. Seven physicians said case was hopeless.

31. Cured of congestion of brain. Doctors could not help.

32. Healed in 1899 of partial blindness. Doctors and oculists offered no hope.

33. Healed of consumption in last stages. Medicine and doctors could not help.

When it is considered that all these people are in the best of health to-day, that they are but a small per cent of those benefited through Christian Science in this State, and but a very small part of the total number throughout the world, it gives one some idea of the wonderful regenerative work that Christian Science is accomplishing in the destruction of physical ills alone. In addition to this, thousands have been reformed morally and uplifted spiritually through its benign influence. Slaves to the drug and liquor habit have been freed by it, and the discouraged and disheartened have been cheered and helped through an understanding of this truth.

When one takes everything into consideration, should we not be deeply thankful that we have, with all its future possibilities for good, that which is needed so much on every hand,—a Christian Science in the world to-day?

CALEB H. CUSHING.

The latest available reports from Maine are to the effect that the wording of the Potter Bill has been amended so that it is now satisfactory to Christian Scientists, and in this form it will probably be passed.—[Ed.]

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Legislation.

LESS than the usual number of bills having for their object the suppression of Christian Science practice, have been introduced in the State legislatures this year, and of this number only the one introduced in Nebraska has been passed, but even in that State the measure has failed to become a law, because of the governor's veto.

Both the decrease in the number of bills, and the utter failure of those which have been introduced, point to the day when legislators will be ashamed to father such attempts to secure unrighteous and unconstitutional discrimination.

The full text of Governor Mickey's veto message is as follows:—

To the Members of the House of Representatives.

Gentlemen:—In relation to house roll No. 165: The purpose of this act is to make the practice of Christian Science healing unlawful and to punish practitioners, unless they educate themselves in *materia medica*, therapeutics, surgery, and other branches of the secular medical profession. To accomplish this purpose a change in the existing statutes is essential, as there is no law now in force forbidding the practice of Christian Science. Such a change in legislation can lawfully be made only by amendment of the statutes in force or by the passage of an independent act. Both of these methods are ignored in house roll No. 165.

Considered as an amendatory act, the bill violates the constitutional provision that "no law shall be amended unless the new act contain the section or sections so amended and the section or sections so amended shall be repealed." There is no attempt in house roll No. 165 to set out the old section or to repeal it, and the bill, as an amendment of an existing law, would be unconstitutional if approved.

The bill is not an independent act in any sense. It could only be effective, if valid, when considered in connection with the statute now in force regulating the practice of medicine. It does not purport to be an independent act, for its only possible effect, if it could be made operative, would be to extend the scope of a section of an existing statute so as to make the practice of Christian Science unlawful; but even if the act were conceded to be independent, in such a sense that it could amend other statutes without referring to or repealing them, it would still conflict with the constitution. The purport of both the title and the bill itself is to prescribe the effect to be given to an existing statute. In other words, the bill, if considered as an independent act, is a bill to construe and give effect to the enactment of a former legislature. The constitution divides the power of government into three departments, and forbids each to exercise the functions of another. It is a function of the courts to construe and give effect to statutes, and this power cannot be exercised by the legislature.

Again, the enabling act passed by Congress, authorizing the formation and adoption of a constitution for the State of Nebraska, expressly demands that said constitution shall provide, by an article forever irrevocable, without the consent of the Congress of the United States, "that perfect

toleration of religious sentiment shall be secured and no inhabitant of said State shall ever be molested in person or property on account of his or her mode of religious worship." In pursuance of this mandatory requirement the constitution of the State of Nebraska declares that "all persons have a natural and indefeasible right to worship almighty God according to the dictates of their own consciences," and further adds, "nor shall any interference with the rights of conscience be permitted." In the Christian Science religion the ideas of worship and of divine healing are so intermingled that it is impossible to draw the line of demarcation, and hence interference with the one or the other is an interference with "the rights of conscience" and thus becomes an infringement of the constitutional guaranty of religious freedom. Considered in any light, the bill conflicts with the constitution.

The measure is also open to the objection that it is class legislation. Practitioners of osteopathy are specifically excepted from burdens imposed upon those who practise Christian Science healing.

Without in any degree reflecting upon the motives of the legislature, it is difficult, too, to avoid the conclusion that the bill was conceived in a spirit of professional intolerance. As originally introduced, the measure bore upon osteopaths with the same rigor that it does upon Christian Scientists, and when it is recalled that homœopaths, eclectics, and other now well recognized schools of healing, as well as osteopaths, have had to fight their way to existence over legal barriers raised by their professional brethren who happened to be within the pale of the law, the suspicion may be pardonable that there is more at issue than a consuming zeal for the public health.

These are some of the reasons which impel me to return house roll No. 165 to your honorable body without my approval.

JOHN H. MICKEY, Governor.

A noticeable feature of all these attempts to secure legislation against Christian Scientists has been the entire absence of any popular demand for such legislation, and as Governor Mickey points out in regard to the Nebraska bill, "it is difficult to avoid the conclusion" that all such bills are "conceived in a spirit of professional intolerance."

ARCHIBALD McLELLAN.

"Songs of deliverance."

Thou art my hiding place; thou shalt preserve me from trouble thou shalt compass me about with songs of deliverance.—PSALMS.

IN all the history of the world's religious progress, "Psalms and hymns and spiritual songs" have had a marked influence in the moulding of human character. They have also indicated the distinctive tendencies of their time. To the extent that they represent a divine ideal they are far above the ordinary standards of religion, else would they fail to lift thought to the hills whence cometh our help.

In the Psalms there are occasional references to worldly power and authority, but these are always subordinated to the spiritual ideal. This is strikingly brought out in the twenty-fourth Psalm, supposed to have been written for the glad occasion when the hosts of Israel marched up the steep ascent of Mount Zion, the ark of God in their midst, to take possession of the citadel from which the heathen had been driven. This Psalm begins with the declaration that the world and they that dwell therein belong to God. Then follows the heart-searching question, "Who shall ascend into the hill of the Lord? or who shall stand in his holy place?" The answer tells, in unmistakable terms, who may enter in through the "everlasting doors" and stand in the divine presence. All Christian Scientists find in the Psalms an ever-deepening inspiration, especially in the ninety-first, that masterpiece of poesy and prophecy. Surely every one that has come to understand its spiritual meaning may say, "He hath put a new song in my mouth."

Coming down to modern times we see that there has never been an upspringing of spiritual sense which has not sought expression in song, and how many weary and sad hearts have found comfort in such hymns as "Rock of Ages;" "Nearer, my God, to Thee;" "Abide with me." As Christian Science marks an era in religious history, so do its hymns introduce into modern hymnology what Paul names the "demonstration of the spirit." "Shepherd, show me how to go," by Mrs. Eddy, touches the hearts of children and adults alike with its tender appeal, while our Communion hymn, "Saw ye my Saviour?" also written by her, lifts thought to behold "the Lamb of God, which taketh away the sin of the world," and its sickness as well. Our Leader's latest hymn, "Blest Christmas Morn," tells of the eternal Christ, and another hymn by her, "Christ my refuge," portrays the drama of the world's redemption, and when these are sung with the spirit, and "with the understanding also," to quote St. Paul again, the healing presence of Christ, Truth, is realized with signs following.

The dense materialism of this age may cavil at the statement that a little child, while struggling with a sense of illness asked its mother to sing "Shepherd, show me how to go," and presently joined with her in the hymn, perfectly healed. But does not this recall the story of Paul and Silas in the Philippian prison, their bodies sorely bruised by "many stripes," because they had dared to heal the sick and cast out evils through the Christ-power; when at midnight, the record says, they "prayed, and sang praises unto God," with the result that "the foundations of the prison were shaken;" the doors were opened and their bonds were loosed. More than this, their jailor himself washed their wounds, and, with all his household, accepted the Christ as his deliverer, ere the morning dawned.

And why should not such experiences come to all professed Christians to-day? Why should not "songs instead of sadness" be their portion? The Word of God has not lost its power to heal, though we read in Hebrews that some were not profited by it because of its preaching, "not being mixed with faith in them that heard it." Surely we have much cause to rejoice that this "faith" has come to us, whereby the healing truth, whether read or spoken or sung, is passed from one to another, thus giving life unto the world.

ANNIE M. KNOTT.

An Impossible Blend.

THERE is nothing so definite and incisive as truth. It has unanswerable finality, is forever settling things, and hence is the basis of all right discernment. This is clearly seen in the distinctive character and universal significance which attaches to Jesus' words, "That which is born of the flesh is flesh; and that which is born of the Spirit is spirit." Here is a discrimination of truth which manifestly conditions all being, and it is therefore supported by all history. Subject to no gainsaying or evasion, it marks the eternal separateness of truth and error, and is as unvarying as beneficent, simply because it is divine. The range of the law Jesus thus enunciates is unlimited, its line "has gone out through all the earth." It classifies every expression of life, every product of human thought. It is true for all time, and it forever denies the possibility of any blend or combination of that which is spiritual and that which is material. Natural history and human experience seem to be constituted by an indissoluble union of opposing entities, and a stupendous mistake of theology, in all the years, has been the acceptance of the validity of this seeming. Erroneous belief has thus objectified evil, given it place and parts, legitimacy and law, by attaching it to good. This sowing has been to the wind, and the reaping has been to the whirlwind; for not only has evil's intrusive claim of privilege and power won a practical concession in every realm of nature,—the so-called physical life,—but the desolating demon has invaded the

highest heaven of human sense, and secured recognition as real and eternal, an integral part of the divine ordering.

Jesus honored this law of the persistence of kind in reproduction, in his daily demonstrations. In his experience of human temptation he met the claimant with instant and annihilating rebuke, and he won thereby the ministry of angels. With the same truth-inspired assertiveness he banished sickness and suffering, the grievous effects of sin's confusion, and thus made it clear that the perception of the fundamental nature and law of being has an immediate relation to health as well as holiness. There is one infinite Spirit, by whom are all things,—this is the profoundest dictum of revelation, the broadest postulate of Christian faith, and when it is seen that creation means continuity of manifestation, and that every divine idea, every "creature of His hand," has and must ever preserve the divine nature, then we cannot escape the conclusion that the real universe is spiritual; the basis of an inspiring idealism has been found in the all-inclusiveness and immutability of the Infinite, and we have dignified and exalted our concept of man by bringing it into at-one-ment with our highest and noblest sense of God. This, in Christian Science, is the initial of human redemption.

The serviceability of this law is not limited, however, to the establishment of man's inviolable likeness to Spirit. The awakening consciousness may have laid firm hold upon right fundamental concepts and yet find great difficulty in determining the true quality, the worthiness or unworthiness of many impulses, motives, and desires. Truth and falsity often seem to human thought so welded together, as to make analysis and separation very difficult, and in such an experience the determination of the source of an idea or impulse often proves the simplest and easiest way of reaching a definite conviction as to its inherent nature and leading. If, in the moment of sense-confusion and uncertainty, we honestly inquire into the probable parentage of the suggestion or desire in question, we shall often be surprised to find how readily and how surely the matter is settled. Our Lord's affirmation of unvarying likeness in generation thus comes to the practical aid of groping human sense, and one of the possible reasons for his emphasis of the law of lineage is thereby disclosed.

This law is given the strongest possible emphasis by Mrs. Eddy in her statement of the teaching of Christian Science (Science and Health, pp. 274-282), and to those who apprehend this teaching it renders a no less important service in the uncovering of falsity than in the perception of truth. "That which is born of the flesh is flesh." It can never develop into its unlikeness, become related to, or a part of Spirit. They have no possible co-existence or co-operation, and herein the teaching of the Master is diametrically opposed to that evolutionary philosophy and dualistic theology which admits a possible miscegenation of the spiritual and the material, regards evil as good in the making, and thereby renders null and void those ethical discriminations on which all religious life is based. The weakening influence of this bad philosophy is seen in the disposition, upon the part of even Christian people, to indulge unideal personal habits and unjust economic conditions, and the only safe position for the Christian theist is that maintained by Christ Jesus in the whole round of his teaching; viz., that God has absolutely no use for evil. This is a bulwark of Christian Science, and strange to say, it explains no small amount of the theological as well as the worldly antagonism which has been arrayed against it. Nevertheless, it adheres unequivocally to the declaration that every expression of materiality must be denied if we would measure up to the requirement of Paul's earnest and uncompromising appeal,—*"Wherefore come out from among them, and be ye separate, saith the Lord, and touch not the unclean thing; and I will receive you, and will be a Father unto you, and ye shall be my sons and daughters, saith the Lord Almighty."*

JOHN B. WILLIS.

Letters to our Leader.

Christian Science Reading Room,
Belfast, Ireland, March 7, 1905.

Dear Mrs. Eddy:—We, on behalf of First Church of Christ, Scientist, Belfast, hope you will accept this shamrock as a small token of our love and gratitude. We hope it will arrive in time for St. Patrick's day, the 17th of March. Centuries ago St. Patrick used the shamrock to explain the Trinity to the Irish people; now you have shown us the Spiritual Tri-unity—Life, Truth, and Love, and we can never be grateful enough for the blessings this knowledge has brought to us, collectively and individually. We are truly grateful for the opportunity afforded us of helping to build The Mother Church in Boston. Some time ago we decided to send a tenth of our income for this purpose, and we are striving daily to help on this grand work, by putting off the old man with his deeds and putting on the new man.

Lovingly yours,

LIZZIE MCKIBBIN,	JOHN H. D. MILLER,
ANNA CROOKS,	R. MURDOCK,
FRANCES PORTER,	THOMAS REID,
WM. CRAWFORD,	<i>Board of Directors.</i>

Brooklyn, N. Y., March 12, 1905.

Reverend Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—The course of life and heavenward progress is taking us rapidly to the realization that purity, love, and harmony can be had only as we rise to the Horeb heights of universal oneness, expressed in our present consciousness as the brotherhood of man. It is our great happiness to announce to you the glad tidings that First and Second Churches of Brooklyn have been united into one church body. The committee appointed by these churches to perfect the arrangements leading up to this scientific demonstration, obeyed in all its deliberations the instructions of the prophet, to deal justly, love mercy, and walk humbly. The proof of success is the sign following; namely, the unanimous vote of both churches. The numerous expressions of joy on the part of members is a good omen for the continued harmony of this branch of our dear Mother Church.

We feel sure that your dear heart will be gladdened by these signs of broadening thought and spiritual awakening, and we believe that the work in this locality will receive a new impetus and be blessed, as we are obedient to the lessons we have received from you, our teacher and guide.

Faithfully and lovingly yours,

FRANK H. LEONARD, C.S.B.,
FRANCES S. TURNER, C.S.B.,
F. L. MANCHESTER,

Committee of First Church.

W. F. BURT,
HARVEY M. FERRIS,

Committee of Second Church.

New York City, March 18, 1905.

Rev. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—Following the lines laid out for us in your recent letter, relative to the establishment by the Central Christian Science Reading Room Association of a branch in Harlem, and having received due notice from the Association that the latter was ready to take this important step and had secured a suitable location for a public Christian Science reading room in the very heart of the up-town business portion of this city, at 123 West 125th Street, Third Church of Christ, Scientist, by the act of its Board of Trustees, unanimously endorsed by the members of the church, at a meeting held on March 15, has given up its own church reading room in favor of the new Harlem

Branch of the Central Christian Science Reading Room Association, accompanying this action by the contribution of a sum of two thousand dollars towards its establishment and support during the first year, aside from the contributions from the individual members of this church.

It is our sincere hope that this step of progression will give you joy, as we feel that thereby Christian Science will undoubtedly be brought much more prominently before the public than would have been possible in our own reading room connected with the church building, and that it will be the means of a wider and fuller dissemination of the healing Christ-truth in this part of our city. It is contemplated to keep the new reading room open also in the evening, so as to give men and women engaged in business during the daytime an opportunity to avail themselves of its privileges.

We particularly rejoice at being able to take this new step in unity with our sister churches of this city, associated in the work of the Central Christian Science Reading Room Association, which work during the past year has already done so much towards breaking down the old thought of separate interests and the limitations arising therefrom, in bringing together loyal Christian Scientists from all the churches,—brothers and sisters walking in the same direction, in the path of Truth mapped out for us by your inestimable lifework.

We are deeply grateful for the blessing of your wise and ever-watchful leadership in the way of the Master, which brings healing to the ages, and we pray that we may be awake—listening to hear the divine voice, whenever it shall call us onward to new duties that may await our doing.

For the Board of Trustees of Third Church of Christ, Scientist, of New York City, gratefully yours in Truth and Love,

H. L. GWALTER, *Committee.*

Ogden, Utah, March 20, 1905.

Rev. Mary Baker G. Eddy,

Pleasant View, Concord, N. H.

Beloved Leader:—I am confident you will rejoice with us that another Christian Science Society has been added to the list of faithful workers who are striving, with gratifying success, to spread this Gospel of Truth. Our first service will be held on Sunday morning, March 26. All are alive to the great value of church services, and have been benefited both physically and spiritually through Christian Science, until it is now everything to us.

Appreciating in the highest degree our text-book, "Science and Health with Key to the Scriptures," as of priceless worth, as well as that indispensable safe guide in church work,—The Mother Church Manual,—we will strive to become a luminous star in the firmament of faithful workers for our beloved Cause,—Christian Science.

Yours faithfully,

GEO. TOLMIE, *Chairman.*

Notice.

The next admission of candidates to membership in The Mother Church will be June 6, 1905. Applications must be in the hands of the Clerk on or before May 15, 1905.

An application sent to the Clerk of the Church does not constitute the applicant a member; he must be elected to membership by the Christian Science Board of Directors, at which time notice of election will be sent.

Notice to Branch Churches.

Each branch Church of Christ, Scientist, is requested to send, on or before May 1, a report of its total membership, (not a list of its members), as on record April 1, 1905, to William B. Johnson, C.S.D., Clerk of The Mother Church, 239 Huntington Avenue, Boston, Mass.

Selected Articles.

An Unworthy Measure.

Bigotry and the latent spirit of persecution has so far prevailed in the legislature as to induce the members in both branches to pass a law aimed at the practice of Christian Science. The members of the legislature mean to be liberal. They would declare unreservedly in favor of liberty of conscience, and they revolt against the persecutions and outrages of the dark ages. Yet these people who believe the good Lord will answer their prayers literally, just as he has promised, and who are willing to trust to good morals, good habits, and correct living, rather than drugs, are so foolish and ridiculous that they ought to be made to practise what we believe instead of being allowed to follow the dictates of their own conscience.

Of course we will not burn them alive, as they used to do in such cases. It will not be necessary. We will just enact a law and they will obey the law. But suppose they do as the ancient martyrs did. Suppose they refuse to obey the law, and persist in their foolish practices. What then? Of course the law has a penalty, or it would not be of any use. If these silly, unreasonable Christian Science people are so strong in their faith that they think they ought to defy the law, as Daniel did, and as thousands of holy martyrs have since done, what will happen then? Why, of course they must expect to suffer the penalty of the law we have made to bind their conscience. We will send them to prison. It will serve a devout and gentle woman right to go to prison if she is so silly as to trust in the name of Jesus for present help in time of need! We have no intention of persecuting the Christian Scientists, as the Quakers, the Protestants, the non-Conformists, the Congregationalists, and the strict Conformists were persecuted. Yet we have passed a law that will land them in prison and keep them there if they are half as obstreperous as was any one of the holy martyrs whose fate we deplore and whose persecutors we detest.

Perhaps we had better take their Bible away from them, so they will forget God's promises. According to the recent statutes of Nebraska, He never intended to keep them anyway! It only requires the signature of the governor to make that statement the law of the State. If Christ should come to Nebraska and do as he did in Galilee nineteen hundred years ago, he would be arrested and fined, and if he did not pay the fine he would be sent to prison, and we could not have the miserable consolation of shirking the responsibility, as Pilate did, by saying, "I find no fault in him." We would be compelled to declare that he had committed the fault of breaking the law of the commonwealth and was worthy of its penalties.

Editorial in *York (Neb.) Times*.

John Wesley's Testimony.

It is probable that many Christian people who have opposed the Christian Science teaching that physical healing should be effected without the use of drugs, are unfamiliar with the fact that the founder of Methodism fully believed in spiritual healing, and at times relied wholly upon God for health and strength, and this not for himself alone but for his beasts as well.—[Ed.]

We are sure that the following extracts from Southey's "Life of Wesley," will be of interest to all Scientists, as well as to those Methodists who may not be familiar with the life of their revered leader.

Says Southey, "He related cures wrought by his faith and his prayers, which he considered and represented as positively miraculous. By thinking strongly on a text of Scripture, which promised that these signs should follow those that believe, and by calling on Christ to increase his

faith and confirm the word of His grace, he shook off instantaneously, he says, a fever which had hung upon him for some days, and was in a moment freed from all pain and restored to his former strength.

"He also says, 'My horse was so exceedingly lame that I was afraid I must have lain by. We could not discover what was amiss and yet he could scarce set his foot to the ground. By riding the seven miles I was thoroughly tired and my head ached more than it had for months. What I here aver is naked fact. I then thought, Cannot God heal either man or beast by any means, or without? Immediately my weariness and headache ceased, and my horse's lameness in the same instant.'"

NINA GOODWIN HENDERSON.

Cured of Drink by Christian Science.

Newark, February 25.—While Lizzie Arlington professes to have been reformed, the police and physicians are watching her case with much interest, but Lizzie has faith in herself this time, and greater faith in George M. McClintock and the teachings of Christian Science. After twelve years of habitual drunkenness she is on the right road, and she says she intends to stay there. Lizzie was cured of the curse which had held her so long, while a prisoner in the Newark jail. Now she is free, and has a position with a good family.

Mr. McClintock declares that nothing cured Lizzie but the teachings and methods of Christian Science. He showed her the way and she proved a willing patient. The story of her cure is remarkable.

"I first heard of Lizzie," said Mr. McClintock, who is a well-known business man of Newark, "on December 3 last. I was sitting in the parlor of my home at No. 1116A Broad Street, reading a newspaper. I noticed an account of the poor woman. The story told about Judge Sweeney sending her to jail with the intention of having her committed to the Morris Plains Asylum later as a dipsomaniac. Judge Sweeney had been appointed and still is her guardian.

"I had been cured of a drunkard's life by Christian Science, and I knew that Lizzie Arlington could be cured. For fifteen years I scarcely drew a sober breath, but nine years ago I consented to let my wife try to cure me through the aid of Christian Science, and from that day I have never touched a drop of liquor. Before that my wife was cured of a severe sickness by Christian Science after specialists had failed. Is it any wonder that I am a believer in the faith?"

"On the first visitors' day at the jail I called on Lizzie. She told me she would soon be sent to the asylum to be treated by doctors for her craving for liquor. I told her I knew a better way—that Christian Science would heal her, that God alone could help her. She said she believed in God and was willing to read the Christian Science books which I had brought with me. The next week I called on her again and I have done the same every week since then. Each time I talked with her and treated her by prayer. She seemed very earnest and gained an understanding of our faith from the books. Through Christian Science the power of drink over her was driven away.

"On Thursday Lizzie's time in jail was up, and I went before Judge Sweeney and told him that she had been cured and that I could place her in a home with a Christian Science family. The Judge was reluctant to do this. He knew that Lizzie had spent the better part of twelve years in jail for drunkenness and he did not believe she could reform. But I was persistent and he finally consented.

"They will never call Lizzie Arlington the 'town drunkard' again. I am as certain of her reformation as of my own. She says she is very happy now, and never has a desire to drink. I do not claim the credit for her cure. It was due to Christian Science alone. I have cured three women and a man through Christian Science and I know

whereof I speak. I am not an idle dreamer. I am simply a believer in the power of God."

The New York Evening Journal.

Christian Science and the Jews.

In the current [February] *Christian Science Journal* there is an interesting article by Anna Friendlich on "Israel's Return to Zion." The lady who wrote this article is a Jewess, and she gives some excellent reasons for the acceptance of Christian Science by so many Jewish people. Besides being a scholarly effort on the part of the writer, it gives enough of divine metaphysics to throw light on the subject; explains Monotheism, and shows the connection between Judaism and Christianity as taught in Science and Health.

The cause of the misunderstanding between the Christian and Hebrew is explained, and the beliefs that have long been offensive both to Christian and Jew are removed. It also proves that when the works of Jesus are understood, he can be accepted by the Jew as the greatest Israelite that ever lived. Says the writer, "In identifying himself with Christian Science he [the Jew] does not desert his people Israel, he returns to them; he does not go out of his religion, he comes into it; he is not absorbed, he is reconciled; Christian is no less Jew than Jew is Christian. Christianity returns to Israel, and Israel to Christ. Christianity comes forward halfway with gracious acknowledgement; shall Israel, having tilled, sowed, and planted, remain self-debarred from its own harvest?"

"The revelation, through Mrs. Eddy, of Christ Jesus to his own people is an achievement unrivalled in history. The glories of a Christian civilization for twenty centuries have not shown the Jews that Christianity is a good thing. Persecution and insult, the Ghetto and the Pale have not brought it to pass. The labors of men of learning, statesmen, generals, poets, sages, have not convinced the Jewish people that Truth is to be found in the New Testament. The simple humility of a consistent Christian life in Concord has corrected the failures of twenty centuries."

Toledo (O.) Times.

An Unjust Law.

There has been introduced in the Oregon legislature a bill compelling parents and guardians to employ doctors of some school of medicine in case of sickness in their families. The law excepts osteopaths, who use no medicine. The law was, no doubt, inspired by the doctors and aimed directly at Christian Science practice. Osteopaths use no medicine, neither do Christian Scientists, but the reliance for success is widely different. The doctors were willing to concede to the osteopaths a place in their ranks, but would not recognize the Christian Scientist practitioner, who relies upon an understanding of man's relation to divine Love for his cures instead of merely punching, pinching, and kneading the body of the helpless sick. If the law would provide for severe penalties in case a medical doctor failed to cure, there might be some sense in the law interfering with the people's rights of self-government. The legislature of Oregon will not pass a law of such distinct class legislation, neither should it.

Post Falls Advance, Post Falls, Idaho.

Lecture of The Mother Church.

A lecture on Christian Science, under the auspices of The Mother Church, will be delivered by Mrs. Sue Harper Mims, C.S.D., a member of the Christian Science Board of Lectureship of The First Church of Christ, Scientist, in Boston, Mass., in Symphony Hall, corner Huntington and Massachusetts Avenues, Thursday evening, April 13, 1905, at eight o'clock. The lecture is free and the public will be cordially welcomed.

Testimonies of Healing.

After many years of invalidism, during which all material methods and remedies had failed to give me relief from the intense suffering produced by periodical headaches, I was smitten with an acute attack of bronchitis. One of the most skilful physicians in this city attended me for many weeks, but finally gave up the case, advising an immediate change to a milder climate, and telling me repeatedly, "No power on earth can stop that cough." I was unable to take the long journey, for which arrangements had been hastily made, failed rapidly, and without any doubt whatever was dying, being conscious only at intervals. During one of those intervals, on waking from the almost constant sleep which seemed to be leading toward that which knows no waking on earth, and seeing the grief of my husband who sat beside me, I roused myself and tried to console him, and finally asked him if he would like me to try Christian Science. Frankly, I had neither faith nor hope in its efficacy, but I said it with the thought that afterward it would be comforting to others to remember that nothing had been untried or left undone. A practitioner came at once, and through her understanding that God is Life, I was lifted almost immediately from the "shadow of death," where I lay in darkness, being "bound in affliction and iron." In a few days I was able to sit up, and gained slowly, but steadily, in flesh and in strength. The cough was many months in disappearing, but finally faded away, and there is now no trace of the disease. This healing was nearly five years ago and seemed miraculous to those who knew my condition. Many who are antagonistic to Science and incredulous of its healing, admit its wonderful power in my case. Every member of my family has been benefited through Christian Science. Each one has been very ill and had no other treatment. I can scarcely enumerate the many attacks of disease which it has dissolved into nothingness,—pneumonia, jaundice, measles, rheumatism, fever, headache, diarrhoea in a severe form, valvular heart disease, and many others.

But what shall I say of the daily problems of life, which so perplex us and for which matter has no remedy? Science alone can and does solve them, and help us to conquer fear and sin through the understanding of the Love that casteth out all fear. I am truly grateful, as I have abundant cause to be, to Christian Science, and to its Discoverer and Founder.—FLORENCE J. BLADES, Kansas City, Mo.

I was a semi-invalid; my husband and one daughter were doomed to die, according to the laws of *materia medica*; the other daughter was subject to hay fever from infancy, and neither medicine nor change of climate could heal her; a little boy was born with stomach trouble, and the hired girl was subject to sick headaches. My daughter and husband were both healed through Christian Science, each in one treatment. The boy's stomach trouble and the girl's headaches also vanished away. The hay fever has been a little more stubborn, but is now practically destroyed. Best of all, I have found the way to Truth. I had lost faith in drugs, though the doctors were faithful and kind, and my only hope was to die. I had no faith in orthodox theology; and I had no hope save in death.

As far back as I can remember I had a desire to be good. As I grew older, a longing to know how to be good grew upon me, but the ideal of good presented to me was not my ideal. I believed myself to be a hopeless, stubborn sinner because I could not see good that way. I asked all the professed Christians and ministers concerning many things that were disturbing me in the Bible, and they answered me according to the prevalent beliefs, but their answers disturbed me more than ever.

When Science and Health was given me I read all day and into the night until I had read it through, and oh, the joy of those days; I had found the truth! In the past

two years I have been called upon to prove that it was the truth, in some very serious conditions, but it has been equal to each occasion. I cannot close without expressing my gratitude to Mrs. Eddy, and to all others who have been so faithful in helping me over the rough way.

ESTHER P. CRUZE, Knoxville, Tenn.

In loving gratitude to God, I wish to tell what Christian Science has done for me. Some months ago, while I was standing on the extreme edge of the sidewalk, I leaned too far forward and lost my balance. To save myself from falling, I put one foot down on the street, when instantly a heavy vehicle passed over my foot. The vehicle stopped when one wheel was directly on the toes, and a lady turned around and asked if I was hurt, to which I replied by asking her to drive on and free my foot. It seemed, to sense, as though my toes were literally crushed, but I declared the truth as I understood it, denying all power but God's power. All the evening I was on my feet, and when I retired I saw that the toes were badly bruised, according to mortal sense. I worked till late at night, but slept soundly after I did get to sleep. The next day we went to the beach and I was on my feet all day long, and three days from the time I was hurt my toes were entirely well. I have also been wonderfully helped in other ways, and while I still have much to overcome, my daily prayer is that I may know the truth that makes free. I wish to express my deepest gratitude to our beloved Leader, Mrs. Eddy.

KATHARINE E. ANTES, Pasadena, Cal.

I feel it my duty to give a testimony as to what Christian Science is able to accomplish through faith in God. In March, 1904, I had a severe attack of sciatic rheumatism. Four years ago I had a similar attack, though not so severe. Then an electrical appliance seemed to help me, and of course that was the first thing I tried this time. It did me no good, however, nor did I get any help from the medical treatment which I tried for quite a while. A friend, who is a Christian Scientist, then proposed that I take Christian Science treatment, and finally I decided to do so. I went to a practitioner in this city. She agreed to treat me, and now, through Christian Science treatment and faith in God, I am healed of my plague. I was so bad that for eleven weeks I could not lie down on the bed. I suffered untold pain, but thanks be to God first, to Christian Science, and also to the faithful practitioner, I no longer suffer. I am once more able to walk as God intended I should do,—upright. I shall study Christian Science and try to understand it better.—R. M. EPPLER, Purcell, Ind. Ter.

I came into Christian Science about September, 1903. I had been examined, ten months previous, by an able physician, who discovered a floating kidney. He said that if allowed to remain in this condition it would affect my nerves. This it did, and from that time until I came into Christian Science my suffering was intense. The doctor said the kidney must be stitched to the muscles of my back, and then he was not positive of favorable results. This kidney has not troubled me in the least since I have been studying Christian Science, and I think nobody can understand my gratitude but those who have been affected with nervous trouble in a similar manner.

Another benefit which I have had in Science, was in the cure of consumption. I came West for this trouble, a brother and sister having died with it. When I took up the study of Christian Science I had tried medicine and climate for two and a half years, with little improvement. However, at this point I would like to state, in justice to a noble doctor of medicine, that he once saved my life by an operation. This trouble has attracted my attention but very little since studying Science and Health, and I feel that it never will if I remain true to this teaching. Another demonstration was over chronic constipation, for which I have had only Science treatment. This was over a

year and a half ago. I would like to add that I became an invalid during a nine-years study of medicine. Then medicine brought no relief for two years and a half, when I took up the study of Christian Science. Six months from the day I first opened Mrs. Eddy's book, "Science and Health with Key to the Scriptures," I considered myself well.

Will also add that I could never have practised my chosen profession, dentistry, had it not been for Christian Science. In the last year and seven months I have been but one day out of the office on account of my health, and this was when I first commenced the study of Christian Science.

JOHN TIFFIN, D.D.S., Canon City, Col.

Jesus came as the Wayshower to teach us the truth, and although it has been partially hidden for centuries, Christian Science is again showing us the way, through the self-sacrifice and love of our dear Leader, Mrs. Eddy, who has so faithfully devoted her years to the cause of uplifting humanity and who stands to-day as the exponent of the Christ-truth. I should like to tell of my experience with the practical side of Christian Science, as viewed from the human standpoint. Last winter my three little girls were taken, simultaneously, with scarlet fever, as diagnosed by two physicians of the Board of Health. No material medicine was given them, and the fever was broken in from two to three days in each case. Every condition was met and destroyed; they were allowed to eat and drink anything they wished for, and although they were quarantined for several weeks, they played about the house, after the first few days, feeling perfectly well. We were warned to beware of after-effects,—all kinds of dreadful things. The first time we took them away from our premises it was to the Christian Science church, in a snowstorm, but there were no "after-effects" except enlarged appetites and perfect health.—A. H. ACKERMAN, Brooklyn, N. Y.

[Translation.]

For about seven years we have known of Christian Science, and find it truly a help at all times and in all conditions of life. The question is often asked, How long will it take one to be able to apply Christian Science and help others? I can answer this question with the following experience. During the first week of our knowing of Christian Science, and after we had attended the services twice, one evening, while undressing for the night, a feeling came over me as if I could not breathe. At first the thought came that I would ask my husband for a glass of water, yet, being filled with the thought of Christian Science and convinced of the ever-presence and all-power of God, I desisted and did not express my desire, knowing that water had no power to help me. Thereby the feeling of suffocation was overcome and the application of Christian Science brought an instantaneous help which proved to me God's presence and power. With a grateful heart I acknowledge that through the study of Christian Science, as taught in Science and Health, I have been entirely freed from a disease which the professors in Germany pronounced floating kidney, and through my growing understanding of the teachings of Christ Jesus as given again to the world, I have been enabled to help others. Is not this a convincing proof of the truth of the saying, "Who trusts in God, does not build on sand." O, may all, who call themselves Christians, become adherents of Christ in truth and in deed, and thus share in the same blessings and promises.

MRS. LOUISE RITTNER, Dallas, Texas.

I wish to tell of the joy and peace that have come to me through the study of Science and Health. My steps have been slow and encumbered with many fiery trials. Oftentimes error seemed so dense that I felt I would faint by the way, but remembering our Master's divine word, to take the cup and drink all of it, and the many trials that our beloved Leader had to endure in order to point out the way of escape to a sin-sick and dying humanity: and knowing,

too, that there was nothing to turn back to, I pressed on to reach the high goal. Mrs. Eddy tells us that in order to reach this goal we must not only seek but strive for it, and I can now see that trials are necessary to cleanse our consciousness of the many evils that beset our way from sense to Soul. If we were not tried, evils that we thought were destroyed would only be covered up. When trials come, many sins which we flattered ourselves we were free from, are revealed, and as we discover them they are cast out through truth. In this way we are gradually purified and our enemies oftentimes prove our best friends.

It is ten years since I heard of Christian Science, and was healed of risings in my head that I had been subject to since childhood. I bought a copy of *Science and Health* at the same time, and not a drop of medicine has been used since that precious volume came into our home, although very little of its teachings was understood for several years afterward. Various forms of sin and sickness have yielded to Christian Science treatment. Three children have been born under this treatment, with good results, and I never remained in bed, but was up attending to my housework as usual. The physical healing is, however, of minor importance, compared with the spiritual uplifting. Many rough knots of sin have been hewn off by the sword of Truth. I can now gladly abandon all strife and striving for material things, and work to reach the goal. This spring I received class instruction, and the benefit derived from it is great.

Words are inadequate to express the love and gratitude I have for Mrs. Eddy, who has become the channel for the revelation of this blessed truth.

MRS. ALICE HENDERSON, Fort Davis, Tex.

I have heretofore given testimony to my own case of healing by Christian Science treatment, after having been a chronic sufferer of many years' standing, and being healed even though I was bitterly antagonistic to what I supposed Christian Science was. When I gained an understanding of it, I realized that my prior conception was erroneous in every particular. Several years ago my wife was a sufferer from an internal trouble that the best physicians said would never be cured without a capital operation, which was so serious and dangerous that they would not deceive us as to the gravity of the situation. The operation was not performed, but Christian Science was called in, and in about five months' treatment, complete and lasting relief was found, without any recurrence of the complaint.

Some years ago one of my sisters was lying dangerously ill. I was sent for and found the physicians holding a consultation. The conclusion arrived at was that an immediate operation was necessary, as it was considered a matter of life or death. My permission was desired, or the responsibility would rest on me. Permission was refused, Christian Science was resorted to, and in a few days the patient was out, perfectly well, and has not suffered from the complaint since.—ISIDOR JACOBS, San Francisco, Cal.

It is with a grateful heart that I send this testimony of my gratitude to God for all the great blessings of the past and present that He has given me and mine. Seven years ago Christian Science came to my home in a time of great need, and healed one near and dear to me. I was an invalid at that time also,—prostrated through sorrow and trouble. I then began to read *Science and Health*, and was strengthened mentally, morally, and physically. I put myself under treatment, and as I began to imbibe the truth my eyes were opened. I saw that my true consciousness is mental and not in the body. I was enabled to lay off glasses which I had worn eighteen years, and I have had no need of them since. I have had many trials since then, but every one of them has brought me nearer and closer to Him who has said, "I will not fail thee, nor forsake

thee." I feel daily that God has greatly blessed me in calling me to know His allness and my oneness with Him.

I thank God for enabling me to look upon the dear one who has brought the truth to me and mine,—Mrs. Eddy. God bless her.—MRS. MARGIE COCHRANE, Buffalo, N. Y.

I am prompted to give my testimony to the many benefits received from Christian Science treatment, as well as from the teaching of "*Science and Health with Key to the Scriptures*" by Mrs. Eddy, together with the Bible. My troubles have been mainly catarrhal, and nearly deprived me of taste and smell. My hearing, sight, and voice were impaired, besides which I had trouble, of long duration, with a painful sore throat. Bunches also appeared on my lower limbs, that developed into running sores. I was under Christian Science treatment off and on for six years. The healing has been slow, but sure and very harmonious, and accompanied by a consciousness that all good is possible with God. I have found the study of *Science and Health* very helpful and interesting. It has given me a better understanding of God as a present help at all times, and how to trust the supreme infinite. I am not entirely healed, but am very comfortable and give all credit to Christian Science treatment, and I recognize the fact that had it not been for this treatment I would have been in my grave years ago.

For all this I cannot refrain from expressing my profound love and gratitude to God for the blessings Christian Science brings through the teachings of our beloved Leader, Mrs. Eddy.—A. B. BALLOU, Woonsocket, R. I.

It is now five years since I first heard of Christian Science. Eight years prior to that time we were living in the south of Louisiana, where I was constantly sick with malarial fever which later developed into lung trouble. I traveled from one place to another looking for health, but could not find it. Finally the doctors advised me to come to Colorado, to a higher altitude, which we did. As soon as I arrived in Denver I got worse, for I had hemorrhages of the lungs and was in a serious condition. My doctor did all he could for me, and when I was able to walk around again he advised us to get out of the city and go into the mountains to live. I was willing to do anything if only I could get well. Arrangements were made, and when we arrived at our destination it was a wild, rocky-looking place and we were twenty miles away from the nearest town. My doctor, knowing the location of the country, took care to provide me with an assortment of medicines which I might need, and I took great care of them, for we could not go to town every day.

Having been accustomed to city life, I used to think that such a lonely life was like that of a hermit. I found my only pleasure and comfort in prayer, but it seemed never to be answered. One day a lady came to our cabin on an errand, and she was so fresh and rosy that I liked to look at her. After a little conversation she asked me if I had ever heard of Christian Science. I said, no, and asked, "What is Christian Science?" She told me how she had been healed, and asked if I wanted to read something about Christian Science. She sent me some copies of the *Sentinel*, and I began to read. The first article I read was a great revelation to me, for I had been taught from childhood that it was God who sent us sickness and tribulations. As I read on I found some references to *Science and Health*, and I wondered what sort of a book it was. Next time I met the lady I asked if she had *Science and Health*, and she said, yes, but that she needed it every day. I told her I would like to borrow it. She finally loaned me her copy for two weeks, and I was confident that I could read it through in that time, but I was disappointed, for those two weeks were the busiest I had since I lived there. The lady was prompt in sending for her book, so I sent for a copy at once.

At last it came and I felt very happy. Day by day it became more precious to me. It satisfied my hunger, and midnight many times found me up, reading Science and Health. When I got to the chapter on "Prayer" (old edition) I was made whole. I could never tell in words what happened, but I became conscious that I was healed, and it was so clear to me that I got up at once and gathered all my medical books and prescriptions and destroyed them, with all my medicines, and I have not used a drop of medicine since. When I look in the *Journal* and see the number of Christian Science practitioners in the different cities where I had been and never heard a word about Christian Science, those words out of the hymnal,—

Thou leadest me by unsought ways,
And turn'st my mourning into praise,—

always bring to me a sense of gratitude and joy, for I love to think of the happy day when I first heard of Christian Science. Since then I have had many and many proofs that God answers prayer when we pray aright, and I no longer wonder why the lady would not be without Science and Health, for now I would not either, at any price.

I am truly grateful to the one who first presented Christian Science to me, and to our dear Leader. It comes to me that I can only prove my gratitude in trying to live the life revealed through Christian Science, in being more awake to the truth, more watchful, more loving and obedient.

BLANCHE C. ROBINSON, Denver, Col.

"Ye shall know the truth, and the truth shall make you free." "That ye should show forth the praises of him who hath called you out of darkness into his marvelous light."

Out of darkness into light,
Out of blindness into sight,
Out of sorrow, sin, and pain,
Into joy, hope, life again.
Lifted up to know the Truth,
Given back a vanished youth,
Knowing in our Father's sight
Is no age, nor cloud, nor night.
Thank we, then, our God above,
Who is Light, Life, Truth, and Love.

Hardly a day passes in which these words do not come to my consciousness with a sense of rest and freedom. One is so surrounded here with the fear of disease; in fact, disease and sickness are the most usual topics of conversation everywhere. With a clear understanding of the truth of Christian Science, however, we realize that we have been liberated from the bondage of these conscious and unconscious fears and brought into "the glorious liberty of the children of God." I have only been in this country for three months, having come here with another lady, a Christian Scientist, and as far as we know we are the only Scientists here. On Sunday we hold our little service alone with our two children, knowing that, as there are no limitations in Truth, others may be led to join us in the future.

One of our Kaffir servants, who was suffering intensely, listened to the truth and was quickly helped. She expressed much gratitude for her healing.

I have only known about Christian Science for a year, but I wish to express my sincere gratitude for spiritual and physical healing, and for the many demonstrations which I have had of the power of Truth.

MRS. AGATHA HAYWARD, Bloenfontein, S. Africa.

Three years ago I was healed of an ailment through Christian Science, and since that time I have had many beautiful demonstrations of God's omnipotent care. My heart has never ceased to be grateful to God, to Mrs. Eddy, and to her faithful followers. My daily prayer is to be ever worthy the name of a Christian Scientist.

MRS. DAISY C. MAIL, Denver, Col.

"When he was yet a great way off, his father saw him." Several years ago these words made a deep impression on me, and even in anguish the thought went out that perhaps my Father saw me.

Just one year ago I took my first treatment in Christian Science, and I can say with much gratitude that crooked paths have indeed been made straight, and rough places plain. My healing has come about gradually, and many ailments, some of years' standing, have been overcome. I can truly say that I never dreamed to attain in this life to such hope, health, and happiness. When I first took up the study of Science and Health I said to my practitioner that night, "Others might be able to heal, but of course I never could." I have had it proved to me, however, that God is no respecter of persons.

Two months ago I came to Rich Hill, Mo., and have been most happy in striving to do the work of him who came "that they might have life, and that they might have it more abundantly."

I wish to thank the dear friends who so lovingly helped me over the rough places. I would tread softly when I think of that gentle woman, our dear Leader. May she be blessed with blessings beyond hope or thought, with blessings which no words can find.

NELLIE CUNNINGHAM, Rich Hill, Mo.

It is now over four years since I first heard of Christian Science, and my heart overflows with love and thankfulness to our beloved Leader, Mrs. Eddy, and the dear one who so patiently led me to see the true light that leads us into the paths of righteousness, or right living. At that time I was given up by physicians. They told my husband that I had blood-poison and they could not do any more for me. I seemed to be the most unhappy woman in the world, and was thinking, "If death would only come and end it all!" But instead Christian Science came, with healing in its wings, and made me free. I was healed in about three treatments and have been free ever since. I have had many beautiful demonstrations, one where my little girl, two years old, swallowed potash, and the trouble was overcome in about twenty minutes. All were met and destroyed through the truth. Words fail to express my gratitude and love to God, and to Mrs. Eddy, who so faithfully labors for mankind.—MRS. ADELIN PHEIBER, Warsaw, N. Y.

[Written for the *Sentinel*.]

Love's Guidance.

MARJORIE JERMAN.

My shepherd is the King most high;
My every want He doth supply,
And He to me is ever nigh:
Love leadeth me.

As ever on my course I press,
Toward that eternal state of rest
Where all with His sweet peace are blest,
Love guideth me.

Though falt'ring be my steps, and weak,
I'll look to Him,—His strength I'll seek,—
Assured that, when I'm patient, meek,
Love strengthens me.

As onward in the truth I go,
Each day destroying some dark foe,
With healing streams which ever flow,
Love blesseth me.

From our Exchanges.

The arguments which are made against the sacrifice of principle in this matter of union are true and have great force. But it is certain that no one truth can ever conflict with any other truth. The whole realm of truth is everywhere consistent with itself. Admitting, therefore, the truth of Christ's words, it is clear that there cannot be anything really true and important which will stand in the way of the realization of the prayer of Jesus [that they may be perfected into one]. Since this is of supreme importance, if the world is to be brought to submit to his rule, the proper attitude of all Christians is, not to emphasize the things on which they must insist, but to search for those points of difference which they will be able to yield in order to aid in bringing about that unity of his followers which Christ declared would in itself achieve the reception of his love by the world.

In view of what has been said, it will at once suggest itself that much Christian effort is at present misdirected. The extension and establishment of the kingdom of God on earth is being attempted under impossible conditions. No thoughtful person can contemplate the immense expenditures of sincere and earnest labor and of money in Christian work to-day, and the utterly inadequate results, without a feeling that there is a serious error, somewhere. May it not be that the followers of Christ are not only sapping their energies and resources by their divisions, but are rendering complete success impossible by failure to comply with the fundamental condition on which Christ himself hung the triumph of his gospel in the world? If this is true, the supreme effort of Christians should be directed toward effecting a real unity among themselves, that they might go forth a single army with a solid front to win the whole world to the love and service of their Lord.

The Watchman.

One of the indications that the revival of religion in Wales is genuine, is that Mr. Evan Roberts, one of the prominent leaders in the movement, warns his fellow-workers of the danger of trying to frighten people into conversion. He says, "Do not say anything about hell and future punishment to the people." He also protests against preaching against the theatre and the public house. His belief is that, if the right spirit is in the hearts of the people, they will show works meet for repentance. In short, his methods are exactly opposed to those of the professional revivalists, who always begin by denouncing the sins of church members and prosperous people. Such preaching is always attractive to the rabble, but is not a sign of spiritual power. The signs of the genuine revival, which comes only once or twice in a century, are spontaneity, gladness of heart, rejoicing in the love of God, the presentation of the glorious aspects of the righteous life, with faith, hope, and joy in believing.—*The Christian Register.*

If the spirit of Christ has become the ruling principle of our conduct, then we have entered into life, and it is a life that knows no term; it is the immortal life. If the spirit of Christ has entered into our lives, then in all our relations with others life is increased; we are by nature givers of good; out of our lives are forever flowing loving, saving, restoring, vitalizing influences, and when all the members of the society in which we move have received this gift and manifest it, there are none to bite and devour, to hurt or destroy.

WASHINGTON GLADDEN, D.D.

The Homiletic Review.

There is too much hortatory, oratorical evangelism, and too little "conversational evangelism," thinks the *Sunday School Times*. If religion is a possession it also is a gift. If men have anything which is their neighbors' worth while to have, why not tell them of it?

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of *SCIENCE AND HEALTH*, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in *SCIENCE AND HEALTH*. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, \$5. Twelve or more to one address, \$4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, \$1 per copy; \$5 per half dozen; \$9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, Treasurer.
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, \$2.40 per annum; \$1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, \$1.00 in advance; all other countries, \$1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid \$3 00
Twelve or more books to one address, each, prepaid . . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science, 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; \$3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea: 120 pages, cloth covers, gilt edges. Prices, prepaid, \$1.06; \$5.00 half dozen; \$9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, \$1.06; \$5.00 half dozen; \$9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, \$2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, \$2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, \$4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; \$4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, \$1.00; six copies to one address, \$5.00; twelve copies to one address, \$9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; \$5.00 per dozen.

Direct all orders for above works, and make remittances payable to

National.

President Roosevelt, before his departure for his trip to the Southwest and West, announced the members of the new Panama Canal Commission as follows:—

Theodore P. Shonts, chairman; given direct charge of fiscal affairs of Commission; purchase and delivery of all materials and supplies; accounts, bookkeeping, and audits; commercial operations in United States of Panama Railroad and steamship lines and of general concerns of commission. Charles E. Magoon, governor of the Canal Zone. John F. Wallace, chief engineer; will have charge of the actual work of construction, custody of all supplies and plant on the Isthmus, and practical operation of the railroad. Rear Admiral M. T. Endicott. Brigadier General Peter C. Hains, U. S. A. Colonel Oswald M. Ernst, U. S. A. Benjamin M. Harrod.

The President has made an order allowing a salary of \$7,500, with traveling expenses, to each member of the Commission, and to the chairman of the Commission the additional compensation of \$22,500; to the chief engineer the additional compensation of \$17,500, and to the governor of the zone the additional compensation of \$10,000. The head of each department is allowed the use of a furnished house upon the Isthmus and his traveling expenses while traveling on the business of the Commission. The total is \$102,500. The salaries and allowances under the former Commission amounted to \$120,000.

If the work of the Department of Agriculture bears fruit as Secretary Wilson expects, the time is not distant when the United States will produce a good proportion if not all of the silk used in this country. He believes that silk can be produced in this country, and he is adopting methods for teaching the American farmer how to raise the silk-worm, and instructing the American woman how to treat the silk cocoons and to reel the silk.

Congress authorized the issuance of \$130,000,000 worth of bonds for the construction of the Panama Canal, but, as it failed to fix the rate of taxation on the circulating notes of national bonds based on the bonds at one-

half of one per cent, they cannot be sold, unless with a handicap of a half per cent, the present rate being one per cent. Unless these bonds are sold the Commission might find itself without funds by November.

It now appears, from correspondence made public by the State Department, that credit must be given to Emperor William for the proposal to restrict the war zone of the Russian-Japanese war to Manchuria and Korea. Believing the proposal would have a greater chance of success if suggested by the United States, he communicated his idea to the State Department, which was quick to see the advantage of such a move.

Secretary Shaw has issued a call upon the national bank depositories of the treasury throughout the country for the payment into the treasury of \$27,000,000 of Government money now on deposit in anticipation of the expected stringency which usually comes in the fall when the crops come to be moved.

It is probable that Japanese will be employed to dig the Panama Canal, as the West Indian negroes are found unstable, the Chinese are practically debarred by exclusion laws, and Americans are not to be considered, except for the operation of heavy machinery.

Foreign.

A serious hitch in the agreement recently signed between British and German bondholders and the Venezuelan Government threatens to render the scheme for the satisfaction of the former's claims unworkable. A clause in the contract provides that the proportion of the revenues allowed to the bondholders shall be paid to British legation and consular officials in Venezuela, but the British Government refuses its consent. The bondholders are discussing an alternative arrangement, but considerable doubt exists as to whether the contract will be carried out.

At a recent auction sale at Chatham dockyard, London, thirty-one obsolete British war vessels were sold for \$900,600. The lot included twelve cruisers, among them being the Warspite, Northampton, Galatea, and the Australia, two torpedo boats and the training ship Exmouth. The terms of the sale provided that none of the vessels could be sold to a foreign Power. All of them must be broken up within twelve months. The ships sold represented an original outlay of \$15,000,000.

Various opinions are expressed as to the significance of Emperor William's visit to Morocco and to his utterances and audiences there, and their effect upon the French claim of paramount influence in Moroccan affairs. Further speculation has also been caused by the almost synchronous visit of King Edward to France.

The total imperial debt of Germany, including treasury notes outstanding and projected issues of consols, is \$875,750,000.

The Spanish Council of State has decided in favor of the creation of free ports in the Canary Islands.

Industrial and Commercial.

The Premier diamond, whose discovery was announced a few months ago at Pretoria, South Africa, has since been brought to London, carrying on the way an insurance of \$1,250,000. The first report, that the stone was as large as a tumbler and was worth three or four million dollars, was no exaggeration. The mammoth gem measures approximately four by two and one-half by one and one-quarter inches, and weighs 3,032 carats, or 1.7 pounds troy. The stone is almost perfectly pure; a few grains are present, and it contains some flaws or cleavage planes, but they can be cut away without appreciably reducing the size of the cut gem. It is perfectly transparent, and looks like a piece of pure ice. Its structure shows that the stone was originally much larger. Only a small portion of the natural surface of the stone remains, and the fragments broken off

must each have been very large. One of the most recent diamonds, known as the Tiffany Syndicate diamond, was for commercial utility broken up into ten diamonds.

A new use for aluminium is found in making spools and bobbins, particularly for mill work. The aluminium bobbins weigh less than half as much as wooden ones, are less influenced by changes in heat and moisture, and are said to be more durable.

In the blading of the three turbine engines of the Victorian, the new Allan Line steamer which recently gave such a satisfactory performance in crossing the Atlantic, there are over a million and a half separate parts.

The great Baldwin establishment in Philadelphia broke its own record last month by building 226 locomotives and practically rebuilding thirty-one others in twenty-seven working days.

General.

Eleven yachts were entered in the ocean race for the German Emperor's Cup at the closing of the lists April 1. It promises to be an unusually interesting event. Some remarkable records of speed and daring have been made in former contests.

The Henrietta in 1866 made an average speed for the course of 2.36 knots and ran in one day a distance of 280 knots; the Sappho, in 1860, made an average over the whole course of 9.66 knots, and ran in a single day 316 knots, a run surpassed later by the Dauntless, which in 1887 reeled off 328 knots in twenty-four hours. This record of the Sappho stood until 1900, when the schooner Endymion averaged for the whole run the same as that of the Sappho, but broke the record for the whole course, which she still holds, crossing from Sandy Hook to the Needles in thirteen days, twenty hours, and thirty-six minutes. This fine run, however, was not made in a race, but in an ordinary passage across the Atlantic, and therefore does not stand as a racing record.

Of the eleven yachts that are entered, five were built in England, and six in America. Two of them will sail under the flag of the Royal Yacht Squadron; seven will fly the flag of the New York Yacht Club; one, the Thistle, will fly the Atlantic Yacht Club flag; and a single yacht, the former Watson schooner Rainbow, now the Hamburg, will fly the flag of the Kaiserlicher Yacht Club and will represent the yachtsmen of Germany.

The Pecos viaduct in Texas on the Southern Pacific Railroad is 321 feet high and 2,180 feet long; the Loa in the Andes is 336 feet high, 800 feet long; the structure which crosses the Kinzua Creek in Pennsylvania is 301 feet high, 2,053 feet long; the Gokteik in southern Asia is 320 feet high, and about 2,200 feet long. In the Pecos structure 1,820 tons of metal were used, making a light, graceful structure.

In the immediate neighborhood of the little town of Klingnau, in Switzerland, a case was found containing an assortment of 820 gold coins. Most of the coins are of the years from 1602 to 1704. It is thought that the gold was buried at the time of the Spanish war of succession. The gold value of the coins is estimated at 35,000, and the numismatic value at over 100,000 francs.

There has just been mounted in the New York Museum of Natural History the skeleton of a gigantic brontosaurus found eight years ago in the Wyoming Bad Lands and put together bit by bit. Scientists say the creature lived eight million years ago and weighed ninety-four tons.

The proposal to raise the Assouan dam in Egypt twenty feet has been abandoned for the present, as a new theory regarding masonry stresses shows it to be unsafe to do so.

Traffic in the Simplon tunnel between Italy and Switzerland was inaugurated April 2. This is the longest tunnel in the world.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

The Right Practice.

CLARENCE W. CHADWICK.

IN its reformatory mission among mortals, Christian Science is working a radical but most needful change in the general thought upon the subject of metaphysical healing. Thinking people are aware of the fact that some curative agency is at work in human consciousness, producing results that cannot be explained from any material standpoint. Various opinions are entertained as to the nature of this unseen agency, and in spite of the fact that every possible effort has been made to discredit what is being accomplished in the way of healing, thousands of the world's best people are daily turning to Christian Science for help. They find what they are after, health and happiness, and they find them in Mind, not in matter.

The most bitter opponents of Christian Science will agree with us that the sick should be healed, but there is the widest divergence of opinion as to the methods that should be employed. Jesus at one time asked, "When the Son of man cometh, shall he find faith on the earth?" With the advent of Christian Science "we know that the Son of God is come, and hath given us an understanding," but behold the faithlessness of the thousands who say they believe in Christ. When upon all sides they see the sick being restored to health, and men and women leading nobler and purer lives as a direct result of their interest in Christian Science, is it not strange that any professing Christians should be found who are more inclined to associate such works with Beelzebub than with Christ? Why do they so zealously discredit the signs of Christ's coming, the very signs which he said should and would follow every true disciple? Why should many of these good people cling tenaciously to their drugs, and oftentimes do their utmost to keep their loved ones from turning to Christian Science for help, when they well know that their Saviour never used nor advocated the use of drugs or any material remedy whatsoever, but healed the sick and the sinner alike through the power of divine Mind?

What valid reason have those who believe that God is all-powerful, for thinking that the sick should not be healed to-day as they were in the early centuries? They firmly believe that it was the power of God which did the healing in those days, and they know that His power has not changed, that it is just as operative to-day as ever, just as capable of filling humanity's needs now as then, just as potent to heal and to save. This being so, why not let God do the work? Why swallow a non-intelligent, impotent, lifeless drug, and persist in thinking, "This will cure me"? that is, "This will do for me what God cannot." Is it an evidence of faith, even of the mustard-seed kind, to assume a position that ascribes less power to the living God than to a pill or to a stone image?

Correct methods alone lead to correct results. The great Teacher of divine metaphysics has left the world one universal prescription for all the ills and sins to which flesh is

heir. It cannot be filled by the apothecary's art, nor can there be any material means in its application. He said, "Come unto me, all ye that labor and are heavy laden, and I will give you rest." Here is humanity's universal panacea, and Christian Science has come to show us how to make it practically available in every hour of need.

Had the first commandment, "Thou shalt have no other gods before me," been lived up to, Christian healing would not have been lost sight of; and to-day humanity certainly owes a debt of gratitude to Christian Science for its practical interpretation of this great commandment, which makes us see the futility of all material methods in dealing with sin and disease. The Christian Scientist can say with the blind man of old, "Whereas I was blind, now I see." He, too, at one time, was a believer in the gods of matter, but now, in obedience to higher law, he turns away from matter to Spirit as the only power to heal and save, and he does so with more intelligent faith and confidence than he ever had in drugs or in any other material means.

Christian Science reveals the right practice, and all must admit that the right practice is the only one leading to correct and permanent results. Its rightness inheres in the fact that primarily and ultimately its mission is the destruction of sin. The healing of so-called physical disease incidentally follows. Any mode of treatment that fails to lay the axe at the root of the tree, by eradicating the mental cause of the disease, falls far short of the Christ cure. The right practice heals. Human systems may bring about a temporary surcease from pain, or they may only increase suffering by exchanging one human belief for another. In any event, it is little else than a smoothing-over process, which may mean no moral or spiritual benefit whatever to the patient. The right practice means regeneration, including the cure of physical ailments. It says, in the language of Scripture, "Be ye transformed by the renewing of your mind." Disease is not corrected unless it is corrected in thought, any more than is sin. If the thought of sin continues, the sin continues, and so it is with disease. Does it not follow that the thought of God, good, is the only healer of sin or disease? The mere exchange of one human thought for another never accomplishes the divine purpose, and surely it is God's will that man should be as free from sickness as from sin. It must be acknowledged, then, that there is just one right way to realize freedom from sin or disease, and that is to turn to God with a whole heart, and to stay turned, knowing that the healing is accomplished through divine Mind alone. Christian Science may seem radical, but that is because it teaches absolute reliance upon God, and it is for this same reason that it succeeds where human devices fail. It may of course seem easier to take medicine and to leave all responsibility with the doctor, but what moral right is there in waiting for a more convenient season to worship the Father "in spirit and in truth"?

The advantages of Christian Science practice over systems which depend upon blind faith and material belief, are found in the fact that it is sustained by divine Principle, has only one basis of operation, works intelligently from one standpoint, obeys fixed rules, recognizes only one law and one law-maker, and demonstrates with mathematical

certainly the omnipotence and omnipresence of good. Its treatment is its prayer, and it is being daily and hourly proven that this prayer heals the sick and reforms the sinner by pointing the mental way to heaven on earth. Any practice that leaves Christ out of its treatment will fail to bring to humanity an understanding of the scientific method that heals disease by primarily destroying its cause.

Spiritual Intuition and Healing.

R. STANHOPE EASTERDAY.

To be spiritually-minded is to be broad-minded, but the belief in substance-matter entails limitation from the outset. It was upon a basis of spiritual clear-sightedness that prophets and apostles foretold the future and achieved results so miraculous to human sense. Endued with such spiritual insight and foresight, and actuated by a high sense of duty and a spirit of broad-minded philanthropy, all the world's great benefactors, from ancient prophet to modern reformer, have from the vantage-ground of advanced ethical and moral attainment been able to look out over the field of the world's activity, see the need and point the way, wholly unmindful of danger or weight of responsibility. And this superior intuitive ability is the secret of magnificent and far-reaching achievement on the part of all these spiritual seers.

It is narrowness and bigotry alone which have in the past hindered the progress of the race along the lines of philosophical and scientific research. To the untutored mind of the days of Columbus, the visual horizon bounded the world; and to this same limited sense in the days of Copernicus, the earth was the central figure of the universe. A similar spirit of narrowness, manifested in a lamentable willingness to base all calculations and draw all inferences from the standpoint of sense testimony and generally accepted theories, has rendered mankind unable throughout the centuries to reconcile so-called natural and divine law; and in consequence science and religion have been divorced. In vain have learned philosophy and scholastic theology struggled to reconcile reason and revelation, all unmindful that centuries ago Paul in his epistle to the Corinthians had given the key to the solution. He declared, "Now we have received, not the spirit of the world, but the spirit which is of God; that we might know the things that are freely given to us of God. Which things also we speak, not in the words which man's wisdom teacheth, but which the Holy Ghost teacheth; comparing spiritual things with spiritual. But the natural man receiveth not the things of the Spirit of God: for they are foolishness unto him: neither can he know them, because they are spiritually discerned." In accordance with this apostolic injunction Christian Science teaches man to interpret spiritually all of God's Word, including the history of creation in the first chapter of Genesis; and to those who accept its teachings in this regard and thus interpret the universe, the seeming conflict between the results of scientific observation and the statements of the Bible disappear. In the same way the so-called miraculous works of Jesus and the early prophets, as well as those which resulted from the efforts of our Lord's followers for some three hundred years after his departure, are seen to be in no sense violations of law, but on the other hand to be in direct accord with spiritual law. Otherwise Jesus could not have done these things consistently, after declaring that he came not to destroy the law, but to fulfil it.

The psychologist informs us that every object cognizable to the physical senses is but a phenomenon or "appearance;" but he also declares that "underlying and making possible" these phenomena, are certain "realities" termed noumena, which he designates as "merely thought of in mind." Now Paul wrote to the Hebrews almost two thousand years ago, that "things which are seen were not made of things which do appear." In the face of these parallelisms, the

insistence of Christian Science upon a distinction between the real and the unreal is in no sense out of keeping with the best modern philosophical thought.

Again, the physicist declares that so-called substance-matter is infinitely divisible, and will tell you that, after having continued the process of division and subdivision indefinitely, the infinitesimally small, the inconceivable particles are held together by an unseen, intangible "force" or operative law. The physicist is thus obliged to admit the existence of a law or force incomprehensible to mortal ken. Christian Science reveals the source of all law as Divine intelligence, and here we have a corroboration of the biblical statement. "God said, Let there be a firmament . . . and let it divide the waters from the waters," and "let the waters under the heaven be gathered together unto one place, and let the dry land appear." And John further declares, "In the beginning was the Word [Truth]," and "without him [the Word, Truth, Mind] was not any thing made that was made." In view of these statements, which are made clear in Christian Science, it would seem, therefore, that there is ample proof in direct contravention of the universal and long held belief in substance-matter, and that, after all, the material sense of existence is a misconception of being, and life is not dependent upon organism.

It was characteristic of the life and conduct of Jesus, that he judged not after the sight of the eyes nor after the hearing of the ears, but that he judged "righteous [right] judgment." Should it then be deemed impossible, that in so doing he grasped the true idea of things, the real mental concept "underlying" the seeming, and was thus enabled to manifest the true, the eternal, the good to a world of mortals steeped in materialism and blind to the spiritual? Is it not indeed very probable that by virtue of this inherent ability to discern all things spiritually, he was able to grasp and utilize the unseen, intangible forces "holding things together," and thus to change phenomena? Cannot his ability to walk on the water, to feed thousands with a few morsels of bread, to change the water into wine, to heal sickness and deformity, to cleanse the leprous, and even to raise the dead, be traced to his superior ability thus to understand and utilize the laws of divine Truth? This being the case, why should it be thought impossible that one has been found to-day spiritually-minded enough to bring again such an understanding of truth to mortals as would result in the same "wonderful" healing "works"? That such healing works are being wrought as a result of the teaching of Mrs. Eddy, the Discoverer and Founder of Christian Science, is a fact beyond all cavil; and this is in itself conclusive evidence that Christian Science is a re-discovery of the teachings of Jesus.

Jesus' whole career showed what mighty "works" could be done in truth, while Christian Science shows how the same works may be done to-day by the same power.

Armor Inspection.

J. W. M.

"WHEREFORE take unto you the whole armor of God, that ye may be able to withstand in the evil day, and having done all, to stand."

This forcible figure which Paul employs in calling attention to the careful preparation needed in our warfare against error, has been most helpful to me in my daily work.

In ancient days, when a warrior went forth to battle, we know, if he was a wise and careful soldier, that he did not neglect to wear his whole armor; he must have examined this armor very carefully to see that each part was firm enough to resist the shafts of the enemy; and if, after an encounter, he found that any part had become weakened, he saw that it was strengthened for future needs.

As Christian Scientists we have enlisted in a war against the seeming powers of evil, and we must follow the example of those brave warriors of old. In our zeal to be at the front and to help destroy the enemy at large, we must not forget that without honest and careful preparation we can do nothing. We must see that we "put on the whole armor of God," knowing that the attack will be made where the least protection is to be found; and we must examine our armor daily by the clear light of Truth, undimmed by the mists of self-love and self-justification, which would always blind us to any weakness in ourselves. When thus examined many of our seeming virtues will be found to be weak points in our armor, which help to encourage the enemy. We must not, therefore, trust to the eyes of our friends to judge of the strength of our protection, for the weakest parts may often deceive by their glitter and brilliancy, and we may, through one of these, receive a blow that will unfit us for service.

Even after all this careful preparation we may find, at the end of the day, that we have been made to feel confused, discouraged, resentful, or unhappy. Then we have not only to work to destroy the outside enemy, but to find the weakness that has made it possible for us to be so disabled. We may often be surprised to find that this hidden weakness is one that we felt surest of never finding in our own armor; but we know that when discovered and acknowledged as a weakness the work of strengthening is rapid. The certainty that God is with us in the work of overcoming gives us an added confidence and joy in our warfare that can never come to us when blinded to our own lack of preparation.

Let us, then, never neglect this most important individual work of preparation for each day, so that, whatever our work may be, we shall be able to do it with such confidence and thoroughness as to defeat the enemy and thus help on our Cause.

[Written for the *Sentinel*.]

Christ, Come Again.

REUBEN POGSON.

It is true, then, that Thou dost come
As in that age, remote and past,
When stormy seas and strident blast
Were trodden down and driven dumb?

It is true, then, that thou dost speak
In love's pure language, low and sweet,
As in her home, when at thy feet
Meek Mary sat, the truth to seek?

It is true, then, that thou dost heal,
With e'en the same compassionate touch,
As when the leper's feeble clutch
On truth made thee thy love reveal?

O ye who feel the leprous taint
Still in your veins through fleshly birth;
Or ye who, rich in worldly worth,
Are famished and with hunger faint;

Ye Magdalens of either sex,
And modern scribe and Pharisee,
Stand still, and look! Across the sea
Of grievous woes which man perplex,

Comes Christ again, without the form
Of flesh and blood. With purity,
And Love's unlabored majesty,
He dissipates the sin-sick storm.

Selected Articles.

A Question of Justice.

A State Bill of Rights is intended to accord strictly with the Constitution of the United States, which vouchsafes to the individual "Life, liberty, and the pursuit of happiness."

Whatever else may be included under the name liberty, the right of choosing one's own religion and medicine is generally acknowledged as an essential provision. The State, therefore, has no right to dictate the sort of religion a man shall cherish or the sort of medicine he shall take, neither has it a right to interfere with a contract between two sane persons whereby it is provided that one shall give of his religion or medicine to the other.

But a question may arise regarding the ability of a contractor to keep his agreement, and this question is the basis for what is technically called regulation. There is a plausible reason for regulating the practice of medicine, since it involves a wise discrimination in the use of drugs. The practitioner should know the difference between the effects of calomel and arsenic. Furthermore, a surgeon must be thoroughly versed in anatomy, and before being allowed to enter upon the grave responsibilities of his office it is proper that he be required to know the difference between amputating the head and amputating the toe. But prayers necessitate no such regulation as the practice of medicine and surgery, for it is quite popularly conceded that they do no harm though it may be argued by skeptics that they do no good.

If, on any asserted grounds, the State should assume the responsibility of granting individual license to pray, it should at least observe the doctrine of equal right to all her citizens. All Christians pray for the sick; some accompany their prayers with drugs because their prayers are found inadequate, while Christian Scientists find their prayers preclude any necessity for drugs. There should be no discrimination against the prayers of Christian Scientists, on the basis that they are of a quality to insure an answer or that they heal sickness as well as sin. A prayer which destroys bodily ills is no more dangerous and no more in need of regulation than a prayer which overcomes sin only. Therefore, if a law exists which provides that Christian Scientists must be examined as to their qualifications to pray for others, this same law should be applied to all other praying people, and not only our good clergymen, but all laymen, should be required to obtain a State license before entertaining a desire or prayer that God shall guide, sustain, protect, and heal their neighbors.

Moreover, to assume or elect that Christian Scientists are subject to a license system because they accept a fee for the time consumed in the service of another, seems unjustifiable, since neither the acceptance nor the non-acceptance of a fee affects the merits of their prayers. If the practice of Christian Science is right, the acceptance of a fee therefor will not make it wrong. If, on the other hand, the practice is wrong, the non-acceptance of a fee will not make it right; therefore, to forbid the acceptance of a fee must be construed as a way of forbidding the practice. The acceptance of a fee is entirely independent both of medical practice and of Christian Science practice and, as in the case of ordinary labor, is dependent upon custom, the value of time expended and the service rendered. If the ministers of other denominations were compelled to preach and pray without a fee, how many of them would continue? The license system is adopted for the purpose of guarding against malpractice, while the payment or acceptance of a fee is based upon a legitimate contract between two individuals, a contract with which the State has no right to interfere.

An intelligent conclusion as to the propriety of Christian Science practice should in no case be influenced by public opinion, but should involve: First, a due consideration of

the efficacy of Christian Science as a healing remedy; and second, the individual practitioner's understanding and ability to apply the Science.

The Christian Science movement does not wait for any action on the part of the State, but regulates its own recognized practitioners and teachers by requiring them to acquire certain qualifications. These qualifications, however, do not include a knowledge of physical diagnosis and *materia medica*, since neither of these is requisite to the practice of Christian Science. However, every man, woman, and child who is a believer in Christian Science is a practitioner, though not specially set apart for the ministry, for to practise Christian Science means no more nor less than to put into practice one's understanding of Truth and right. To practise Christian Science is to think rightly on all subjects. Bodily healing is the result of right thinking. A medical course requiring three or four years' study would not be of the slightest benefit to the prayers of Christian Scientists; therefore, to demand a medical education is unjust and useless. It has no office except to confront Christian Scientists with a barrier doubtless intended to be too formidable for them to surmount.

The decision of the Supreme Court of Ohio states: "Legislation prohibiting any one from treating a disease for a fee, excepting such persons as have prescribed qualifications, is a valid exercise of the police power of the State and is constitutional." Consistent with this conclusion, to acquire and maintain such "qualifications" as are fit to be "prescribed," a Christian Scientist needs to devote all his time and attention to the practice, and would thus be debarred from earning a livelihood in other vocations; therefore, a law prohibiting the acceptance of a fee militates against proficient "qualifications" and is like "a house divided against itself." A law pretending to regulate the practice of medicine and containing such provisions as apply only to the practice of medicine, and yet at the same time so formed or constructed as to apply to practice which does not at all concern medicine, is nothing less than a deception, and is, therefore, unconstitutional.

While a given law is intended to regulate practitioners, it is also intended to grant and protect certain rights and privileges. A law intended to regulate a certain practice may justly apply only to that class of practitioners for which it provides. If it provides only for M.D.'s, it can regulate only M.D.'s. If the Ohio law is so limited in its provisions as not to afford any privileges to Christian Scientists, and yet at the same time curtails the rights of Christian Scientists, it is partial and amounts to class legislation, and is, therefore, unconstitutional. If the framers of this law had it in mind to grant to medical practitioners rights and privileges which they did not vouchsafe to Christian Scientists, they, in this respect, violated the privilege of equal rights, and the law is, therefore, unconstitutional. Even though the law unintentionally discriminates against Christian Scientists without also making due provisions for their rights, it is none the less unconstitutional.

Since every consistent Christian Scientist is in duty bound to help his neighbor in time of trouble, and must be ready to cure his bodily ills when called upon so to do, any stipulations which prevent him from doing this freely and effectually are an interference with his religious practice and are, therefore, unconstitutional.

The argument that Christian Scientists need to understand diagnosis in order to practise safely, is based upon erroneous assumption. Christian Scientists do not assume the responsibility of diagnosing disease. They do not assume to know any more or less about contagious diseases than those laymen who depend upon medicine, except in so far as their experience in handling disease may afford them an unusual knowledge of symptoms. They do not take the charge of cases nor advise in their material affairs. They assume no more responsibility, when called to treat a

case, than the clergyman who is called to pray with a sick person. When a patient dismisses a medical practitioner and turns to Christian Science he is virtually taking his case out of man's hands and placing it in God's care, and is thus assuming his own responsibility. When Christian Scientists are perplexed with suspicious diseases, their practice is exactly in accord with that of others; they employ a qualified diagnostician. In the case of neglect in this respect they are liable to the same laws to which others are amenable, and claim no special privileges.

It would be quite as unreasonable to require Christian Scientists to pass an examination in *materia medica* as it would be to require the M.D.'s to pass an examination in Christian Science. If it is proper for the State to require any qualifications from a Christian Scientist, it should require those qualifications which enhance the practice of Christian Science. There is no constitutional provision to prevent the Christian Scientist from practising within the bounds of that which he professes, and thus far in the history of our country a man's right to practise his religion has never been made contingent upon medical knowledge, nor the question as to whether he was to be compensated for his service.

ALFRED FARLOW.
Boston Times.

What is a Religion?

CHRISTIAN SCIENTISTS will read with much appreciation, your account of the meeting of Baptist ministers, at which Christian Science was discussed "from the standpoint of orthodox Christianity." It is gratifying to learn of the acknowledgment, on the part of these ministers, that Christian Science really does cure. It is pleasant also to note that the spirit manifested in the discussion was in the main kindly and courteous. It is agreeable evidence that Jesus' attitude, "I judge no man," is being taken as a model by his professed followers.

In denying that Christian Science is a religion, after admitting that it heals, our good friends of the clergy are occupying an untenable position which sooner or later they will have to vacate. They accept as proved, an effect, but deny its cause, for the healing done by Christian Science is but an effect of a cause, and that cause is its theology. It will be remembered that Jesus' cures were admitted by the exponents of the established religion of his day, because these cures were undoubted, but they denied that there was any religion in it. He said, "I am come in my Father's name, and ye receive me not."

What is religion? I suppose it will be generally accepted by all Christians that living as nearly as possible the Christ-life is true religion. Then it becomes proper to ask, Of what does the Christ-life consist? Jesus said he came to do the will of Him that sent him, and in accordance with this will he both saved sinners and healed the sick. It cannot be contested that any system which does all it can to do the will of God, as Jesus explained it, is a religion in every sense, for it stimulates its followers to grow up to the Christ-life. If it was the will of God (and Jesus said it was) to reclaim sinners and heal the sick nineteen hundred years ago, it must be the will of God to do those same things to-day. Then any teaching which in practice results in the cure of the sick man as well as the reformation of the sinful, must be acknowledged as of God, therefore, true religion. Our friends freely concede the healing by Christian Science. Are they not obliged to concede that to be religion which does the Christ works? In all candor and honesty, we think they must. Christian Science does more than restore lost physical harmony. Its mission is avowedly the full Christ mission, namely, the destruction of all the works of the devil, or evil. Surely this is the very core of religion.

WILLARD S. MATTOX.

Waterbury (Conn.) American.

The Lectures.

Lockport, N. Y.

A large and appreciative audience, composed principally of local and visiting Christian Scientists, but also numbering many not of this faith, listened attentively to a lecture on the subject of Christian Science delivered in Assembly Hall, Thursday evening [March 9] by Bicknell Young of Chicago. The lecture was given under the auspices of Second Church of Christ, Scientist, of this city. The Rev. G. A. Brock, pastor of the East Avenue Congregational Church, in a very courteous manner introduced Mr. Young, saying in part,—

You are all aware, friends, that my presence here is not due to the fact that I am a Christian Scientist. I am a Congregationalist, and that very fact leads me to be very generous in my judgments and opinions regarding the faith and teachings of other Christian bodies. History repeats itself, conservatism is always in the saddle, the prophet at the stake, and yet truth crushed to earth must rise again. Congregationalism, according to my history, had to fight against desperate opposition, it was ridiculed, persecuted, driven from its native soil. The iron-hearted men sought freedom of conscience across the wintry seas and founded their religion on the rock-ribbed shores of New England.

In the same way, friends, your faith has been obliged to fight for its existence. But in spite of ridicule, invective, and ostracism the "grain of mustard seed" planted by Rev. Mary Baker G. Eddy in Boston—the citadel of Congregationalism—has grown during thirty years until its shade reaches unto the uttermost parts of the earth. I was living in Boston when Mrs. Eddy began her work there. I remember even yet the impression her Sunday service made upon my mind. It was in a very small hall near Boston Common. The room was well filled. I expected something extraordinary, as a Harvard undergraduate: I expected to be amused. Not at all; there was intensity, sweetness, quietness, power.

Mrs. Eddy's talk was religious, rather than polemical. That was the beginning. People said it was a religious fad and would soon die out. Two years ago I spent August in Boston. I preached in one of the Congregational churches there. The next week our religious paper gave a report of a Sunday canvass.

There were more people in The First Church of Christ, Scientist, than in all the Congregational, Unitarian, and Universalist churches in the city. Seed—mustard tree!

A friend of mine recently visited New York City and attended a Christian Science church on a Sunday evening. The church was packed and the number of men present was a subject of comment. In view of this wonderful development, whereby, within the lifetime of the Founder, a religious sect has suddenly by leaps and bounds taken its place among the religious factors of our age, it behooves all of us, no matter how we may feel, to take the position assumed by Gamaliel and say, "If this counsel or this work be of men, it will be overthrown: but if it is of God, ye will not be able to overthrow them; lest haply ye be found even to be fighting against God" (Revised Version).

If, my brother, your revelation of the divine will, the divine faith, the divine love is richer, deeper, nobler, than the world now possesses, then I say to you, May God abundantly bless your teachings and your church. This is God's world. His truth must eventually prevail. I am glad, therefore, of this privilege of welcoming you to our city.

I am pleased to see so many eager faces here. We have but little time, sir, to study the deeper truths, the more spiritual concepts, the holier and diviner aspirations and inspirations of your system of faith. It will do us all good to listen to these things from the lips of one whose mind is clear, whose heart is surcharged, whose purpose is in-

flamed to teach to needy men the unsearchable riches of health, strength, and salvation through Christ.

It gives me great pleasure, dear friends, to introduce to you at this time, as the distinguished speaker of the evening, Bicknell Young.—*Lockport Journal*.

Lincoln, Neb.

The lecture given at the Oliver Theatre last night [March 12], under the auspices of First Church of Christ, Scientist, by Mrs. Sue Harper Mims of Atlanta, Ga., was probably the most successful in point of attendance and interest that has ever been given by this denomination in this city. Horace W. Hebbard, First Reader of the local Christian Science church, introduced the lecturer, saying in part,—

Christian Science is identical with the religion of Jesus in that it does not rely on a mere statement of its doctrine to satisfy inquirers, but furnishes absolute proof of its efficacy and divine nature in the healing of physical disease and of sin, and unless these signs do follow, the teaching of Christian Science has not been intelligently and scientifically applied.

Christian Science is pre-eminently a religion of works and not of words only, and in this it is susceptible of being measured by the standard laid down by Jesus when he said, "By their fruits ye shall know them." And is it not significant that in all his recorded sayings the Master never established any other test of discipleship than that of works? He knew that men might talk rightly and live wrongly, but he knew also that they could not accomplish the works that he accomplished, which were the result of right thinking, without thinking right themselves, and we have Scriptural authority for the statement that as a man "thinketh in his heart, so is he."—*Nebraska State Journal*.

St. Joseph, Mo.

On Tuesday evening, January 24, under the auspices of First and Second Churches of Christ, Scientist, the Hon. Clarence A. Buskirk of Princeton, Ind., delivered a lecture on Christian Science at the Lyceum Theatre, to a representative audience. Ex-Senator Wm. H. Haynes introduced the speaker. It will be remembered that ex-Senator Haynes made a memorable speech before the Senate and House of Representatives against the Hall Medical Bill in our State Legislature, three or four years ago. The lecture was published in full in *The News and Press*.

A Critic Answered.

A reprint of Mr. Alfred Farlow's article in the June *Journal* is now on sale. Price 3 cents per copy, or 100 copies for \$2.50. Address orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the *Christian Science* text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

God Does not Create Evil.

THE following reference to a disaster in which more than fifty persons lost their lives occurs in a newspaper report of a sermon recently preached in Boston:—

"Whoever was directly to blame for the Brockton catastrophe, God has His indirect responsibility. Without consulting men in the slightest degree, He has set them in the midst of terrible and dangerous forces. With Him, therefore, there can be no accidents. Flames cannot leap forth without His consent, and He never lifts His hand from the steam boilers. To this horror, in Brockton, there is attached some divine meaning.

"To my mind it is plain that it is a benevolent meaning. God intended to remind men of certain spiritual truths, without which life becomes insignificant. The first is the immortality of the soul. There has been a decided tendency of late, on the part of some of our ethical leaders, to obscure this truth. Prof. Goldwin Smith is uncertain about a future life. Mr. Allsop wrote in the *Westminster Review* for December, 'Immortality is gone. I have not the faintest desire for it.'

"It is quite easy for men to talk after this fashion, when they have comparatively trivial ambitions. But when poor men drop down into flame, and die miserably after years of ill-requited toil, with hopes and dreams for even the humble sustenance of their families blasted, then a fierce cry goes up from men for immortality. At the funeral services in Brockton, and upon the streets, I heard the word immortality again and again. The horror has forced upon the minds of multitudes the conviction that there must be another life which shall fulfil the pitiful poverty of the present one.

"Another great truth which God intended to teach by the catastrophe, I think, is the supreme value of spiritual realities. Looking upon the ruins in Brockton the other day, I was driven to accept one of three conclusions. Those physical forces may have for a time escaped the control of God, in which case He is branded as the Great Stupid. Or, God wrought those horrors because He found pleasure in them, in which case His moral nature has just about reached the plane of development of the cannibals. Or, what is the truth, God intended to remind men that, in comparison with character and spiritual realities, happiness is nothing, nor support in old age, nor the realization of earthly hopes.

"God is saying to Brockton and this whole commonwealth to-day, 'There is nothing real nor valuable in the world nor the universe but righteousness, justice, mercy, and love.' To produce them God would burn a wicked city, though its streets were paved with gold, or He would smite a nation to the death."

We assume that the purpose of the sermon from which we have quoted was to draw men closer to God; to arouse in their breasts a greater reverence for Him, but we cannot help wondering how the speaker expected to accomplish this purpose by picturing Deity as employing methods which would consign a human being to the prison or the scaffold; yet he has but chosen one of the inevitable alternatives which logically spring from the belief that evil is real.

This belief necessarily implies a belief that God is the creator of evil, or that there is another creator who is the author of evil; and in choosing the first of these two erroneous postulates our brother has followed the more common tendency of the theological doctrines of the day, but in doing so he has not revealed a God to whom men can turn with confidence and devotion.

Much has been said about the falling off in attendance at the churches during the past few years, and a more recent cause for uneasiness in religious circles has been the steady decrease in the number of students who are preparing for the ministry, but no universally accepted reason has been given for these evidences of religious apathy. We believe it is not too much to say that at least one of the reasons for these conditions is that men are beginning to see how illogical, unethical, and inconsistent are the teachings which, in effect, represent God as a being who, through choice or necessity, creates or permits evil, and through this agency tortures and destroys His helpless victims. Men are no longer willing to accept such doctrines as their guide to that immortality for which our brother pleads.

ARCHIBALD McLELLAN.

Religious Freedom.

Ay, call it holy ground.

The soil where first they trod!

They have left unstained what there they found:

Freedom to worship God.

THE PILGRIM FATHERS, by Mrs. Hemans.

WHAT depths of meaning lie in the words, "Freedom to worship God," and well may we ask whether this freedom has ever been realized on earth. It can readily be seen that simple liberation from the restriction of human statutes does not constitute that larger sense of liberty required to worship God "in spirit and in truth;" nevertheless, freedom to follow the dictates of conscience certainly furnishes the most favorable conditions in which to reach this consummation of human desire and effort, and to attain even to this ordinary sense of civil and religious liberty the noblest men have been willing to sacrifice all the world counts dear.

At the present time Christian Scientists are taking a stand for their God-given rights, and this will sooner or later be seen to be an unselfish protest in behalf of universal emancipation. Their religion has brought them a sense of true freedom, which they would gladly share with all mankind,—a freedom which strikes off the fetters of sin and sickness, and which provides for the unhindered development of man's limitless possibilities. The purpose of human law is to prevent mankind from invading the rights of others; there it stops, for it has never proved its power to compel men to obey the law of absolute right. Divine Love alone can do that. A perverted sense of legal authority sometimes leads those who have come far short of the elimination of crime, to seek to hinder others from obeying their highest sense of right, as in the case of attempted restrictive legislation with respect to Christian Science practice. If these attempts are persisted in, it would surely seem proper to demand the publication of statistical reports of the deaths in each State, with the methods of treatment employed in all cases. Thus the Master's just and fair test, "By their fruits ye shall know them," might be applied. From data now in hand it is proved that, despite the most favorable conditions, the mortality of children under medical treatment is very great, while in the case of adults there is a constant dropping out before the lessons of life have been learned. In many cases the medical treatment deemed necessary is more distressing than the disease, from which it often fails to give relief, but none the less it insisted upon, and when sufferers would fain escape from their misery through some other means, legislative enactments are forthwith called for to prevent any experiment save those which have already been tried and found wanting.

Not many years ago, a beautiful marble statue was placed by the sea, on the coast of Scotland, where it stands, a silent witness to human intolerance, and to the faithfulness to her religious convictions of a young girl, who, many years ago, was chained to a stake and drowned by the incoming tide. Neither the tears of her friends nor the cruel mocking of the soldiers could change her decision to live, or die if need be, for freedom to worship God, as her conscience directed. About the same time a child was shot at her father's doorstep, because she refused to tell where a non-conformist preacher was hidden. This little maid is said to have knelt before the pointed muskets of the troopers and prayed for her native land, aye, and for its enemies,—the men who denied it religious liberty. At the close of her prayer the shots rang out through the glen, and the child joined "the noble army of martyrs." It is well to remember that these and many others suffered death for their religious faith long after Protestantism was established in Great Britain.

Christ Jesus promised that the truth should make men free, and through Christian Science we have found that it does. Can those who seek to legislate Christian Science out of existence offer even physical freedom through the systems which they would force upon their fellow-men? If not, on what grounds would they take away from others that freedom of choice which they claim for themselves? Had the thousands who to-day are Christian Scientists found peace of mind or health of body in recognized material methods, they would not have left these beaten paths. Having failed in this, however, and having found in Christian Science both mental and physical freedom, they stand ready to defend this gift of God from all intrusion, fully assured that nothing can take it from them if they are faithful to that which is the highest hope of enlightened humanity,—"freedom to worship God."

ANNIE M. KNOTT.

The Pall of Ineffectiveness.

NOTHING is more depleting to one's energy, more dampening to enthusiasm, or more discouraging to hope, than an abiding sense of spiritual inadequacy. Many a brave heart has borne up against its depressing influence, indefinitely, through the sustaining consciousness that his highest conviction of duty was being honored, and the story of such an unavailing heroism would be rightly named, —An Epic of Tears.

Human life, at its best, means ceaseless endeavor, and it were pitiful indeed if, at any moment of the struggle, we were denied the sustaining and stimulating consciousness that, despite all, we are winning. Such moments are experienced, however, and as, with many, they have grown into years, the heart-history has become tragic. The artifices of pride and prejudice often prompt to the explanations of an attempted self-deception, but there is abundant reason for thinking that this saddening sense of inefficiency is felt by the great majority of Christian workers in all lands to-day. Evidence of the fact may be gathered from many sources, and notably from current religious literature. The following frank confession, which we have recently quoted from an exchange, is fairly representative. "No thoughtful person can contemplate the immense expenditures of sincere and earnest labor and of money in Christian work to-day, and the utterly inadequate results therefrom, without a feeling that there is a serious error, somewhere. May it not be that the followers of Christ are not only sapping their energies and resources by their divisions, but are rendering complete success impossible by failure to comply with the fundamental condition on which Christ himself hung the triumph of his gospel?"

We are entirely sure that this questioning thought embraces very little if any doubt respecting the truth of the

teachings of Christianity. Men believe in the presence and power of God, and in the spiritual sovereignty of the life and words of Christ Jesus, but the confidence and joy of a well-grounded assurance is lacking, and for the reason that the promised overcoming is not realized. Christian laymen as well as leaders are dissatisfied and distressed, and rightly so, with the meagreness of the results attending conscientious Christian effort. This increasing discontent is one of the most encouraging aspects of the situation; for however lamentable our failures, their frank recognition always brings a promise of betterment to the aspiring. The uncovering of error in honest thought presages its overthrow, and Christian workers, both as individuals and as organized bodies, do well to deepen their sense of the contrast between what is, and what ought to be, and enlarge and establish their understanding of their privilege and power as the ambassadors of Christ. Said Joshua to Israel, "One man of you shall chase a thousand: for the Lord your God, he it is that fighteth for you;" and Paul, speaking to the early Christians, in yet more comprehensive terms, of the believer's spiritual adequacy, said, "God is able to make all grace abound toward you; that ye, always having all sufficiency in all things, may abound to every good work." "Not that we are sufficient of ourselves to think any thing as of ourselves; but our sufficiency is of God."

As Christian Scientists we have been led to see that the tremendous emphasis thus laid upon the manifestation of Divine power, through man, leaves no excuse, in any age, for incompetency, no place for failure. We have come to understand that the "has been" of fulfilment and the "will be" of promise can beget no abiding confidence or inspiration without the "I am" of present demonstration. We perceive that defeating unfaith is the legitimate outcome of the belief of the reality and consequent permanence of the things which are against God and the ideal life; and of the practical denial of the immediate redemptive power of the Christ-idea in consciousness.

Our brother is right, beyond all question, in attributing much of the inefficiency of Christian endeavor to un-Christian division. "That they may be one, as we are one." So hoped and prayed the Master, and his followers may well grieve as they remember the weakness and failure which to-day, as in all the past, attend religious strifes and separation. How saddening, how unworthy of professing Christians, how needless this blight! Christian Scientists have been abundantly taught, if they have not yet perfectly learned, that only oneness in Christ can win; and that the Master comes not to abide, until this devastating demon is cast out. Christian Science means union upon the divinely appointed and only possible basis; viz., a demonstrable and therefore scientific understanding of the Christ-teaching.

More serious, however, than separation from one another, is separation from God. It accounts not only for the divisions among men, it is also the final explanation of all unanswered prayer and ineffectual endeavor. Jesus' teaching respecting God's ever-presence has always been vigorously maintained by the Church, but the possibility of the logical sequence of that presence, as demonstrated by Jesus, who in all his healing declared that his Father did the works, has been as vigorously denied. Christian Science has come to re-affirm and to prove the practical availability of Spirit, divine Truth, in the healing of sickness and sin. It is demonstrating that, through right understanding, the knowledge of Truth, God is present to supplement the aspiring endeavor of human sense, to save it from itself and from defeat. Thus, and thus alone, can we attain to that unfaltering confidence, that spiritual exaltation, and that unfailing adequacy which belong to every follower of him who said, "Herein is my Father glorified, that ye bear much fruit; so shall ye be my disciples. . . . These things have I spoken unto you, that my joy might remain in you, and that your joy might be full."

JOHN B. WILLIS.

Letters to our Leader.

Philadelphia, Pa., April 1, 1905.

Rev. Mary Baker G. Eddy,

Pleasant View, Concord, N. H.

Beloved Leader:—Our prayers have been answered and the attempt to legislate against our Cause in the Keystone State has totally failed. The appropriations committee refused to let the bill come out of its hands unless the words "any healing art or science" to which we objected were withdrawn, and the promoters of the bill were forced to yield and agree to strike out the words. Thus another forward step has been taken and prayer has again been found to avail much.

Faithfully and lovingly,

Yours in truth,

ALBERT E. MILLER.

Pittsfield, Mass., March 26, 1905.

Rev. Mary Baker G. Eddy,

Pleasant View, Concord, N. H.

Beloved Leader:—It is with much joy and gratitude that we are able to send to Mr. Chase one hundred dollars for the Building Fund of The Mother Church. This represents a collection taken at the first public service of First Church of Christ, Scientist, Pittsfield, Mass., March 5, 1905. We believe you will rejoice to know that these mountains and hills are breaking forth into singing, that the forest is becoming a fruitful field, that the deaf are hearing the words of the book, and the blind are seeing out of obscurity.

Faithfully yours,

WILLIAM R. THOMAS, *Clerk.*

Fourth Church of Christ, Scientist,

New York, March 22, 1905.

Rev. Mary Baker G. Eddy,

Pleasant View, Concord, N. H.

Beloved Leader:—It may please you to know that at the meeting of the Board of Trustees of this branch church, held on January 9, 1905, it was resolved that the collection taken on the first Sunday of each month be given to The Mother Church Building Fund, till that fund is completed. This is the outcome of the abiding love and fealty which this branch church bears to you, and to our glorious Cause, coupled with the realization of our Master's words, "Abide in me, and I in you. As the branch cannot bear fruit of itself, except it abide in the vine; no more can ye, except ye abide in me." In making The Mother Church its paramount consideration, this branch has in many ways been richly blessed of divine Love. Not only has the collection on those first Sundays been unusually large, but the influx of money for the maintenance of this church has increased.

In behalf of the Board of Trustees,

Loyally and gratefully,

NATHAN GANS, *Clerk.*

Shanghai, China, December 27, 1904.

Beloved Leader:—I know it would have made you very happy could you have stepped into Miss Fobes' pleasant home on Bubbling Well Road, Shanghai, on Christmas morning. Usually she and two or three interested friends meet on Sunday to read the Bible Lesson. This morning four others,—two from Peking, two from Korea,—by "chance directed," were in Shanghai over Sunday. Naturally the first question upon entering a new city is, Are there any Christian Scientists here, and where do they hold services? Thus eight happy people met for the reading of the beautiful Christmas Lesson. Every thought was a song of gratitude to the Giver of all good and to the one through whom the truth has come to this age. Your inspiring hymns never before seemed so full of meaning; "Blest Christmas Morn" rang out like a benediction.

How these Bible Lessons cause continents to clasp hands,

and cancel the thoughts of separation, especially at the holiday season. All present felt the power and magnitude of your work "alone with God" more deeply than ever before,—the unselfish labor of love that has made it possible for all nations, all people everywhere, be the number small or great, to have the same Sunday service, the same "Pastor" to consult, and to be guided by the wisdom which is made clear in the Bible and explained by Science and Health. One who has never seen you personally said she had at first thought it strange that Mrs. Eddy did not take patients, and did not see those who called at her door. Two years in Korea, away from Christian Scientists, had shown her "why,"—had shown her the world-wide numbers who were being blessed by your writings, in comparison with the few who could be reached were you to give your time to callers and to the healing of special cases. At the close of the inspiring service, one present suggested that a little love-offering be sent to The Mother Church. Thirty-nine Mexican dollars found their way into the hand, and have been sent to Mr. Chase for the Building Fund. Though small in itself, this gift is freighted with love.

It will cheer your dear heart that away out in China the seed of Truth is being sown, and the loving sowers realize that your tireless work and self-sacrifice have made it possible for them to reap the rich rewards of your love-filled labor. Dear Mrs. Conger and I are taking a little trip through southern and central China. Mr. Conger will join us in Hongkong, then we will visit Manila and return to Peking.

We have made a special point of visiting the mission schools in each place, in order to know for ourselves the magnitude of the work being done for the Chinese boys and girls. "Every knee shall bow," and Love is the only power.

Every day, every hour we feel more grateful for our knowledge of the blessed truth, and to you, our dear guide, for showing us the way. Mrs. Conger sends sincerest love and gratitude. We hope before many months roll around to set foot again on American soil, to see dear friends once more, to have the privilege of attending our services and engaging in active Christian Science work.

I am indeed grateful for my experiences in the Orient. They have surely broadened me, and I feel that when I return I will be able to do better work than ever before for the Cause we love so dearly. My love and gratitude to you and for you increase as time goes on.

Lovingly and gratefully,

MAURINE CAMPBELL.

The September, 1904, Journal.

Another edition of the September issue of *The Christian Science Journal* has been printed and orders can now be filled. Single copies, 20 cents; in dozen lots, \$2.00 per dozen. Send orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

Notice.

The next admission of candidates to membership in The Mother Church will be June 6, 1905. Applications must be in the hands of the Clerk on or before May 15, 1905.

An application sent to the Clerk of the Church does not constitute the applicant a member; he must be elected to membership by the Christian Science Board of Directors, in which event notice of election will be sent.

Notice to Branch Churches.

Each branch Church of Christ, Scientist, is requested to send, on or before May 1, a report of its total membership, (not a list of its members), as on record April 1, 1905, to William B. Johnson, C.S.D., Clerk of The Mother Church, 239 Huntington Avenue, Boston, Mass.

Testimonies of Healing.

I wish to express my heartfelt gratitude for Christian Science and for all the blessings it has brought into my life,—for the spiritual sense and consciousness of man's oneness with God. When first I heard Christian Science mentioned,—being at the time a traveler in England,—I did not think further about it, as I was deeply immersed in medical and surgical theories. My husband was a physician, and both before my marriage and after he died I was engaged in hospital nursing. Upon my return to Brisbane, I heard the Christian Science text-book named, and was advised to have no other work on this subject. About nine months later, when in charge of a small private hospital in the South, feeling utterly worn out by the heat of the summer, and suffering from various ills, constant headaches and depression, the desire to know what Christian Science is came to me, and upon making inquiries, I found where "Science and Health with Key to the Scriptures" by Mrs. Eddy, could be purchased. I was supplied with a copy, and when I started to read the book, although very far from understanding it, I just wished to be left alone with it for about a week; but as this could not be, I "devoured" it every spare moment. I felt really hungry for truth.

I never thought of being healed, but the healing truth was at work. My ailments were forgotten, and also the drugs, tonics, and stimulants which up to this time had been deemed so absolutely necessary. I seemed to wake up and to know I was free. It did not take very long for me to come face to face with the fact that truth and *materia medica* could not mix, and that I must take my stand for this truth. It was impossible to be honest and keep my position. I had been considered a successful nurse, and had been previously offered a very important post in a well-known hospital. I decided for truth, and in a few months' time I was able to leave the hospital. Since then, nearly five years ago, I have given my whole time to the grand work of Christian Science. I was brought up in an orthodox church and tried faithfully to follow its teachings, but I felt a want, a something, I did not know what, so I went from church to church, from cathedral to cathedral, looking for this something. I entered grand, massive buildings, heard solemn, impressive, and perfect music and singing, yet always left with the sense of a lack, a void. It was my privilege to go to Boston, and upon attending the first morning service in The Mother Church, I found that for which I had been searching for years, and I recognized that something to be divine Love. Words cannot express what joy and peace came to me when the large congregation sang from the heart our Leader's hymn, "Shepherd, show me how to go," and I knew the Shepherd had shown me the right way.

It is with a sense of deep thankfulness to God for the wonderful gift of Christian Science, through our beloved Leader, Mrs. Eddy, that I wish to add my testimony to that of thousands of others to the healing power of Christ, Truth, and to the practicability of Christian Science when applied to every detail of our daily life. It is indeed an "ever-present help." My gratitude and love to Mrs. Eddy for her life of selflessness, her wisdom and patience, expressed in and through so many ways, and for her great love for all mankind, will be best expressed by striving to live the truth which has been revealed through her.

HELEN S. BYRNE, Brisbane, Australia.

[Translation.]

The first time I read a copy of *Der Herold der Christian Science*, the thought came to me that I would some day like to inform my fellow-men of what Christian Science has done for me, and this glad day has now come. I feel so contented, grateful, and happy that it is impossible for me to express it all in words. O how blessed the

moment of silent prayer, when we realize that we are one with our heavenly Father. How joyfully we hear the words, "This my son . . . was lost, and is found." Christian Science found me sick, miserable, in trouble and anxiety, and divine Love seemed so far away from me that I wished to die, for I then believed that death would bring me to the Father. I was homesick, because my parents and brothers and sisters were in Germany, while I was here alone; I seemed to have no friends and wanted to go to God. I can never forget one sleepless night just before Christian Science found me. I started about seven times to say the Lord's Prayer, and every time I came to the words, "And forgive us our debts, as we forgive our debtors," I could not go on. It seemed as if my debt was so great that God could not cancel it.

I suffered torments that night until three o'clock, when peace came to me in the words, "And the peace of God, which passeth all understanding, shall keep your hearts and minds through Christ Jesus." This was then my dearest prayer until Christian Science found me, and it has showed me the way to heaven. I have now learned to walk in this way through that wondrous book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. I have learned that God is not afar off, "for in him we live, and move, and have our being." I have no desire now to die, but my desire is to become more Christ like every day.

I am deeply grateful to God for our faithful Leader, Through her understanding of God and her love for humanity I have been healed of many diseases,—small-pox, heart trouble, headache, and severe cramps. I am learning through Christian Science how to cast the beam out of my own eye, and after I have learned that, I can help my brother to cast the mote out of his eye. I have found in Christian Science the truth which sets free from sin, sickness, and death.—LOUISE LINGEL, St. Louis, Mo.

Eight years ago Christian Science was brought to my notice through the healing of a nephew. My husband as well as myself had been sick for several years, and had taken every kind of medicine that we could hear of. It would only relieve for a short time, and the trouble would come back worse than before. We now can thank God for the many blessings that have been bestowed on us,—for the knowledge gained through Christian Science. Since coming to Christian Science I have been saved from the insane asylum. Only a few years before I laid two dear little boys away to rest, and my health was very poor. There seemed but little to live for.

I write this with the deepest gratitude to God and to our dear Leader, Mrs. Eddy, for giving this glorious truth that makes free. My husband was healed of the tobacco habit of twenty-eight years, by reading Science and Health. I have had many beautiful demonstrations,—the healing of my son of a dislocated ankle and broken collar-bone, besides colds and headache. I would also like to mention what seemed to me two great demonstrations. My husband while talking to me was overcome by heart trouble. He slipped from the chair to the floor, and it seemed as though he could live but a few minutes. The only thought that came to me was that God is his Life and he could not be separated from God. In about five minutes he opened his eyes, looked around; in less than twenty minutes he was up and went to the door to talk with a friend. I was able to overcome a trouble for myself due to inhaling poison from paint. I could not pass through the room where there was any smell of paint but my lungs would be so sore that I could hardly breathe, and I would break out with sores from my arms to my feet. Now I can take the brush and paint, and stay in the room and inhale the paint all day, and it does not affect me.

Words are inadequate to express the good that Christian Science has done me and mine. I have gained much from the *Sentinel* and *Journal*. I will try to express my grati-

tude by striving to be worthy to bear the name, A Christian Scientist.—MRS. L. H. MILLIKEN, Levant, Me.

Five years ago I came into Christian Science sick, discouraged, disheartened. I felt at times that I was only a burden to my husband and children. All was done for me that kind friends and relatives could do, with the best medical aid to be had. When I could not find help at home I was sent away to specialists, but all to no avail. Not until I turned to Christian Science, as taught by Mrs. Eddy, was I helped. I am truly thankful for the health that I now enjoy. But what would I do without this new light and understanding that comes to us by studying the Bible in connection with our text-book, Science and Health. How can we help loving Mrs. Eddy, after all she has done and is still doing for poor suffering humanity? I want to say to any one who may read this testimony of mine, If you are right where I was, will you not turn to the truth, as taught in Christian Science, and find God an ever-present help in time of need? I might fill several pages in telling of the many times and ways in which we have been helped through Christian Science, but this I will say, We have learned that divine Love is the only power. My greatest wish is to live so that I may be worthy of the name I bear, A Christian Scientist.—E. ADELL POTTER, Webster, S. Dak.

I have long felt a desire to tell to the Field what Christian Science has done for me. I wish to be counted among those who are grateful enough to return and give God thanks, not only for physical healing, but for the peace and joy that have come through this great truth, as taught by Christ Jesus and explained in Science and Health by Mrs. Eddy.

Twelve years ago, while I was in a deplorable state of health from throat consumption, and making preparation to go hence, I visited a dear friend who had just gone through a class in Christian Science with her husband, and she being very zealous it took but a few minutes for the subject to be brought up. She related to me her changed condition, from being a broken-down opium user, weighing less than ninety pounds, to that of a happy, healthy woman weighing a hundred and fifty pounds. As they explained Christian Science to me, I recognized it as the truth which had been taught by Jesus. Although I had been a church member for many years, I decided to lay aside my doctrinal views and investigate Christian Science. I have never gone back after the budget thus laid down, for I have found that Christian Science embodies all the truth and that the Bible fully substantiates it. I have seen much wonderful healing done in Christian Science as well as in my own case. After doctoring for thirty years with different physicians and remedies, I found that my trouble had vanished like the morning dew before the sun.

The great amount of good done by the Publishing Society cannot be measured; it has been as a strong hand leading us safely and surely step by step along the pathway laid out and defined by our beloved Leader, who by her noble, self-sacrificing labor has won the gratitude of all lovers of Truth.—MRS. A. F. MURRAY, Coalinga, Cal.

It is four years since I turned to Christian Science. Physical healing was what I sought and received, but I now know that had this come rapidly the "fowls of the air" might have snatched the good seed away. During these years truth has been my only medicine and almost all of that administered to my wife and baby. I have been healed of a perpetual case of hay fever which had not been cured by *materia medica* (though my physicians were loving,

conscientious, and able practitioners); catarrh and constipation of twenty-five years' standing have also gone.

My path has not always seemed clear, but I have always known that Science and Health contained the truth, and therefore I have clung steadfastly to it. For a long time I wondered why I did not receive the spiritual uplift that comes to all who seek Truth, but the cloud lifted as I came to know what spirituality is, and recently I have had most glorious glimpses of what it means to live the spiritual life here and now. I am being healed—born again—all the time, both physically and mentally. Anxiety, envy, suspicion, sarcasm, jealousy, anger, stupidity, and poverty; these are diseases of which I am being healed, and their places are being filled with love for the one ever-present and omnipotent God and absolute trust in Him.

C. D. WINES, St. Louis, Mo.

I desire to express my deepest gratitude for what Christian Science has done for myself and my family. Christian Science came to us about a year ago, and since that time it has met and overcome many troubles, both physical and mental, and several demonstrations in business have also been made. During all my life I had been seeking something helpful in the way of a creed, and had dipped into various religions and beliefs; but none were satisfying, and until Christian Science was brought to my attention, at a time when everything appeared to be the darkest, I was adrift, although trying in a measure, and as best suited my own convenience, to live up to the teachings received in my boyhood days. Christian Science came to me, however, and opened up the way to a purer and better life and a true knowledge of God. I have proved for myself, beyond the question of doubt, that "we live, and move, and have our being" in God. This knowledge has been brought to me through the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, to whom I am more than grateful, and through whom the Christ-truth has been brought to a sick and sinful world. For several years I had compound astigmatism. I was forced to wear glasses, and if I took them off when at work, it would cause the most terrible headaches and compel me to give up and go home. The first time that I picked up Science and Health to read I forgot to put on my glasses. From that day on I have never had recourse to them, and only on three or four occasions since then has any sense of headache returned, and it was almost instantly met in Science. Indigestion, bodily fatigue under most trying circumstances, and other physical ailments have also passed away.

The physical healing, however, has to me been the least. When I think of the cleanliness of thought and of daily life realized since coming into Christian Science, my gratitude is too deep to find expression in words. I know that "The Lord is my shepherd," and that He has led me to a higher knowledge of good, through the paths of righteousness,—right thinking.

SAMUEL D. PINE, Evanston, Ill.

It is with a deep sense of gratitude and love to God, that I give my testimony of the health, joy, and gladness which have come into my life through Christian Science, lifting me from a state of semi-invalidism, of many years' standing, into the glorious realization of freedom from every ill, and proving to me without a doubt that Christian Science can and does heal the sick. I was a member of an orthodox church since childhood, and its loving associations still linger in my memory. While yet struggling to relinquish those cherished associations, God pointed the way and furnished many proofs of His healing power through Christian Science. It is now four years since I have used any kind of medicine, and during this time I have been healed

of throat trouble, neuralgia, headache, colds, and many other ills, simply through the reading of "Science and Health with Key to the Scriptures" by Mrs. Eddy. I have also been healed of heart-trouble from which I suffered for eighteen years, finding no relief in medicine, rest, or change of climate. I was fettered with a fear that each day might be my last; my breathing was so heavy and labored that it was distressing to those around me. Many nights I had to sit up because I could not breathe while lying down. Through Christian Science all this has passed away as a dream. Were this all it did for me, it would merit all the praise that I could give it, but infinitely more than this have I found in the teachings of Christian Science. It has taught me to read the Bible so as to understand its spiritual import, which heals and saves. Many sick ones have been raised up in our family. One case was the healing of my little nephew of spinal-meningitis. To human sense there seemed no hope; he was doomed to death, or if he lived, to a fate worse than death. In spite of the opposition to Christian Science of friends who meant to be kind, he was restored whole, without one blemish or weakness, proving that there is no other power than that of God. If those who have nothing but censure for a religion that can give so much help, could only feel this healing touch, could only understand this truth which brings freedom from all sickness and sorrow, they would turn their censure into praise. Christian Science ennobles and uplifts mankind, and brings health, happiness, and prosperity to all who come within its influence.

I wish to express my grateful appreciation of the *Sentinel* and *Journal*. They bear joyful messages of love,—the unfolding of individual experiences through the infinite possibilities of Christian Science. My heart goes out in love to Mrs. Eddy, whose pure, unselfish life and teachings have brought health and peace into so many hearts and homes. Although I have oftentimes stumbled, I am grateful for every step that has enabled me to plant my feet more firmly on the Rock of Ages.

MRS. EVA M. MEAD, Chillicothe, Ill.

I wish to express my gratitude for the blessings which Christian Science has brought to my life. Had it not been for this grand revelation, and the privilege I have had of being led to this wonderful Science, I am sure my family would be without a father and husband. I know I was fast nearing my end, all hope for relief had gone, and I was in such a state of melancholy that the insane asylum was staring me in the face. I had been in the hands of doctors for twenty-five years, and had endured all kinds of treatment. I went through electrical treatment, had three operations, took a water cure, besides all kinds of medicine which I thought could help me. Finally, meeting an old friend, he advised me to try Christian Science. The first treatment was a wonderful help, and I speedily threw all other remedies away. This was six years ago, and since that time I have not taken any medicine. I have been freed of melancholy, catarrh, nervous headaches, bowel trouble, neuralgia, and many other complaints.

Through the study of this great truth I have been able to help many, and thus bear the blessing to others. My twenty-two year old daughter was taken this spring with a severe cough, and not knowing much of Christian Science, she resorted to the doctors. She took medicine for a while and found no relief. The doctors changed the remedies but she could not take them. She was failing very fast and fear was felt in the whole family for her. My teacher advised me to speak to her and secure her consent to take treatment. She finally consented, and in three treatments she was a changed person, and now she is a regular attendant at church with me and is getting well very fast.

GEORGE GAUTHIER, St. Paul, Minn.

With gratitude I give my testimony of healing through Christian Science, hoping some poor sufferer may receive help while reading it. From childhood I was called a puny child. I was never strong and was always sick or complaining. After I was fifteen years old (a year after I was married) my husband fell sick and I broke down. From that on, until Christian Science found me, I was a physical wreck. I was first of all healed of throat trouble which seemed very severe. I then took up the study of Science and Health and was healed afterward of many other ailments, including rupture.

I thank divine Mind for leading me all the way. I have seen dark days, but the light shines in dark places. My husband has also been helped by our little understanding of truth. I praise God, from whom all blessings flow, and I am very grateful to our Leader.

IDA BOWMAN, Harper, Ill.

In gratitude to God for revealing to our revered Leader this wonderful truth, which is blessing thousands of suffering mortals, I give this testimony. Six years ago I was in miserable health. One year previous to this time, I had returned from a sanitarium in Chicago, where the good old surgeon assured me that without an operation I would continue to suffer, and would perhaps live but a very short time. I could not think of submitting to an operation, however, so I returned home without hope and in ignorance of the loving hand that was surely leading me into paths of health and peace. I had been brought up by good Christian parents, but I could not understand why this God I had been taught to love, "no matter what ill He sent," could be called a God of love, and yet afflict His child. How blind I was, and how little I knew of that dear, kind protector, the omnipotent Mind, the loving Father-Mother God. Through the unselfish work of one pure woman, my life has indeed been blessed, and health and peace have been brought to me. I have been enabled to help others out of suffering. Heart failure, rheumatism, bruises, burns, headaches, and colds, and many other so-called diseases have been overcome, and I do thank God for all His goodness to me. I am thankful for Science and Health, which has made it possible for me to understand God and my relation to Him.—KATHRYN McKEY ALTON, Enid, Okla.

I wish to express my gratitude to God for Christian Science, also my thanks to Mrs. Eddy for her untiring love and faithful labor for all the world. Words cannot tell the gratitude I have in my heart, but I will let my life and deeds tell it. I have been healed of cancer, and before I found Christian Science I was almost constantly taking some kind of medicine, but now I know that I can go to God and leave all error behind me. I owe my life and all to Christian Science, through the teaching of Science and Health. I constantly try to keep my face turned heavenward, and look for all good.

ANGIE WEBB, Stillwater, Okla.

Dandelions and Sunshine.

M. L. T.

'And can I lack?
My garden's full of gold!
Gladdening the seeing eye
With shining wealth untold.
Spread are my riches fair
Where all who will may share—
Can any lack?—
My garden's full of gold!

From our Exchanges.

The remarkable religious revival in Wales and the awakening in London has turned attention sharply to similar possibilities in other parts of the world. The distinguished English editor, W. T. Stead, and the eminent American clergyman, Newell Dwight Hillis, unite in the prediction that the movement is to become world-wide.

Certainly the time is ripe. Mankind has been moving at a rapid pace. It is a hard, materialistic age. The rich have become more and more lavish and oppressive of the poor, and the poor have given themselves up very largely to the thought of how to keep up with the procession.

It might seem to the unthinking that this is the hardest of conditions for religious enthusiasm to break in upon. But the truth is that human nature swings, like the pendulum, from the extreme of idealism to that of materialism and from materialism back to idealism. Its attitude to-day is no indication that it will be the same to-morrow.

World-wide materialism works its own cure. The whole thing eventually breaks down of its own weight. Men's minds become surfeited and susceptible to other and very different considerations. It is then remembered and proclaimed that man does not live by bread alone. We may have so much of the now and here as to sicken of it and turn to thought of the beyond for rest and inspiration.

The Atlanta (Ga.) Journal.

The highest life means the deepest delight. But one must not wait until he attains the highest before he is satisfied to rejoice in the gifts of God. All right pleasure in external things is a means of grace, helping on to the day when one shall be satisfied when he awakes in the divine likeness. One needs to be educated to rejoice with the gladness of the angels; and the cultivation of the art of seeing the good things of life, of counting the divine mercies, is a most important factor in the regeneration of the soul. The habit of being happy in the simple relationships of to-day is the best of preparation for the joys that are eternal. Moreover, joyfulness is the truest altruism. The unhappy, discontented, fretful nature absorbs life, depletes others of what makes life worth living; but the glad spirit by its inherent, diffusive beneficence helps those around to blossom and bear fruit as in a fertile garden.

New-Church Messenger.

How any one who believes in God can believe that the world is growing worse, I cannot see. Of course, if you never read anything but the daily newspaper with its burden of crimes and scandals, if you have no idea of the magnificent Christian work going on all over the world, you are more likely to be a pessimist. To such I suggest two sure cures for doubt and fearfulness. First, keep in touch somehow with aggressive Christianity. Second, keep working constantly at the problem of the betterment of your own life, the elimination of its defects, the establishment of it in ways of decency and honor. Either of these cures is likely to produce the desired result. Both taken together will prove irresistible.

REV. H. A. BRIDGMAN.

The Congregationalist.

Jesus never argued the existence of God. He knew Him in the recesses of his own soul, where he had uninterrupted communion with Him, talking face to face as a man with his friend. He did not believe in God because of any logic about the First Cause of the universe or the manifestations of design in creation. He was not dependent upon any external revelation, and this direct vision of the Father is the privilege of all the sons of God. God is the answer to the imperatively felt need of every soul, crying out in longing after Him. If this longing is stifled, if a man is no longer conscious of it, nothing can be done until it is awakened afresh.—*Western Christian Advocate.*

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, \$5. Twelve or more to one address, \$4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, \$1 per copy; \$5 per half dozen; \$9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, Treasurer.
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, \$2.40 per annum; \$1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, \$1.00 in advance; all other countries, \$1.25. Single copies, 10 cents, postpaid.

CHRIST AND CHRISTMAS. An illustrated poem. Single book, prepaid \$3 00
Twelve or more books to one address, each, prepaid 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; \$3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, \$1.06; \$5.00 half dozen; \$9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, \$1.06; \$5.00 half dozen; \$9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, \$2.50.

CHRISTIAN SCIENCE versus PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, \$2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, \$4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; \$4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, \$1.00; six copies to one address, \$5.00; twelve copies to one address, \$9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; \$5.00 per dozen.

Direct all orders for above works, and make remittances payable to

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY
250 Huntington Ave., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,
Associate Editors.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.
Ten copies or more to one address, one year, each copy, ninety-five cents.
Twenty-five copies or more to one address, one year, each copy, ninety cents.
Fifty copies or more to one address, one year, each copy, eighty cents.
For Foreign subscriptions add, for postage, fifty cents per copy to rates given.
Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, \$1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, \$1.40; one hundred copies, \$2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

The census of the Philippine Islands, the principal object of which was to secure statistics of population and a general knowledge of social conditions as a basis for the establishment of a Philippine Legislature, has been completed. The Legislature is to consist of two houses—the Philippine Commission and the Philippine Assembly. The census enumeration was made in the Spanish language. The total population of the archipelago as returned from 342 independent islands is 7,635,426. Of this number almost seven millions are more or less civilized. The wild tribes form about nine per cent of the entire population.

Ambassador Choate was last week elected "Master of the Bench of the Middle Temple," London. Among English lawyers this is the most distinguished honor that they could confer on any outsider, and it is the first time in several generations that other than an English subject has been elected a bencher in the Middle Temple, one of the oldest Inns of Court in London. This action calls Mr. Choate to the English bar and elects him member of the governing body of the Middle Temple. Five signers of the Declaration of Independence were members of the Middle Temple. Since then, it is said, not a single American has been a member.

At a recent conference between Secretary Taft and the three chiefs of the Panama Canal Commission it was decided to adopt a flat rate tariff for traffic across the Isthmus. Transcontinental railroad interests are said to have favored the prevailing high tariffs in order to equalize rates. It is asserted by some experts that freight can be carried from New York to San Francisco by the Panama Railroad and the water route for \$4 per ton, as compared with \$9 on all-rail routes.

Attorney-General Coleman has rendered an opinion that the various farmers' shipping associations of the State of Kansas are organized in violation of the Kansas anti-trust law. The matter was started by the Kansas Grain Dealers' Association, and the

Attorney General will be asked to begin proceedings against the farmers. The secretary of the grain dealers has been sentenced to serve ninety days in the county jail for violation of the anti-trust laws. He has made application for a pardon, which is being vigorously opposed by the farmers' organizations.

President Castro's reply to United States Minister Bowen at Caracas has been made public. Its language is considered a little strong, but not personal to the minister, whose recall, therefore, is not considered necessary by Secretary Taft. The President's language, touching upon the inference that the United States questions the integrity of the Venezuelan courts, was quite vigorous.

United States Consul-General Parsons, of Mexico City, has completed his report on tropical agriculture with special reference to large American owned plantations in Tabasco and Isthmus of Tehuantepec. It is not unlikely that the United States Postoffice Department will be asked to prevent circulation of mail matter by companies not able to make showing of serious work done.

The Commissioner of Corporations has started his work of investigating the Standard Oil Company in Kansas. Three special agents of the Department are there with him, going through the records in the office of the Secretary of State, gathering data concerning the various oil companies doing business in the State.

Attorney-General Moody is proceeding against a system of peonage that has been found to exist in a few industrial pursuits in different localities of the country, and officials of his department are at work securing evidence against those who are practising this wrong in a number of States.

Secretary Taft has informed the representatives of Chile, Ecuador, Peru, Bolivia, Guatemala, Costa Rica, and Nicaragua that under American administration the open-door policy will be maintained on the Isthmus.

What are known as the Western land cases have been called for trial before Judge Hunt in the United States Court in Helena, Mont. Fifty-four persons are defendants.

Foreign.

Baron De Estournelles de Constant, the former deputy and president of the parliamentary group favoring international arbitration, last week made his debut in the French Senate, to which he was elected last November, in a speech urging the military and naval disarmament of the States of Europe by a proportional reduction of their forces similar to the joint disarmament of Chile and Argentina. The speech has attracted notable attention. He maintained that naval expenses were ruining France under the pretext of defending her. The naval programme to which Parliament was committed, he added, contemplated the expenditure of \$200,400,000 before 1917. Neither France, Germany, nor Great Britain had the resources, population, or wealth to meet these colossal expenditures which insured difficulties and debts to posterity. The speaker cited statements made by statesmen of Great Britain, Russia, and Germany, favoring a European accord for the limitation of naval expenses, and urged that this would benefit the entire world, particularly Russia, Japan, and the United States, leaving them free to develop their commercial resources. He asked that France take the initiative.

The President of Venezuela has published an edict announcing that interest on the interior debt for seven years has been cancelled and that script bearing interest at three per cent will be issued to replace the six per cent script which now represents the indebtedness. Much of the Venezuelan interior debt, which amounts to about \$16,500,000, is held by Frenchmen, and this edict, taken in connection with the action of the Republic in declaring the charter of the French Cable Company forfeited, cannot be agreeable to Frenchmen.

General.

The spirit of brutal utilitarianism which tries everything by the test of "the money there is in it," says the *Scientific American* of New York, grows bolder with every success. We have scarcely cooled down from the bitter indignation that was aroused by the disfigurement of our new Subway by the bill-poster, before we are confronted with an attempt to sacrifice the beautiful American Falls of Niagara to the ambitions of a few men who see visions of great profit in the energy of the falling waters.

We have made no protest against the previous use of Niagara Falls for commercial purposes, because it has not yet been attempted on a scale that would seriously interfere with the scenic beauties of the Falls; but the present attempt to secure legislative authority for developing something like half a million hydraulic horse-power, at the expense of the volume of water flowing over the American Falls, is so serious as to call for a halt at what is becoming a case of ugly vandalism. The New York State Geologist has stated that when eighty thousand cubic feet of water per second has been taken away from the Niagara River above the Falls, the American Falls will cease to exist. The American Falls will run dry before the Canadian Falls, because the ledge over which they pass is at a higher elevation than the larger Falls on the Canadian side. The bills now before the Legislature, should they be passed, will give to the various companies that are behind them the power to take away an amount of water that will go far toward wiping out the greatest object of natural beauty east of the Rocky Mountains.

The Niagara Falls are the pride of America and the wonder of the world. They are a proper object of delight to millions of people, and they will naturally, unless they be destroyed, form, for all time to come, one of the most popular points of scenic interest in the world. On the other hand, "there is money" in these Falls—lots of it—for a few people. It is argued that there is much useful energy going to waste at the Falls, that could be turned to a great commercial advantage; but it is not necessary that this energy should be developed, inasmuch as equal energy can be developed in other ways, such as utilizing less important water falls, or by burning bituminous coal under steam boilers. But if this energy were produced from coal, it would be done with less profit to a few individuals than if it were developed at the Niagara Falls.

And the spirit which is back of this attempted vandalism is the same spirit that is become rampant throughout the whole of our commercial life—a spirit of cold, hard, ugly utilitarianism, which, if not curbed in this and many other similar cases that confront us at every turn, will work irreparable injury to the ideals and the character of this, the youngest, and as many of us believe, the greatest among the nations of the earth.

Mount Shasta threatens to become active again. At Sissons, a town in the vicinity of the mountain, it is reported that the ground has opened at several points, and mud has been ejected. The railroad fill across a big canon has sunk forty feet, and the streets of the little mountain town are filling up with muddy stuff, full of oil.

On "Budget Day," before a large crowd of members of Parliament and of visitors to the House of Parliament, the Chancellor of the Exchequer, Austen Chamberlain, announced to the satisfaction of those present that the revenue of the year had exceeded his estimates by \$15,000,000.

Commissioner Jullundur reports that as a result of his investigations he estimates the fatalities resulting from the recent earthquakes in the Punjab, India, at thirteen thousand.

Experiments are being made in Charlottenburg, near Berlin, with a device for lighting and extinguishing all the street lamps simultaneously from the gas works.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

Lecture of The Mother Church.

THE semi-annual lecture of The First Church of Christ, Scientist, Boston, Mass., was delivered by Mrs. Sue Harper Mims, C.S.D., of Atlanta, Ga., on Thursday evening, April 13. The audience filled Symphony Hall to its utmost capacity, and hundreds were unable to gain admission.

The lecturer was introduced by Prof. Hermann S. Her-
ring, First Reader of The Mother Church, who spoke as follows:—

Friends:—On behalf of The First Church of Christ, Scientist, in Boston, The Mother Church of the Christian Science denomination, it is my pleasure to extend to you a most cordial welcome to its semi-annual lecture. That Christian Science is a subject of marked interest is evidenced by your presence here to-night. Indeed there is no topic of such vital import to humanity as that of salvation from the bondage of sin, of disease, and of the discords of this life. The world, with its miseries, disappointments, and woes, is in dire need of something more than it has had, and Christian Science supplies that need through the Science of Christianity, which reveals the teaching and practice of Christ Jesus, the true Saviour of the world, to be applicable to-day in all their fulness and promise.

When Christian Science first found me as a student, experimenter, and teacher in the physical sciences, I was awed by its tremendous claims and its inconceivably glorious promises, and to my great joy, after very careful and thorough research, meditation, and demonstration, I came to the definite conclusion that it was really true, that Christian Science is a perfect Science, being based upon absolute divine Principle; a religion that offers a rational, complete, and demonstrable interpretation of the Holy Scriptures, and a philosophy that makes possible a satisfactory solution of all the problems of mankind.

Christian Science seems more wonderful as its grandeur and depth grow upon the thought, and when we consider the materiality of the age in which it appeared, we become more and more grateful to the one whose mental and moral qualities were so pure and spiritual that the absolute truth concerning God, man, and the universe was revealed to human consciousness through her. This woman was the Rev. Mary Baker Eddy, and she has perceived and demonstrated divine Mind to such a degree as has made possible the marvelous works which have characterized her sacred ministry for humanity, and which have fitted her for the leadership of the great Cause she has established.

The lecturer of the evening is one who appreciates the vastness and import of this subject, and who is intellectually and spiritually qualified to present it to you; but it is possible in a single lecture to touch but a few of its essentials, with the hope that this cup of cold water in the name of Christ may bless some needy one here to-night.

Our lecturer is a Southron,—a fair daughter of the sunny South, of a distinguished and cultured family, who was healed through Christian Science of chronic invalidism of fifteen years' standing, and who subsequently devoted her energies to this healing ministry and became a pioneer of the Cause in the Southern States. She has had the advantage of personal instruction from our beloved Leader, Mrs. Eddy, and has had an extensive and varied experience in

Christian Science work, and I bespeak for her your very courteous attention.

I have the very great pleasure of introducing to you Mrs. Livingston Mims of Atlanta, Ga.

Mrs. Mims spoke as follows:—

One of the most expressive indications of the progress of religious thought is to be seen in the vast numbers of people who attend lectures on the subject of Christian Science. Before Mrs. Eddy made her discovery of the Science of Being, or the Science of Christianity, no two words in the popular thought, or in the English language, seemed more irreconcilably separated than these—Christianity and Science; and yet, since God Himself is Omnis-Science, anything emanating from Him must inevitably be essentially scientific, since God and His laws are supreme, unerring, and unvarying,—the same "yesterday, to-day, and forever,"—and Science being that which deals with the laws of Truth, there can be no more holy alliance than that of these two words, Christian Science. You are here to listen to a lecture on a Science whose Principle is God Himself; whose laws are the immutable laws of health, holiness, harmony, and immortality; whose results must be, and are, the establishment of the kingdom of God on earth,—the reign of individual and universal righteousness.

This God whom we call the infinite, divine Principle of Being, is not a new God. The God of Christendom, defined as infinite Spirit, is our God. The God of orthodox Christianity, defined as infinite Mind, omnipotence, omnipresence, omniscience, is our God. It is He of whom the ancient prophets thundered throughout the centuries, "Hear, O Israel, the Lord our God is one Lord, and beside Him there is naught else." Then what has Christian Science more to offer? We answer, Much. It is the voice of Truth calling to the world to-day to awake from its materialism and pause to ponder, to contemplate this definition of God, Spirit; to accept, as Mrs. Eddy teaches, the sublime consequent of this statement of God. If God, Spirit, Mind, is all, is all power, presence, and reality, then matter, evil, is naught, is not. Christian Science arouses slumbering humanity from its lethargic, stupid acquiescence in evil, sin, disease, and death, and teaches the imperative need and beneficent power of the Christianly scientific protest against these discordant conditions as being opposed to the divine law, order, and government.

The aspiration to know and understand God and "His wonderful ways to the children of men" has inspired the long search and questioning of the centuries. The attempt to reconcile the mystery of evil with the postulate of an all-wise, beneficent, and omnipotent creator has stimulated vast systems of philosophic thought throughout the history of the race. The theoretical mind has been ever the same, since and before the days when Socrates talked of the immortality of the soul, and Plato dreamed his seemingly Utopian dreams of the true Republic, while the Alexandrian schools teemed with magnificent hypotheses.

Nineteen hundred years ago, in the midst of the tumultuous thought of that day, there suddenly appeared a simple, majestic figure, Jesus of Nazareth! He spake as never man spake before, and he proved the beneficent ways of God to man. He showed this benevolent God to be neither

the creator nor the permitter of evil. It was as if he said, "God is not a remote abstraction, not a far-away ruler and mighty king, but a living presence, eternal Truth, a divine environment, in which we live, and move, and have our being, the one source from which cometh every good and perfect thing. The Master came fulfilling God's law. He said of the law, "I am not come to destroy, but to fulfil." In full-filling the law of Life he raised the dead; in full-filling the law of harmony, he stilled the tempest and healed the sick. When he full-filled the absolute law of spiritual being, he ascended to his invisible unity with the Father, Spirit, from whence he came. He taught that God is Mind, intelligence, the substance that includes all, and that feeds, clothes, sustains, and governs man, redeeming him from the bondage of materialistic law by the spiritual law of life and harmony. He taught that even the birds and lilies teach us lessons of the ineffable love of this Father-Mother God, a God of love who embraces all, from the infinitesimal to the infinite, who cares for the winged bird and the "flower in the crannied wall." He is the same intelligence, Love, which rolled away the stone and enabled Jesus to express his deathless, indestructible identity or individual being in God. Stupendous lesson! that man may be wise enough and good enough to escape corruption.

Has the popular, speculative philosophy of modern thought gone beyond that of the old Greek who at least glimpsed immortality? Mr. Herbert Spencer, in his last days, helplessly summed up his system by saying, "Contemplating the inscrutable connection between brain and consciousness, as we can get no evidence of the existence of the one without the activity of the other, we are forced to relinquish the thought that individual consciousness continues after physical organization ceases." This is interesting from the Christian Science point of view, only as it shows that so long as the belief of the union of mind and matter obtains, it hides immortality and man's divine possibilities, while Christian Science, teaching that God is Mind, never in matter, brings into view the perfect, eternal, ideal man in God. To-day, in answer to sore human need, Christian Science appears, reiterating to a famishing world the words of Jesus, and is following him in demonstrating the God-power to heal and bless humanity. It is establishing the practical Christianity of Jesus as he walked humbly with the multitude, healing every manner of disease, purifying and uplifting human thoughts. It is fulfilling the mission of the Comforter. It takes of Jesus' life, works, and words, and shows them to us, while explaining his *modus operandi*.

Have you ever thought how little is said by Christian people to-day about Jesus' works? Yet he said, "The works that I do shall ye do also." He taught that God is the only true Physician, revealing to man his God-given dominion as the reflection of his Maker. This supremacy is not attained through the human will, but through the enlightened understanding of the realities of being and of man's relation to God. Paul, who had a clear sense of Jesus' mission, strove for this mastery of matter, or the body, and understood it as a primary step in Christianity. "I keep under my body, . . . lest . . . when I have preached to others, I myself should be a castaway." This conquest of material selfhood and sense must bring (as he teaches) every thought, wish, and desire into "obedience to Christ," to the demands of a pure, unselfish love that seeketh not her own but another's good.

THE LAW OF SPIRITUAL DOMINION.

In the spiritual account of creation in the first chapter of Genesis we read, "And God said, Let us make man in our image, after our likeness; and let them have dominion over the fish of the sea, and over the fowl of the air, and over the cattle, and over all the earth, and over every creeping thing that creepeth upon the earth." "Thou madest him to have dominion . . . thou hast put all things under his

feet," sang the sweet singer of Israel. I have never read the statement of man's spiritual dominion as given in Science and Health, page 518, that there has not risen to my vision those sweet and yet sublime pastoral scenes on the Judean hills when the multitude, having followed Jesus to hear the "gracious words that he spoke," were finally an-hungered. Instructing the disciples to seat them on the grassy hillside, he fed them, the five, and then the seven thousand, with the multiplication of the fishes and the loaves. He knew that creative Mind supplies all human needs, redeeming man from the materialistic law of toil and struggle. This law and proof of spiritual dominion runs like a fine golden chain throughout the entire Scriptures, linking all its eras of development in one perfect design, and culminating in Christ Jesus. Abraham, the friend of God, through faith in the invisible, became the father of a mighty nation. Jacob, wrestling with material evidence, and overcoming, became the founder of the great monotheistic Hebrew nation. Moses illustrated in many ways this dominion, and Elisha multiplied the meal and raised the dead. Paul, in more modern times, said, "And my speech . . . was not with enticing words of man's wisdom, but in demonstration of the Spirit and of power." These so-called miracles, to the understanding of Christian Scientists, are not infractions of law, but utilizations of an ever-operative, divine Principle, God; and the application of this Principle can accomplish the same results to-day as of yore, for it is eternal and universal good.

The Comforter in Christian Science, illuminating the Scriptures in a flood of light, reveals that this Science was, and from the beginning is, the Word of God, the true Logos, reconciling man to spiritual law. It shows Jesus to have been not only the most transcendental, but the most practical of men. In him the ideal became the real and the acme of religious aspiration was reached.

UNSATISFACTORY AND UNREAL NATURE OF MATERIAL EXISTENCE.

In the greatest of all epics, Job pondered the strange problem of material existence, and spake from and for the universal human experience, when he said, "Is there not an appointed time to man upon earth? are not his days also like the days of an hireling? . . . Therefore I will not refrain my mouth; I will speak in the anguish of my spirit; I will complain in the bitterness of my soul." He said also, "Man that is born of a woman is of few days, and full of trouble;" and David queried, "What is man, that thou art mindful of him?" Prophet and apostle speak of this material existence as a vapor that melteth before the sun, as a shadow, a dream, for all flesh is as the flower of the field that to-day is and to-morrow is cast into the oven. And the great apostle Paul speaks of this sad condition as the "old man with his deeds" (or concept of man), corrupt according to the deceitful lusts, to be "put off." This brings us to one of the most practical metaphysical points in Christian Science. Tired humanity, with tragic earnestness, during all the long centuries has endeavored to "put off" the "deeds of the old man,"—the sin, discord, disease, death,—but these efforts have resembled those of an agriculturist who attempts to get rid of a tree by lopping off the branches. Spring, however, reveals an added number of branches,—the root has not been touched; but in the divine metaphysics of this paragraph of Paul we find in a logical sequence that the old man with his deeds must be put off.

This brings us to see Mind as causation. Only as the old man,—or the Adam concept "in which all die,"—the Adam thought of man as coming from the dust, is put off, do we see that disease, decay, and death are causeless, having no origin nor right to exist. The apostle turns our attention to the true concept, the Christ, the spiritual idea, when he says, "Put on the new man, which after God is created in righteousness and true holiness." This is the

immaculate concept of man as the divine idea, this true concept is the saviour of the world.

In that beautiful fifth chapter of 1 John, a new translation makes this very clear. It reads, "For we know that the son of God hath come, and hath given us an insight that we are getting to know Him that is real, and we are in Him that is real, and in His son Jesus Christ." This clearly shows that spiritual insight alone can show us the real, while we look not at the things that are seen but at the things that are not seen, which are eternal. This is a simple statement of the Christian Scientist's understanding of matter and its discords; they are temporal falsities. Truth, and what it includes, is eternal, perfect, and harmonious. Indeed the apostle tells us in Hebrew, 11, that this *one* thing—this conviction of unseen realities, as a closer translation gives it—was the mighty power by which was wrought the wonders of spiritual victory throughout the Scriptures; that it quenched the violence of fire, stopped the mouths of lions, and raised the dead. This same conviction of the unseen power and presence of God is, not shorn of its invincible utility, but is, now and ever, the prerogative and proof of Christianity. That this faith which "is the evidence of things not seen," is the very basis of Christianity, is beyond question to the enlightened and unbiased Christian thought. This true idealism of pure Christianity brings to light Life and immortality; it reveals the perfect man and universe, as the expression of the pure ideal "in the bosom of the Father." It fulfils all high aspirations. The apostle further tells us of the transformative power of this true idealism. "Be ye transformed by the renewing of your minds." By beholding with unveiled face this divine glory, even as in a mirror, we too may be changed "from glory to glory, even as by the spirit of the Lord." "Who shall change our vile body that it may be fashioned like unto his glorious body?" It is to this unspeakable glory that Jesus' idealism calls us; not through death, for death is not a transforming power, but through spirituality, wisdom, and understanding. We should not be discouraged because this process seems slow, but rejoice that we have learned to take the infantile steps in this direction, for we are only babes on the shore of infinite, divine possibilities. Our work at this hour is to make the little we know practical, not forgetting the sublime ultimate.

PHYSICAL FORCE, SO-CALLED.

The wise man hath said that there is nothing new under the sun; and the Scriptures say, "That which hath been is now, and that which is to be hath already been." One hundred years ago, not a steamboat was known; the human mind had not begun to explore the subtle forces unused around it. For centuries the steam had lifted the top of the boiler in the common uses of daily life, hinting an unrecognized power. Then a Watt and a Stephenson grasped a sense of the forces of steam and applied it. It is an interesting historic fact, that the first steamboat that crossed the Atlantic Ocean left the southern harbor of Savannah, going to London in twenty days. Now palaces of immense size and luxury plow the waves with a constantly increasing speed. One hundred years ago not a railroad annihilated time and distance between the cities of the world; now continents are crossed, nations are linked in close and profitable bonds through this enlarged application of the same homely force. Fifty years ago not an electric wire stretched its slender lines above our thoroughfares, not a loving nor distressing message thrilled along its thread of fire. Now, under the ocean depths, along its coral beds, through its translucent waves, the new and old worlds clasp, and speak, and vibrate one to another. This swift messenger, more subtle than its predecessor, steam, is daily reaching to higher applications. It is not a new thing. As far back as the days of Aristotle it was known to exist in this material realm.

But this century, the advancing dawn of man's dominion, has brought it into subjection, and it is the servant of man. On the seashore, as the great revolving beacon-lights illumine the darkness, they symbolize the impersonal love of man to man, as they become guides to the storm-tossed or fog-blinded mariners on their outward and inward journeys.

Thus we see these invisible, so-called physical forces, these unknown quantities, lighting and moving in the material world. These forces seem, however, capable of both good and evil; the luminous guide to the storm-tossed mariner may also kill with a touch. They are devoid of spiritual law; they cannot therefore be true nor good forces, but are only counterfeits of spiritual force; they are manifestations of the human mind or will which must yield to the true force, the spiritual dynamics of unchanging and eternal good. Truth is a revelator and a revelation of eternal, changeless facts, and the limitless possibilities of being.

THE TRUE FORCE.

Towards the climax of Jesus' demonstration over space and time, we read in John of a wonderful incident. The apostle relates this incident with much appreciation and understanding. It seems that one evening Jesus and his disciples were together on the shore of the Galilean sea. Finally the disciples left to cross the sea, and Jesus was alone under the blue Eastern sky. In the middle of the night the disciples saw Jesus walking over to them. They were at first affrighted, not yet realizing that the divinely natural is not supernatural. They finally took him with them into the boat, and the apostle records that immediately the boat was where they had been slowly going. Mrs. Eddy points us to Jesus who came in the "power of the Spirit," and before this power every form of sin, disease, storm, tempest, and death itself, "vanished into its native nothingness." For several centuries the application of the power of Spirit to overcome human ills characterized the primitive Christian Church. Gradually the materialization of the age obscured the glorious light, as the world took possession of the Church instead of the Church taking charge of the world. To Paul, the metaphysician, this power was the Mind of Christ destroying the illusions of the mind of the flesh. St. John, rising to a high spiritual sense, called this power divine Love, the Love that is God, that destroys all fear, that is Life, that makes perfect; and Mrs. Eddy, in *Science and Health*, page 140, line 25, gives a definition of Deity which shows divine Love to be universal and eternal.

MRS. EDDY'S PLACE AMONG SCIENTIFIC DISCOVERERS.

Less than forty years ago, in lofty spiritual isolation, there stood a woman, Mary Baker Eddy, on the mountain-top of vision, kissed by the rising sun of righteousness with healing in its beams. Solitary as the great explorer who stood on a lonely peak in Darien, an unknown continent to the north and south and a vast ocean on either side, Mrs. Eddy saw behind her the vast sea of human thoughts swelling and raging in tumultuous struggle, and before her the peaceful Pacific, an ocean of spiritual understanding and love. She saw the awful unreality of the finite senses which witness to sin, disease, and death, the evil "that deceiveth the whole world;" the enforced, self-inflicted sorrow and slavery of men through human illusion. She saw also the omnipotence and reality of God, good, and the infinite possibilities of man endued with a true knowledge of God. She discovered anew the spiritual laws of life and harmony, and their application to human needs, as Jesus taught and proved,—the spiritual Canaan where man, free and fearless in his true selfhood, "transparent walks the earth like some holy being,"—and she named her discovery Christian Science because it deals with eternal laws which always were, and are, and will be,—the laws of God and the universe.

What, then, do we not owe to her who has so bravely stemmed the tide of human opinions and held aloft the banner of primitive Christianity and its demonstrations of the power of the Spirit which can work no ill, that is eternal and unchanging good,—aye, very good,—that law of love to which every knee must bow. It is my happy privilege to speak of Mrs. Eddy from my own personal knowledge of the beauty of her life, the inspiration of her presence, the grace of her personality. Born of an old and intellectual family, associated intimately with the scholarly men of her native State, and surrounded by a pure spiritual atmosphere, she was adequately fitted for her high destiny. Educated in part by her elder brother, one of New Hampshire's most brilliant sons, she acquired an accomplished education. This brother, Hon. Albert Baker, was a law student and partner of President Franklin Pierce. Mrs. Eddy was both intellectually and spiritually endowed, and was a well-known and gifted authoress even in early life. Of her philanthropy and her unselfish work for humanity, words are inadequate to express its fulness. No other person, perhaps, in all this modern world, has so lived and loved that many thousands have been lifted out of sin, disease, and poverty, as they have been through her sweet ministry. As the veil of misconception is removed, that blinds the world to its great spiritual leaders, her life gives forth a radiant light, she commands the admiration of the world, and the ages will call her blessed.

DIFFERENCE BETWEEN CHRISTIAN SCIENCE AND SOME PHASES OF MODERN THOUGHT.

Christian Science is entirely unique in its dealings with the question of evil, or matter. It rests absolutely on the basis that God is the only, the infinite One, omniscient, omnipotent, omnipresent good; the all-inclusive Mind, beside whom, "there is none else." It is true that some modes of modern thought claim to acknowledge this statement of God, Spirit, good, but they drop from this sublime postulate and admit matter, something besides the infinity of Spirit, thus making, in theory, material man and universe the expression of Spirit, which is illogical and un-Scriptural, for flesh and Spirit, matter and Mind, are contrary. "The flesh lusteth against the Spirit, and the Spirit against the flesh." Because of this opposition of Spirit to the flesh, we know that logically one cannot be the outcome of the other any more than light can emit darkness, or Truth express a lie. Therefore, Christian Science denies that matter or materiality can be actual, or the emanation of the one Spirit, the only Cause. It does not deny man or the universe, but only a false, material sense of them. Furthermore, none of these phases of modern thought or philosophy make a separation between "the carnal mind" which is enmity to Truth and the Christ-mind which is Truth.

Christian Science stands alone in the realm of religion and philosophy, separating between the unreal and the real, between the flesh and the Spirit, the seen and the unseen. In that second day of spiritual unfolding recorded in the first chapter of Genesis, this statement is made, that "God made the firmament, and divided the waters which were under the firmament from the waters which were above the firmament." In "Science and Health with Key to the Scriptures," page 505, the separation between Truth and error is clearly defined. Moses by symbols taught this separation. Moses and Ezekiel reproached the pastors of Israel because they did not show "the difference between the holy and profane, and cause them to discern between the unclean and the clean."

In fulness of time Jesus came, not to judge by the seeing of the eye nor by the hearing of the ear, but to "judge righteous judgment." He came with fan in hand to separate the chaff from the wheat; the material seeming, the fleeting, from the real, harmonious, and eternal. In divine metaphysics this is the suppositional conflict between Truth and error, understanding and belief. Jesus termed

the false sense of matter and evil a lie, "a liar, and the father of it," and proved its unreality on the basis of the truth of God's infinity. It is on this point of denying evil, of meeting it as a false claim, a seeming presence opposed to the divine ever-presence, a pretender and a usurper, and overcoming it, that many of our best poets and thinkers have failed; they say that all is good without meeting and destroying the false evidence of sin and evil, and thus they fall under the condemnation of the prophet who said, "Woe unto them that call evil good, and good evil."

When the full revelation of the spiritual sonship glorified the consciousness of Jesus, he heard the Divine voice saying, "This is my beloved Son, in whom I am well pleased." In the wilderness of human errors and beliefs he met and overcame temptation, for Truth uncovered to him the mystery of evil, the false claims of another mind than God, with all its arguments and evil suggestions, and he met and mastered every one. Then he came, clothed in the mastery of spiritual dominion, ready to cast out all manner of evil. He had found what was in the human mind, and rebuked every temptation of materialism, with its prides, ambitions, passions, and desires. He reversed every material belief, prevalent then and now, as to the origin and destiny of man, and planted himself absolutely on the premise of man's spiritual perfection as the image and likeness of his Maker, revealing the eternal, changeless *now* of scientific being. "Now are we the sons of God."

This meeting and overcoming of the false evidences of evil on the basis of man's spiritual perfection in God, delivers man, here and now, from the powers of darkness. To enter into this kingdom of Christ, this commonwealth of Israel, the first step is renunciation, the "putting off" of the old sense of things, and the acceptance of the "new man created in righteousness." Allegiance to other rulers than Spirit must be renounced, and the true individuality, or son of God, "born, not of blood, nor of the will of the flesh, nor of the will of man, but of God," must be acknowledged in his true heirship. In this spiritual realm only the law of Spirit must be acknowledged which demonstrates life and immortality. He that is in Christ is a new creature, old things are passed away. In this pure realm our conversation is in heaven. "The new tongue" of Spirit which heals, is our vehicle of expression. Our basic thought must be the spiritual fact that man is, ever was, and must be, spiritual, not material; that he never fell from the hands of omnipotent Love. Holding on to these divine realities in thought, meditating on and talking truth "one to another," we shall become naturalized to Spirit, to the divine nature, to the immortal law of harmony and perfection. The sinless man, the offspring of Spirit, heir with Christ of power, glory, and dominion, will become the real to us.

HEALING.

Many intelligent physicians who recognize the healing work of Christian Science, say that their objection is to the claim of its being supernatural. Now this is just what Christian Science absolutely disclaims. Paul once said, "Why should it seem a thing incredible with you that God should raise the dead?" That God should heal the sick seems divinely natural to Christian Scientists. To the understanding of God, the only Cause, the tender, loving Father-Mother God, nothing else could be natural. It is the Truth of being which heals, not human will nor influence. (See Miscellaneous Writings, p. 200.) Thus Christian Science teaches that sin and disease have no divine authority. They obtain in an illusory, untrue sense of existence and are destroyed by the Truth of being.

PHILANTHROPY.

It is sometimes said that Christian Scientists are not philanthropists, because they do not build hospitals nor asylums. Christian Scientists dearly love all good work, every expression of love and good-will to men, and offer

contribute generously of their material means; however, since the need of these institutions does not seem to decrease, but greatly increase, it would appear that the root of the evil has not yet been reached. The healing and redeeming power of Christian Science has the task of breaking down the fetters of material law which bind the whole world, and its philanthropy is broad as the heavens and deep as the ocean. Indeed, we see that Christian Science healing, going to the root of evil, dealing primarily with cause instead of effect, being ethical as well as physical in its redemptive work, offers a permanent and radical remedy; and, as its beneficent influence extends, it will bring universal salvation.

In that magnificent eighth chapter of Romans, the apostle says, "The law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death." He also says that "the whole creation groaneth and travaileth in pain together," unwillingly under the law or bondage of corruption, "waiting for the adoption, to wit: the redemption of our body." Everything cognized by the material senses seems to be under this law, from a blade of grass to the splendid stars, for astronomy reveals "a dead moon and dying worlds." The wonderful, spiritual law of Truth, recognized as making free from the supposititious law of sin, disease, and death, is utilized by Christian Science in its work of redemption, revealing gradually "the new heavens and the new earth," wherein dwelleth righteousness.

Christian Science is in full and ready sympathy with every advancement towards purity, benevolence, law, and order. It teaches that the Ten Commandments and the Sermon on the Mount furnish the solution of every human problem. Its Alpha and Omega is Love,—it teaches that God is Love, infinite and ever-present; that all sects, nations, and races are embraced in that Mind which is Love; that there is one Father-Mother, God, one family,—the whole earth; that man attains his own perfection and harmony in proportion to his own reflection, in thought and action toward all men, of his active Principle, Love. Divine Love reflected on earth reveals the kingdom of God here as in heaven. Such love "seeketh not her own," but another's good; it "beareth all things, . . . hopeth all things;" it "never faileth." It thus becomes the saviour of the world from all evil,—economic, political, physical, mental. Because this unselfish love was enthroned in the heart of Jesus, he did his mighty works. Divine Love is as universal as the sunlight, and distils "as the small rain upon the tender herb." In the light of this Love we see man as the image and likeness of God.

Some day, by laws as fixed and fair
As guard the planets in their sweep,
The children of each outcast heir
The harvest-time of Truth shall reap.

The peasant's thought shall yet be wise,
The untamed pulse beat calm and still,
The blind shall see, the lowly rise,
And work in peace Love's wondrous will.

Some day, without a trumpet-call,
The news shall o'er the earth be blown,
The heritage come back to all,
The myriad monarchs take their own.

Go out from your room some night,—over-heated, wearied,—and let the stars speak. Pray, "Calm me, my God, and keep me calm." Now lift your eyes and read direct from Him your answer in those suns and worlds: "Hast thou not known? hast thou not heard, that the everlasting God, the Lord, the Creator of the ends of the earth, fainteth not, neither is weary? . . . He giveth power to the faint." Or, as you stand lonely in God's Acre, let the mountains speak. Lift up your eyes unto the hills and ask whence your help will come. The hills themselves reply, "He will not suffer thy foot to be moved: he that keepeth thee will not slumber."—*Pacific Baptist*.

The Omnipotence of God.

W. D. MCCrackan.

THE word "omnipotence" is not infrequently used in a manner which is so careless as to frustrate the legitimate conclusions that should be drawn from its true meaning. It is sometimes used as equivalent to superior power or supreme power, while it really means almightiness, and its true significance will not admit of any lesser interpretation. Its derivation makes it clear that the word omnipotence means "all-power" or all-mightiness; not merely a power superior to other powers, or even a power supreme over all other powers, but the only real power, the possibility of the existence of any other real powers being excluded. There cannot be more than "all," hence there cannot be another real power beside omnipotence. It is thus, as the one and only power, that Christian Scientists are taught to regard and know God.

The admission that there is any other power beside that of God, leads, as our text-book shows, to errors variously called mythology, idolatry, or materialism, and to the worship of all manner of other gods, in disobedience to the first commandment.

The proper definition of omnipotence having once been clearly established, it will follow that if there seem to be other so-called powers beside the only power, such powers cannot be real, but must be illusive or delusive beliefs of powers, pretended and pretentious counterfeits of powers, which the recognition of God as the only power will promptly dispel as falsities. These so-called powers manifest themselves to the material senses as real and potent, frequently as violent and terrible, and seem at times cleverly to mimic the only power by acting apparently with intelligence and under law. But since the material senses can testify only of matter and never of God or Spirit, they are incompetent to give evidence concerning the omnipotence of God, and their reputed evidence on this subject must perforce be set aside as invalid and irrelevant. The only evidence admissible is spiritual evidence based on spiritual comprehension and apprehension; upon the understanding of the Christ-mind; upon the Science of Christianity or Christian Science.

A proper understanding of the term omnipotence is thus found to be productive of the utmost benefit to the human race and it leads to experiences of great joy and relief, because it forces the human mind to relinquish its hold upon the belief that there can be any evil power or any power in evil. From this point of view it will readily be perceived that the study of the term omnipotence tends to deliver mankind from a long train of errors, all attached to the supposed existence of so-called evil powers, and that a clear understanding of this term is healing, reforming, and comforting in its effect.

Another helpful conclusion may be reached from the perception of omnipotence as meaning only one power, and it is this: If there could be any real power calling itself evil and manifesting itself as sin, sickness, death, or destruction, then omnipotent good or the one only power would be perpetually in the act of making such evil power null and void. Now, supposed powers which can be described as perpetually in the condition of being destroyed, certainly cannot be called real, whatever other nomenclature may be supposed to fit the case. Indeed, we find that sin, sickness, death, or destruction cannot co-exist with omnipotent God. We must make our choice between admitting the omnipotence of God and the reality of evil in all its forms. The two are evidently incompatible. Christian Scientists are taught to make their choice in behalf of an omnipotent God as against any supposed reality in evil. Thus they learn to magnify God and to rejoice in a wholly good creator and first cause.

Further, it can not be maintained that evil is dependent upon God's will, and that it thus possesses some measure of reality, since it is inconceivable that an omnipotent and infinitely good God should will evil upon His defenceless children, should permit or sanction it, or even prepare conditions capable of developing it. To admit the possibility of sin, sickness, and death, as emanating from or by the will of God, our heavenly Father-Mother, is to assume a responsibility which those educated in Christian Science are not willing to accept and which no one should be willing to encourage.

The Lecture and the Field.

WILLIAM R. RATHVON.

WITH great wisdom the successive stages of the Christian Science movement have been inaugurated by our Leader. Instituted at times and on occasions opportune and auspicious, they have summoned to their fulfilment the voluntary, unconstrained co-operation of Scientists as individuals and as a body. Mrs. Eddy has nobly performed her share in indicating what is to be done, and it is due to her from us to see that what we do is done well.

The establishment of the Board of Lectureship is a case in point. Among the various media that are at the disposal of the Field for the public dissemination of Christian Science, our lectures in some respects afford the greatest possibilities. A lecture seldom falls on unwilling ears; it is always an authoritative presentation of Christian Science; it is readily conformable to the needs of the hour; it attains the most effective form of publicity, drawing audiences that in point of size and quality are convincing object-lessons to the observing world, and it receives a generous share of attention from the press which is far-reaching in its effects. In view of these and other facts it is to be seen that our lectures are doing valiant service.

That the Field is getting all the good out of them it should, cannot be so confidently asserted, and it may be profitable to consider how we can improve our opportunities by better work. No specific method of procedure can be laid down that will fitly apply to all cases, for each community has conditions peculiar to itself, which must be met in the way best adapted to those conditions; yet there are certain things common to all which must be handled uniformly. The Board of Lectureship has officially made provision for most of these in the printed circulars which are sent to the branch churches. The observance of the instructions they contain, or their neglect, may make or mar the success of our lectures.

In many of the churches the lecture is an event of but annual occurrence, and should always be prepared for with intelligent thoroughness and deliberation. Sometimes such preparation is disregarded or delayed, until, through press of time, it is hurried or poorly done. Then again it may be slighted because of ignorance of the right thing to do and the right time to do it. The writer has assisted in the arrangement of six lectures in as many years past, given by two small churches, and in each instance has learned something that was of distinct advantage for the next. In the hope that his experience may be helpful to the Field, he will describe in some detail the method under which a recent lecture was conducted. It must be understood that what is here set forth is in no wise to be regarded as a precise plan for others to follow from beginning to end. What succeeded with us might be less effective in another locality, and there may be other ways which are better than those here given. They are presented as having yielded satisfactory results on six different occasions. The last lecture given will be taken as typical of the others, as it embraced the essential features of those which preceded it.

The church has been organized for less than three years and has a membership of twenty-nine, with an average attendance of sixty-five. Nearly a year having elapsed since

a lecture was given, an informal meeting of the church was held, at which the clerk was instructed to arrange a date, by correspondence with the lecturer. The chairman of the meeting briefly stated the general good that was directly traceable to the previous lecture; the benefits accruing to the individual members of the church through the extra work its preparation entailed, and the need of complying promptly with the rule of the Manual which stipulates that at least one lecture shall be given annually by each of the branch churches. All were counseled to seek the divine blessing upon their undertaking. It was pointed out that each member had an individual responsibility in protecting the undertaking from every thought of failure and insuring its success through proper scientific work.

The first thing to be confronted was the suggestion that the required money would be difficult to raise at this time, for various reasons; but especially in view of the fact that the membership is made up of bread-winners who of late had given generously in response to several special demands. But the claim of lack was met and handled as vigorously and positively as though it had been a claim of sickness or sin, for it was recognized as of the same evil origin. The financial demonstration was effected by using the system of anonymous subscription which has been found to work so well in other small churches. Blank slips of paper were distributed among those present, with the request that each should set down the amount he felt he could subscribe to the lecture fund. It was explained that no signature need appear on the slips; that they were not intended as obligations, but rather as indications of what was to be counted upon as a whole, and that they were not for public inspection. By this means personal comparison and complacency are eliminated and other mischievous diversions are anticipated and nullified. It was announced that the amount desired was about ninety dollars, and when the slips were counted the total was found to be \$86.60. From former experiences we knew that this insured all expenses, for the original subscriptions had always been increased later on. In this instance the entire sum received was one hundred and twenty-seven dollars. This excess came in from various sources without solicitation of any kind. In passing, let me say that in the six years I have seen this system employed as above, I have never known of a single instance where a subscription so made was neglected, repudiated, or not promptly met as arranged.

A treasurer of this lecture fund was appointed at the meeting, one being wisely chosen whose attitude toward the claim of lack was known to be uncompromising and courageous. Suitable committees were selected to look after the printing and advertising, the renting of a hall, and other minor matters. The work of these committees was well done. They encountered the usual obstacles, but were faithful, both in prayer and in the employment of good common sense, and so overcame threatened ill at various times. Four days before the date of the lecture brief reading notices were inserted in the daily papers, calling attention to the lecture in a pleasing yet dignified manner. These notices were changed each day and were given good positions among the local items. Tasteful window cards were distributed in the prominent show windows, and large posters were painted and put up on each side of the entrance to the hall where the lecture was to be held. There is a common thought that storekeepers are reluctant to display these window cards, but the committee was not looking for opposition when they went out, and they encountered none. A day or two before the lecture they went over the same ground again, and got permission to re-arrange cards which had become displaced or removed for any cause. Courteous themselves, in thought as well as manner, they met with like treatment. One thousand invitation cards had been printed, that being double the seating capacity of the house. These cards were enclosed in envelopes for mailing and were of the best material and

workmanship. Members were given all they could use to advantage, and the committee addressed and mailed in sealed envelopes about six hundred to those whom it was desired to reach. In this way the lecture was brought directly before the attention of many who otherwise might not have given it a single thought, and coming in the form of a personal invitation, it was in many instances accepted by those whose presence at the lecture was a surprise to their friends. One member who enclosed her personal card in a number of the invitations she sent, received kindly replies of acceptance or regret from people who had heretofore manifested no interest in anything pertaining to Christian Science.

On the night of the lecture, in the face of several counter-attractions, the house was filled to the doors with representative people of the town, many of whom made their first acquaintance with Christian Science on this occasion. More than four hundred copies of the *Sentinel* were taken home by the audience, the distributors being posted at intervals along the lobby, thus reaching all. Commendatory reports of the lecture and the introduction appeared in the local papers, which also published, without charge, a full synopsis of the lecture from copy furnished in advance. These newspapers were circulated by our members among those of their friends who desired to read and study the spoken words at their leisure. Many copies of a neighboring paper, which published the lecture verbatim, were also distributed in like manner, thus widely extending its sphere of usefulness.

The foregoing may be of little use to many of our large churches, to whom the giving of a lecture is not so momentous an event as with the smaller ones. But to those who are beginning, or to others who have not obtained satisfactory results, these experiences may be of help. Their value lies in the prominence given to the necessity for constant and faithful work on the part of every member, if the lecture is to be made a success in the truest sense of the word. Every Scientist in the community must feel a personal and individual sense of responsibility resting upon him which can only be discharged by conscientious endeavor. A few may be called on to do the material tasks requisite, but all have important obligations which cannot be delegated to others. This done, the harvest will be abundant, and the mission of the Board of Lectureship will be achieved.

Rest in Love.

LOUISE DELISLE RADZINSKI.

AN article in a recent issue of *The Christian Science Journal*, telling of a man's vacation experiences, carried me back some years to a time when my early steps in Science were tentative and very timid. The college of whose faculty I was a member, had closed for the summer; the entrance examinations for the fall semester were over, and I turned homeward with the question in my heart, "Father, what next?"

It had been my custom to prepare, during the long vacation, special work for elective classes, examine new books, and then make a few visits and short trips for rest before taking up the fall duties.

I had not found that visits or pleasure trips were particularly restful or recuperative, but I had taken them as a matter of course, under the belief that a teacher needs a rest and a change after her year's work in the class-room. Christian Science had, however, come into my life with such renovating and rejuvenating influences that the usual routine of visits and trips had become rather distasteful, and the question, "Father, what next?" rose continually. After the cottage had been put in summer trim, a quantity of sewing was brought out—ornamental needlework to be finished, and garments to be repaired; books to be read were set out, and a schedule of hours of garden work, needlework, and read-

ing was prepared that promised profitable occupation and a certain amount of pleasure. But a mightier hand than mine took up these rough-hewn tablets upon which my summer was to be graven, and marked them with a very different tale. The factories in the valley below the hill on which my cottage nestled, were closed for the greater part of the day, the water supply being insufficient for full hours' work, and the operatives, docked of their wages, and lacking their usual quality of food, began to manifest their sense of privation in fevers, boils, and in still more serious ailments.

I had not yet begun my "summer course" of work and study, when a case of fever was brought to my notice with a request for help. Very timidly was the work begun, but the promise, "As thy days, so shall thy strength be," was fulfilled to the utmost, and as truth was declared against the fear of lack, and that of infection, the trouble was overcome. After that, every day brought its satisfying proof that God was indeed with us, rewarding the patient's faith, and strengthening the practitioner's feeble footsteps in the way of demonstration, as ailment after ailment was brought for healing.

That summer stands in my memory as one of the landmarks on my way in Science. Nothing that I had planned had been done, but my heart was big with gratitude when I counted up the treasures that had been given into my keeping. Not only did I know now that the feeblest flutterings of newly fledged wings toward divine Love would be strengthened into saving flight, but the proof had been given me of God as Life, as health, an ever-present help in time of need, dispelling fears and their frightful progeny of sickness and sorrow.

On my return to college there was a general cry that I had found a new place of rest and recreation, for I looked so well, so strong, so serene! Where had I been? The answer, "At home," was met with the remark, "Then you must have had delightful company," which was honestly acknowledged to be most true, the sense of obedience to Principle in declaring truth and demonstrating love having been so precious a companion that I then fully recognized the truth our Leader has crystallized in the last sentence of Article XVI., Section 1, of the Church Manual.

[Written for the *Sentinel*.]

An Easter Carol.

MARY J. ELMENDORF.

OPEN wide the eastward windows
To the Resurrection morn;
Hearken to the deep thought-music
In the rose-pearl silence born.

Wraiths of night and death are vanished;
Gone the scourge and thorns and gloom.
Victory stands beside the cross;
White-winged angels rend the tomb.

Open wide the eastward windows
To the lilies waiting there;
Rise, and journey with the blossoms'
Fleetly up the way of prayer.

In those garden-paths of peace,
Petals of the heart unfold,
While its fragrance wafts to God
Like an offering of gold.

Open wide the eastward windows
To the light and joy that are;
Lo! the glory of the Sunrise
Rounds the message of the Star.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

An Amended By-law.

ARTICLE XIII.

DATE OF COMMUNION.—SECT. 3. The Communion shall be observed by this Church annually on the fourth Sunday in June of each year.

Dedication at Pittsburg.

The following correspondence between our Leader and the church at Pittsburg upon the occasion of the dedication of the new church edifice in that city, will be read with interest.

Pittsburg, Pa., April 3, 1905.

Rev. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—From the farther end of the Keystone State your followers ask that you give them a few words of felicitation on the occasion of the dedication on April 9 of their church edifice in Pittsburg, the first to be erected in the State of Pennsylvania by Christian Scientists.

FIRST CHURCH OF CHRIST, SCIENTIST,
A. E. PIERPONT, Clerk.

MRS. EDDY'S REPLY.

Pleasant View, Concord, N. H., April 5, 1905.

First Church of Christ, Scientist, Pittsburg, Pa.

My Beloved Brethren:—I congratulate you upon erecting the first edifice of our denomination that has gone up in the Keystone State, a State whose metropolis is the "city of brotherly love," so-called. May this dear church militant accept my tender counsel in these words of the Scripture, to be engrafted in Church and State:—

"Let every man be swift to hear, slow to speak, slow to wrath." "He that is slow to anger is better than the mighty; and he that ruleth his spirit than he that taketh a city." "If a man offend not in word, the same is a perfect man, and able also to bridle the whole body." "By thy words thou shalt be condemned." "Love thy neighbor as thyself."

"Christ also suffered for us, leaving us an example, that ye [we] should follow his steps: . . . who, when he was reviled, reviled not again; when he suffered, he threatened not; but committed himself to him that judgeth righteously." "Consider him that endured such contradiction of sinners against himself, lest ye be wearied and faint in your minds."

Yours in Christ,
MARY BAKER EDDY.

Pittsburg, Pa., April 9, 1905.

Rev. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—Your loving words of greeting and wise counsel have served to lift our thoughts above the contemplation of the material edifice. You bid us look within, to strive for the dedication and consecration of that which belongs wholly to God, to upbuild that "temple not made with hands," whose corner-stone is Christ.

We rejoice in thanking you and earnestly pray that the

deep significance of this occasion may leave its impress upon all who have been privileged to participate in this demonstration of love and unity.

Gratefully your followers,

FIRST CHURCH OF CHRIST, SCIENTIST, OF PITTSBURG, PA.

The Lectures.

OF the several plans formulated by our Leader for the correct presentation of Christian Science to the public, one of the most efficient in operation is the giving of lectures by the members of an official board. During the years since the institution of these lectures, their value, both to the Cause and to the individual churches which have given them, has been amply proved. We regret to say, however, that reports received at this office indicate that some of the branch churches and societies are not availing themselves of this most excellent means of correcting prevalent mis-statements about the teachings and practice of Christian Science.

Because of the many attempts which have been made through the legislatures and the courts to prohibit or curtail the practice of Christian Science, it has become more and more necessary that the public should be enlightened upon the merits of this religious system which heals as Jesus healed. Truth is the only possible cure for ignorance and its yoke-fellow, prejudice; and just to the extent that the public is educated to understand the truth about Christian Science, just to that extent will those who desire, for their own selfish ends, to forbid its practice fail of their purpose.

The more the truth about Christian Science is known, the less opposition there is to its practice, and the fewer there are who rally to the support of those persons whose individual interests prompt them to invoke the aid of courts and legislatures in order that they may monopolize the care of the sick.

Perhaps some of the churches which have not as yet complied with the By-law regarding the giving of lectures, have looked upon this work as a large undertaking to which they have not grown, but the article which we publish on page 540 should disabuse the mind of every one of this fear. If the lecture is planned for well in advance of the date at which it is desired, arrangements can be made with some one of the members of the Board of Lectureship who has other engagements in the vicinity, and thus the minimum of expense will be secured. Unless a church has given a number of lectures within the year, it would seem to be poor policy to wait for any particular lecturer. Every member of the Board is qualified to deliver a lecture which will meet the needs of the Cause in any given locality, and there is no excuse for any church failing to give at least one lecture during the year. ARCHIBALD McLELLAN.

Our Easter.

ON that first Easter Day, Truth gave adequate and eternal answer to every falsity of belief, every assertion of error. The cohorts of malice and hatred were marshaled in bitter antagonism to the dominion of Love, but their exulting self-confidence gave place to confusion and defeat before the might of him whose cross was to become the universal symbol of victory, whose opened tomb was to be the hope of the nations. From whatever point of view, whether that of the historian, the philosopher, or the religionist, the resurrection takes rank as the most startling, the most prophetic, the most inspiring event in the world's long drama. Its story is the one luminous paragraph of history, and as spiritually understood in Christian Science, it interprets the struggle and rewards the heart's desire of earth's every up-looking pilgrim. In the truth of this event the hope and happiness of all mankind is centered.

The truer, richer, and more helpful meaning of this

"mighty happening" is apprehended, however, only as we come to regard it, not as an isolated incident of a unique life, but as a natural consummation, the glorious ultimate of a series of kindred events in the consciousness of the world's Redeemer. The practical value of the thought lies in this, that the detail and duty of daily endeavor is thus linked to the highest and noblest possibility of spiritual experience, and the inspiration of a transcendent achievement becomes our helper in the well-doing of the little things, no less than the large. When we see that our resurrection is brought nigh by every decision and deed which is inspired by Truth and Love, then the minor phases of human experience take on higher relations and values. Our common life grows more intelligible, more worthwhile, more interesting, more noble,—and the Easter blossoms are gathered throughout the year. To know that every effort to resist temptation, to return good for evil, to be gentle under provocation, forgiving under injustice, fearless when in danger, is to remove in-so-far the stone from the door of an entombed human sense,—this gives a new enthusiasm to purpose, a new bright star in the night-time, a new confidence for the morning, a new meaning to life. It is to acquire that stimulating and victorious attitude of thought in which Paul could say, "I can do all things through Christ which strengtheneth me."

Continuity of worthy conduct can be maintained only as we learn to estimate every undertaking and opportunity in the light of its highest relations and significance. This ascension of thought, this trend of choice toward the better part,—this is our lifting up, our resurrection, and it is attained, through Christian Science, in every demonstration over the assertions of material belief. In the endeavor to fulfil the Master's injunction to heal the sick, we speedily learn that the value of treatment is largely determined by the spiritual freedom and exaltation of our thought. It is the perfected consciousness, the Christ risen within, which shines forth to banish the darkness of disease. As we rise in God-likeness our patients are lifted up; our Easter becomes their exceeding joy.

Men are prone to look upon human experience as an end; Christ Jesus regarded it ever as a means to an end, and the commonplace was therefore excluded from his life. To-day is lived feebly and unprofitably if we have thought of it as sufficient unto itself; but every situation and experience is redeemed, when through understanding it is seen in its true nature and relations, and thus made to contribute to our spiritual ascent.

If I have overcome sickness to-day, I have declared anew with Christ Jesus the supremacy of Life. If I have stood for the verities of spiritual being, I have asserted with him the saving presence of Truth. If I have put away malice, envy, and hatred, I have demonstrated, as did he, the omnipotence of Love. This is my resurrection from the entombment of material sense. It is effected through Christian Science,—that knowledge of the Truth of being, the acceptance of which makes an Easter day in every human consciousness.

JOHN B. WILLIS.

"Effectual, fervent prayer."

As shown in all human experience, there is an element of consciousness which, in time of stress, turns away from the things of sense to the spiritual and eternal; intermittently it may be, yet from necessity it refuses to be stilled until satisfied, if only for the hour. The awakening sense has grown weary of the husks and of the companionship of swine, and longs for a help not found in materiality. This is illustrated in one of Jesus' parables which is generally misunderstood,—that of the unjust judge. In this story the Master tells of a widow who sought redress for her wrongs from one who "feared not God, neither regarded man." While no consideration of justice or mercy

moved this judge, he was at length influenced by her ceaseless importunity to grant her request. The parable is usually referred to as an authorization of perseverance in prayer until the unwillingness or unreadiness of the Almighty is overcome. Many commentators have recognized the obvious disrespect for God shown by this interpretation, and they have conceded that while it was permissible in Jesus to compare his Father to an unjust judge, it would be highly improper in any one else to do so.

The seeming inconsistency of the parable is removed, however, when we notice that Jesus did not compare the Divine character with that of the unjust judge; on the contrary, he contrasted them, and showed that God will "speedily" avenge,—right the wrongs of His people, when they go to Him instead of going to another. The parable makes it clear that the delay in obtaining justice was because the long-continued appeal had been made to a mortal, and yet, even here the reward of persistency is seen, for the selfish indifference of evil which would have thwarted the ends of justice was finally overcome. The pathos of the parable lies in the reference to those who "cry day and night unto him." Are there not many to-day who do this very thing, but who at the same time depend upon material means and trust in the supposed wisdom of mortal mind,—the unjust judge,—even when it passes sentence of death upon them? It is sad to meet the great Teacher's incisive question, "When the Son of man cometh shall he find faith on the earth?" Who will answer? Luke says that this parable was addressed to "certain which trusted in themselves that they were righteous, and despised others." Are there not at the present time many who covet the blessings of Christian Science, but who are so encrusted with self-righteousness that there is found no entrance for that "faith" which apprehends the Father and which gives both confidence and humility in seeking His loving aid?

The case is recalled of a deeply religious lady who, after years of unrelieved suffering, sought help in Christian Science. A testimony of gratitude for moral and physical healing was given her to read, and after perusing it she said, with an air of offended dignity, that she hoped the Scientist did not class her with such wicked people as this one who had been healed. Was it not to such that the Master said, "The publicans and harlots go into the kingdom of heaven before you"?

Nothing is more clearly taught in the Bible than the great truth that God is both able and willing to supply *all* our needs, and Christian Science urges the necessity of our acceptance of this truth in order to gain the blessings desired. A correlated truth must also be realized; viz., that there is no other power which can hinder us from being blessed; and surely it is a joy to know that another's sins or mistakes cannot keep us from realizing health and harmony. The absolute justice of divine Love makes it a glad task to bravely face and overcome our own errors, whether beliefs of sickness or sin, and then to witness their disappearance through our realization and demonstration of Truth's supremacy.

ANNIE M. KNOTT.

A Correction.

We are informed that Mrs. Emily B. Hulin, C.S.D., was one of the committee through whose labors the consolidation of First and Second Churches of Christ, Scientist, in Brooklyn, N. Y., was brought about, but through some mistake she failed to sign the letter which was sent to our Leader, informing her of the happy result of this committee's work. As the editors of the *Sentinel* were not advised that Mrs. Hulin was a member of this committee until after the letter had been published in the *Sentinel* of April 8, they were unable to detect the omission.

Letters to our Leader.

Atlanta, Ga., March 25, 1905.

Beloved Leader:—Let me thank you for your brave, magnificent article on "Divorce." It reminds me of that paragraph in Revelation, 18: "And a mighty angel took up a stone like a great millstone, and cast it into the sea, saying, Thus with violence shall that great city Babylon be thrown down, and shall be found no more at all. . . . And the light of a candle shall shine no more at all in thee; and the voice of the bridegroom and of the bride shall be heard no more at all in thee." The mighty rebuke to the sensualism of the era, in your article, which points to Jesus' words as the divine remedy for all ills,—with the glorious metaphysics of that great question,—is beyond words, sublime and wonderful.

Daily do we see in your inspired leadership that Jesus has sent his angel to the churches, that if they have ears to hear they may hear what the Spirit saith. Above the sea of human conflict and opinions, the Divine voice is heard. Into the sea of human doctrines, creeds, mortal beliefs of false origins, the great stone goes, stirring the muddy deeps that they may be purified. Thank God for the grand moral courage and spiritual power revealed through the woman to-day. It is, and must be, victorious over all seeming obstacles.

I was rejoiced to see, from Mr. Johnson's letter to you, of your interest in "Parsifal." To me it seems a part of the divine leading, that this great musical epic, which shows the power of purity to uncover and destroy evil, should be given with its grand music all over the breadth of this land. In Tennyson's "Holy Grail" it is a woman who first sees the Grail,—the healing cup. It seems to me that we have much yet to learn of those earliest years of Christianity in Great Britain. I have just returned from the broad, beautiful West. I heard of many wonderful cases of healing from the study of the book, Science and Health. The Cause seems most prosperous, and the love and loyalty to our dear Leader boundless.

Pardon this long letter, but I am afire with love of this subject and gratitude to you, for what you are and what you are doing.

Devotedly yours,
SUE H. MIMS.

The following loving comment upon this letter was made by Mrs. Eddy, and we feel sure it will be appreciated by Mrs. Mims as well as by our other readers.—Ed.

"On reading the above letter from our distinguished lecturer and beloved student, I was reminded of the following Scripture: 'For as Jonas was a sign unto the Ninevites, so shall also the Son of man be to this generation. The queen of the south shall rise up in the judgment with the men of this generation, and condemn them: for she came from the utmost parts of the earth to hear the wisdom of Solomon; and, behold, a greater than Solomon is here.'" Luke, 11 : 30, 31.

Boston, Mass., April 5, 1905.

Dear Teacher:—I thank you for your poem, "Whither," which appears in our April Journal. Its words, so tenderly comforting, reach my heart and meet its need in this hour, as your words, above those of all others in the world, have met my need in every hour since I have known you through them.

I am, in gratitude, your student,
FRANCES HASTINGS JEWETT.

New York City, March 23, 1905.

Dear Mrs. Eddy:—With much that the world calls "good" to live for, and with many of its pleasures available to me, I yet knew not one moment's real happiness until after I became a Christian Scientist. Words could never tell my gratitude to you for the light and transformation that came to me through an hour's reading of Science and Health,—and for all subsequent blessings, the portentous struggles and deeper joys,—as I have studied the book and

gained from it a clearer sense of infinite Love, and of man's rightful heritage.

A few days before I turned to the "little book" for help, one physician, who had tried long and faithfully to help me, hopelessly shook his head and said that he didn't know what to do; another told me that I couldn't be helped, that owing to defective structure of the eyes, I would be a "nervous wreck" always. The nervous prostration and headache of years left me in that one hour's reading. The change was so marked that on the same day several people asked me what had caused it. Later, when I went to be treated for other troubles, I was shown the error in my own thought, and how to detect and destroy it. I was guided patiently, wisely, and fearlessly, by two dear women who had learned the way from you, and I cannot thank them enough. During the eight and a half years that I have been a Christian Scientist, I have not been confined to my bed, nor to the house, for a day.

Until I became interested in Christian Science and learned from it to know Him "whom to know aright is life eternal," I was conscious of no God; I had had no Sunday School nor church experience, no religious training, and had never been even momentarily satisfied with any ethical system presented to me. Yet, even as a child, I had longed for God, and longed to know and understand things; and I did want to be good, but it seemed to me the more I wanted to, and the harder I tried, the less successful I was, until I had almost reached the conviction that it was useless to try. It was in this condition of thought that the "little book" found me; to this condition it brought the "healing Christ;" and ever since this first illumination, although the shadows have sometimes temporarily rolled into black, foreboding masses, the light has grown brighter and brighter and my life more full of hope and cheer.

For all these blessings, dear Mrs. Eddy, I am grateful to you; grateful even for my gratitude, for I never had a truly grateful thought for anything or to anybody, until after Christian Science came to me. With a love that is ever unfolding and that wants to help, because it is born of Love, I am

Most gratefully and affectionately,
MARY E. SANDS.

Boston, Mass., March 12, 1905.

Beloved Leader:—When the call first came for a new Mother Church Auditorium, our teacher called on the members of her association to contribute to the Building Fund. This we gladly did; and later, when the opportunity was offered to make you a Christmas present by adding to our givings, our teacher again called on her association, and although the greater part of the members are connected with branch churches throughout the Field and are giving with those churches, there was a loving response. Again, at Christmas time, we sent an offering to Mr. Stephen A. Chase, Treasurer of The Mother Church Building Fund, esteeming it a great privilege to join in gathering into the storehouse the "Two millions of love currency," as you so wisely named it in your article, "Now and Then."

If we could but look forward and see the priceless blessings which will fall upon humanity when this building is completed, with its added facilities for people to come and hear the truth and partake of the healing power of divine Love, we would each press on with renewed courage to bring into the treasury all that the Lord requires of us.

Lovingly,

AUSTIN W. FREDERICK, Secretary.
Suffolk Christian Science Association.

It is much easier to think right without doing right than to do right without thinking right. Just thoughts may, and wofully often do, fail of producing just deeds; but just deeds are sure to beget just thoughts. For, when the heart is pure and straight, there is hardly anything which can mislead the understanding in matters of immediate personal concernment.—JULIUS HARE

Among the Churches.

Church Dedication at Pittsburg, Pa.

First Church of Christ, Scientist, in Clyde Street, was dedicated yesterday [April 9], three services being necessary to accommodate all those who attended. To add to the interest of the event a greeting was received from the Rev. Mary Baker G. Eddy, the Founder of Christian Science.

The new church edifice was crowded at the morning service, which began at eleven o'clock. After the organ prelude and hymn there was a Scripture lesson and readings from Science and Health, the text-book of Christian Science. This was followed by silent prayer and the audible repetition of the Lord's Prayer with its spiritual interpretation as given in the Christian Science text-book. Mrs. J. E. Patton then rendered a solo, after which Mrs. Warrington Warwick, the Second Reader, read the history of the church organization. The First Reader, A. Bruce Coffroth, C.S.B., also spoke. Mr. Coffroth's remarks were followed by another hymn and the benediction. The afternoon and evening services were repetitions of the morning service.

A number of visiting Scientists from neighboring states, as well as from various parts of Pennsylvania, were present at the services. Visitors from Philadelphia and New York were in evidence, and may be heard from at the final meeting held in connection with the dedicatory services this evening, at which time many telegrams and letters of congratulation which have been received from churches and individuals throughout the United States as well as some from abroad will be read.—*The Pittsburg Gazette*.

[Mrs. Eddy's letter above referred to will be found on page 542 of this issue of the *Sentinel*.—Ed.]

The Demand for Literature.

We are glad to note a growing interest in Christian Science here in Seattle, Wash., as evidenced by the increased demand for our literature during the past year. The librarian of the reading room of First Church of Christ, Scientist, reports as follows:—

The sales during this last quarter, ending with February, amounted to \$611.32; an increase of \$175.65 above that of the corresponding quarter of the previous year; during the last quarter eighty-nine copies of Science and Health were sold, while for the same period of the year before fifty-six were sold. Visitors to the rooms who come to read or to purchase literature, will average five hundred per month.

We know it is through our Leader's wisdom and love that we are enabled to present this practical truth in a fitting way to the world; for this and for the manifold blessings we have received through Christian Science we are deeply grateful to God, knowing full well that we can best show this gratefulness by doing faithfully the work entrusted to us.—ADELA S. HAWLEY, *Librarian*.

Notice.

The next admission of candidates to membership in The Mother Church will be June 6, 1905. Applications must be in the hands of the Clerk on or before May 15, 1905.

An application sent to the Clerk of the Church does not constitute the applicant a member; he must be elected to membership by the Christian Science Board of Directors, in which event notice of election will be sent.

Notice to Branch Churches.

Each branch Church of Christ, Scientist, is requested to send, on or before May 1, a complete report of its membership (not a list of its members), as on record April 1, 1905, to William B. Johnson, C.S.D., Clerk of The Mother Church, 239 Huntington Avenue, Boston, Mass.

The Lectures.

Charleston, S. C.

About four hundred persons gathered last evening [February 16] at the Freundschaftsbund Hall to hear Judge Septimus J. Hanna of Colorado Springs expound the teachings of Christian Science. Judge Hanna was introduced by Mr. E. E. Norwood, formerly First Reader of the Christian Science Church at Charleston, under whose auspices Judge Hanna appeared. Mr. Norwood spoke as follows:—

It seems rather anomalous for me, a stranger to most of you, to introduce an entire stranger, and yet I am not a stranger, for a few years ago I lived in your city for a season, and learned to love Charleston and many of her citizens, and it is indeed a pleasure to be with you this evening upon such an occasion and renew that friendship.

As we look back, with the mind's eye, upon the nearly two hundred and forty years since the foundation of this historic "City by the Sea," we are impressed by the long list of distinguished sons she has sent forth to add to the achievements of human endeavor—statesmen, soldiers, scholars, and jurists, physicians, preachers, and poets—all have helped to add lustre to the fame of their native place, and emblazoned their names upon her heraldry.

In addition to those who were natives of Charleston, there were a few who lived here for a time who have also gained names as captains of industry in the intellectual world. Here lived Audubon and Agassiz, the great naturalists, and here also for a time dwelt the Discoverer and Founder of Christian Science, Rev. Mary Baker Eddy. Marrying, when but a girl, Col. George Washington Glover, a Bostonian by birth, but who had been a citizen of Charleston for years, her honeymoon was cut short by his early death and she returned to her New England home. Before she left Charleston, she set free the slaves her husband left, though they constituted much of the estate, for she could never bring herself to believe that one human being should be the property of another one. This is significant, and prophetic of the truth she was later to discover and establish, through which countless multitudes in bondage to material sense were to be led to say with Paul, "I was free born," and to emphasize the saying of our Master, "Ye shall know [understand] the truth, and the truth shall make you free." And we who have learned somewhat of the teaching of Christian Science as given us by our Leader, have found it to be Divine truth, and that this truth does heal the sick, does reform the sinner, does bind up the broken-hearted, and bring peace to the sons of men. We have learned the great fact which verifies Solomon's statement that there is nothing new under the sun, that these teachings are not strange, not a new gospel, but the old, old story that Jesus and John, Peter and Paul told—the old-time religion of power, with signs following of God's infinite love to His children and of their at-one-ment with Him.—*The Post*.

Portland, Ore.

To an audience that filled the Marquam Theatre to the doors, Edward A. Kimball last night [April 2] delivered a lecture on Christian Science and the relations of that doctrine to the human mind and body. It was an able effort, and the speaker for nearly two hours commanded the earnest and respectful attention of his hearers. The audience was composed of a representative class of people. Students and thinkers, old and young, sat side by side and absorbed the words of the lecturer as he expounded the theory and practice of this religion, once held in contempt, but which now commands a hearing, and not that of the curious alone.

He was introduced by Governor Chamberlain, who said in part:—

I suppose it may safely be said that no religion or system of religion can be fully appreciated unless it is thoroughly understood, and I think it may also be said that every religion or system of religion has its critics and opponents, and this is true of the Christian Scientist religion. It has had its opponents ever since its birth, and they have been bitter ones, too. Notwithstanding this fact, however, it has survived and grown steadily, so that we cannot to-day but admire and respect it. I am told that within the past twenty or twenty-five years its number of churches has grown from twenty to eight or nine hundred in the United States.

The gentleman who will address us to-night is a plain business man, but I am sure that his knowledge and experience have been such as to qualify him for the task of teaching. I take pleasure in introducing Mr. Edward A. Kimball.—*The Telegram*.

Los Angeles, Cal.

About three thousand people attended the Christian Science lecture given in Temple Auditorium, Monday evening, January 23, by Mr. Bicknell Young. Mr. Young was introduced by Judge John D. Works, First Reader of Second Church of Christ, Scientist, who spoke in part as follows:—

There never was a time or place in the history of the world, of greater, more persistent, more conscientious seeking for truth in religion, a striving to know God and man and their true relations to each other.

The great masses of the people, in the churches and out of them, are seeking and hungering for a higher, more practical, more satisfying religion, that will bring health and peace and happiness, here and now, and which will prove itself by its works. Out of this seeking and striving, and through the consecration and clear spiritual insight of one good woman, the Christian Science religion was brought into the world, and has become a power for good. It is less than half a century old, and yet it is not a new religion. It is a revival of the pure and simple religion of Jesus Christ, the gospel of health, holiness, and brotherly love.

I would not have you understand that this religion is no more than an instrument of physical healing, however important that healing is to the human race. It has a higher and holier mission to perform, the regeneration of man from sin and immorality. The power of healing can be nothing more than an incident, the "signs following" of any true religion. This religious movement is attracting the favorable and kindly attention of all just and thoughtful people.—*Correspondence*.

A Pamphlet in German.

MR. ALFRED FARLOW'S article, "A Critic Answered," which appeared in the June *Journal*, and which has since had a wide circulation as a pamphlet, is now published in pamphlet form in German. It will thus reach a larger number, and be helpful to them through the removal of many of the current misconceptions of Christian Science. Price, 6 cents each; 60 cents per dozen; \$1.15 for twenty-five copies; \$2.25 for fifty. Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

Testimonies of Healing.

From infancy I had been a delicate child. I had the constant care of devoted parents, and my religious training began with my first lisps of "Now I lay me down to sleep," and continued with the fifth chapter of Matthew for daily food. I grew morbidly conscientious and suffered untold pangs of self-condemnation all my life in trying to live consistently with inconsistent instruction. After twenty-five years of struggle and disappointment, with all the foundations of my beliefs in an anthropomorphic God shattered (and I could conceive of no other), I was left without God or hope in the world, a nervous, unhappy, and desperate woman, unable to meet the ills and misfortunes that followed me like a Nemesis, as I supposed, for my rebellious spirit against God and repudiation of all allegiance to my former church vows, to which I could no longer subscribe. Our only child was stricken with nervous prostration and for three years our whole thought was centred on finding relief for her. We had three of the best physicians in this city, each doing faithful work for her, months together, with no improvement, but rather increasing weakness, and with no hope held out to us that she could be well for five years longer.

After this verdict I was so distracted that my own mental condition was alarming. I knew not how to bear the anguish this prospect held for me, from the past years of trial, and at last, having had Christian Science proposed by a friend who had been benefited by it, I begged my daughter to let me call this friend to come to see her and tell us about it. There was some opposition to meeting my request, on the mistaken grounds that Christian Science required will power and she had none left to use,—she being too weak to sit up but a short time each day, and having to be carried up and down stairs always. She did, however, consent, to please me, and only those who have been blessed in a similar way can believe that in five days she rose from her bed a well young woman. I was overjoyed, but I could not think it true that she did not need the practitioner to continue her visits daily, for I thought it some mesmeric power which she must be kept under in order to remain well. The visits of the Christian Scientist were continued two weeks, during which time we both diligently sought to obtain all the knowledge we could of what Christian Science really is. We studied Science and Health constantly; our minds were disabused entirely of our false and ignorant conception of this Science and we began immediately to put into daily practice the small understanding we were gaining. For myself, I can never tell the unspeakable joy it was to me to be shown the open door of Christian Science and get a glimpse of all its infinite possibilities beyond. I had been honestly hungering and thirsting after righteousness (right-thinking) for many years, and now I had found the way to God, the loving Father.

This great light shone into our darkness nearly nine years ago, and during every day since that time we have felt a growing consciousness of our relation to God, good. Even though to mortal sense we have passed through very great trials, still the peace that passeth human understanding has been ours. I have felt that the comforting promises of the Bible were mine and have seen their demonstration through the understanding given us by Science and Health, which is truly the Key to the Scriptures. I often feel that if this wondrous book had never done anything else but show me the true God and His Bible, it would overwhelm me with gratitude.

Each year we have seen higher proofs of the healing and saving power of Truth, in all forms of disease and discord; and as we grow in knowledge and experience we have an appreciative reverence for our dear Leader that we could not feel in the earlier days of our experience. Words are wholly inadequate to express the love we bear for her,

God's chosen messenger to this age, but we are sincerely striving to respond to the call for higher and holier living.

MRS. EMMA MACGREGOR, Chicago, Ill.

"A little child shall lead them." This has been the case in the reaching out of our entire family for the healing truth taught in Christian Science. Our little son of four and a half years cried almost constantly day and night during his babyhood, the ailment being terrible nervousness, also a severe kidney trouble. Three physicians were consulted at different times, but no help was obtained. As he grew older, while he did not cry so much as formerly, still he could not sleep usually more than a few minutes at one time, either day or night, and he always awoke with a distressed cry. Through the day he was often fretful; he was so excitable and seemed to want to tear everything to pieces, and being cruel to a baby brother he had to be watched every moment. When he was three years old we decided to send him east to a lower altitude. After staying ten months he came home, and much to my disappointment, almost despair, the pitiful conditions returned, if anything, worse than before. There was also a swelling and soreness which irritated him until he was nearly wild. In the meantime I was led to study Science and Health, and had received enough light to sustain me during this terrible trial, for not only myself but the whole family often despaired of his future. He had been treated in Christian Science but his case had not then been reached. However, the thought was always with me that there was help for him.

One evening a lady called who knew nothing of my child's affliction, but during the conversation she related the healing of a little boy, by absent treatment, whose case was similar to that of my boy. What joy that message brought to me, for I knew the same understanding of truth could also heal my child, and at once resolved to be treated myself for severe nervousness and other troubles that had almost wrecked my life. I often thought that if the child suffered as I had at times, I did not blame him for tearing things to pieces. Mother and child were healed together in two treatments, and such a marvelous change followed, that words cannot describe it. The little fellow actually sings praises to God, he is so happy over his healing. He sleeps all night, the kidney trouble is gone, and with it the swelling and soreness. One of the sweetest proofs of his healing was the love he immediately began to manifest for his little brother, where formerly it was mostly discord. A dear old uncle who visited us was amazed at the changed disposition and made inquiry as to the cause. This was a convincing proof to him of this wondrous truth that sets us free.

In my gratitude to God I cannot resist adding that every member of our family, from baby to grandmother, has received physical healing; but above all else is the spiritual uplifting which enables us to lay down our burdens and claim our birthright, as is taught in the Bible and in our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy.—GERTRUDE WATTS, Colorado City, Col.

I feel it a great privilege to give my testimony of the healing which I have received through Christian Science. Four years ago I came to Jacksonville very unhappy, as I was in such poor health, and had been for six years, that I had given up all hope of ever getting well. My husband was also very much disturbed and discouraged, as he was not very strong and my condition never helped him, since about all he would ever hear from me, on his arrival home from work, were expressions of the pain and misery which I seemed obliged to endure. We then knew nothing of Christian Science, but we rented rooms of a Christian Scientist, not knowing at that time that she was one. We had lived there but a few weeks when I began to relate to

her my troubles. We had by this time learned that she was a believer in Christian Science, so I asked her what Christian Science was. She began to tell me something about it, and she also told me I could be healed. It seemed very new to me, but I drank in all of it I could, and a few days later another Scientist came to call on me and gave me a few more crumbs and made arrangements for me to go to a practitioner who was also in the neighborhood. I did so and took one week's treatment. I was healed and was at once able to do work which I had before thought impossible for me to do. I can never express in words my gratitude for the sweet peace and great spiritual uplifting which I received with the physical healing. Before coming to Christian Science I was not able to walk any distance without great fatigue, and sometimes with worse results than that. I very often had spells when I was confined to my bed for a week or more, and would suffer untold agony. I was told by different doctors that I must keep off my feet all I possibly could, and after the birth of our little girl I seemed to be in a worse condition than before. One of the leading physicians of Keokuk, Ia., had told me I never would be any better without having an operation performed, so arrangements were made for one; but something happened to prevent it, and I can now thankfully say that the only operation that has taken place has been wrought by divine Love, thus proving the Scriptural statement that God's "hand is not shortened, that it cannot save."

During the one week's treatment which I received I was also cured of constipation of several years' standing. I will mention a few of the ills which Truth has overcome in our family: whooping cough, measles, fever, sore throat, ulcerated tooth, varicose, headaches, colds, corns, bunions, and a very bad case of poisoning manifested through our dog.

I can never be too grateful to God, and to Mrs. Eddy who has so faithfully and lovingly delivered His message of life and peace to a waiting and hungering world. I am indeed grateful for the helpful articles in the *Sentinel* and *Journal*. These dear messengers of Love have often come to me at a time when I greatly needed them and have led me through the storms of error into the sunshine of Truth. My husband and I have been enabled to overcome a great many errors. We are also very grateful to Christ Jesus who labored to make clear to mankind this great truth which, when rightly applied, destroys all evil and reveals the omnipresence of God, good. I must again say, "Thanks be to God, which giveth us the victory through our Lord Jesus Christ."—MRS. CARRIE A. HALL, Jacksonville, Ill.

"For he shall give his angels charge over thee, to keep thee in all thy ways. They shall bear thee up in their hands, lest thou dash thy foot against a stone." One day in March, 1903, a party of seven, including my sister and myself, who were the only ones interested in Christian Science, was driving up a mountain road, when suddenly the horses took fright at an automobile which whirled around a bend farther up the road. The chauffeur stopped his machine as soon as he could, but the horses continued to plunge and back. The mountains rose abruptly on one side, and a precipitous declivity twenty-five or thirty feet deep was on the other side. At the first indication of trouble my sister and I exchanged glances, each knowing the other was declaring the truth. My uncle, who was on the middle seat with me, jumped out and went to the horses, but was unable to control them sufficiently to prevent them from backing the carriage down the bank. The vehicle was so constructed that it was difficult for any except those on the middle seat to get out, even had there been opportunity. I decided to make the attempt and reached the step, when down we went. Although unable either to get out or regain my seat, I felt not the slightest

fear. It seemed clear to my sister and to me that in divine Mind there can be no accidents, and the verses quoted above rang in my ears. As the carriage reached the bottom it turned over on the side I was on, and as it was turning I stepped off and walked safely out of reach of the falling vehicle. Divine Love was leading me, for I was not conscious of leaving the carriage until I found myself out of its way. Not a member of the party was in the least injured, save the man who drove, he having a little skin knocked off the knuckles of one hand, and the lady on the seat with him, who had two slight bruises. Neither of the horses was hurt. Not a scratch could be found, even on the under one who was tangled in the harness. Not a strap or buckle broke, nor was the carriage injured. The most beautiful part of the demonstration to my sister and to me was the entire absence of fear in any of us, and the unusualness of it caused not a little comment. That no one screamed was also considered surprising. The people in the automobile, however, were greatly alarmed, and running to us, excitedly asked who was hurt. They said it was a miracle that we, the horses, and carriage could go down a steep bank like that, miss all the stones below, and have no bones broken, not even a wheel of the carriage splintered. When we returned to the hotel, our arms filled with the ferns and oranges we had been gathering, and with the dust brushed from our clothes, the people there were for some time loth to believe our story, and declared that we were joking.

My sister and I are very thankful for even the small understanding of Christian Science which we have, and grateful to the dear Leader who has brought to us the realization of the ever-presence and power of divine Love.

CATHARINE S. ALBERS, Los Angeles, Cal.

Several years ago I was entirely healed by Christian Science of a severe catarrhal trouble of the head and throat, after having been a long time under medical treatment, and being finally told by an eminent physician that I had a form of catarrh that would end in consumption unless the greatest care was used. I then regarded my physical cure as wonderful, spoke of it as such, and entertained the most profound respect for Christian Scientists and their work. Several dear friends were deeply interested in Christian Science and devoted in their labors, nevertheless the religious part of Science made no impression on me, as I was at this time a member of an orthodox church and satisfied with its creed. Over two years ago, as the result of a terrible mental strain, my health broke down, with extreme nervous exhaustion which affected the heart's action. Even then I resorted to *materia medica*, having able and kindly help, until it was proven to me, as well as to my family, that I was not gaining, but on the contrary growing worse, and I was suffering untold agony with neuralgia of the heart. I finally decided again to have Science treatment. I secured the help of the same dear friend through whom I had been healed before. I was helped immediately and very soon permanently healed.

Even after a year of reading I did not fully appreciate the blessing of Christian Science, until last fall, when I was in deepest mental distress, and it seemed to me that the very foundations of my being were shaken. I then turned to deep, prayerful, earnest study of the Bible and "Science and Health with Key to the Scriptures," there to find such peace as I had never known. I wish to express, though it be in small measure when compared to my great benefits, my sincere gratitude to God, and to our dear Leader, who by her loving devotion to the great work she has done, and is doing, is teaching us how to study the Bible aright.

It was my blessed privilege to unite with The Mother Church at our Communion in June, 1904. I want to say to any who may be disheartened at what may seem to them slow growth, Work harder, study, watch, and pray. My own experience has taught me that Christian Science

demands the practical, every-day living of religion, though at times this way seems hard, up-hill work, yet I know that God is a "very present help in trouble." I must speak of our helpful literature. Each number of the *Sentinel*, *Journal*, and *Quarterly* brings rich blessings into the home.

That I may learn more and more of this blessed truth, and that I may be enabled to help others, is my earnest prayer.—MRS. ANNA W. FISHER, Dedham, Mass.

While visiting in Los Angeles, I accompanied my hostess to a beautiful park. In stepping down from the street car, my foot turned, so that the ankle-bone touched the ground, and I caught at the lady's arm to keep from falling. I declared the truth, and we walked around over an hour and then returned to the city. There we went to several stores, and I stood around while my friend attended to some shopping. By the time we reached home, I had been on my feet nearly four hours, without an opportunity for more than the first simple denial of the error. I sat down to give the much-needed treatment, for the swelling had extended to my knee, and the pain seemed to be very great. There was no time, however, to make any declaration, beyond what I had already said mentally, for my hostess came and begged me to receive a caller. At first it appeared impossible, for the lie seemed almost a truth, but I knew an expression of courtesy never harmed any one. The way to the next room seemed to be a mile long and to be paved with sharp knives, but I went there without limping. When I was at last free, the sense of pain had made me sick, and I had to lie down to do my work. The counsel of our beloved Leader came to me, to have no other trust than Truth, and with this I made my demonstration. For a time it seemed like pushing against a stone wall, so stubborn was the mental resistance, but in about two hours I was relieved, the pain gone, the swelling and discoloration also. After dinner I had occasion to run up and down stairs several times, and took a walk, absolutely well.

This is only one of the many daily proofs I have of the great debt I owe to Mrs. Eddy for Christian Science.

KATHARINE S. EWING, San Diego, Cal.

The following little demonstration has been so helpful to me that I am sending it, because it will be a help to me to acknowledge the benefit received from the *Sentinel* and *Journal*. In the place where I am at present there are no other Christian Scientists. It was quite easy to hold the Sunday service alone, but there seemed at first no way of holding a testimony meeting. By realizing God as the source of supply the way was opened,—the testimonies and helpful thoughts in the *Sentinel* and *Journal* are a rich supply for the time given in our meetings for demonstrations. But even this did not satisfy, for I seemed to have little part in it myself. There was no opportunity to tell of my demonstrations. I then remembered two other Scientists who were also alone, and I tried the plan of writing out my demonstrations for their meeting. This has greatly increased the help derived from the service, and from some of them there have been the "signs following." On these Wednesday evenings the consciousness of ever-present Love has been so clear, that at times the little room seemed illumined with the divine presence, until one evening, I realized that, like Abraham, I was entertaining angels unawares. Who could feel alone with such glorious thoughts for guests. Sometimes the feast seems too great for only one, and I long to share it, and when enough of the heavenly manna is realized God will supply the guest to partake of it.—RUBY A. NORTON, Gladys, Alta, Canada.

I have been asked what Christian Science has done for me, but my family do not need to ask this question. They see along some lines, at least, a little of what it has done; and they will see more and more as the years go by. Instead

of being shielded from any extra exertion, lest illness result, they now see me equal to any physical emergency that may arise; instead of being almost a nervous wreck at the close of the school year, they see me made whole in this respect; instead of being worried over difficulties that may arise, they see me confident and happy. I now see God's own perfect idea that must reflect His nature, and "I press toward the mark for the prize" which is mine, not stopping to regret that I have not yet realized all my inheritance, but knowing full well that only by using what I now can reach, shall I attain to the beyond. But for this I am most thankful, that the works of the flesh are being reduced to their native nothingness by an understanding of Life, Truth, and Love.

As being always results in doing, so the purification of mind and the clearing of consciousness through the truth is leading to better work in connection with the little children, and toward the normal students in training. Many points in educational philosophy that seemed comparatively vague and theoretical, have become clear and practical through the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy. While for years I recognized in a general way that evil is the negative of good, that they cannot be associated any more than can light and darkness, yet the truly practical application had to be revealed through Christian Science. To reflect Life and Love, as the mirror reflects the sun, is the privilege of the teacher who has the true scientific spirit.

Mine is a grateful heart for the truth that makes free, and I thank God for His gift of Mrs. Eddy to humanity.

ELLEN CODY, Toronto, Ont.

Like many others, I came to Christian Science for healing at a time when I was a physical wreck, sick and weary of the way of *materia medica*, which I had been trying for five long years. My trouble was caused by a kick in the left side by an animal, and it resulted in an injury which medicine failed to cure. The untold suffering, both mental and physical, could not be described by pen, nor would space permit. At this stage I was asked to try Christian Science, but having been a member of an orthodox church and also of a religious society for eighteen years, and a Bible student since the age of seventeen, I had little faith in Christian Science. As my friend insisted, however, I consented to read some of the literature, and the goodly pearl which I had long been looking for was found. In 1896 I began treatment, but will say for the benefit of those who read this, that I had to be tried and purified before the healing was realized. My case was slow in yielding, the mental stagnation was hard to break, and the battle between sense and Soul was at hand. Through this, my suffering seemed to be greater than before; I became skeptical, and it seemed that I could not live, for pain. At the time of this struggle, I received a letter from the practitioner which aroused me. I knew there was no help in medicine and begged her to try me a while longer, which she did. During this time I made up my mind to stand for Christian Science, and thanks to God and the faithful practitioner the battle was won, and like hundreds of others I stand a living monument for the truth. I have read and studied the "little book," and thus I have come to understand something of the Life that knows no death, the Truth that knows no error, the God that knows no sin, disease, sickness, or death.

I have had many proofs by demonstrations; one I will speak of. I had been subject to cramps from childhood until this illness was mastered by Truth. One day the cramps came on in the forenoon, and I had a struggle from ten o'clock until seven in the evening. I left my work about four o'clock, as I could not communicate with my practitioner except by a letter that would not reach its destination till the following day, and there being no Scientist at hand, the work was for me to do. I did all I knew, I prayed

for a long time, but suffering as I was, I could hardly get to my feet with the intense pain. Then I decided to make one more attempt, and cried, "If Christian Science is true, this pain is a lie and there is no truth in it." Like Jacob of old, my trouble ceased and I was free,—such freedom I can never forget. Peace, sweet peace,—no tongue can tell but those who have had the experience. From that time on the cramps have been a thing of the past. This experience was the link that has bound me to Truth and Love, not for a day, but for all time.

I feel grateful to our Leader for the rich food, for the mental as well as for the physical health, as healthy thought makes a healthy body. I feel grateful for all that Truth has done for me and my home, and may God's blessing continue to keep the one who has so faithfully shown us the way.

CHARLES AUGUSTUS BUTLER, West Berkeley, Cal.

In July, 1887, I was advised to read Science and Health, by a friend who had received help. I had prayed earnestly to God to show me the way, as my burden seemed greater than I could bear. I purchased the "little book" and went by myself, determined to know this healing truth. I commenced at the beginning, and as I read I could not stop. My suffering was such that the tears rolled down my cheeks. I declared the truth and was made whole. I have had no return of the trouble since. My gratitude to God for our Leader, who brought to us this truth, God knows. I must attest my sincerity by living love. I feel thankful for Science and Health; through all the seeming darkness the truth I have realized from the study of its teachings has never left me. I am watching and waiting for more understanding of Truth and Love.

LOIVA A. HERRICK, Westfield, Mass.

True science and true religion are twin sisters, and the separation of either from the other is sure to prove the death of both. Science prospers exactly in proportion as it is religious, and religion flourishes in exact proportion to the scientific depth and firmness of its basis. The great deeds of philosophers have been less the fruit of their intellect than of the direction of that intellect by an eminently religious tone of mind. Truth has yielded herself rather to their patience, their love, their single-heartedness, and their self-denial, than to their logical acumen.

PROFESSOR HUXLEY.

[Written for the *Sentinel*.]

He is Risen!

ISABEL SHERRICK WARDELL.

IN the shining, heavenward way
White-robed lilies bloom to-day,
Waxen petals, full of grace,
Bear the message now we trace,
He is Risen!

Hear, O earth! the glad refrain,
Angel voices bear the strain
Of the song from realms above,
Ever-song of Christ-like love,
He is Risen!

At the sepulchre we stand,
Clasping now the Saviour's hand,
Love has triumphed o'er the sod
And has proved that Life is God,
He is Risen!

Stricken hearts need weep no more
O'er the cross the Saviour bore,
Bloom the flowers, and rolled away
From the grave, the stone for aye,
He is Risen!

From our Exchanges.

All over the land it is reported that every department of church life is being aroused to interest and action, that churches of different denominations are working together, and even the Universalist churches, so long shut out from participation, are being invited and are accepting the invitation, showing that while there yet remain many differences of theological distinction, the forces of Christ are coming together under the banner of that love which inspires all alike to service.

The world, too, is ready for the awakened Church; the reaction from religious indifference has set in. No one can tell just where or why it started, but there is no question but that the living forces of the world, particularly the educational and commercial, are recognizing the part religion must play in the completed life. The great universities are recognizing that a full grasp of the realities must include religion as well as electricity, that history cannot be real history if Christianity is left out. The leading teachers in these institutions are coming at this thing from another point, perhaps, but they are meeting the disciples who have come by the quick paths of intuition and inspiration. Religion is being studied because religion is real; is a part of life.—*The Universalist Leader*.

Jesus preached repentance and urged on men the immediate necessity for it, because the kingdom of God was at hand. But we find no instance in the Gospels of his attempting to win any one to be his disciple by telling him that he was a sinner. He began to gather men around him by presenting to them some common ground on which they could stand together, and then he invited them to join him in doing what he and they desired to have done. Some who hesitated to accept him as leader he praised without qualification. Nathanael responded to Philip's invitation by expressing doubt as to whether the town of Nazareth could produce a leader whom it would be worth while for him to follow, but when he came to be introduced to Jesus, he was greeted with "Behold an Israelite indeed, in whom is no guile." The Church has sometimes failed to win men to Christ because it has sought to compel them to a humiliating confession of sin which they did not yet feel, as a condition of coming into fellowship.

The Congregationalist.

"Make God real to men, and they will come to the church." Very well. But the pulpit cannot make an unreal God real to the real man. The pulpit cannot make the God of Jonathan Edwards real to the men of this time. "Teach the people to practise the presence of God." Rather, give them a true conception of God and they will not need to practise His presence, since He will make His presence felt and seen. Give them a God who is present in their hearts and minds, and they will feel His nearness. The pulpit cannot hold men to the former doctrines of heaven and hell, but it can persuade them of the terror or joy that must come to them from obedience or disobedience of the law that "whatsoever a man soweth, that shall he also reap."

REV. FRANK H. DECKER.

The Homiletic Review.

There is also manifest in the Church of to-day, the craving after a clearer vision of Jesus Christ. Multiplying biographies of that peerless personality point to that. Multiplying treatises of his principles, his teachings, his words and works indicate that. The cry of the Greeks is the cry of to-day, "Sir, we would see Jesus!" We would get at the very heart and mind of this high and humble helper of humanity. And he never yet hid himself from sincere seekers. Therein lies our heartening hope to-day.

E. M. MARTINSON.

The Standard.

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, \$5. Twelve or more to one address, \$4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, \$1 per copy; \$5 per half dozen; \$9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.

Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, Treasurer.
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, \$2.40 per annum; \$1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, \$1.00 in advance; all other countries, \$1.25. Single copies, 10 cents, postpaid.

Twelve or more to one address, each, prepaid 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem. Single book, prepaid \$3 00
Twelve or more books to one address, each, prepaid 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; \$3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEER THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL, 80 pages, cloth covers. Prices, prepaid, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, \$1.06; \$5.00 half dozen; \$9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, \$1.06; \$5.00 half dozen; \$9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, \$2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, \$2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, \$4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; \$4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, \$1.00; six copies to one address, \$5.00; twelve copies to one address, \$9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; \$5.00 per dozen.

Direct all orders for above works, and make remittances payable to

Christian Science Sentinel

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

250 Huntington Ave., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,
Associate Editors.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year,
each copy, ninety-five cents.

Twenty-five copies or more to one address,
one year, each copy, ninety cents.

Fifty copies or more to one address, one
year, each copy, eighty cents.

For Foreign subscriptions add, for postage,
fifty cents per copy to rates given.

Six months' subscriptions received at half
the above rates.

No subscription received for less than six
months.

Subscriptions to the *Sentinel* will be entered
to begin with the first of the month.

The date of expiration may be found on the
address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any ad-
dress; twenty-five copies, fifty cents; fifty
copies, ninety cents; one hundred copies,
\$1.65.

Foreign: Four cents a copy, postpaid, to
any address; twenty-five copies, seventy-five
cents; fifty copies, \$1.40; one hundred
copies, \$2.65.

Entered at the Boston, Mass., post-office as
second-class mail matter.

Items of Interest.

National.

Secretary Taft and Senor Gutierrez have reached an agreement to arbitrate the outstanding issue respecting the sale to the Philippine Government of the Dominican Friars' lands, amounting to about 160,000 acres, involving eight Haciendas, valued at about \$2,500,000, which amount has been on deposit in New York for more than a year awaiting an agreement between the principals as to the titles to the lands. The basis of the agreement is that title to the five tracts, concerning which there has been little controversy, shall be conveyed at once to the Philippine Government and the lands paid for, while the title of the three remaining tracts shall be submitted to the arbitration of Chief Justice Arellano and Associate Justice Willard of the Philippine Supreme Court.

The Panama Canal Commission has accepted the bid of the American Locomotive Works Company for twenty-four 85-ton locomotives, at \$12,350 each, to be delivered July 1. It is estimated that the big steam shovels will dig more earth than the locomotives can remove, and the rate of progress will consequently depend on the capacity of the latter. These locomotives are guaranteed to haul five hundred net tons over a one and one-fourth per cent gradient, the heaviest on the line of the canal. This is about three times the hauling capacity of the small locomotives now engaged in the work.

In an opinion by Justice Peckham last week the Supreme Court of the United States holds to be unconstitutional the New York State law making ten hours a day's work and sixty hours a week's work in bakeries in that State. Justices Harlan, White, Day, and Holmes dissented, and Justice Harlan declared that no more important decision had been rendered in the last century. The opinion was handed down on the ground that the law interferes with the free exercise of rights of contract between individuals.

"Farewell. Rejoice! He goes back to his home with his duty well and nobly done, taking the universal respect and admiration of

a kindred nation and his own," were the concluding words of Lord Chancellor Halsbury's tribute at parting with American Ambassador Choate, who recently was uniquely distinguished by election as a member of the Middle Temple, and who last week was honored by the greatest gathering of the bench and bar in the history of the Inns of Court.

Sir Mortimer Durand, the British Ambassador to the United States, has given fresh assurances that it was not the intention of either Great Britain or France, when the agreement between them of April 8, 1904, respecting Egypt and Morocco was signed, injuriously to affect the commercial rights of other nations in Morocco. The principle of the "open door" was fully recognized at that time.

Secretary Taft represented the Government last week at a meeting of the Panama Railway Company, when the properties of the company were formally taken over by the United States. Theodore P. Shonts, the new head of the Canal Commission, recently appointed by President Roosevelt, was elected president of the Railroad Company. A resolution was passed appropriating \$1,250,000 for double tracking and the re-equipment of the railroad.

Tribute has been paid to the late Theodore Thomas by changing the name of the Chicago Orchestra, which he long conducted, to the "Theodore Thomas Orchestra." As a matter of fact, to the Chicago public, and the musical public in general, the orchestra has always been known as "the Thomas orchestra," and its concerts as "the Thomas concerts."

The Federal Grand Jury sitting at Chicago has returned indictments against four persons for tampering with a witness in the Beef Trust inquiry.

All the nations but one have accepted President Roosevelt's invitation to a second Peace Conference.

Foreign.

The Cretan Chamber of Deputies was opened last week by Prince George, the High Commissioner of the Powers, who in his speech blamed the revolutionists, and declared his readiness to grant every reasonable reform properly proposed. On the withdrawal of the Prince the Chamber of Deputies unanimously declared in favor of the union of Crete with Greece, and the deputies proceeded to the palace to so inform the Prince.

"The movement for the annexation of the island of Crete to the Kingdom of Greece," says Editor Adossides of the *Parthenon*, "is but the culmination of the feeling which has been universal in the island since the overthrow of Turkish rule and the establishment of an autonomous government under Prince George of Greece. There has been a wholesale emigration of Turks from the island, so that Crete is now wholly Greek. It is Greek in language, in traditions, in ideas, in civilization, in everything that goes to make up a people."

Holland is making preparation for a celebration of Rembrandt's three hundredth anniversary. The windmill of Rembrandt's father was situated on a branch of the Rhine, near the city of Leyden, and on the site of this mill a fine monument will be erected in memory of the great Dutch painter. An exhibition of Rembrandt's works is to be held in Leyden in July.

Reports to the British Colonial Office, just issued, include one on Pitcairn Island, the home in the Pacific of the mutineers of the armed ship *Bounty*, who landed there in 1789. The islanders number in all 160. They are hard working and more or less healthy, but exhibit certain vicious tendencies which religion has been unable to eradicate.

There is reason to believe that communication has already passed between the representatives of France and Germany, with the

view of removing the misunderstandings relative to Morocco. It is certain that diplomatic means have been found to bring about a mutual exchange of views in place of the mutual recriminations which heretofore have been going on.

A Russian Congress of lawyers met in St. Petersburg last week, despite police prohibition, and started a movement for a national association to overthrow the bureaucratic system.

It is unofficially stated that negotiations between Great Britain and China have resulted in an agreement on the Tibet convention, Great Britain accepting some modifications.

By a new law just promulgated the gradual and entire abolition of all remaining forms of slavery in Siam is provided for.

Industrial and Commercial.

During the past thirty years ten thousand tons of sulphur have been taken from Mt. Popocatepetl, Mexico. This mountain is 17,520 feet in height, the crater opening is 2,700 feet long, 1,200 feet wide and 550 feet deep. The sulphur is raised from the floor of the crater to the rim, and from there carried to the timber line by men on sleds, thence by pack animals to the railroad a number of miles distant. Experts have traced deposits covering a half mile area and extending one thousand feet in depth.

The General Electric Company has united with the Tokio Electric Company, Ltd., of Tokio, Japan, and will hereafter manufacture Edison incandescent lamps and similar articles in Japan instead of importing them from the United States. Although considerable American capital will be invested in the enterprise the local management of the plant will remain in the hands of the Japanese interests.

Recently Barcelona invited the architects of the world to send in competitive plans for enlarging the town, beautifying the working class quarters, and unifying the five or six suburban towns. The first prize, \$6,000, has been won by a young Frenchman. Only five architects, two Spanish, one French, one German, and one Italian, competed.

It is reported that a deal has been closed for six hundred acres of land near Allequippa, about eighteen miles from Pittsburg, Pa., for a sum close to \$1,500,000. It is given out that there will be built at once an immense blast furnace, several steel mills, and an immense steel car plant, to compete with the United States Steel Corporation.

The Republic Iron and Steel Company has placed in operation its new steel rail mill at Youngstown, O., and becomes an active competitor in this branch of the steel trade. The new mill has a capacity of one thousand tons daily, and has orders for several months' operation. It is understood that it will be included in the rail pool at once.

Recent frosts in Georgia and South Carolina are reported to have done much damage to the peach orchards.

England imported last year something over ten million bushels of apples.

General.

Traces of radium have been found ten miles east of Kansas City, according to instructors in the University of Missouri, who have made an investigation.

The net profits of the North German Lloyd Steamship Company last year amounted to \$4,954,456, or \$2,046,122 less than during the previous year.

Preparations for the great ocean race for the cup offered by Emperor William are going on apace for the start May 16.

Paris is to have a special kind of street light to indicate the whereabouts of branch post offices.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

The Price of Liberty.

SAMUEL GREENWOOD.

THAT is a poor general who in time of war leaves camp or fort unguarded or unwatched, at any point or at any hour, for sooner or later he may meet defeat through these very weaknesses, when a proper vigilance might ensure his safety and success. At an hour when he is not prepared, his enemy may overwhelm him; then what will all his watchful hours avail, if his adversary descend upon him while he sleeps? What will it signify that he has ninety-nine good points of defence, if at the hundredth the entrance of the enemy is unopposed?

Christian Scientists have enlisted in the warfare between Spirit and the flesh, and must conquer in the struggle. They must meet at every point that enmity to good which comprises all there is of mortal or carnal mind, otherwise called matter and evil. The fears and superstitions of a thousand generations must be overcome through our unfaltering loyalty to Truth. Those unacquainted with the power of divine Love have been kept in perpetual dread, while error has seemed to inflict upon them every conceivable torture and suffering, and how can we expect to triumph over it without that vigilance and activity which the Christ teaching demands.

When we go to sleep, thought should take refuge in the citadel of Spirit, ever ready to use the weapons of true warfare. We cannot expect the material senses to give up the seeming power which belief has bestowed upon them, without a struggle, nor can we rightly expect to reach the Christian's final reward unless we measure our strength day after day with the so-called forces of evil, maintaining ceaseless vigilance against foes without and weaknesses within. When our enemies, the errors of human belief, cease to fight they will have been destroyed, but until then we have need to meet every effort of these false senses to invade our consciousness. Not to do this means possible suffering, or at least the prolonging of our conflict.

The belief of material intelligence is always enmity to good. It has always revealed itself the foe of every effort Godward, and of every struggling desire for spirituality. In the first Christian century the malignity of this false sense crucified the Founder of Christianity; and he prophesied that the world would hate his followers also.

A sensuous world may be at peace with a form of Christianity which does not antagonize the claims of the flesh, nor assert man's dominion over them; but Christian Scientists must realize that the warfare which their Master inaugurated against the flesh must be continued until the last claim of evil has been met and destroyed. Material sense may approve and reward him who betrays his Master's teachings by materializing Christianity, but it has only hatred for him who is loyal to them. This should quicken our vigilance against the subtle deceptions of materiality, for however "pleasant to the eyes," they are but the serpent's offerings. The belief that man exists in matter holds

within it not one true joy or blessing, while it contains the whole of evil. The mesmerism of material pleasure is no nearer the truth of being than the mesmerism of material pain, and we should be equally watchful that through neither of these false conditions we be made to forget or deny the allness of God, and that at His right hand, and nowhere else, "there are pleasures forevermore,"—and no pains.

The truth of spiritual being, which is clearly taught in the Christian Science text-book, *Science and Health*, and which is the essence of true Christianity, reveals the absolute barrenness of the flesh, or matter, of aught that is good or Godlike, and Jesus enjoined upon his students the need of watching and praying lest they enter into any of its temptations or delusions. We cannot afford to ignore his admonition. Whatever opposes the spiritual idea in man, whatever tends to retard our spiritual development, whatever hinders our demonstration of the Christ-spirit, should be continually guarded against, as we value our success. The artifices of evil will be readily detected when we are aware of their true nature, and we shall not be found believing in or fearing them. Carelessly to expose our mentality to the open assaults or secret manipulations of evil in any form, is to unlock our treasury to thieves and robbers. The human belief in evil intelligence and power is shown in Science to be without foundation, but it cannot lightly be ignored by mortals if they would escape from its delusions. To reach the consciousness of the absolute supremacy of good does not mean the turning of our backs upon any error until we have first faced it and proved its nothingness.

To preserve our consciousness secure from the invasion of evil, our thought sentinels must be loyal to the absolute Truth of being; and it should be our care that no allies of the enemy, in the shape of pride, indifference, love of the world, etc., creep in among them to betray our peace and safety. At every avenue through which evil claims to reach and control man, in mind or body, these truth sentinels must be posted, to challenge every suggestion of an evil creator or creation, intelligence or power, and not only bar the entrance to whatever is untrue to God, but prevent the going forth of any thought that is untrue to man, God's image.

Jesus pointed out to his followers the folly and the failure of trying to be Christians by keeping all the commandments but one. It matters little what door we leave open, so long as error gains an entrance. Saul doubtless wore a splendid suit of armor in his last battle, but his undefended point was fatal to him. The result was the same as if he had worn no armor at all. Though we may work hard, and keep nine commandments of the Decalogue, yet in the breaking of the tenth we forfeit the reward,—the perfect harmony for which we are striving. Our care should be that we have on "the whole armor of God," the armor that protects us wholly,—that is, to see that we are fulfilling the whole law of righteousness. To expect perfect success as a Christian without keeping all God's law all the time is a fatal mistake.

The price of liberty from sin, disease, and death will not

be paid without constant vigilance against the mesmerism of the belief that there is life, intelligence, and power apart from God. We may be assailed day by day by some form of error, but if it is not believed, it has neither foundation nor power. It is here that we must draw the line of separation between the real and the unreal, and then hold untiring watch that we keep error always on its own side,—that is, on the side of nothingness. This line must be drawn and sharply defined in each human consciousness, and whatever cannot stand the test of truth must be cast out. Goodness, love, harmony, and spirituality designate the realities of life, and whatever binds mortals to materiality, or leads them to acknowledge other than the one God, is error, a falsity that has no rightful place either in heaven or earth.

If we would be soldiers of Christ we must not shrink from conflict. The beliefs of sin, sickness, and death must be resisted and overcome before we can perfectly realize the liberty of the sons of God, and the kingdom of harmony within man. We may have to cross many battlefields before self is subdued, and our fear of evil conquered, but with every struggle and triumph we shall believe less in the supposed reality of matter and sin, and know more of the all-inclusiveness of good. Above the anxiety and tumult of our daily conflict we may hear the sweet voice of the Master coming down the centuries, "Be of good cheer; I have overcome the world."

Spiritual Law.

W. C.

WHAT is the meaning of law? If this question were asked of a student of the physical sciences, he might reply that law expresses a uniformity of action in connection with natural phenomena. The highest aim of such an investigator is to discover these generalizations. If the same question were propounded to a lawyer, he would give a different answer. His view of a law is essentially something which, subject to a penalty, may be broken. The analytical jurist says that his concept of law has no relation to that of the physical scientist; the laws of science being no more than those statements of uniformity which merely resemble commands in so far as they may be deemed to emanate from an intelligent source. The term law is thus used in two entirely different senses. The lawyer and the physical scientist now understand and tolerate each other's use of the term.

In Christian Science we acknowledge divine Principle and spiritual laws. These laws are expressions of absolute uniformity of action whereby all elements of chaos are eliminated. They spring from and exist in the divine Mind and manifest the essential harmony of that Mind whereby He is expressed in all His ideas, whatever may be their order and degree. All the activities of the divine Mind, of Life, Truth, and Love, are unfailing and invariable. The divine Mind cannot be self-inconsistent; the ideas of that Mind cannot act antagonistically to their cause,—the effects cannot contradict the cause. These laws or general commands are thus given by the superior to His inferiors. They resemble the concept of law held by the physicist in respect of uniformity, but differ from this judicial notion in that they cannot be destroyed or their operations suspended. These laws understood, explain all the so-called miracles and mighty works of the Wayshower and supply the key to the spiritual understanding of the Bible. Their existence is constantly demonstrated in the daily practice of Christian Science.

Blackstone, in his commentaries, before the days of close analytical investigation into the nature of municipal law, wrote of a Law of Nature as synonymous with the will of God, to which man must conform because of his physical dependence on his Creator, and to this law the Creator Himself conformed. If Blackstone, instead of writing of man's physical dependence, had written of man's spiritual

dependence, he would have arrived at a clear statement of spiritual law. Hooker in his "Ecclesiastical Polity" wrote a passage famous for its beauty of expression:—

"Of Law there can be no less acknowledged, than that her seat is the bosom of God, her voice the harmony of the world; all things in heaven and earth do her homage, the very least as feeling her care, and the greatest as not exempt from her power; both Angels and Men, and creatures of what conditions soever, though each in different sort and manner, yet all, with uniform consent, admiring her as the Mother of their peace and joy."

The commandments, as enunciated by Moses, were akin to the modern notion of positive law; for instance, "Thou shalt do no murder." The command conveyed an idea of divine authority, and there was a punishment, here or hereafter, attached to possible disobedience. All positive laws of State are temporary expedients adapted to, and necessary for, a condition of darkness and illusory oblivion to man's spiritual being wherein Love reigns supreme and discord is unknown.

The true consciousness is conscious only of God, good, and of spiritual laws. To mortal sense there appears to be another consciousness,—a lie,—namely, that good is limited. This false consciousness is developed into the illusions of material mentality, of minds many with haunting discords in the guises of sin, sickness, and death. The false sense of personality and will is the "carnal mind" which must vanish into its native nothingness. The spiritual laws do not punish, for they cannot be infringed. The illusory infringement punishes the illusion; the wages of sin is death. As incidental to the suppositional warfare with the falsity of sense and the alleged sense of falsity, such weapons will be used as are embodied in the statements that Truth destroys error, that Love supplies lack, that Life conquers death. These declarations can only be effectually used by understanding the spiritual law to which they are related. Apart from that wisdom and understanding, they may degenerate into incantations, such as they are deemed to be by those who have never studied Christianity in the light of Christian Science.

A Revelation of the Century.

MAX JAGERHUBER.

As a newspaper man with thirty years' activity in the metropolis of this country, the most interesting phenomenon to me is the mental transformation which is taking place among "my kind." Mere intellectualism has so enslaved many journalists that it often seems impossible to hope for a change to the higher ideals in life which shall overcome the stubborn prejudices to a religion,—a new philosophy,—the Discoverer of which is a woman. As this still darkens many liberal and willing seekers after the truth, I am moved to submit my experience, because I feel that it may benefit many others. Generally the whole environment of a newspaper-worker tends to harden the tenderness, the idealistic conception of life; but bring a message of love at the right time and in the right way, and the "moulder of public opinion" will listen and will quickly yield to the appeal of Truth. All thoughtful men admit that every great man was blessed with a good mother, hence our Leader's womanhood should be appreciated and no more opposition to Christian Science be felt on that account. Furthermore, Christian Science must be judged primarily by the great good which it does.

Another stumbling-block to the unbeliever, atheist, infidel, or materialist is the church. When he learns, however, that the Christian Science Church not only attracts and firmly holds the erstwhile infidel, but awakens in him a desire for spiritual truth, he will be ready to admit that there must be something "different" from all others in this church. And how great seems the victory, when, one by one, the so-called unbelievers turn to Christian Science, not

only for physical healing but, in some cases, solely for a peace heretofore unknown to them, and which comes when first they understand the heavenly message,—“God is Love.”

Still another difficulty in the way of these seekers after light is the unwillingness to understand the “new tongue.” If listening to inexperienced students, they may reject the statements made, but just as soon as the true meaning comes to them on “their own level of thought,” they will admit the whole of the truth as revealed to this age by our beloved Leader. If *she* only knew how “the mighty have fallen,” how many deeply thoughtful men find their way to the cross, and humbly ask for a cup of water in the name of Christ, Truth, how she would bless these busy men who once knew no better than to reject the truth, but who now acknowledge the majesty of divine Science,—the great revelation brought to a sinful world.

At no time since I came from atheism to Christian Science, where I found God and home, did I realize such a sense of gratitude as of late; and I am led to wonder if gratitude, as I express it, is all-sufficient before God, and I say, “No; I must grow; I must work; I must do a thousand times more than I have done.” Spiritual blessings can only come to the degree in which we realize our nearness to God. Surely our dear Leader is awakening the whole world, and we must be marching on.

This is the hour for work; no half-hearted efforts can secure the prize, yet it is easy to win, and even little children show us how to demonstrate success in our work.

Reaching the Heights.

A. D. P.

RECENTLY, while in the Himalaya Mountains, a party of travelers made the ascent of a high spur, called Tiger Hill, in order to see that rare and beautiful sight,—sunrise on that vast mountain range of which Mt. Everest forms the highest point. The spiritual analogy between this and the journey which students of Christian Science are all taking, struck me forcibly as we made joyous a trip usually regarded as one of hardship.

The early morning was bright, with full moon shining overhead and making luminous the billowy white clouds beneath. After some preparations, in which the needs of each were considered, and provided for if possible, we started, some being carried in chairs to render the trip less fatiguing. Soon, however, murmurs were heard, for we seemed to be going backward, and even downward. “I don’t like this way of going,” said one; “I would have remained where I was, had I known we were to go backwards,” said another. “Wait!” cried a voice, “trust the guides, they have been over the road and know best;” and sure enough, in a short time we were ascending steadily. Fresh difficulties soon beset us, however; a mist appeared which became a thick cloud and obscured the light, and it also became very cold. With a knowledge born of experience, our guides trod the path we could not see, responding with cheerful readiness when any new order was given. There were some stragglers; one came hurrying up, saying that his companion loitered so, he was afraid of losing the way. Others, impatient to get ahead, hurried on, only to become confused, and be obliged to wait after all.

The higher the altitude we attained, the greater seemed the cloud and cold, but the confidence inspired by our guides enabled us to face them fearlessly. Suddenly, even while the darkness seemed impenetrable, the clouds dispersed, and such a scene burst upon our gaze that all cold and fatigue were forgotten,—lost in the rapture of that moment. The sun rose with majestic splendor, and made radiant that vast mountain range, lighting up the snows

with the purity of the dawn and the beauty of the rose. The mighty peaks were illuminated, and reflected the beneficent rays in every direction.

Long would we have loved to linger on the mount of vision, but we were not yet prepared for this height, and so we turned with reluctant steps to descend, when, to our glad surprise, we found that the road which had seemed so beset with difficulties on the way up, was now a beautiful one,—not a cloud, not an obstacle of any kind was there, but instead were lovely glimpses of mountain peaks and smiling green valleys, and sunshine all the way.

After our faithful guides had received their well-earned compensation, along with our gratitude, we resumed our journey, with uplifted hearts and treasured memories, to tell others of this glad experience and to encourage them to ascend also.

An Interesting Letter.

WE are glad to publish the following letter, received by Mr. Alfred Farlow from one of the leading publishing houses in Boston. It discloses a liberal, dignified, and conscientious attitude which should commend this concern to the attention of right-minded people.—ED.

Boston, Mass., February 21, 1905.

Mr. Alfred Farlow, Room 619, Huntington Chambers,
Boston, Mass.

Dear Sir:—We have your circular letter of February 11, addressed to both Lothrop Publishing Company and Lee & Shepard, from which we understand that it is a general communication to publishers.

We beg leave in reply, to assure you, in behalf of this publishing house, that we hold Christian Science entitled to the same respect that is due to any dignified form of religious belief, seriously entertained by reputable men and women. It would be with us a point, no less of conscience than of sound business policy, to see that no violation of this respectful attitude was allowed in anything appearing under our imprints. . . .

Of our book, “*Talitha Cumi*,” by Miss Holland, we need not speak except to say that it is already in the third edition and meeting a growing demand from all parts of the country. Had we no other reason for a friendly attitude toward a body containing so many respected personal friends of highest standing, we should in our respect for Miss Holland hold the same attitude toward anything for which she stood. While endeavoring to make a success of this book, we have been careful not to allow any commercial exploiting of such opinions of Christian Scientists as may have reached us from any source. In closing, we beg leave to add that we are glad to take this opportunity to assure you that we reciprocate the friendly spirit which you express.

Yours very truly,

LOTHROP, LEE & SHEPARD COMPANY.

W. F. GREGORY.

Don’t sympathize too much with the little foolish pains and troubles of your children; teach them to endure, to be brave, to ignore the little things. Sympathy has been overdone. Hundreds of people are kept half invalids by over petting. I know of good women who are wearing out better husbands by demanding constant sympathy for imaginary ills. A woman who had been dying for twenty years, because she had nothing better to do, for the fortieth time called her husband to her bedside to make him promise to be true to her memory after she was gone. Tried human nature for once rebelled. Instead of promising as she wished, he told her that just as soon as possible after a reasonable time for mourning had elapsed he proposed to marry again. The woman got well.—REV. L. M. POWERS.

Among the Churches.

Ashland, Ore.

We have received an acknowledgment of the receipt of Science and Health, and "Miscellaneous Writings," from the president of the Ashland Public Library, which marks another step forward in the work in this place. Three years ago the officers of the library positively refused to allow us to place these books with them for distribution. Last August, however, they accepted the copy of Science and Health very kindly, and they report that it has since been in constant demand. We have recently presented them with the copy of "Miscellaneous Writings" which was the occasion of their sending us this little letter of acknowledgment. We feel that we have cause to rejoice over this victory, and that we should be very grateful for many other evidences that our work has not been in vain.

Alice M. Whyte, Clerk.

The Work in Kansas City, Mo.

Believing that what rejoices and benefits one, proves of like blessing to all, we have pleasure in sending to the Field a brief statement of the work done in First Church of Christ, Scientist, Kansas City, Mo.

In January, 1904, this church had raised less than one third of its ten-thousand-dollar voluntary pledge to The Mother Church Building Fund, and there was also a standing debt of seventy-three hundred dollars against its own church building. Its membership was large and seemed earnest, but there was a lack of united effort, and until we recognized that impersonal evil, through its silent arguments, had caused and was prolonging this condition, we accomplished little toward its removal. Early in the year a special business session was called to consider the status of The Mother Church Building Fund. Several called meetings followed, pledges and contributions were made by well-nigh all, and as a result of the spiritual awakening which ensued, a system of committee work was so devised that practically every one of our five hundred members was interested, and questions relating to the condition and welfare of the church were discussed, with the result that the congregation as a body was unified as never before.

Between July 1 and December 17 the pledge to The Mother Church was more than fulfilled, and the debt upon our home building entirely wiped out,—and this without any personal solicitation of funds, and without large individual contributions. Moreover, through the committee work our membership roll was thoroughly revised, and we realized that our apparent lack had been but a dream from which our members were now awakened. At the time the committee work was begun, the collections for The Mother Church Building Fund were averaging only two hundred and twenty-three dollars per month. Since that time, they have averaged eight hundred and sixty-six dollars per month. Our local debt has been paid, and our general fund shows a substantial increase.

The healing of our local condition simultaneously with the loving work done for The Mother Church has led our whole membership to see the importance of putting forth a still greater effort for The Mother Church building, and we anticipate that our contributions in the future will be much larger than in the past. We have learned by sweet experience that as we "make channels for the streams of love," this "love has overflowing streams, to fill them every one."

MARTHA H. GISH,
CHARLES L. VAN FOSSEN,
MADELINE KOONS PERRIN,
Committee.

The Lectures.

Cambridge, Mass.

The annual lecture of First Church of Christ, Scientist, of Cambridge, was given Thursday evening, March 16, at First Parish Church (Unitarian), by William D. McCrackan. The subject was Christian Science. The lecturer was introduced by Wilfred G. Garnet Cole, First Reader of the Cambridge Church, who said in part,—

Last year, through the kindness of our Unitarian friends and brethren, whose church this is, we were enabled to have our lecture here. This year again, we wish to publicly and gratefully acknowledge our deep appreciation of the high-minded public spirit, Christian courtesy, and loving kindness which they have shown in again granting us its use. Reaping as they have sown, we are confident that their harvesting of good will be abundant.

The present is an age of investigation. All proper investigation, whether directed to questions scientific, economic, sociological, philosophic, or religious, aims to eliminate the false, and bring to light the true. Scientific methods of investigation have long been applied in the study of the various subjects comprised under the domain of the physical and moral sciences, but until recently humanity has stopped short of applying these special tests to that subject which of all should be nearest and dearest to their hearts; viz., religion. To-day, therefore, there is a demand that Christianity shall prove itself scientifically true. Logically this involves the doing, at this time, of the works done of old by Christ Jesus and his disciples. On this account, because it claims to do the same works, a great and growing interest has arisen in Christian Science.—*The Cambridge Chronicle*.

Norfolk, Va.

Judge Septimus J. Hanna lectured here February 26, on Christian Science. He was introduced by Col. George C. Cavell, who said in part,—

I know very little about Christian Science, but I am acquainted with a great many persons of that faith, and am glad publicly to testify to their many good qualities of heart and mind. They certainly possess in a large measure that attribute which was so beautifully illustrated in the life of our Master,—meekness. I was wonderfully struck with this at the time the bill requiring Christian Science healers to stand a medical examination was before the legislature of Virginia. The testimony given and experiences related were remarkable, but more remarkable still was the manner in which the Scientists received the jeers and taunts of their opponents. Not one word of anger in reply, but always came the soft word of friendship and love which turned away the wrath of many.

Correspondence.

Erie, Pa.

The large and beautiful Majestic Theatre was crowded yesterday afternoon [March 5] by an intelligent audience that gathered to hear Bicknell Young of Chicago, who lectured on Christian Science. Mr. Young was introduced by Rabbi Max C. Currick of the Temple, who spoke in part as follows:—

I believe that so long as people are intolerant toward those who hold religious opinions different from their own, so long are they in need of religious instruction, for their religion is but a name. And further, since all true religion has but one aim, it follows that the truly religious of all creeds should aid each other, for God is found in various ways. So long as men are honestly striving for the truth, and so long as their striving is not of such a character as to endanger the general good, so long are they deserving of our protection.—*The Erie Times*.

Selected Articles.

A Loving Rebuke.

Editor Constitution:—We note that the *Constitution* quotes Mr. Meyer at the Tabernacle as saying that since he has the genuine Christianity he has no need for Christian Science. Disparaging remarks about Christian Science and its revered and gifted Leader have not been infrequent during the Bible conference, and they have passed without notice from our denomination, but it is time to say a few words.

The Christ that has come to me in Christian Science has brought to my consciousness a large and loving tolerance for differing opinions, creeds, and doctrines; a deep and abiding faith in the ultimate triumph of good, God; a loving and patient sympathy with every aspiration in the human heart toward Christliness. While the members of our denomination have been mostly debarred from the conference, on account of the embarrassment of hearing their loved religion often misrepresented and maligned, yet there has never been a moment when we have not rejoiced to know that so many are hungering and thirsting for righteousness, that the meetings have been large and well attended, and we still trust that every good thought and word of truth may bear its fruitage in this city so dear to us all. I often think it would be wise if our press would reprint every paragraph of Sidney Lanier's magnificent poem on "Intolerance."

Even if the Bible conference is composed of the great stars in the spiritual firmament, why should not they rejoice that the little twinkling stars are also rejoicing in the affluence of the light—"which lighteth every man that cometh into the world." It is the infinitude of the individual reflection of light which constitutes the starry splendor of the heavens. Sometimes it is found that the little star is really a splendid central sun with its own grand system, and small only to our limited vision.

Christian Science is drawing to its ranks many of the gifted, the heavenly minded, the intellectually alert. In my own recent experiences I have seen the agnostic, revolting from the inconsistencies of dogmatic theology, yielding every earthly wish, bowing the knee to a scientific demonstrable Christianity, leaving all earthly ambitions for the steep ascent and narrow path that leads to Christ. I have seen the slave of depraved appetite for drink quickly made free, rejoicing and regenerated by Christian Science. I have seen the lame to walk, the blind to see, the deaf to hear, the worldly to give up all for Christ, the hopeless invalid raised to health and life and joy and spirituality. Well may the Christian Scientist say with our blessed Master, "For which of those works do ye stone me?" A recital of these works was Jesus' only reply to John's inquiry as to who he was.

The Christ is here and now, an ever-present Saviour in every trouble, and Christian Scientists are praying and striving to follow the Master's example and injunction to his followers, "Preach the gospel;" "heal the sick, . . . raise the dead." They do not worship Mrs. Eddy, but they reverence deeply the saintliness of her life, the elevation of her character, the splendor of her achievements, the priceless gift of her example, the rich treasure of her contribution to the storehouse of spiritual things.

In the spirit of charity and love, hoping all things, enduring all things, and knowing that creeds may crumble and empires fall, but that "Love never faileth," I am yours in the brotherhood of Christ.

SUE MIMS.

Atlanta (Ga.) Constitution.

While it is always the duty of all to hold fast to that which is true and to be ready to prove all things, it is nevertheless true that we are too prone to brand everything

as heresy which differs from our own cherished opinions. Indeed, historically considered, heresy means little more than doctrinal views and beliefs differing from those entertained by the persons making the charge. Even Jesus was regarded as the prince of heretics by the orthodox party of his time, and all of the Christian reformers have been regarded as heretics by those who have made tradition rather than Christ and Christliness the standard of orthodoxy.

Another wise lesson which the history of heresy and heretics teaches is that truth and love and Christliness are all that is needed to destroy all the heresies that are not good enough to survive. As Dean Stanley says, "You may destroy a hundred heresies and yet not establish a single truth. But you may, by establishing a single truth, put to flight a hundred heresies." And the wisest and best teachers of all the ages have advised those whose zeal exceeded their wisdom, charity, love, and Christliness, to "Refrain." They have seen that if this heresy, this counsel, or this work be of men, of error, "it will come to nought; but if it be of God, ye cannot overthrow it."

The fact that Christian Scientists are so willing to be judged by their fruits, entitles them to a patient hearing and a fair trial. The fact that they never attack, but are always ready to rejoice and help in the good others are doing and trying to do, entitles them to receive a part of the charity they so freely give. The fact that when they are reviled, they revile not again; when cursed, they bless; when hated, they love, entitles them to Christian consideration, especially by Christian people and Christian ministers.

Christian Science, instead of denying the personality and fatherhood of God, the divinity and atonement of Christ, the inspiration and authority of the Bible, and other vital facts of historical Christianity, affirms and cherishes and gives to them a larger, more vital and reasonable meaning.

Christian Science, instead of teaching the rank absurdities that some of its critics claim to believe it does, is simply spiritual, scientific, practical Christianity. Instead of being the enemy of the Christian churches, it is proving that even more and better things than they claim for Christ's Christianity are not only true, but scientifically demonstrable.

PROF. J. R. MOSLEY.
Macon (Ga.) News.

Christian Science has been denounced by certain systems and self-appointed critics ever since its discovery. In spite of all the opposition, it has gained thousands of converts, healed multitudes, and established what is known as the broadest form of democratic church government. A Southern lawyer declares that to denounce or speak contemptuously of Christianity is an indictable offence. Now, if there is such a thing as Christian Science, any one denouncing it has not only been breaking the law, but has also been putting a stumbling-block in the way of every Christian minister who believes that sin and immorality are diseases which Christianity alone can cure, and that they are the most important things to cure. A good local doctor, before the Young Men's Christian Association, urged that the remedy for certain diseases is in the hands of the ministers, and advised that this great truth be preached from the pulpit. "How the world do move." After awhile the doctors will learn that Christian Scientists are the most humane people on earth, and have been all these years not opposing, but helping them.

Editorial, Toledo (O.) World.

Jews and Christians are the children of the same great God. Is it not time that fanaticism and prejudice should cease? I tell you the day is not far distant when religious dogma and creed will be no more, and we shall all stand, tolerant and agreed in our beliefs, before the great Jehovah. God speed the day.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

An Amended By-law.

ARTICLE XXVII. MUSIC IN THE CHURCH.

SOLOIST AND ORGANIST.—SECTION I. The solo singer shall not neglect to sing any special hymn selected by the Board of Directors. Music from the organ alone must be appropriate to the religious occasion. First performance, invocational; second, offertory; third, gentle, short, sacred.

Church Dedication in St. Louis.

THE following loving words of greeting, counsel, and encouragement were sent by our Leader to First Church of Christ, Scientist, St. Louis, upon the dedication of its recently completed church edifice. These words will be read with profit and appreciation by all.

First Church of Christ, Scientist, St. Louis, Mo.

My Beloved Brethren:—The good in being, even the spiritually indispensable, is your daily bread—work and pray for it. The poor toil for our bread, and we should work for their health and holiness. Over the glaciers of winter the summer glows. The beauty of holiness comes from the departure of sin. Enjoying good things is not evil, but becoming slaves to pleasure is. That error is most forcible which is least distinct to conscience. Attempt nothing without God's help.

May the beauty of holiness be upon this dear people; and this beloved church be glorious, without spot or blemish.

MARY BAKER EDDY.

Pleasant View, Concord, N. H., April 21, 1905.

The church evidenced its appreciation of Mrs. Eddy's despatch by the following telegram:—

St. Louis, Mo., April 23, 1905.

Reverend Mary Baker Eddy.

Pleasant View, Concord, N. H.

Beloved Leader:—We acknowledge with deep appreciation your loving despatch, read to-day to three large audiences at the dedicatory services of our church edifice. Your tender words of counsel and admonition have given to this people enlightenment, inspiration, and renewed confidence in the power of divine Love to heal sickness and sin and to abundantly bless a needy race. Your matchless writings and spiritual leadership, extending over a period of nearly forty years, have brought to mankind the full import and present availability of Scriptural truth. This new light thrown upon the sacred page has increased our love for the Bible and made plain the way of salvation through Christ.

With overflowing love and gratitude,

FIRST CHURCH OF CHRIST, SCIENTIST.

Afternoon and Evening Services.

WE have before us a letter asking whether the holding of the afternoon or evening services referred to in the "Explanatory Note" in *The Christian Science Quarterly*, is optional with the churches, also whether these services are to be considered simply in the nature of overflow meetings.

As there is no By-law or rule of The Mother Church

which makes it obligatory for churches of our denomination to hold an afternoon or evening service, we may fairly assume that the intention is that branch churches shall be governed in this matter by local conditions and requirements. The experience of churches of our denomination, located in the larger cities, has been that many persons who cannot or do not attend the morning service are present in the evening, and quite a percentage of these attendants are strangers and persons whose regular church affiliations have taken them elsewhere in the forenoon. We believe that the afternoon or evening service should not be looked upon solely as an overflow service, but rather as an additional opportunity for presenting the gospel of Christ to all who may wish to hear it.

The observation of Christian Scientists in the principal cities has led them to believe that it is profitable to hold a second service, even if the morning service is not overcrowded, but whether the same holds good in small cities and towns where there is no floating population, we are unable to state.

If a church is founded upon Christ, and preaches his full and complete gospel, which must of necessity include the healing of the sick, it will do good at every service it holds, and while it may not seem practicable for the smaller churches, which meet in rented quarters, to hold more than one service, each Sunday, there appears to be no reason why churches which occupy their own buildings should not hold two services unless some local conditions make the holding of more than one service inexpedient.

The primary object of a religious service is the worship of God in such manner as will best meet the needs of those who desire to attend, and as many persons have borne testimony to the fact that they have been healed and spiritually elevated by the public services held in our churches, it would seem that the greater opportunity there is given for such experiences, the greater will be the harvest.

ARCHIBALD McLELLAN.

The "Common Sense" of It.

It is most interesting to observe how rapidly the Christian world is coming to accept the teaching of Christian Science, that health is the normal and congruous state in which the spiritually aspiring may and should live; that its freedom and strength belong to the children of God, and are essential to the successful fulfilment of those Christian duties and obligations which the Master's words has imposed upon every believer.

Says a religious contemporary, "No man can do his best for God and humanity except he be at his best. No man can be at his best except he have a healthy body in which to live and serve. If that is Christian Science, make the most of it. I am sure it will stand the test of being Christian and scientific, too. . . . A jaded body is a poor conductor of spiritual force. . . . The Son of God,—who was also a true son of humanity,—though he toiled hard, though he bore on his mind and heart great burdens for his fellow-men, yet in this particular, as in all other things, became our perfect example by bringing to the last hour of his earthly life a perfectly healthful and vigorous manhood."

Says another, "A healthy body is a great aid to clearness of religious vision and to spiritual enjoyment. A deranged liver is the enemy of a joyous and hopeful piety."

Not all of those who thus recognize the legitimacy of health, are ready to concede that it may be secured and retained by spiritual means, but that they have given up fighting for the educational value of suffering,—that it is divinely appointed for our aid in the attainment of character,—this means very much, for when men perceive that wrong thought is alone responsible for the expectation and tolerance of the afflictions which Christian people so largely indulge, they are the better prepared to see that wrong thought is also responsible for these afflictions themselves,

and that the whole theory of their divine provision is discreditable to God and in distinct opposition to Jesus' word and works. If all the pallid saints who have been canonized because of their patient endurance of what they regarded as their heaven-bestowed patrimony of pain, had but acquired and retained robust health through a right understanding of that spiritual truth whose coming Jesus said would set free, and had devoted their strength to the ministry of healing which he enjoined upon his disciples, the world's religious history and present condition would have been vastly improved.

Most people do not enjoy sickness, be they ever so pious, and this fact will serve to make them the more accessible to the wholesome teaching of the Master as interpreted in Christian Science, that it is ours to overcome, and so be free from sin, sickness, and death, in the measure of our attainment of the Mind that was in him. JOHN B. WILLIS.

Spiritual Energy Needed.

ST. PAUL's declaration that "all things work together for good to them that love God," has given struggling humanity endurance and strength in many an hour of trial. Its deep significance has been recognized by Christian Scientists who have found, with added growth in spiritual understanding, that its application is limitless. It recalls Pope's advice to

make each adverse circumstance
A helper or a slave.

A statement recently made, which carries the weight of medical authority, is to the effect that a man's life is practically valueless after middle age, and that it might, therefore, be well to end it. Like many another half-jest, this statement has pierced to the quick hundreds of the discouraged and sensitive, and, according to the daily papers, not a few of these have acted upon the suggestion thus given. One such case may be cited. The unhappy man said, before he died,—

"I have been unfortunate. I graduated from a university and prepared for the ministry, but I was not a success, although sincere in my efforts. I know a good deal about medicine, but my knowledge has not made life better for myself nor any one else. I feel that my days have been wasted. If I could not make effectual use of my knowledge when in the prime of life, I can scarcely hope to do so now when I am past fifty years of age, and I am inclined to indorse the assertion regarding the uselessness of aged persons."

It is not necessary to discuss in these columns, the theory that men become comparatively useless when they reach the age above named, but we may with propriety consider the condition of thought which leads to such a conclusion.

Quite apart from the teaching of religion, the world has had proof of the truth of Tennyson's statement, "Man is man, and master of his fate." It cannot be questioned that very many grow weary in the struggle of mortal existence, and little wonder, when the grave is so generally regarded as its *final*. With a belief in lagging energies and impaired faculties, they drag wearily along what they erroneously believe to be "the way of all the earth," when their eyes should be lifted to the heights whence, as in John's vision, the city of God with life and immortality comes down to men.

It is possible that the thought awakened by the statement referred to may, in the end, work out much good by compelling both old and young to take their bearings, so to speak, and find whether their lives are making for that mental and spiritual growth and unfoldment promised and provided for in divine law. In too many cases Isaiah's words, "Even the youths shall faint and grow weary," are verified, but this is because of ignorance of Truth, for the prophet also says, "He giveth power to the faint" (at any age), and "they that wait upon the Lord shall renew

their strength." St. Paul enjoins all Christians to acquaint themselves with the Divine source of strength and intelligence, "that they may lay hold on the life which is life indeed" (R. V.).

If those of more advanced years have failed to reach their mark, in the best sense, the demand rests upon them to make up their arrears by a new and more spiritual endeavor. Divine Love calls upon all men and women to reach an altitude of scientific being where the disabilities of mortal, material belief are dispelled as mists, and where the dominion of spiritual law is known and demonstrated. We should not forget that when we reach the ideal existence,—the only real,—we shall find ourselves fitted for work, not idleness. "His servants shall serve him," said John, who saw the divine reality. The achievements of some of the world's great workers prove what is possible, even under present conditions, and it rests upon each individual to offer the world such high service as will create a demand for the results of that ripe experience which is united to a keen appreciation of all that makes for progress. When mortal sense would feebly say, "I cannot," Truth is ready with fresh inspiration to effort, greater than any before attempted, "for with God nothing shall be impossible;" and when this sense would tell of coming night, the faithful may remember the prophet's words, "Then shall thy light break forth as the morning. . . . and thy darkness be as the noon day." ANNIE M. KNOTT.

Letters to our Leader.

Concord, N. H., April 20, 1905.

Beloved Leader:—I have not thanked you, on paper, for our new *Journal*, with its vernal cover; and best of all, your deeply suggestive poem, "Whither." The last verse is truly a beautiful answer to the query, Whither? It was a pleasure to see Judge Jones' able article republished.

The aged mother of one of our Concord people, who lives in Conway, N. H., has recently had a beautiful case of healing. Two M.D.'s had declared that there was no hope, except through an operation, and a trained nurse from Portland had been sent for. The day preceding that fixed for the operation, the son reached his mother's bedside. He found the doctors in consultation, but he refused to accept their hopeless verdict. On gaining his mother's consent, he asked his sister to discharge the M.D.'s, and going to the telephone, he explained the case, and asked me to take it, which I did. On reaching home from the telephone office he found his mother better, and at supper she partook of nourishment. That night she rested comfortably, and morning found a decided improvement. The death pallor had left the face, the fever had gone, and she ate a hearty breakfast. Soon after breakfast who should arrive but one of the M.D.'s. It appears that the sister had failed to discharge the physicians, but had said that they might call in the morning. The doctor went to the patient, and expressed his surprise at the change in appearance. . . . He placed the thermometer under her tongue and was dumbfounded to find that the instrument showed a perfectly normal temperature. Then came the second M.D., with a similar surprise. They said that they could not understand it, and agreed that an operation was not necessary. That afternoon, instead of having an operation, the happy mother was up and made biscuits for the family. I am told that the case has excited much comment in Conway and has interested many in Science. "Who is so great a God as our God?" Lovingly,

IRVING.

East Orange, N. J., April 15, 1905.

Beloved Leader:—Will you accept my tenderest love and gratitude for the gift of your beautiful poem "Whither," in the April *Journal*. It has fed my hungry heart, and is

to me a resurrection song with an everlasting promise, as are all of your words; they satisfy my longing, as nothing else would do.

You, as your books and writings have taught me to know you, are the light to beckon me on "amid the seeming shadows," and I have grown to love and reverence you as the best relative and friend I have on earth, for you have shown me "whither" to go in my pathway. So closely have I dwelt with your writings that I know you are the one great Teacher revealing the words and works of the Master, and I sometimes hear His voice repeating these words, "Blessed are they that have not seen, and yet have believed."

With increasing love and gratitude from one who is striving to follow in your footsteps.

GRACE MERWIN COLBY.

Bucyrus, O., April 13, 1905.

The Rev. Mary Baker G. Eddy, Concord, N. H.

Beloved Leader:—The members of First Church of Christ, Scientist, of this city, wish to express their gratitude for the tender words contained in your letter to the Columbus church, which appeared in the *Christian Science Sentinel* of April 1. Truly, you are our Leader. Your message comes as the voice of authority—the "Peace, be still," which quiets confusion and brings harmony to light. It gives us renewed courage and an increased purpose to continue joyfully in the work in this State, and let our lives bear witness to the truth. Our church will be glad to obey your loving advice.

Thanking you for your untiring effort in behalf of every loyal Christian Scientist, we are,

Lovingly and gratefully yours,

HARRY DELOS HUGHES,

JOSHUA C. LICHTENWALTER,

MRS. STELLA D. CARY,

Committee.

Concord, N. H., March 14, 1905.

Dear Mrs. Eddy:—I desire to express my gratitude to you for Christian Science. I was healed, while reading Science and Health, of the desire for tobacco and drugs, also of very severe headaches. I wish to tell how much help the reading room is to me and I feel sure there is good work being done here. The lady in charge has been most kind, and helped me in many ways. This lady gave me the first copy of Science and Health which has brought so many blessings to me through your teachings.

Thanking you for all you are doing to uplift humanity, I am,

Obediently yours,

L. L. KENDRICK.

Seattle, April 11, 1905.

Rev. Mary Baker G. Eddy, Concord, N. H.

Beloved Leader:—Pardon my intrusion on your valuable time. Since receiving the April *Journal* containing your poem "Whither," which seems to say to me, Can you not watch with me one hour? I am impelled to say I stand with you in this hour as one that loved not this life unto the death.

Gratefully yours, in the Cause of Christ,

B. JACKSON.

Notice.

The next admission of candidates to membership in The Mother Church will be June 6, 1905. Applications must be in the hands of the Clerk on or before May 15, 1905.

An application sent to the Clerk of the Church does not constitute the applicant a member; he must be elected to membership by the Christian Science Board of Directors, in which event notice of election will be sent.

Testimonies of Healing.

When Christian Science was first brought to my notice some eighteen years ago, I was sorely in need of help, both physically and spiritually. I was suffering from a severe bronchial affection of years' standing, many times losing my voice entirely for days, and I was constantly trying every material remedy I heard of, but with no relief. I was also hungering and thirsting for a better understanding of God and my relation to Him. Having had two husbands who were clergymen, and having been in the Methodist itinerancy over twenty years, I was well versed in theology and had enjoyed all there was in their creeds. At times I had much spiritual light and comfort, for I was living up to my highest understanding. For a number of years before I heard of Christian Science, I was much interested in the healing of disease, and in reading Jesus' commands to his disciples, to preach the gospel and heal the sick, and I believed it was our privilege to be healed of our physical infirmities as well as to have our sins forgiven. Occasionally I would hear of some one being healed by faith, and I have spent hours praying for the faith that would heal the sick.

As a minister's wife I was often called to pray for the sick, and I have gone and with prayer laid my hand on the sick, to try and carry out the gospel methods, but no results followed until I came into the understanding of Christian Science as taught in "Science and Health with Key to the Scriptures" by Mrs. Eddy. Since then I have had abundant proof that the healing power of Truth and Love is just as efficacious to-day as when Jesus was here on earth. I have seen sufferers, after nineteen years of invalidism, after the doctors had said they had done all they could for them,—with two or three treatments, these have been raised up, made strong to walk a mile daily for treatment. Others, in the last stages of consumption, expecting that every day would be the last of their earthly life,—these have been able to rise from bed in a few hours and to do their ordinary housework with ease.

The spiritual light, comfort, and understanding I now have, in comparison with my experience in the old theology, is so great I hardly know how to tell of it. It seems as if, in the old thought, I was out in the vestibule, praying, and trying to believe, for many desired blessings, but receiving very few. Now it seems as if the doors of the inner sanctuary had been thrown open wide, and I have entered into the holy place of understanding and realization; I have learned the true basis of all prayer, and there is no more anxious waiting for answers to prayer which never come. The answer is already here and I only have to take and appropriate it.

When I first heard of Christian Science, I was told that it is the same truth that Jesus demonstrated in healing the sick and that it was for any one spiritual enough to understand his teaching. I was also told that this truth was to be found in the Bible and in Science and Health. I got a copy of Science and Health, clasped it to my bosom, went home and began to read. I read nearly all night, for the truth seemed so clear, and unfolded to my consciousness so beautifully, that I could not stop. All I could say was, "Praise God, I have it, I have it now!" Very soon I began to demonstrate the truth revealed in that divinely inspired book, in healing the sick and doing the works that Jesus said his followers should do. The beautiful and wonderful revelations of Truth and Love given in the Bible and Science and Health, when our understanding is opened to see our God-given inheritance,—our dominion over the educated beliefs of mortal sense,—are so great that love and praise is the language of the heart. It is said that on one occasion Jesus opened the understanding of his disciples. It seems to me that was a simple lesson in Christian Science, for truly it does open our understanding to know the truth which makes free.

To me this revelation grows more and more grand with each day's experience. So much of good comes to me, and such a realization of the guidance of divine Principle that I am led to praise God that I live in this day and age. "Whereas I was blind, now I see." Yes, blind in the mortal dream and belief of sense, but the true light now shines and I am working my way up and out of the bondage of mortal, man-made laws and environment, and am realizing a little of what "dominion" means. It is all of Truth, and in humility I do praise God from whom all blessings flow. I see more and more that Mrs. Eddy is the God-chosen one to this age to prepare the way of the Lord for the coming of the Christ-idea through the wonderful revelation of Christian Science.

MRS. LAURA A. YOURTEE, Chicago, Ill.

When I first heard of Christian Science, I had been in a hospital for fourteen months and had not turned out of one position for seven months. I had been sick with a fever, there was every evidence of my having been salivated, abscesses forming as a result of the poison, and in opening the abscesses the muscles in both limbs below the knees had been severed, both feet dropped down, the joints in knees and ankles stiffened, and I had no control of my limbs at all. When a patient in the bed next to mine told me of Christian Science and that I could be healed, it did not seem to me that I could get paper and pencil quick enough to write to a practitioner. The doctors broke up the adhesions in the joints six times, the joints stiffening each time; finally a cast was put on the left limb, and later the doctors concluded the limb would have to come off. Christian Science of course broke that law. The physicians said I would never walk; I might be up on crutches, but they thought not. It has been four years, I am at work down town, and there is only a slight show of lameness, which is rapidly passing away. When I first began to walk I used crutches, and walked on a broken ankle for a year and a half, the doctors having left it in that condition when trying to bring motion to the joint. I have been healed of dyspepsia in its worst form; my eyes are perfectly healed, after eight years' dependence upon glasses which the oculist said I would always wear, and dropsy which manifested itself has entirely disappeared. My hair fell out from the fever and the new hair which came in was white; that was overcome, and my hair is now black and very heavy and long.

I am indeed grateful to Mrs. Eddy, that through her understanding we now know so much of Truth. Science and Health is certainly the Key to the Scriptures, for it opens up the Bible as nothing else has ever done.

M. EDITH ELKINS, Chicago, Ill.

It is with pleasure that I write of my experience in Christian Science. About twelve years ago I was taken very ill with an abscess on the lung. The doctors said I had consumption, and after several years' battle, during which time I was able to work only about half the time, I was advised to go to a dry climate. I gave up my position on the railroad and went to Tucson, Arizona. I improved there for a short while, but after I became acclimated the same trouble re-appeared, only worse,—bronchitis and catarrh of the lungs. I expectorated day and night, coughing up much blood; I had severe night-sweats and could not sleep. The doctors gave me opiates and said the end was a matter of only a few days. A friend of mine told me of a place for consumptives, and I again fled to a new climate. My friends all bade me good-bye and never expected to see me again, but I rallied and after four months returned to my position, thinking I had a chance of recovery. Again, however, the relief proved only temporary. In June, 1904, the awful disease made its appearance worse than ever before. It took a great effort to walk half a

block. This time I gave up all hope. I knew it was no use to seek other climates, but I did employ the best physician I could, though all he could do was to give me opiates to try to induce sleep. He told me it was only a matter of a few weeks or so to the end. I decided to go to Los Angeles to die, as I had a dear friend there, a train dispatcher, who had been writing me for nearly two years about Christian Science. I considered him crazy and did not give it a thought, but after I met him he again insisted on my taking treatment. I asked him if he took me for a fool, but after about a week had elapsed, he again mentioned Christian Science to me, and this time I was somewhat under the influence of liquor, trying to pass away my last days happy, as I thought. I decided to go with him and he took me to a practitioner on July 8th, and a blessed day it was to me. I could not understand her at first, or even Science and Health. It all seemed unintelligible to me; but in about two weeks I was sleeping all night without coughing and could not drink liquor. My friends all said I would die because I was without the liquor, but I was back on my run in about five weeks and have been there ever since; and now I weigh nearly one hundred and eighty pounds. When I met the doctor on my return, he walked by me several times, looking at me as he passed. He finally approached me and asked what on earth I had been doing. I told him of my experience and that Christian Science had enabled me to do without all the opiates. I was an infidel all my life, and never believed in God until I was healed in Christian Science, when "life everlasting" was revealed to me.

I have the latest edition of Science and Health and have subscribed for the *Sentinel* and *Journal*. I never take any more drugs and have no fear of sickness. I wish that my experience might enlighten some poor sufferer who is passing through such awful struggles as I have. May God bless our dear Leader for her great work and for the good she has brought to suffering humanity.

JOSEPH ARCHER, Yuma, Ariz.

I recall one proof, among many, of God's readiness to meet our every need. I went to the home of a friend to take charge of the house in her absence. Not being accustomed to all the surroundings, I slipped on a step, and my foot twisted and turned in such a manner that I felt the need of divine help. I recalled some statements in the Bible and Science and Health, and declared the truth for myself. For about an hour and a half I kept busily and comfortably on my feet, when suddenly a severe pain made it impossible for me to stand. Seeking my room, by pushing a chair and going on one foot, I sat down on the sofa where I had left my books. Taking the Bible, I read in 1 John, second to fourth chapters, and was much impressed by this statement, "Ye are of God, little children, and have overcome them: because greater is he that is in you, than he that is in the world." As I read and reread these illuminated words, I said, Who is the "them" spoken of as in the world? Surely it must be sin, sickness, death. Then who is "he" that is in you, that is greater than he that is in the world? It is reflected Life, Truth, Love. Understanding is greater than belief. Then opening Science and Health, I read of the power of divine Love. I found joy in this beautiful light but the pain continued. As I sat there suffering, the telephone called, and being the only one then present, I attempted to put on my shoe, which I had removed, and found the foot discolored and swollen so badly that it was not possible to do so. Pushing my way again behind the chair, I reached the telephone. On leaving it, I turned to grasp the chair again and came down upon the sprained foot, and to my joy and surprise it was well! As I stood there, stamping the floor to convince myself, tears of gratitude for this loving evidence of the Father's care were shed by the penitent who seemed to have received more than she

deserved. If space permitted, many like experiences might be told.

Before reading Science and Health I was a scoffer at the teaching of the sacred Scripture. I love our Leader, Mrs. Eddy, for what she has done for me, and for the whole world.

SARAH D. HILL, Burns, Ore.

In gratitude for what Christian Science has done for me, and the hope that other sufferers may through knowledge of my case be attracted and receive benefits, I want to make a statement of my healing. For twenty years I had been an invalid. I had many ailments, and for the last seven years I was not able to walk more than two blocks without suffering great pain as a result. I was nervous, could not eat much of anything, and was in misery most of the time. I was under the continuous care of my home physician for seven years and in addition was taken to other cities for consultation and the co-operation of physicians there; but all without permanent results. Four years ago a rising in my right breast was pronounced a cancer and my breast was cut away, but still no relief from my suffering, and during all these years there was hardly a day that the doctors did not inject poison into my body to deaden my sense of the terrible pains, and well-nigh every pore on my arms has been penetrated by the doctors' needle. A year ago another rising appeared on my left breast and again it was pronounced cancer, and again I was being prepared for the operating table, when a sister who lives in Cleveland, O., insisted that I come there and try Christian Science. I was taken there, and, thank God, in three months' treatment in Christian Science I was completely healed, and I am now as well as I can imagine one to be. I need hardly say that the people of my home town have become much interested in this wonderful Science. Many are investigating it, and one most remarkable case of healing has resulted. Is not this wonderful? How I do pray that all humanity may learn to know God as revealed in Science and Health.—BARBARA DUSCH, Cannelton, Ind.

My only son was very badly burned in the following manner. On the Fourth of July, 1903, he went to a children's party, and a boy asked him to take care of a handful of tablets, such as children use in canes to make a loud noise. Not thinking of danger, he put them in his hip pocket, with a few matches. He slipped later on a polished floor, and fell on his back, which caused a terrific explosion, and his clothes caught on fire. He was brought home in a suffering, hysterical condition,—one leg burned from thigh to knee, almost to a crisp. A part of it seemed to be baked. I afterward learned that the tablets were composed of phosphorus, nitrate of potash, and sulphur. Physicians claimed that this combination at once entered and destroyed the tissues. This I know, that it produced the greatest agony imaginable, and that the cooked flesh in time decayed and sloughed away, leaving the nerves, arteries, ligaments, and muscles exposed. There was a most offensive odor during this period. In thirty minutes after the boy was brought home, he did not have any pain, and although he had to lie almost three months in one position, he suffered very little during his whole experience. The night he was brought home, he ate a hearty dinner, after he had been treated. His appetite was good, he was cheerful, patient, and slept well all the time.

It took months for this limb to fill out, as it was burned so badly and so much tissue seemingly destroyed. When he could stand by the bed, the injured leg was much shorter than the other, on account of hardened ligaments and sore muscles. He had to use crutches for months, and had many ups and downs, but truth was finally victorious, and the leg straightened and filled out. There was a large area to be covered, and while the healing was going on,

the boy learned many needful lessons. He never doubted God for a moment. No matter what influence or argument was used, he never wanted material remedies. We did not have a doctor, but we had a Christian Science practitioner who had been a medical physician before coming into Science. He bandaged him and was very kind.

Everybody expressed so much love to the dear boy, that it has caused him to know that Christian Science is a religion of love, and he now lives in its atmosphere and is a Scientist. He had never known anything about drugs, as we have looked to God for our healing ever since he can remember. While I had treated him often before, he did not grasp the spiritual understanding or reflect happiness and love; now, all that is changed. He is fleshier, healthier, and more active than I ever knew him to be. He is fourteen years old. From the time of the burn until he was healed, was ten months.

Mrs. Eddy has my sincerest gratitude for teaching us Christian Science. I firmly believe that nothing but the understanding of God could have healed my boy. Material means could not have replaced that which seemed to be utterly destroyed, or cause one to be happy under such conditions as he had to experience. This healing was not done in a corner; many who were not Scientists opened their eyes to behold "How great a God" is the Christian Science God, divine Love.—ADELAIDE C. LEFFELL, Kansas City, Kan.

It is often said, "I have not enough faith to be healed by Christian Science, or to trust my children to it." That great faith on the part of the patient, at first, is not absolutely necessary to the healing, was plainly proven to me, when I allowed my little daughter, of five years of age, to be treated. I thought, and said to the one who took the case, "I will convince myself and you that there is nothing in Christian Science that can help us," for I was in nearly as great need as the child. Christian Science had been very kindly offered me a year before, by one who saw my then great need, with my two little ones. Never having heard of it before, I classed it with faith cure, mental science, etc., and wanted nothing to do with it. Finally after several months, this friend, seeing the distressed condition of my child, who was growing worse daily, being only partially relieved by remedies of the best physicians, who had kindly and faithfully done all in their power for her,—said to me, "Would you not be willing she should be treated a week by Christian Science, and if no worse, try it another week?" My friend added that if I was willing to suffer it was my own affair, but that it did not seem fair to allow the child to suffer so when she could be relieved. While I believed she could not be helped, I knew the friend was honest in her belief to the contrary, and to satisfy her, more than anything else, and with faint hope that if there was any truth in it I ought to give my child the benefit of it, I consented to the treatment. The friend urged me to go to a regular practitioner, but I would not. I asked her to take the case herself, and there being no other way, owing to my obstinacy in the matter, she did.

Her faithfulness was rewarded,—the healing was instantaneous, and there has never been a return of the trouble, although the five-year-old child is now a girl of sixteen, and that admission shows how slow I have been to acknowledge the blessing through our periodicals.

After the healing of my little daughter, I had treatment for myself from the same friend with wonderfully happy results. Never since that time have we used material remedies of any kind, nor has there ever been a moment's doubt of the truth and efficacy of Christian Science. After reading Science and Health for months, and while it was still as Greek to me, I finally took treatment of a regular practitioner for a trouble of eight years' standing, for which I had been sentenced to invalidism, and had served some

years of my sentence, with much suffering. I was perfectly healed,—being able to remove, at once and entirely, a support I had not been without, day or night, for three years. While I had been able to do but little of my own housework, and that little with difficulty, I have been able ever since to do any part of it. We have had many serious things to meet, when error seemed to be real, but its nothingness was always proved. My little son, twelve years of age, has no remembrance of dependence upon anything aside from God, as taught in Christian Science. He nearly always does his own work in Science, and often has helped me. Some years ago I had the benefit of class teaching by one of Mrs. Eddy's students. Of Mrs. Eddy herself, with her long years of unremitting, patient toil, in giving to a darkened world the Christ-light which shines so clearly through her pure consciousness, I stand in reverence. It seems to me that this generation can scarcely conceive of the magnitude, the far-reaching effects of her loving, patient work.—MRS. ELIZABETH L. LLOYD, Utica, N. Y.

It is over five years since Christian Science was brought to my notice, and Science and Health was given me to read. At that time I was suffering with heart disease, and many other ills too numerous to mention. I had also used tobacco excessively for twenty years. I did not read Science and Health for the healing, although I was in great need of it. I did not know that such could be possible, but before I had read the book through my appetite for tobacco was gone, and I was also healed of heart disease, although I did not think of this for probably a month after, and I could not remember just when I was last troubled with my heart.

Above all, the reading of Science and Health has created a desire in me to do good, to feel better toward my fellowman. I am very thankful for the blessings I have received through Christian Science. My wife is also a student, and we feel that we cannot be too grateful to Mrs. Eddy for making it possible for us to gain an understanding of this great truth.—W. G. WILLIAMS, Kansas City, Mo.

I was led to investigate Christian Science over two years ago, after many years of ill health. I had "suffered many things of many physicians," and can hardly recall a day in which I was free from pain. After trying our home doctors without getting any relief, I consulted some noted specialists in Columbus, O. An operation was suggested for relief, and at this suggestion I prepared myself to go to the hospital. Calling upon an old friend who had been operated upon the previous year, and finding her in a helpless condition, I was so discouraged that I sent for my baggage, and returned home. A few months later, in the spring of 1902, I learned of Christian Science and was asked to investigate it. I was led to the home of a practitioner, and began treatment that morning. During the first week's treatment one of my many troubles, constipation, was overcome. I shall never forget the joy which came to me. I felt that this was the living presence of Christ, God with us. My ailment being internal, I was indeed a great sufferer, and I seemed to have had all the troubles to which flesh is heir. I was healed during two months' treatment, and am indeed thankful for the help received. I was lovingly led, step by step, into this beautiful understanding. I am very happy, and grateful to God for all my benefits.

The physical help, however, has been trifling as compared to the spiritual uplift. Through the study of the Bible and "Science and Health with Key to the Scriptures," I have learned how to overcome many physical troubles. I will mention some of those which have passed away,—rheumatism, neuralgia, catarrh, sore throat, and toothache. These are the proofs that this is a demonstrable Science, and proofs are always better than mere verbal arguments. I am

thankful to God for the life of our dear Leader, who has toiled so faithfully, paving the way for generations yet unborn. I am very thankful to her for the precious treasure, Science and Health, which indeed is a Key to the Scriptures, and which has unlocked the door to higher understanding for me.

MRS. MAUDE K. SHAWAKER, Delaware, O.

It is with a very grateful heart that I acknowledge a few of the benefits I have received through Christian Science. It would not be possible to name all the blessings that have come to me through this truth. In less than two weeks I was healed of chronic constipation of twenty-five years' standing, and also of heart trouble pronounced by the best specialists in Chicago to be incurable. I was subject to frequent, so-called "acute attacks" of irregular heart action, which were very distressing to myself, and also to my friends, as they feared that any one might prove fatal. My healing occurred in February, 1898, since which time I have not had an attack of this ailment. During these years I have had many beautiful demonstrations of the presence and power of divine Love.

Words are inadequate, when we try to express our gratitude to our heavenly Father for His loving kindness in sending us this understanding of Himself; and they are also insufficient to express our grateful and loving appreciation of Mrs. Eddy's life and work of love, in bringing to us this heavenly message.

MRS. HATTIE P. SHERWOOD, Los Angeles, Cal.

Through the solicitation of a dear brother to try Christian Science, as a last help for a serious affection of the knees, I became willing in January, 1903, to do so. After two months' study of that beloved book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, I was freed from the bondage of wearing steel and leather braces, which I had done for two years. During this time I had also to submit to a painful operation, and had used crutches for six months previous. In consultations with some of the best surgeons in the West, I was met with the statement, "You can never hope to be well." Many other ailments have also been overcome, such as sore throat, rheumatism, serious female trouble, and the constant wearing of eye-glasses for five years. One of these was slow in yielding, but I can now say that even this has seemed for the best, since it has helped me to seek the more earnestly for this blessed truth which makes free indeed. When surrounded by storms of mortal mind these words have come to me as a peaceful benediction, "If God be for us, who can be against us?"

My love and praise to God, and my gratitude to our beloved Leader, can best be expressed by walking in the footsteps of the great Wayshower, and thereby proving worthy of the name, "A Christian Scientist."

CAROLYN VOIGHT, Elko, Nev.

Her Birthday.

CLINTON B. BURGESS.

EVERY day is your birthday, dear;
Every day in all the year
The loving Father gives to you
Birthday gifts all fresh and new:
Joyous life that cannot cease,
Blessed truth that bringeth peace,
Love that doth all good increase.
Every day is your birthday, dear,
Every day in all the year.

From our Exchanges.

The pessimism and hopelessness so prevalent to-day, even among professing Christians, are the direct result of a failure to grasp the fundamental doctrine of God's omnipotence.

Along with the doctrine of God's sovereignty will go the doctrine of His immanence. It is an old doctrine couched in fresh phraseology and with new light shot through it by modern science. The doctrine is written large across the pages of Scripture, and in every land and time the saints have known that God dwells in the hearts of men. In Him we live, and move, and have our being, as the apostle long ago declared. The forms in which retribution was often preached in preceding generations were so grotesque and arbitrary that some of us have been ashamed to say it right out clear and strong, that God punishes men for their sins. In the coming days we are going to believe again that whatsoever a man soweth that shall he also reap, that without holiness no man can see the Lord, that there is no peace unto the wicked. . . . and that God is calling upon men everywhere to repent.

REV. CHARLES E. JEFFERSON, D.D.
The Congregationalist.

If the Bible is not *felt* by any one who reads it, to be a revelation of higher truths than other books contain; if the things therein which are pure, true, just, lovely, and of good report are not instinctively apprehended; if the recorded words of Christ do not of themselves impress the reader as the deliverances of one who spake as never man spake; if the Scripture expositions of sin, repentance, hope, faith, trust, and love are not understood and interpreted from an inner individual experience; if the Bible does not "find" men in the innermost sanctuaries of their lives, and pronounce the word which lies unuttered in the secret places of their hearts; if it does not give a voice to all devotional, penitential, and worshipful moods; if the proof of its superiority to the sacred books of other religions is not manifest without added logic—then no authentication of its worth by theologians, churches, or councils can do anything for a man.—*Western Christian Advocate.*

Our inner life is capable of indefinite, if not infinite, development. There is no point, and we can imagine no point, where we reach our limits. The infirmities of the flesh may close in around us, or the boundaries of our earthly progress may rise before us; but they are not we. The more developed men are, the more they believe that there is more to come. The greatest souls, those who have got the most out of the life that now is, and who for that reason might be expected to be most contented with that life alone, are the very ones who look forward with most confidence to living on. And there is that in us which hints sometimes to the poorest of us that we have but just begun to be what we were meant to be. What is this love of unbounded distances—but the intimation of our own infinity?—*The Christian Register.*

In other words, what is needed and sought is the transformation or transfiguration of character. This is the specific and immediate business of evangelism. The change wrought is primarily a personal one. Humanity, *en masse* or in local or extended groups, is to be changed only by a sum of changes effected in individuals, which of course may be heightened or accelerated by interaction. The social order, industrial reform, political progress, educational modification may all be reached, but only through the altered and exalted life of individuals.

REV. C. ELLWOOD NASH, D.D.
The Universalist Leader.

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, \$5. Twelve or more to one address, \$4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, \$1 per copy; \$5 per half dozen; \$9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, Treasurer.
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, \$2.40 per annum; \$1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, \$1.00 in advance; all other countries, \$1.25. Single copies, 10 cents, postpaid.

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.

Single book, prepaid \$3 00

Twelve or more books to one address, each, prepaid . . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; \$3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, \$1.00; \$5.00 half dozen; \$9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, \$1.00; \$5.00 half dozen; \$9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, \$2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, \$2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, \$4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; \$4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, \$1.00; six copies to one address, \$5.00; twelve copies to one address, \$9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; \$5.00 per dozen.

Direct all orders for above works, and make remittances payable to

National.

The recommendation which the Naval Board of Construction has made to the Secretary of the Navy for the construction of the three scout cruisers—Chester, Salem, and Birmingham—contemplate that the Fore River Shipbuilding Company build two of the vessels,—one equipped with reciprocating engines, the other with turbine engines; the Bath (Me.) Iron Works to build the third with a different type of turbine engines. The bids favorably recommended by the Construction Board are considerably under \$1,800,000, the maximum price fixed by law. The turbine engine will be new to the American Navy. These scout ships are required to make a maximum speed of twenty-four knots. One of the turbine engines to be installed is an American type, while the other is English.

A gift of \$10,000,000 by Andrew Carnegie, to provide annuities for retiring college professors who are not able to continue in active service, was announced last week. Professors in the United States, Canada, and Newfoundland will share in the distribution of the income of the fund. The fund applies to teachers in universities, colleges, and technical schools without regard to race, sex, creed, or color. "Only such as are under control of a sect or require trustees (or a majority thereof), officers, faculty, or students, to belong to any specified sect, or which impose any theological test, are to be excluded."

Augusta Victoria, Empress of Germany, in recognition of the heroism displayed at the time of the General Slocum disaster, has presented diplomas to the fifty-one nurses of the North Brother Island (N. Y.) Hospital. The head nurse was given a golden brooch on which was emblazoned in enamel the German coat-of-arms, in the center of which was a large emerald surrounded with pearls.

The proposal to establish in Texas several Japanese colonies, led to some agitation for the enactment of a Federal exclusion law as rigid as that against the Chinese. Several instances of refusal to issue naturalization papers have been recorded. The State Dis-

trict Judge has announced, however, that he finds nothing in the statutes justifying debarment.

Negotiations between the United States and China, for a treaty restricting the immigration of Chinese to this country, have been abandoned for the present, as it has been found impossible by the representatives of the two Governments to reach a common ground of agreement as to many of the terms of the proposed treaty.

The programme for the ocean race for the Emperor's Cup, to start May 16 from Sandy Hook, has been issued. Half-tone reproductions of the eleven starters are given, together with the color of hull and the day, night, and fog signals each will use. By the aid of these the vessels can be easily recognized, and it is believed that the competing craft will be frequently heard from through East and West bound steamers.

Minister Bowen has been recalled from Venezuela, pending an investigation into charges brought by him, reflecting upon the official integrity of the present Assistant Secretary of State when Minister to Venezuela. The charges involve his alleged undiplomatic connection with the Bermudez Asphalt Company.

It is proposed by the co-operation of the Metropolitan Museum of Art, the National Academy of Design, and Columbia University, to establish and maintain in New York City a National School of Art with amplest facilities and on the highest plane.

A formal mass meeting of the alumni of the Massachusetts Institute of Technology was set for May 4, for the purpose of discussing the proposed alliance of Harvard and "Tech."

Secretary of Agriculture Wilson announces that unless farmers change their methods of growing wheat, even America will be compelled to turn to other countries for a supply.

It is estimated that the Treasury deficit for the fiscal year ending June 30, will reach thirty-five million dollars.

Foreign.

M. Delcassé, the French Minister of Foreign Affairs since 1898, last week, influenced by attacks upon his policy in connection with the Moroccan affair, offered his resignation. This move brought about a saner attitude in the French Chamber and he was importuned to reconsider his resolution. It was he who skillfully brought about the negotiations that ended the Spanish-American War; who avoided hostilities with England on account of the Fashoda affair; who forced Turkey, by a well-timed naval demonstration, to prompt payment; who kept France from meddling in the Transvaal War, and weakened the triple alliance by concluding a treaty of commerce with Italy.

Two recent incidents in the Russo-Japanese War have furnished a subject for possible discussion in an international peace convention—the stay of the Russian fleet under Admiral Rojestvensky at Madagascar, and later at Kamranh Bay, off Cochin-China. In both instances the admiral has declared that he was outside of the three-mile limit. This limit was agreed upon when the range of coast guns was less than three miles. With the range now fifteen to twenty miles, the old limit seems somewhat of a fiction.

It is reported that President Roosevelt has promised the Chinese Government to recommend to Congress in his next annual message that the United States formally relinquish its right to the \$22,000,000 balance due on the claim for indemnity allowed as a result of the boxer outrages in 1900. On its part the Chinese Government agrees to set aside the sum which it had agreed to pay annually until the debt is satisfied, for the education of the youth of the Empire.

In accordance with the decision of the meeting in Rome, on April 24, of the British, Russian, and French Ambassadors, under the presidency of Foreign Minister Tittoni, the Italian Foreign Office has communicated to Prince George the information that the protecting Powers regard the annexation of the island of Crete to Greece as impossible. The communication adds that the Powers are prepared to act energetically for the pacification of Crete.

Germany has negotiated reciprocity treaties with seven European States, to go into effect March, 1906. She has formally notified the United States that while the present tariff arrangement with this Government will terminate at that time, she stands ready to negotiate a reciprocity treaty.

On memorial of Wu Ting-Fang, ex-Minister to the United States, an imperial edict makes sweeping reforms in the Chinese Criminal Code.

Shakespeare festival week was celebrated last week at Stratford-on-Avon.

Industrial and Commercial.

In the new subway which is projected for New York City, it is reported that a proposition is under consideration to improve the carrying capacity by replacing the railway car with platforms. On entering the subway the traveler will first set foot on a stationary platform. From this he will step to a platform two feet wide and moving at a speed of three miles an hour. A second step will land him on another of the same width running six miles an hour, and a third step on still another running nine miles an hour. The latter will be six feet wide, will have cross seats holding four persons, and will possess nearly twice the practical carrying capacity of the present subway. It is claimed that a one-horse-power hour in the platform system will do as much effective work as eight in the elevated and thirteen in the subway system. In train movements two-thirds of the power is lost at the brakes.

Theodore H. Price, at the seventy-eighth semi-annual meeting of the New England Cotton Manufacturers, said,—

"The cotton crop of the United States is probably less carefully cultivated and more wastefully handled than any other of our great staples. It is estimated by the closest students of the subject that intelligent methods of culture, picking, and transportation would effect an economy of not less than twenty per cent. If the South could be brought to realize, and in time it will be brought to realize, that its true policy is to decrease the cost of its production, and by so doing increase the demand for that production, a new era of prosperity will dawn for both the manufacturer and the planter."

The Government work of constructing at San Pedro on the Pacific Coast, a gigantic breakwater, begun in 1900, is now well under way. When completed, this, with the dredging of the inner harbor, and the construction of an outer harbor, will afford a safe and capacious harbor of refuge. The breakwater is 64 feet high, 190 feet wide at the base, 20 feet at the top, and extends two-thirds of a mile into the ocean. During the past year 1,600,000 tons of stone, brought from an adjacent quarry on a trestle built over the breakwater, were laid, rough stone being used for the bottom and smoothed ones for the top, laid in regular courses, but without mortar.

A rolling roadway has recently been completed and placed in operation in Cleveland, by means of which teams with heavy loads are carried up a twenty-foot grade—forward four hundred and twenty feet and upward sixty-five feet in four minutes or less.

The New York Building trade last week entered upon an era in which there will be no strikes, if the terms of the arbitration plan lately signed by the employers and the representatives of about one hundred thousand workmen continue to be honored.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

"Get right with God."

C. W. CHADWICK.

SOME weeks ago, during a series of evangelistic meetings held in a Western city, the attention of a Christian Scientist was especially directed to this subject, "Get right with God," which had been announced for discussion at a specified time. He did not hear the subject discussed, but the appeal proved to be very suggestive.

Even the student of Christian Science, whose heart is full of gratitude for his enlarged sense of truth, will do well to ponder this question, "Am I right with God?" He will find that a certain amount of self-examination on this subject is essential to his progress heavenward. No one should feel safe until he has positive knowledge upon so important a topic. Nor will he be able to convince others by mere profession that his heart is right with God. He may believe he is right, but this does not make it so. He will be called upon to give some practical proof of his profession before he can satisfy the needs of humanity, and this proof must be of such a nature as to reveal man's true relationship to his Maker.

The belief that God is all right but man all wrong will never lead to correct or harmonious conclusions, yet this is a theory very commonly entertained. Even mortal man's confession of sin will not solve the problem; he must forsake his sins before he can begin to understand or prove man's relationship to God, and he can do this only as he learns the reality and supremacy of good, and the consequent unreality and powerlessness of evil. The belief in a fallen man who some day will be redeemed and reach heaven by dying will not solve the problem of life, yet this opinion is also very prevalent. How we should rejoice in the revelation that God is not responsible for such vagaries of human belief!

The question of man's relationship to God can only be solved as we view it from the standpoint of perfection. We must first know God, and then we cannot help knowing that man must be perfect like his creator. A wrong idea of God means a wrong concept of man, and *vice versa*. When we find out that light proceeds from the sun, we do not look for darkness in the sun's rays. When we know that God is infinite good and the only creator, why look any longer for a man that is unlike God? Why place a gulf between God and man and stubbornly declare that it was never intended that man should reach perfection or be God-like? If he is not perfect, how dare any one think that he is right with God? Would any one venture to say that the statement two times two are five harmonizes with the basic law of mathematics? If nothing short of perfection is right in mathematics, how can it be otherwise in the Science of being? Right and wrong never blend, nor is either the author of the other. If God is right, man is right, else man is without God.

How shall we reach a correct understanding of this great problem? As we study Christian Science and begin to apply the truth in the order of its apprehension, the unity of divine Principle and its idea, man, will grow more real to us, until we shall no longer entertain any supposition of imperfection. The Principle of perfection is just as manifest in effect as

in cause, hence the reasonableness and the Science of the conclusion, that the real man is now God-like and inseparable from God. Just as the basic law of mathematics must be reduced to practice before we can fully understand the science of numbers, so must the Principle of being, God, be manifest in daily living before we can fully understand the truth and Science of our being.

This does not mean that man is to reach a height from which he has fallen, it does not mean that he is a sinner now but will sometime become a saint, but rather that the belief in sin and death which constitutes earth's troubled, mesmeric dream, is to be eliminated from human consciousness, leaving naught but the conscious recognition of good. Can this be accomplished here and now? Christian Science proves that it can be, just to the extent that we obey the law of perfection, or harmonious being. In mathematics we do not attempt to prove the things that are not already embraced in its law, neither in the Science of being can we demonstrate a fact that is not already true in Principle and in idea. The very fact of man's present unity with God, which means a state of spiritual perfection, makes its demonstration or externalization possible. If man is not already perfect in God, how can we ever hope to prove that he is so? If he is not God-like now, how can it be proven that he is God-like? Why attempt to heal the body, unless it be true that the real man already possesses perfect health?

Christian Science does not leave such problems for a so-called future world to unravel. It sets humanity at work to-day to find out what already exists as fact, the fact which necessitates a systematic and thorough demolition of all the fable of the mortal day-dream existence. Purification of thought leads on the inevitable conflict with erroneous beliefs, theories, and opinions, until the recognition obtains that man is right with God for the simple reason that God made him right and knows him to be right.

Does this man of God think right? Yes. Then let us awaken to right-thinking, the thinking that comes from God, and we shall know that what is right to-day always was and always will be so. Let us strive for a clear realization of what Christian Science means by the term "reflection." Nothing short of this can satisfy us, for man is God's perfect reflection, His own image and likeness, and this reflection is all that ever was or ever can be absolutely right with God.

One thing is proven beyond cavil in Christian Science, and that is, that the man who is right with God can heal the sick in the way that Jesus taught; in fact, this is one of the most practical and reliable proofs that man is in right relationship with his Maker. "These signs shall follow them that believe;" if they do not follow we may know that something is lacking on our part. In Christian Science we know that God heals the sick through man, and this practical proof of the power and presence of divine Love enables us to believe in and accept the Scriptural records of healing with unquestioned sincerity and reverence.

Let us strive to get right with God by gaining a scientific understanding of man's true relationship to Him. Then Christian healing will be established forever on earth, all tears will be wiped away, "and there shall be no more death, neither sorrow, nor crying, neither shall there be any more pain: for the former things are passed away."

A Message of Love.

EFFIE ANDREWS.

IN a year full of blessings, one great gift came to me through our beloved Leader's Dedication Address to the Concord Church, and I should be ungrateful indeed did I not recognize the giver with the gift. After reading the address through, I seemed to catch the thought back of the words, and was impelled to commence again, for the throbbing impulse of Love's message brought me also to "the feet of Christ." I read on until I came to that glorious definition of Christian Science which reads thus: "To live so as to keep human consciousness in constant relation with the divine, the spiritual and eternal, is to individualize infinite power,—and this is Christian Science." (See Christian Science Journal, August, 1904, p. 258.) I could go no farther, for my human consciousness was filled with the simplicity of the statement and the infinite possibilities for each and every child of God. Christ Jesus stood before my thought, the perfect exemplification of individualized infinite power. His thought, kept in touch with the Father, gave him dominion, enabled him to annul every material law: even the wind and wave obeyed him; both visible and invisible forces were in subjection to him; and he could say, "All power is given unto me."

It was glorious! I seemed to realize as never before the individual right and necessity of all God's children to advance in line with the definition and rule just quoted (and as taught all through our text-book), until each one can "in spirit and in truth" make the same statement, "All power is given unto me." I was so happy and glad over the love that illumined my thought through the words of that address, that it seemed like a Pentecostal day, and my heart cried out: For the spirit of Truth is come, and is guiding us into all Truth! Love is all-presence and all-power now.

That night I was awakened out of sleep, and sat up. Once I used to be awakened by some sense of pain or trouble, but this was with a thought of the voice that came to little Samuel, and then I remembered the voice of Love that had spoken to me, and I wanted others to be blessed, so I got up at once to realize more of the truth, desiring that my light should be burning, kindled as it had been by our Leader's individualized expression of love for all mankind. When I lay down again, it was with a sense of "On earth peace, good will toward men," that came with a feeling of the nearness of the all-power.

In the morning I felt a great desire to hear from a friend of mine. She was not in town, but I called her up on the telephone, before I had even thought why I called her or what I should say. The connection was made so quickly I had not time to decide on anything, and my friend herself was at the telephone. When she spoke I could only say, "Good morning; this is just a message of love." She asked me to repeat my words, and as clearly and distinctly as possible, I again said, "It is just a message of love." I came away from the telephone before I had thought to make any inquiries, or say anything of myself, and I laughed,—laughed because I was happy, and because I had called her up so early with no special excuse or reason for so doing. Soon after, I received a letter, telling me my "message of love" had come "with healing in its wings," and would I come and tell how and why, and all about it. I did go, and learned that a member of the family, after a long fight and intense suffering, was on the bed in "agony," on that early morning, but the words, "a message of love," were perfectly heard by the dear one through the telephone as they came into that room, and instantly the "clouds of human reason" were dispelled; the heart responded to "love's message" and she said, "I am free from pain; I am well!"

We had a time of great rejoicing and mutual uplifting, all the more when it was understood I had not the slightest

knowledge of the circumstances. What an object lesson it gave us of the individualized infinite power which, in our day and generation, could send out love "with healing in its wings," to as many as are ready to receive its vital spiritual message. We must not only awake to a quickened sense of love and gratitude, but to a higher appreciation of unselfed love, until we become so imbued with the power of infinite Love that through us mankind may be blessed.

Demonstration versus Speculation.

REV. CHARLES D. REYNOLDS.

THOSE critics of Christian Science who contend that good and evil are co-related and so blend into one another that no clear separation is possible, need to have it pointed out to them that such a conclusion rests upon false dualistic premises and that no amount of reasoning from this standpoint can give them the needed information. Before they can become informed on the subject of Christian Science, they must change their standpoint and adopt the right premise. Then, proceeding logically, they will learn that the facts concerning real existence must be learned through demonstrations, not abstractions.

What has greatly perplexed thoughtful men is this: Even when we have discovered the truth, how may we know that it is the truth? By its fruits. By what it accomplishes in freeing from untoward conditions, ignorance, superstition, fear, unrest. By removing whatever envelops in mystery, incapacitates, binds, limits, fetters with sorrow or suffering. If truth is the element that makes us free, that which binds and enslaves must be its opposite, error. He who speaks from the standpoint of experience cannot doubt that Christian Science is the truth; neither is there any doubt that the world is in a ferment of unrest, and is even now in the process of throwing off its dualistic concept of being, because it cannot demonstrate its proposition; while Christian Scientists do demonstrate their proposition with ever-increasing satisfaction and joy. Religion is becoming spiritual and practical. Dogmatism is no longer needed to insure safety and stability in religion. We are learning to walk by sight, not blind faith. As theology and philosophy are being purified of the dross of semi-materialistic concepts, we rest upon the one foundation, which is God, and our eye grows single,—illumined with the divine glory. Then we shall know the truth by what it has done, and is doing for us, and vapid speculation will have ceased.

I Am my Brother's Keeper.

ANNA K. CRAIG.

THE richer significance of brotherhood, as revealed in the teaching of our text-book, came to me a short time ago.

Who is my brother? Jesus said, "Whosoever shall do the will of God, the same is my brother, and my sister, and mother." Then my brother is not the sinning mortal, but he is the divine manifestation of God, whose keeper I am. When error says our brother has done wrong, would it be Christian or scientific to listen to the whisper of the serpent and make a reality of the error? When we reverse sense-testimony we not only bless our brother but we protect ourselves from the mesmerism that would hinder our progress by personalizing error, giving it mind and power and shutting out the true man from our consciousness. Is there any other way to heaven than this?

The mist was very heavy one day, and as I looked out of the window I could not see across the street. There was, however, no doubt in my mind that the houses and trees were still there, and this suggested the thought that the true man may be recognized through spiritual discernment when he cannot be seen through material sense. Mortal mind is the mist which hides our brother, the reflection of God, and

effort is needed at all times to make an unreality of error, for the adversary seems obstinate and resistant, but we have a sure means of defence in unceasing prayer and earnest striving for the Mind of Christ.

Sometimes the question presents itself, "Am I my brother's keeper?" If we saw our brother disappearing in a quicksand and could save him even at great danger to life, would we not do it?

By obeying the Word of God as interpreted in Science and Health, we become missionaries to all men. When we let the light of divine Love beautify and hallow our lives, we thereby find our own in our brother's good.

The Glorious Liberty.

MARION P. HATCH.

As one listened recently in a Wednesday evening meeting of Christian Scientists to their testimonies of good works,—the healing of sorrow, sickness, and sin,—and remembered that all over this country and in many other parts of the world similar meetings, with like exalted testimonies, were being held every Wednesday evening in the year, it was all at once seen, and with great joy, that in Christian Science is to be found what the Apostle Paul saw when he wrote to the Romans and to all the world of "the glorious liberty of the children of God."

It matters not now, that for ages it has been believed that the grave lies between this liberty and man, for Christian Science is proving that this glorious liberty is in the understanding and demonstration of Life, Truth, and Love, and that it is "for all peoples."

How great is this liberty! The greatest known, because it is a release from the hardest taskmasters known,—sin, sickness, and death; and because it may be universally realized. The way has been made very plain, it is to obey the command, "Touch not the unclean thing; and I . . . will be a Father unto you." As a sure result of this obedience, sin, sickness, and death will be seen to have neither presence nor power, and God will be seen as All-in-all, with man in His image and likeness, expressing His dominion, wisdom, and understanding.

How beautiful it is that Paul joined this "glorious liberty," unto "the children of God." And who are the children thus forever united to God? Paul said, "So then they that are in the flesh cannot please God." And again, "For as many as are led by the Spirit of God, they are the sons of God."

Our beloved Leader, Mrs. Eddy, to whom the whole world is so indebted, has shown us how to gain this liberty, this emancipation from the flesh; how to follow in the footsteps of Jesus, who said, "The works that I do ye shall do also;" "Go ye into all the world, and preach the gospel to every creature,"—the gospel that heals the sick. Truly, those who are obeying this command must be led, as was Jesus, by the spirit of God; must be "the children of God." Saint John wrote, "Behold, what manner of love the Father hath bestowed upon us, that we should be called the sons of God: therefore the world knoweth us not, because it knew him not. . . . Little children, let no man deceive you: he that doeth righteousness is righteous, even as He is righteous."

The religion of Christian Science is a religion of works that bring, *now*, to all who will, "the glorious liberty of the children of God."

Listening and Following.

MARGARET MAC L. EAGER.

WHILE our Leader's beautiful hymn, "O'er waiting harpstrings of the mind," was being sung at the Sunday morning service a few weeks ago, I suddenly realized that I was not singing in time or tune with those around

me. Stopping to listen, I discovered that from a musical standpoint the effect as a whole was not that of unity or harmony. My seat was well forward, and turning, I faced the great body of singers behind me. As I looked into their earnest faces I realized that each person was singing out of the depths of his heart all that the dear hymn had meant to him in his individual experience. He was singing of the times when Christ had whispered the "peace, be still," to the troubled waters of his human consciousness; of the joy of knowing that we are grounded upon the Rock 'gainst which wind and wave beat in vain; of the desire to help God's little ones, and of all the consecration the last verse of the hymn expresses; and I thought, How beautiful is the work going on in the individual consciousness of this great chorus, and when each shall have reached the glorious realization of the true rhythm of Soul, what harmony there will be! It is surely possible, however, for us to give a better expression of it to-day, but how?

Turning, I faced the organ, and found my answer. Clear and true its round, full tones stood forth, and some were listening for and following its leadings. Most of us, however, were content to know it was there and that the organist was doing his duty, quite forgetful of the fact that in order to secure a true sense of rhythm, in so great a chorus, each individual in it must be responsive to the leader. Then I thought, How like it is to our work in Christian Science. Each has his own work that no one can do for him, the daily study of our text-book, the putting of its counsels into practice, in the home, the counting room,—everywhere; the constant seeking, and knowing, and proving of the truth, that he may grow into all the fulness of the stature of Christ. There is also our work as members of the church and of the Christian community, the great chorus work, the listening and following together which gives momentum and efficiency to our Cause, and to all united undertakings. The individual work is most essential—the singing with abandon, out of the heart as though there were none other to sing—and at the same time it is equally essential that we sing all together. It demands thoughtful effort to realize both these ideals, but it can be done if, while loyal to individual responsibility and work, we are careful to keep in obedient touch with the thought of our Leader,—study the Manual, and seek in the expression of humility, unselfishness, and love, to preserve intact that common bond and united activity which shall make all our organized endeavor and influence mighty before God and in the sight of all men. Then our strong choral note shall be as the voice of one great singer, uplifting and inspiring men.

[Written for the *Sentinel*.]

Pleasant View in Spring.

GRACE WHITE.

BROAD meadows clothed with tenderest green,
And patient trees their leaves just showing.
The little ice-bound pond awake,
All sun-kissed ripples from soft breezes blowing.
From distant tree-tops gaily ringing
The song of homing birds is flowing;
While high above in sunny skies
Are stately full-rigged cloud-ships going.

To trust in Christ because he deserves it, this is spiritual-mindedness at its highest reach. It is a paradox to shame us, that out of the mouth of babes and sucklings praise is perfected. But babes and sucklings instinctively feel that Jesus is to be trusted, while few Christians are mature enough to trust with a faith so child-like. Sometimes they do it when they try, but not all the while and not without trying.—E. H. JOHNSON.

Selected Articles.

The State of Ohio has declared that it is a violation of law for a Christian Scientist to treat a patient for a fee, but it leaves the door wide open for the Scientists to practise so long as no fee is named. In a word, the legislature of Ohio thinks the danger is not in the practice of Christian Science, but in taking a fee for such treatment. They thus admit the efficacy of this mode of treating disease.

Watertown (Mass.) Tribune-Enterprise.

Some of our Presbyterian brethren have become unduly excited over what they are pleased to call "the heresies of Christian Science."

Just why this should be it is difficult to understand, since both their beliefs are based upon the same premises—the divinity of Christ—with Mrs. Eddy's position, from a logical standpoint, considerably in the lead. Mrs. Eddy maintains that the creator is a God of love—that nothing but what is "good" could have been created by Him, that things that are bad are but the creations of (or projections from) mortal mind.

Our friends who ascribe these heresies to the work of the devil, maintain that the creator is not only a God of love, but one of hatred and revenge; one whose wrath is so awful that none shall escape unless he believe in their special dogmas. In other words, the chief difference between the creator and man is His omnipotence—His infinite power.

These differences furnish a fruitful field for controversy, especially if one side or the other chooses to exercise little or no tolerance; but judged without prejudice, the philosophy of Mrs. Eddy is the more attractive of the two, and until theologians are able to separate the things that really exist from those that are simply projections from their own minds, there is little opportunity for agreement, even among themselves.—Editorial, *George's Weekly*, Denver, Col.

Admitting all that can possibly be deducted for exaggeration in many ways, there still remains a large number of well-authenticated cases cured by this system of treatment without medical agencies. Many cases had been long under treatment by expert physicians, and no doubt could be entertained as to the correctness of the diagnosis and the seriousness of the disease. Their rapid recovery, when the physicians had considered their conditions hopeless, has been something amazing. Probably all of you here present have known personally one or more such cases. The diseases healed have more frequently been mild disorders. Yet diseases of most serious and usually considered incurable kinds have all been represented in the list of well-authenticated cures. Just one case, by way of illustration: This is the most recent one to come under my personal notice. I inquired into it while on my vacation last summer. The physician who had the case in his hands for some time is one of the best friends I have on earth—an exceedingly thorough and conservative physician, with forty years of successful practice for a record. The disease was of such a nature that a correct diagnosis could be had without possibility of mistake. But in addition to the attending physician, the patient was examined by at least two of the best specialists in Massachusetts. All agreed that she had but a short time to live, yet under a brief treatment by a Christian Science healer she regained her strength and vigor, and retains it to this day, more than six months afterward—a constant marvel to all who know the circumstances, and who expected that her gain would be followed by a fatal relapse.

Here are facts admitted; namely, cures wrought . . . Is it not likely that there is some one uniform Principle or law which underlies these?

REV. VERNON C. HARRINGTON,
Second Presbyterian Church, Cleveland, O.

Among the Churches.

Growth in Manchester, England.

Christian Science is spreading in Manchester. The movement initiated by Lady Victoria Murray, which culminated in the opening of a handsome building in Victoria Park in May last, is month by month gaining fresh adherents from the cultured classes of the city. Two new wings are shortly to be opened, one to be used as a school-room and the other as a reading room. Two services are held each Sunday, and an "experience" meeting every Wednesday evening, at which some remarkable results of Christian Science treatment are related week after week.
